Those who have departed, or are departing, from that path under apprehension of danger, we and all friends of the Constitution, organized from one extent of the Union to the other, should awake to "retrace their steps, and to regain the road which alone leads to liberty and safety."

I am now prepared to take the oath of office.

Among the earliest and most important duties devolved upon the Legislature was the election of a Judge of the Supreme Court, *vice* A. M. Speer, whose term had expired, Judges of the Superior or Circuit Courts, and a Senator in the Federal Congress to fill the unexpired term of, and after March 4, 1883, succeed the late Benjamin H. Hill.

To the first-named office, Hon. Samuel Hall, of Macon, a lawyer of high character and great learning, was elected. John D. Stewart was elected Judge of the Flint Circuit; T. J. Simmons re-elected Judge of the Macon Circuit; Allen Fort, Judge of the Southwestern Circuit; B. B. Bower, Judge of the Albany Circuit; A. P. Adams, Judge of the Eastern Circuit; John B. Estes, Judge of the Northeastern Circuit, and W. R. Hammond, Judge of the Atlanta Circuit. The contest for the senatorship was active and heated. The candidates for the unexpired term (December, 1882-March 4, 1883) were B. H. Hill, Jr., eldest son of the deceased Senator, and Pope Barrow, a former member of the Legislature from Clarke County. The candidates for the term of six years from March, 1883, were ex-Governor Alfred H. Colquitt, Chief-Justice James Jackson, Hon. Clifford Anderson, and Hon. J. C. C. Black. The result was the election, on the first joint ballot, of Pope Barrow for the short term, by a vote of 116, to 95 for Hill. For the long term ex-Governor A. H. Colquitt was elected on the second ballot, receiving 123 votes; necessary to a choice, 109. After a session of five weeks, the Legislature adjourned until the first Wednesday in July, 1883. The election of judges and Senators, the passage of the appropriation and tax bills, the refusal to accept Senator Brown's

donation to the University of Georgia, and the passage of a few bills of local interest, constituted the legislation of the session. The restricting of the State in conformity with the last apportionment act of Congress, the usury bill, and the question of building a new Capitol, have been postponed till next July. Resolutions were adopted asking Congress to repeal the tax of 10 per cent on the circulation of the State banks; the repeal or modification of the internal revenue laws; the repeal of the statute of limitation barring cotton claims; the erection of public buildings at Brunswick; the establishment of a local postal route; and aid to education in the State out of the proceeds of sales of the public lands. It is gravely questioned whether, under the Constitution of the State, the General Assembly has the right to adjourn for seven months, so as to defeat practically the provision of the organic law against annual sessions. The Constitution directs that the General Assembly shall meet "on the first Wednesday in November, 1878, and *biennially* thereafter, on the same day, until the day shall be changed by law." This seems to settle the time of meeting, and to limit the number of sessions to one, every two years. The Constitution further declares that "no session of the General Assembly shall continue longer than forty days, unless by a two-thirds vote of the whole number of each House." This provision, it is argued, is intended to supplement the provision already quoted, and provide for cases in which forty days would not be sufficient time to transact the necessary business; but that it applies to a continuous session. The framers of the Constitution certainly intended that the sessions of the Legislature should be held only once in two years, and that they should be limited to forty days except in cases of emergency. The estimated expense of a legislative session of forty days is \$42,613. The summer session will cost as much or more, making the whole expense not less than \$85,226. With a view to obviate any necessity for the "adjourned sessions," a proposition has been made, and is now pending, to amend the Constitution so as to take the election of judges and solicitors-general out of the hands of the Legislature and delegate their appointment to the Governor, by and with the advice and consent of the Senate. Every Legislature, since the adoption of the Constitution, has held annual, or adjourned sessions, alleging, as excuse for the apparent violation of the law, that the election of judicial officers had consumed the regular fall session. The appointment of these officers by the Executive would involve no expense. The charge of mileage by the members of the General Assembly, amounting in the aggregate to \$6,572, when most of them are known to hold and to use free passes over all the railroads, is the subject of much comment.

The election of members of Congress to serve in the Forty-eighth Congress took place

according to law on Tuesday, November 7th, and resulted as follows: First District, John C. Nichols, Democrat, 6,055 votes; James Atkins, Republican, 3,884. Second District, Henry G. Turner, Democrat, 7,794; Charles Wessolowski, Republican, 4,406. Third District, Charles F. Crisp, Democrat, 4,121; D. B. Harrell, Independent, 329. Fourth District, Hugh Buchanan, Democrat, 5,583; J. F. Pon, Independent, 1,402. Fifth District, N. J. Hammond, Democrat, 10,788; A. E. Buck, Republican, 5,756. Sixth District, James H. Blount, Democrat, 3,514; scattering, 26. Seventh District, J. C. Clements, Democrat, 12,408; William H. Felton, Independent, 10,746. Eighth District, Seaborn Reese, Democrat, 4,384; no opposition. For unexpired term in Forty-seventh Congress of Alexander H. Stephens, resigned, Seaborn Reese, 4,282; no opposition. Ninth District, Allen D. Candler, Democrat, 14,521; Emory Speer, Independent, 11,915. At large, Thomas Hardeman, Democrat, 81,443; C. D. Forsyth, Republican, 24,930. The contests in the Seventh and Ninth Districts were warm and excited. They were the battle-ground on which was fought the contest between the regular Democratic party and the "Independents," the latter receiving the almost unanimous support of both white and colored Republicans.

**DEATHS.**—Several distinguished Georgians have died during the year. Among the most prominent were Hon. Benjamin Harvey Hill, United States Senator; Colonel William Tappan Thompson, for thirty years editor of the "Savannah News," and author of "Major Jones's Courtship" and other works; William M. Wadley, President of the Central Railroad; William L. Mitchell, LL. D., Professor of Law in the University of Georgia; and Colonel E. C. Anderson, ex-Mayor of Savannah.

**MISCELLANEOUS.**—A singular question has arisen as regards the Southern Mutual (Fire) Insurance Company, of Georgia. The company having accumulated a sufficiently large reserve fund to give ample security to their policy-holders, desire legal direction as to what shall be done with the annual interest on the reserve fund, if the surplus is not to be increased in future. The profits of the business, arising from premiums, are now divided annually among the policy-holders, and the question is, how this interest is to be divided, whether exclusively among those who are now members as actual policy-holders, or those also who have held policies in the past, but have severed their connection with the company. The company has filed a bill praying the court to give direction on these points.

Edward Cox, who killed Colonel Robert Alston two years ago, and was sentenced to the Penitentiary for life, was pardoned by Governor Stephens on December 11th, in answer to a numerous signed petition.

The Art Loan Exhibition of the Young Men's Library Association, of Atlanta, was

a great success. The receipts amounted to \$4,400.

Several Artesian wells have been bored in Southwestern Georgia, where hitherto the supply of fresh water was neither abundant nor of good quality. The deepest is at Albany, 570 feet, yielding thirty gallons per minute, as clear as crystal and sufficiently cool. The temperance movement is rapidly gaining ground. Under the "local-option" law the sale of spirituous liquors has been entirely prohibited in over one hundred towns and villages, and the people are much gratified by the result. The law now requires all liquor-dealers in the State to register in the office of the ordinary of the county where they propose to do business, and immediately on registration to pay the collector the tax for the whole year.

The question of paying the bonds pronounced to be illegal and void by the General Assembly, and the payment of which is expressly forbidden by the Constitution, has been again mooted, but with no probability of any attempt to reopen the matter being successful. Nothing short of a change in the Constitution could enable the Legislature to entertain the question. Congress having made two United States Judicial Districts in Georgia, Judge Henry Kent McCay, former Associate Justice of the Supreme Court (appointed by Governor Bullock), has been made the judge of the new court by the President. The appointment has been approved by all parties.

**GERMAN EMIGRATION.** The report of the Imperial Commissioner of Emigration for 1881 states that the emigration for that year exceeded the highest figures reached in former years by fully 100,000. The total number of emigrants from the ports of Hamburg, Bremen, and Stettin, was 247,346, of whom 184,369 were Germans. The total number from Hamburg and Bremen alone was 245,898, who came from the following countries:

COUNTRIES.	Emigrants.
Germany .....	182,985
Austria-Hungary .....	85,517
Russia .....	9,409
Sweden and Norway .....	5,014
Denmark .....	4,711

Of this number, no less than 241,478 went to the United States, of whom 179,507 were Germans. Of other countries, Brazil received 1,654, including 1,211 Germans, and Australia 816 emigrants, of whom 745 were Germans. Of the German emigrants, 98,510 left by way of Bremen, 84,425 by way of Hamburg, and 1,434 by way of Stettin, in all 184,369, of whom 106,648 were males and 77,721 females. In addition to this number, 26,178 German emigrants left by way of Antwerp, of whom 16,587 were males and 9,591 females. The largest number of emigrants came from the eastern provinces of Prussia, Pomerania furnishing 25,027; West Prussia, 23,045; and Posen, 21,315. Among other parts of the empire which furnished large numbers of emigrants are Hanover, 13,909; Schleswig-Holstein, 12,161; Mecklen-

burg-Schwerin, 3,731; and Oldenburg, 1,889. The total number of emigrants from Germany during the past decade was as follows:

YEAR.	Total emigrants.	German.
1871.....	75,912	73,816
1872.....	125,650	120,056
1873.....	103,698	96,641
1874.....	45,412	42,491
1875.....	30,773	27,884
1876.....	28,368	22,767
1877.....	21,964	18,240
1878.....	24,217	20,373
1879.....	33,327	30,808
1880.....	106,190	103,115
1881.....	210,547	206,189
Total .....	805,098	762,381

The report states, with regard to the condition of the emigrants, that they appear to belong to a much better class than in former years. In the latter part of the year large numbers of Hungarians and Russian Jews left the German ports.

It is a notable fact that the thinnest populated parts of Germany furnished the largest number of emigrants, notably, as stated above, West Prussia, Pomerania, Posen and Mecklenburg. The reason for this is to be found, not only in the extremely low wages paid in these provinces, but principally in the fact that it is almost an impossibility for the poorer inhabitants to secure their own home, and that they therefore naturally turn to the United States, where it is easier to attain that end, which for these people is the principal aim of life. The real estate in these provinces is entirely in the hands of large landed proprietors, and manufactures there are none, so that the laborers are compelled to submit to the conditions which the large proprietors can offer to them. The few small farmers are not able to compete with the great lords of the country on account of the absence of roads and markets for their produce; and, in order to avoid having their property sold for debt, they embrace the first opportunity that offers, to sell their property, and to seek a new home beyond the sea.

**GERMAN RAILROADS.** A strong movement has been on foot in Germany since 1876 to have the railroads throughout the empire become the property of the Imperial Government. The first step in that direction was taken by the Prussian Government, which in 1876 introduced a bill in the Diet providing for the sale of the Prussian railroads to the empire. In this bill stress was laid upon the long-needed reform of railway affairs in Prussia, and the dangers of further delay in attending to the matter were pointed out. The most remarkable passage in the reasons given for the urgency of the matter was the following: "In case the endeavors of the Prussian Government respecting the transference of the Prussian railway property to the empire should fail, by the opposition of some influential parties in the empire, there would be no doubt that Prussia herself would try with the greatest energy to

accomplish the task, and would have especially to consider, as the next step in the carrying out of her railway policy, the enlargement and consolidation of her own railway system. The consequence of this Prussian railway policy would then probably be that, by enlargement of the state railway system, and full development of the influence arising from the possession and administration of the railroads, the ascendancy of the interests of the Prussian lines would be felt far beyond the limits of Prussian territory." The bill was adopted by the Diet, but the necessary treaties were not concluded with the empire, as the opposition to the project was too great. The Prussian Government has, however, carried out what it called its next step in its railroad policy, the consolidation and enlargement of its own railroad system. On April 1, 1879, a special Ministry of Public Works was created, for the particular purpose of inaugurating a vigorous railroad policy. The negotiations, which had been already begun, and were now entered into by the new ministry, led, as early as June, to the purchase of the Berlin and Stettin, the Magdeburg and Halberstadt, and the Hanover and Altenbeken Railroads, and in August of the Cologne and Minden road. These purchases were ratified by the Diet in its next session, and were followed in 1880 by the purchase of several other roads, notably among them the Rhenish road, and the Berlin, Potsdam, and Magdeburg road, so that the total length of the Government roads in Prussia in 1880 was 6,910 miles. After these great purchases it seemed to be the opinion of the members of the Diet that a pause should be made in the process of changing private roads to Government roads; and although the Government has proposed the purchase of a number of roads during the past years, it has met with but little success. The feeling that the results of the purchases of 1880 should be awaited, was too manifest. The Government declares that even now the results are not only of the most satisfactory character, but surpass all expectations. It has met the complaints made by its opponents with the assertion that they were based on evils which were inseparable from a state of transition, such as the railroad system of the country was passing through at the present time, and which would disappear when the entire system had been permanently fixed. On the other hand, Herr Maybach, the Minister of Public Works, referred to expressions of encouragement which he had received from the business community. The year 1882 showed again a greater activity on the part of the Government in adding more private roads to the Government railway system, and the influence of Prussia on the entire system of the empire has now become so great that the question is beginning to be discussed whether the time has not come to accept a possible offer of Prussia to transfer its railroads to the empire. This seems to be the point aimed at by Prince Bis-

marck, and there can be no doubt that it would be of greater advantage to the small German states to have the railway system of Germany controlled by the Imperial Government than by Prussia, as it is now.

GERMANY, an empire in Europe, formed by the union of the German states, consummated on May 4, 1871, when the Constitution of the German Empire replaced the articles of confederation between the North German states and the treaties by which the Grand Duchies of Baden and Hesse and the Kingdoms of Bavaria and Württemberg entered the League during the Franco-Prussian War. This war, and the previous one with Austria, prepared the way for the re-establishment of the German Empire under the Prussian head, thus realizing the cherished aspirations of the German people. King Wilhelm I was proclaimed German Emperor from Versailles on the 18th of January, 1871, upon the successful termination of the war with France. He was born March 22, 1797, and ascended the Prussian throne on the death of his brother, January 2, 1861. On May 6th a male child was born to his eldest grandson, making the fourth living Hohenzollern in the direct line of succession to the two thrones. The heir-apparent, Friedrich Wilhelm, was born October 18, 1831.

The sovereign powers of the confederation of states forming the empire are invested in the Prussian crown and the Federal Council, but the concurrence of the Parliament, or Reichstag, elected by universal suffrage, is necessary to the exercise of certain functions. The popular assembly possesses, also, a limited right of control over the acts of the Government.

STATISTICS.—The area and population of the twenty-five states composing the German Empire, and of the Reichsland of Alsace-Lorraine, as returned at the last two census enumerations, were as follow:

STATES OF THE EMPIRE.	Area in square miles.	Population, Dec. 1, 1876.	Population, Dec. 1, 1880.
Prussia.....	187,066	25,742,404	27,279,111
Bavaria.....	29,292	5,022,390	5,284,778
Württemberg.....	7,675	1,881,505	1,971,118
Saxony.....	6,777	2,760,586	2,972,805
Baden.....	5,851	1,507,179	1,570,254
Mecklenburg-Schwerin.....	4,884	558,785	577,055
Hesse.....	2,866	884,218	986,840
Oldenburg.....	2,417	319,814	387,478
Brunswick.....	1,526	327,498	349,867
Saxe-Weimar.....	1,421	292,938	309,577
Mecklenburg-Strelitz.....	997	95,673	100,269
Saxe-Meiningen.....	983	194,494	207,075
Saxe-Coburg.....	869	213,585	232,592
Saxe-Altenburg.....	816	182,569	194,716
Waldeck.....	466	54,748	56,522
Lippe.....	445	112,452	120,246
Schwarzburg-Rudolstadt.....	840	76,676	80,296
Schwarzburg-Sondershausen.....	818	67,490	71,107
Reuss-Schleiz.....	297	92,375	101,830
Schaumburg-Lippe.....	212	88,193	95,874
Reuss-Greiz.....	148	46,965	50,782
Hamburg.....	143	388,618	458,869
Lübeck.....	127	56,912	63,571
Bremen.....	106	142,200	156,728
Alsace-Lorraine.....	5,580	1,581,804	1,666,670
Total.....	212,091	42,727,360	45,234,061

In 1816, at the end of the Napoleonic wars, Germany had a population of 23,103,211. In 1837 it was 30,010,711, showing an annual increase in the thirty years of nearly  $1\frac{1}{4}$  per cent. The increase between that date and 1858, when the population stood at 35,334,538, was little more than three fourths of one per cent per annum. In 1867 the total was 38,495,926, showing an increase of only five eighths per cent per annum. Between 1867 and 1871, in which period the great war with France occurred, the rate of increase was '58 per cent; but, in the period succeeding the war, between 1871 and 1875, it rose to 1.01 per cent. In the last census period, between 1875 and 1880, it was again about '58 per cent.

Of the total population of the empire, 62½ per cent belong to the Protestant confessions, 36 per cent are Catholics, 2 per cent are Christians of other creeds,  $1\frac{1}{4}$  per cent are Israelites, and 1 per cent of other beliefs. The number of Protestants and Catholics in the different states was as follows:

STATES.	Protestants.	Catholics.
Prussia.....	16,712,720	8,625,840
Bavaria.....	1,892,120	3,578,142
Saxony.....	2,674,905	73,848
Württemberg.....	1,296,650	567,375
Baden.....	517,561	958,916
Alsace-Lorraine.....	255,229	1,204,081
Hesse.....	602,850	251,172
Mecklenburg-Schwerin.....	548,741	2,255
Oldenburg.....	215,054	71,743
Anhalt.....	208,288	8,478
Other states.....	2,284,375	89,675
German empire.....	26,718,823	15,371,227

The movement of population in 1880 was reported as given in the table at the head of the following page.

The total number of vessels entering German ports in 1880 was 55,282, of 7,775,559 aggregate tonnage: 40,045, of 3,657,638 tons, carried the German flag; 46,130, of 7,095,522 tons, were with cargoes; 13,923, of 4,899,648 tons, were steamships; of which 7,807, of 1,935,882 tons, were German. The total number cleared was 55,021, of 7,763,087 aggregate tonnage: 39,569, of 3,633,628 tons, German ships; 39,097, of 5,475,721 tons, laden; 13,928, of 4,914,328 tons, steamers; of which 7,799, of 1,940,151 tons, were German.

The German merchant marine consisted at the beginning of 1881 of 4,660 vessels, of 1,181,525 aggregate tonnage; as against 4,777, of 1,171,286 tons, in 1880; 4,804, of 1,129,129 tons, in 1879; 4,805, of 1,117,935 tons, in 1878; and 4,809, of 1,103,650 tons, in 1877. The number of steam-vessels was 414, of 215,758 tons, having increased from 318, of 180,946 tons, in 1877. The crews of the 4,660 ships number 39,660 men. Of the total number of ships, 2,749, of 738,260 tons, among them 213 of the steamships, registering 160,556 tons, belong in North Sea ports; while 1,911 ships, of 443,265 tons, including 201 steamers, of 55,202 tons, ply the Baltic.

STATES.	Marriages.	Births.*	Deaths.*	Still-births.	Excess of births.
Prussia.....	208,456	1,071,778	785,705	42,827	386,068
Bavaria.....	34,958	209,724	159,499	7,010	50,225
Saxony.....	25,626	128,520	92,300	5,148	36,220
Württemberg.....	18,058	81,420	59,896	3,056	22,024
Baden.....	10,070	57,571	41,438	1,738	16,138
Alsace-Lorraine.....	9,826	67,888	41,609	1,867	10,279
Hesse.....	6,815	32,502	22,521	1,317	9,981
Other states.....	29,030	180,098	88,063	4,953	42,065
German Empire.....	387,842	1,764,096	1,241,126	67,921	522,970

The total value of imports of merchandise in 1880 was 2,835,600,000 marks, against 3,773,200,000 marks in 1879 (one mark = 23·8 cents); the value of merchandise exports, 3,046,100,000 marks, against 2,775,700,000 marks in 1879. There were 320,700,000 marks of cereals imported and 194,200,000 marks exported, against 687,700,000 marks imported and 194,200,000 marks exported in 1879; the imports of fermented liquors were only 39,900,000 marks, against 116,500,000 marks, the exports 54,800,000 marks, against 62,600,000 marks; the imports of colonial wares, 172,300,000 marks, against 230,300,000 marks, the exports 144,000,000, against 122,400,000 marks; the imports of tobacco were only 23,900,000, against 110,200,000 marks, the exports 3,700,000, against 3,200,000 marks; the imports of seeds, fruits, and vegetables were 110,700,000 marks, against 125,300,000, the exports 52,100,000 marks, against 77,700,000; the imports of meat, provisions, and live animals, 317,600,000 marks, against 357,000,000, the exports 196,400,000 marks, against 262,800,000. The total imports of raw materials were 910,500,000 marks, against 1,249,600,000 marks, the falling off being distributed over textile materials, hides and leather, wood, metals, fuel, and the other articles of the list; the exports of raw materials were 501,900,000 marks, against 685,800,000. The imports of manufactured articles were about the same in both years, being 495,000,000 marks, against 491,700,000 in 1879; but the exports of finished products increased from 971,900,000 marks in 1879 to 1,436,700,000 marks in 1880. The miscellaneous class of drugs, fats, chemicals, colors, etc., showed a like increase in the exports, which rose from 234,300,000 to 462,300,000 marks, and the imports from 404,900,000 to 445,000,000 marks. Specie imports amounted to 40,800,000 marks, and exports to 53,300,000, against 119,600,000 marks imported and 45,800,000 exported in 1879.

**ARMY AND NAVY.**—The Prussian system of universal military service was extended over the entire empire by the Constitution of April 16, 1871. Every German capable of bearing arms is obliged to serve seven years, three with the colors and four in the reserve, after which he is liable to service in the Landwehr for five years more. By the Landsturm Act, passed in 1875, all men capable of bearing arms who are not in the line, the reserve, or the Landwehr, are to be enrolled in the Landsturm, which is divided into two classes, the first class compris-

ing all able-bodied men under forty-two years of age, and the second class the remainder of the adult male population. The first class only has been organized. The German army on the peace footing comprises 161 regiments of infantry of three battalions each, besides 20 jäger or rifle battalions and 275 battalions in the Landwehr; 93 regiments, divided into 465 squadrons, of cavalry; 37 regiments, containing 89 divisions and 341 batteries, of field artillery; 14 regiments, divided into 31 battalions and 126 companies, of heavy artillery; 17 battalions, divided into 68 companies, of pioneers; and 18 battalions with 41 companies in the train. The peace effective of the army is as follows:

PEACE EFFECTIVE.	Officers.	Men.	Horses.	Guns.
Staff division.....	2,014	4	....	....
Infantry:				
Line.....	9,582	278,846	....	....
Jägers.....	424	11,120	....	....
Landwehr.....	848	4,763	....	....
Total.....	10,804	294,709	....	....

The Bavarian contingent, which has preserved a separate organization, although it stands under the absolute command of the Emperor like the rest of the army, numbers 2,214 officers and 50,224 men. The royal Saxon troops number 1,137 officers and 27,606 men; the Württemberg contingent, 773 officers and 18,815 men. The Prussian troops, in whose organization the contingents of the remaining states are entirely merged, number 14,004 officers and 330,629 men.

The strength of the army on the war footing, exclusive of the Landsturm and special bodies, is 35,427 officers, 1,456,677 rank and file, 312,731 horses, and 2,808 guns. They are divided for purposes of mobilization into the field troops, mustering 19,391 officers and 744,031 men; the depot troops, 4,796 officers and 296,614 men; and the garrison troops, 11,240 officers and 416,032 men. With the organization of the first class of the Landsturm reserve the war effective can be raised to nearly 2,000,-

\* The still-born are included in the returns of births and of deaths.

000 men. It is estimated that Germany can call into the field 2,500,000 armed men without calling out the last reserves. The empire is divided into seventeen military districts, each capable of mobilizing a complete corps. The guard regiments, recruited from Prussia and Alsace-Lorraine, are not attached to the territorial divisions.

In the remodeled system of fortifications there are 17 fortresses of the first class, with fortified camps, and 26 other fortresses, 10 of which are for coast-defense and 13 to guard the railroad approaches. The empire is divided into nine fortress districts: 1, Königsberg; 2, Dantsic; 3, Posen; 4, Berlin; 5, Mayence; 6, Metz; 7, Cologne; 8, Altona; 9, Munich. The fortresses of the first class, which serve as fortified camps, in the different districts, are the following: 1, Königsberg; 2, Dantsic and Thorn; 3, Posen and Neisse; 4, Küstrin, Magdeburg, and Spandau; 5, Mayence, Rastadt, Strasburg, and Ulm; 6, Metz; 7, Cologne and Metz; 8, Sonderburg-Duppel; 9, Ingolstadt. A wide circle of outer fortifications has been recently built around the fortresses of Strasburg and Metz. The forts at Thorn, Posen, Küstrin, and Mayence have also been enlarged. The forts for railroad protection and the districts in which they are situated are as follow: 1, Dirschau; 3, Glogau; 4, Königstein and Torgau; 6, Diedenhofen, Saarlouis, and Bitsch; 7, Düsseldorf and Wesel; 9, Garmersheim. The coast fortresses are: 1, Memel and Pillau; 2, Kolberg, Stralsund, and Schweinemunde; 8, Kiel, Travemünde, Elbe-mouth, Ems-mouth, Weser-mouth, Friedrichsort, and Wilhelmshaven. The remaining fortresses are: 1, Marienburg; 3, Glatz; 5, Neu-Breisach; 7, Ehrenbreitstein. A number of old fortresses have been abolished in the reconstruction of the system of defenses carried out since the last war.

The German navy consisted in 1882 of seven iron-clad frigates, five iron-clad corvettes, eleven iron-clad gunboats, with two more under construction, one monitor, fifty-eight other steamers, and four sailing-vessels. One additional iron-clad frigate and one iron-clad corvette, with six torpedo-boats, besides the fourteen now existing, will nearly complete the naval reform scheme adopted in 1873. Two of the torpedo-steamers of the German navy, the Zieten and the Ulan, are sea-going vessels of remarkable speed, calculated to be not less than twenty knots an hour; they are protected in their vulnerable parts with steel armor. The German navy is manned with 15,196 men and officered by one admiral, one major-general, one vice-admiral, five rear-admirals, thirty ship-captains, and fifty-five corvette-commanders. (See NAVIES OF EUROPE.)

**FINANCE.**—The revenues of the empire are derived from customs duties, the excise duties on malt, spirits, tobacco, etc., stamp-dues, the profits on the post and telegraphs, and certain other sources fixed by the Constitution, the

deficiency between the expenses and the receipts from these sources being made up by the matricular contributions, or quotas assessed on each state in proportion to its population. Bavaria, Würtemberg, and Baden receive the proceeds of the malt and liquor taxes, and Alsace-Lorraine applies the receipts from beer to its own administration, while Bavaria and Würtemberg maintain separate postal and telegraph establishments. In compensation these states must pay proportionately higher matricular quotas. The budget for 1880-'81 states the total revenue at 539,252,640 marks (1 mark = 23.8 cents), and the expenditure at the same amount. The revenue and expenditure for the year 1881-'82 are placed at 596,811,409 marks. The budget for 1882-'83, approved by the law of February 15th, states the total receipts as 610,632,707 marks. For the states forming the Zollverein the customs revenue is taken as 186,466,150 marks; the impost on beet-sugar as 47,421,460 marks; on salt, 36,709,570 marks; on tobacco, 11,029,240 marks; on spirits, 35,517,630 marks; and on malt, 15,111,170 marks, except in the states which levy the duties on the last two articles themselves. The imposts collected in the states not forming part of the Zollverein are taken as 6,843,060 marks, making the total revenue from customs and excise 339,098,280 marks. The gross receipts from the posts and telegraphs are given as 145,128,000 and the expenses 123,864,000 marks, making the net revenue 21,264,000 marks. The public railroads belonging to the empire are made to yield a net revenue of 12,686,400 marks out of 40,083,700 marks of total receipts. About 19,000,000 marks are derived from stamp-dues. The interest on the invalid fund is 30,129,567 marks, the interest on capital funds 3,062,953 marks; the surplus carried over from 1881-'82, 10,558,350 marks. A sum of not quite 50,000,000 marks, included in the receipts, comes from the funds and loans for the building of fortifications, railroads, and other extraordinary expenses. The matricular contributions amount to 103,684,369 marks, 52,249,733 marks being assessed upon Prussia; 20,278,807 marks upon Bavaria; 5,598,007 marks upon Saxony; 7,670,015 marks upon Würtemberg; 5,359,876 marks upon Baden; and 3,838,381 marks upon Alsace-Lorraine. The expenditures are estimated at 610,737,707 marks, divided into 531,829,228 marks of permanent and 78,908,479 of special expenses. The expenses are divided among the different departments as follow: Reichstag, 407,670 marks; Chancellor's office, 125,770 marks; foreign affairs and consulates, 6,676,775 marks permanent, and 183,800 marks special; Interior Department, permanent, 2,775,422 marks—special, 9,240,072 marks; post and telegraphs, special, 3,053,000 marks; printing-office, special, 15,000 marks; army, permanent, 242,493,325 marks—special, 28,033,931 marks; navy, permanent, 27,565,856 marks—special, 8,728,800 marks; administration of justice, 1,707,667

marks permanent, and 200,000 marks special; treasury, 86,317,566 marks permanent, and 3,595,825 marks special; office of railways, 303,150 marks; debt of the empire, 13,702,500 marks permanent, and 227,300 marks special; audit of accounts, 528,673 marks; administration of railways, 4,400,000 marks special; pensions, military, 18,266,829 marks; naval, 449,733 marks; civil, 378,725 marks; together, 19,095,287 marks; on account of the last war, 18,283 marks special; invalid fund, 30,129,567 marks permanent; deficit of 1880-'81, 12,062,468 marks special; capital investments, 9,150,000 marks special.

The debts of the empire, contracted since 1877, amounted on October 1, 1881, to 298,951,500 marks, to which 29,674,405 marks were added by the financial law of February 15, 1882. Besides the funded debt, all of which bears interest at four per cent, there were treasury notes outstanding on April 1st to the amount of 152,164,210. The empire possesses various funds greatly exceeding its obligations in amount. At the end of November, 1881, the invalid fund amounted to 534,428,028 marks, besides 459,400 Frankfort florins in securities, and 2,609,350 in silver; the fund for the construction of fortifications, to 51,103,709 marks, besides securities to the amount of £404,950 sterling, and silver to the amount of 547,851 marks; the fund for building a Parliament House, to 29,603,350 marks; and the war treasure to 120,000,000 marks.

**FOREIGN RELATIONS.**—The relations of Germany with Russia have been strained since the Berlin Treaty of 1878. Prince Gortchakoff made bitter complaints of the ingratitude of Germany in depriving him of the fruits of the Turkish victories after the moral support extended to the Germans by Russia in the French War. The antagonisms arising from the rival interests and jealousies of race of the Russians and Germans, whose fields of activity are contiguous from the Baltic to the Mediterranean, constitute a perpetual danger to the peace between the two nations. The entire aim of Prince Bismarck, the supreme director of foreign affairs in Germany, has been, since the consolidation of the empire, to prevent the formation of a Russo-French alliance against Germany. On this account he has repressed the ambition for one of the richest provinces of Russia, and for German extension southward. For the same object the Austro-German alliance was concluded in October, 1879. The treaty was to continue until October 15, 1884, and arrangements have already been made for its renewal. The visit of the Russian Minister of Foreign Affairs, De Giers, to Berlin and Varzin, was regarded as a sign of peace, as the extravagant utterances of General Skobelev and others, in the beginning of the year, were considered to be fraught with danger; but Prince Bismarck places his hopes only in the powerful union of interests which he is trying to bring about in Central Europe, and in the

continuation of peaceful relations between nations throughout the Continent.

**LEGISLATION.**—The first session of the fourth legislative period of the Reichstag opened ominously on the 17th of November, after a bitter electoral struggle. The Liberal factions, which had defeated the Government projects of social reform, returned victorious, with the indorsement of the country. Parliament was treated as though it were in disgrace. Instead of being opened by the Emperor, as usual, the Chancellor read the imperial address, in which the schemes of accident insurance and annuities for aged laborers, with state aid, were coupled with the obnoxious demand for a tobacco monopoly.

At the final elections of 1881, out of 9,090,381 possible votes—the competent electors forming 20·1 per cent of the population of the empire, 62·6 per cent of which belongs to the Evangelical Lutherans, and 35·9 to the Roman Catholics—5,301,784, or 58·6 per cent, were cast. Of the total number of legal votes 21·7 per cent were given to candidates of the Clerical, or Center, party; 15·2 per cent to German, or pure, Conservatives; 13·6 per cent to Progressists; 13·1 per cent to National Liberals; 8·8 per cent to candidates of the Liberal Union; 7·4 per cent to the Imperialists; 6·3 per cent to Social Democrats; 3·7 per cent to the Poles; 2·9 per cent to the Alsatians; 2·7 per cent to unattached Liberals; 2·3 per cent to the People's party; 1·8 per cent to Guelphs and Autonomists; 0·3 per cent to Danes. The elected candidates received 64·5 per cent of the total votes cast. The Parliament was divided into 76 Conservatives, comprising 49 German Conservatives, sitting on the Extreme Right, and 27 Free Conservatives, or German Imperialists, who formed the left wing of the Right Center; 107 in the Center, composed of the Clericals, with the Guelphs and the National Liberals or Benningsen party; 43 Secessionists, or Liberal Unionists, the party of Von Stauffenberg, Forckenbeck, Lasker, and Bamberger, devoted to free trade; 47 Progressists, led by Richter and Hänel; 68 Democrats of both shades, the Volkspartei, or Popularists, and the Social Democrats; 12 forming the Extreme Left; 15 Alsace-Lorrainers, 18 Poles, and 2 Danes, constituting the Particularists, who are opposed to the empire as now constituted; and 8 Savages, or Independents.

Bismarck's hardy determination to press the measures which he declared "postponed, not defeated," by the adverse votes of the Reichstag, after they had been expressly condemned at the polls, was understood, when the royal prerogative was suddenly intruded into the controversy.

The social reforms were put forward this time with particular emphasis as the Emperor's policy, as if to lure the Liberals into a constitutional controversy. Indignant at Bismarck's disregard of parliamentary usage, in urging his economical solecisms upon a majority which

had rejected them, they blamed him bitterly for shirking his responsibility, and shielding himself behind the name of the Emperor. On the 4th of January a manifesto was issued by the King, which dispelled the illusion of the Constitutionalists, that they were already living in a state in which the King reigns but does not rule. It declared that the Prussian Constitution (of 1850) transferred a portion of the law-giving powers to the Legislature, but left the King the full power of initiation and approval. The policy of the Government is the King's policy, although it must be represented by his ministers; his royal acts are his own, although the countersigning minister becomes responsible for them to the laws and the country. They express his will and pleasure, and should not be spoken of as emanating from the ministry, but from the King himself.

The Constitution of Prussia, the rescript declares, is the expression of the monarchical tradition of this country, whose development is based on the living and actual relations of its kings to the people. These relations, moreover, do not admit of being transferred to the ministers appointed by the King, for they attach to the person of the King. Their preservation, too, is a political necessity for Prussia. It is, therefore, my will that both in Prussia and in the legislative bodies of the empire, there may be no doubt left as to my own constitutional right, and that of my successors, to personally conduct the policy of my Government; and that the theory shall always be gainsaid that the inviolability of the King, which has always existed in Prussia, or the necessity of a responsible counter-signature of my government acts, deprives them of the character of royal and independent decisions.

In a passionate address in the Reichstag, Prince Bismarck said that the minister is a mere stop-gap, according to the Prussian Constitution, however ill that may accord with constitutional legends borrowed from other countries. It accords with Prussian traditions, for the kings of Prussia have always construed their duties as rulers seriously, in the spirit of Frederick the Great, who declared that he was the first servant of the Prussian state.

We know how our present ruler lives, and occupies his time from morning till night. It makes itself felt that with us in Prussia, within the Cabinet, the King commands, and the ministers, as long as they think they can support the responsibility, obey. If they can take the responsibility no longer, a change of ministers is not a difficult matter. We have an abundant variety of politicians of every sort in stock; and the King, unless he adopts some very eccentric policy, will easily find ministers to assume the responsibility for what his present ones may decline to put their names to. Nothing eccentric, however, is required of us; but in the deep and steady grooves in which the policy of Prussia in the German Empire is laid, his Majesty the King decides on the principles of the course to be taken; he decides how the Prussian representatives in the Federal Council are accordingly to be instructed; he decides that drafts, made accordingly, shall be laid before the Diet and the Reichstag; decides according to his own convictions, and the elaboration, the formal part of the matter, is the business of the ministers. The ministers may hold different opinions from his, and then a compromise is made. Constitutional government is made up of compromises; and a king who does not wish to dismiss a minister outright will make some concessions to him

which he would prefer not to make. Still oftener it happens that the ministers can not obtain the agreement of the King to a work or a document which they think right. Then the minister must make up his mind whether he shall drop the matter, or make a Cabinet question of it, or resign, or whether it would be better for the country and the service to make concessions to the royal will. The royal will it is which alone decides. The actual minister-president in Prussia is his Majesty the King. I can give no directions to my colleagues. I can only make requests, and write letters to them, which do not always convince. That is very exhausting, and on that account I do not always do it; but when I think that a thing ought to be done, and I can not carry it through, I apply to the actual chief of the Cabinet, the King. If I find no accord there, I give the matter up. If I do find it, then a royal command is given that it shall be done so and so, and it is done, or else there follows a Cabinet crisis, which is quietly got through with.

The rescript, besides the plain legal definition of the place of the King in the Constitution, which the theoretical subtleties of Liberal politicians had obscured, contained vague and somewhat startling warnings to officials not to oppose Government candidates at elections. As explained by Bismarck, the holders of political offices were declared liable to the forfeiture of their places under the disciplinary law, if they electioneered for the Opposition by spreading misrepresentations of the Government, or by exercising the influence or patronage of their office; and non-political officials, as well as political, were expected to feel restrained by their oath of office from engaging in active opposition at elections to the policy approved by the Emperor, though not to forego the liberty of ballot secured by the Constitution.

The Government was not ready to present its revised projects for accident insurance and the relief of infirm workmen. The clericals proffered their support for a scheme of labor reform which would protect the interests of religion and the family by restricting Sunday and female labor. In the academical discussions, Bismarck foreshadowed only moderate measures, but pleaded for the principle with unwonted power and passion. The Liberals were held up to scorn as a party of pure negation, able only to carp and criticise, who neither now, nor when they were in power, proposed any relief for the poor. The cause of labor reform was declared to be dear to the Emperor's heart. The King of Prussia was by tradition peculiarly the king of "the poor man." The "Manchester men" who opposed the reforms showed themselves heartless to the sufferings of the poor. The Government was undecided as to the forms which the measures of "practical Christianity" ought to take. Parliament had denied it the assistance of an Economic Council. Bismarck had changed his opinion regarding the administration of accident insurance, which he now thought should be placed on a corporative basis instead of under state management. Corporate societies of the laborers in the different trades might not only be intrusted with the control of the

proposed funds for accident insurance and the support of the superannuated, but could help in working out regulations to govern the length of the hours of labor, the employment of women, and Sunday labor, which would be better than the establishment of a normal working-day and general prohibitive laws. Factory inspection likewise would be more judiciously conducted under the supervision of such societies. The cost of securing shorter hours of labor and of the other contemplated improvements in the condition of the toilers would seem to be more than the industries could sustain, and would necessitate the extension of state aid. The Government requested counsel and instruction in the elaboration of the projects for realizing the desire of the Emperor, that "the defenseless in the state should gradually learn by practical experience that Government is not entirely forgetful of them, except when it needs money or calls upon them to bear arms, but that it thinks also of protecting and sustaining them, so that with their feeble powers they may not be trampled down in the great highway of life."

The session was not a barren one, notwithstanding the bitter conflict which was waged on high political and constitutional questions. The Government achieved a moral victory. Even the Liberals were caught in the socialistic current. The Liberal factions submitted conjointly an employers' liability bill which was intended to be stringent enough to remove the necessity for accident insurance. They did not even refuse a measure for the collection of statistics of trades and callings on which to base the social legislation of the "new era"; although they again struck the appropriation for the Economical Council out of the budget.

The resolution of Dr. Windthorst for the repeal of the law of 1874, attaching penalties to the unauthorized exercise of ecclesiastical offices, gave the opportunity for some shrewd campaigning on the part of the Liberals, who hastened to announce their willingness to modify the May laws in those portions which had led to religious scandals and privations, in order to thwart the prospective alliance between Bismarck and the Clericals. A large section voted for the resolution, which was carried by a two-thirds majority, disclaiming the authorship of the law, and insinuating that the most grievous of the Falk laws were forged as weapons by Bismarck for his unscrupulous methods of political warfare. They still affirmed, without defining, the general principles of the May laws, but declared themselves in favor of a truce in the *Kulturkampf*, although believing a permanent peace in the perpetual conflict between the state and the Roman hierarchy to be impossible. This particular law was used in the pursuit of the two bishops and in a score or so of other instances, but it had long been a dead letter. Its exercise was made discretionary with the Government by a parliamentary resolve in 1880.

A decided victory for the Chancellor's policy was gained by the passage of the measure for incorporating the city of Hamburg in the Customs Union. The policy of the absorption of the two Hanse towns has met with strong opposition on the part of the free-trade elements in the Reichstag, and intense reluctance in the cities themselves. According to the Constitution of the empire, the Hanse towns, Bremen and Hamburg, are to remain free ports until they petition to be taken into the Zollverein. This petition was wrung from the municipality of Hamburg by threats and promises. In fulfillment of the compact finally extorted by the extraordinary "pressure" of the Government, the Reichstag voted forty million marks as an imperial contribution to the expenses of the inclusion. The right of free entry is limited to a new quarter, to be built on the left bank of the Elbe. No one is allowed to reside in the limited free port, nor can it be connected with the rest of the city by bridges. In time, for the separation of the imports traffic of the free port from that of the Customs Union, in order to simplify the customs regulations, a canal is to be dug along the left side of the river which will cost from fifty to sixty million marks. The merchants of Hamburg would not have given way thus far to the importunities with which the old Free City has been assailed for half a century, to join its economical fortunes with the rest of Germany, if it had not felt that its hope lies more in the growing export trade of Germany, than in its own manufactures and maritime trade in the products of other lands, and that even its present commerce, which is seriously threatened by the competition of other cities, particularly of Antwerp, can be better preserved with the subventions and other favors expected from the Government and the co-operation of the German manufacturers, which are necessary for the transformation of the city and harbor to meet modern requirements. Yet they would not have acquiesced so soon if they had not felt the weight of the Government's displeasure, and were not moved by the threat of Bismarck to erect a rival Hamburg just outside the gates. In the limited free port they can still make up cargoes of foreign goods and carry on the great industries of rectifying foreign spirits, manufacturing foreign tobacco, etc. Among the various "ethical" advantages which are expected from the harmonizing of economic interests, the principal one is that the Hamburg commission-merchants will apply their talents more to selling German goods at home and abroad, relieving the manufacturers of the task of finding a market, and less to marketing foreign products in Germany.\*

\* The original foundation of Hamburg's prosperity was the northern trade, with Scandinavia, Finland, and the Russian North Sea provinces—a trade which it still possesses. But it acquired its important position in the world's commerce in the beginning of this century, after the opening of the South American ports, through the liberation of the Spanish colonies. The Hamburg ship-owners were obliged to carry English goods, for there were no German wares to export

Chief among the other positive results of the session was the agreement to the erection of a monumental Parliament building in Berlin. Among the treaties which were ratified—purely a formal act—was one affecting consular relations with Greece, one supplementary to the Danubian navigation convention, and an international convention regarding precautions for the extinction of the phylloxera.\*

The budget was voted with but slight alterations. It showed a surplus of between 18,000,000 and 19,000,000 marks. Eugen Richter carried a resolve in the last hours of the session crediting something over 10,000,000 marks of the surplus of 1881-'82 to the next year's budget. The Federal Council accepted the measure, which relieved Prussia from financial difficulty by reducing her matricular contributions. This shrewd manœuvre of the Liberal leader confused the plans of the Government by rendering unnecessary a loan of nearly 5,000,000 marks which had already been proposed in the Prussian Diet. The session was closed January 30th.

Although the Chancellor had spoken of the necessity of an extra session in the spring, when the Government projects for social reform would be ready, there was great surprise, since the regular session had passed off smoothly. The prospects for the Chancellor's economical plans had not improved, when the Emperor called the Reichstag together again on the 27th of April. The opening address stated, as the objects of the session, the initiation of social reforms, and the continuation of tax reforms. The first measure proposed was the laborers' accident-insurance bill. The change in the scheme by which the administration is to be intrusted to corporations and trade associations instead of to state officials was expected to win the approval of the Liberals and the Ultramontanes for the project, which was designed to secure the co-operation of the industrial associations and of the working-men's societies in preventing accidents, to localize the administration as much as possible, and on the other hand to distribute the financial burdens over the broadest possible field. The passage of the measure would necessitate a change in the existing poor-laws, and would entail the extension of the sick benefit provisions. A change in the factory laws was also announced in the direction of more efficient

regulations for public safety, order, and morality. The social projects were referred to commissions, in whose hands they remained during the autumn sittings. They will probably engross the attention of the Parliament in 1883, and give to the session its character.

The extra session was really called for the purpose of settling the question of a tobacco monopoly. In the royal address at the opening of the regular session the abolition of the burdensome direct taxes of the German states, with the local taxes which add to the burden, was described as an urgently needed reform in the tax system. This object could only be accomplished by raising the indirect taxes of the empire, so that the Federal Government could do without the matricular contributions, or pay over to the single states contributions which will enable them to reduce the state and municipal taxes. Tobacco was designated as the most suitable article of consumption with which to commence the readjustment. All parties were agreed as to the propriety of increasing the tobacco-tax, but, regarding the form of it, there were various opinions. The Federal Council approved the form of a government monopoly, and would only consider other projects when the impossibility of obtaining the agreement of the representative Assembly became manifest. Bismarck has pursued none of his other legislative projects with such energy and tenacity. A ceaseless agitation had been kept up by his organs of the press. The Strasburg public tobacco factory had been continued by the Government, and agencies were established in all large cities of Germany; but the people showed such repugnance to see the royal arms on the packages that the shopkeepers were ruined and the factory left without business. The Prussian Economical Council, selected by Bismarck himself, refused to approve the unpopular measure. The failure to secure an alliance with the Clericals, even at the price of the revocation of the May laws, sealed the fate of the measure. When Parliament refused to pass the monopoly bill in the regular session the extra session was called in order to make a last effort to secure the financial independence which the tobacco monopoly would give to the Government. The committee of the Reichstag reported against the monopoly, and when Bismarck arose and went over the arguments again in two long speeches, it was only, as he said, to accompany the monopoly project to the grave. The vote, taken June 7th, was 276 against, to 43 for the bill. Certain vexatious tariff regulations were repealed. Protective duties were demanded on such articles as honey, asbestos, and slate; but both free-traders and protectionists had agreed to a truce so as to let the tariff have a "fair trial." The session ended on June 16th with a simple adjournment, so that the unfinished business might be taken up in the regular session, which opened November 30th.

except linen. The intimate commercial relations which sprang up between the Hamburgers and British manufacturers, the employment of their capital in English enterprises, their preference for everything English, were a thorn in the side of the struggling German industrial interests which sprang up. The jealousies are not yet extinct, and no cordial relations exist between the Hamburg middle-men and the German manufacturers, whose stock complaint is that the exporters will not pay living prices, and that they are obliged to export on their own account; while the shipping-merchants aver that, when they give an order for some transatlantic place to a manufacturer, he will forestall them by sending goods there himself, and spoil the trade by competing with his own manufactures.

\* The disease has existed for some time on the Aar, where the vines originally affected have died out, and the parasite has reappeared in new centers of infection.

The deputies were again confronted with the rejected proposal of biennial budgets immediately upon reassembling. The accounts which were laid before the Parliament, approved by the Federal Council, contained the civil list for 1883-'84, besides that for 1882-'83. The budget debates in Germany are always confined to the business details, so the second appropriation was simply struck out, the Government mustering again only 43 Conservative supporters.

PRUSSIA.—The Prussian Ministry was composed in 1882 as follows: President, Prince Otto von Bismarck, Minister of Foreign Affairs and of Commerce; Vice-President, Von Puttkamer, Minister of the Interior; Minister of War, Von Kameke; of Public Works, Maybach; of Agriculture, Domains, and Forests, Dr. Lucius; of Justice, Dr. Friedberg; without portfolio, Von Bötticher; of Ecclesiastical Affairs, Von Gossler; of Finance, Scholz. The latter succeeded Bitter, who was dismissed on account of a difference which arose between him and his chief with reference to the projected reform of taxation. He persisted in the idea, which Bismarck had abandoned, of extending the reform to the field of direct tolls and fees, while separating the capitalized or funded revenues from the unfunded.

The Prussian budget never shows the fact of a surplus or a deficit, as the accounts are made to balance exactly, but in nearly every year of late there has been an excess of receipts over expenditures. The expenses for each year since the formation of the empire down to 1880 were as follow (1 mark = 23·8 cents): 561,176,820 marks in 1872; 630,130,400 marks in 1873; 695,097,700 marks in 1874; 694,484,900 marks in 1875; 808,072,700 marks in 1877 (fifteen months, owing to the change of the date of closing the fiscal accounts from December 31st to March 31st); 657,520,344 marks in 1878; 713,857,764 marks in 1879; 711,500,758 marks in 1880. The principal sources of revenue are direct taxes, the Government railways, customs and excise duties, and the contributions of the individual states. The income from the railroads, mines, and other state enterprises has largely increased in recent years, and promises to exceed the revenues from taxation. The budget for 1882-'83 shows gross receipts of 934,589,917 marks, and, deducting the costs of administration and working expenses, net receipts of 419,755,032 marks. The public debt amounted in 1882 to 1,975,687,248 marks, of which 1,357,897,238 marks were railroad loans; the provincial debts to 83,994,182 marks, of which 64,899,171 marks were for railroads; making a total public debt of 2,059,681,430 marks. The sinking-fund and interest charges for the year amounted to 109,489,348 marks.

Political action in Prussia determines, in a great measure, the political development of the empire. Prince Bismarck, exercising the initiative in both Governments, often takes the measures which he would carry for the empire

to the Prussian Legislature, or goes to the Reichstag with plans which he entertains for Prussia, when the prospect of carrying them directly is unfavorable. He sought in vain in 1882 to obtain recognition in the Prussian Landtag for the reform projects which he endeavored to carry out in the empire. The Catholic question, which was first broached in the Reichstag, belongs properly to Prussia, and must be settled in that arena. The Clericals were not disposed to enter into an alliance with Bismarck to enable him to strengthen the central power in the empire, and the ministerial rights and the royal prerogative in Prussia, unless their demands were fulfilled and made secure for the future. They saw a better prospect of regaining the rights of the Church through the parliamentary institutions which Bismarck wished to emasculate with their aid, than of bringing him to Canossa. All that he could be expected to give they saw would have to come in order to put an end to public disorders. The friendly attitude of the Liberals in the Reichstag encouraged them in their position.

The Prussian Landtag was opened January 14th with an address from the throne, read by the Vice-President of the ministry, von Puttkamer, which dwelt upon the favorable financial position of the monarchy and announced a reduction of taxes. At the same time, as in the preceding year, a new loan was proposed, this time for 5,000,000 marks. The nationalization of several private railroads and the construction of new lines was proposed, as well as a canal connecting the Rhine and Ruhr system with the Ems and the North Sea. The political schemes of the Chancellor occupied the first place in the programme by the renewed proposal of the bill providing for the application of any sums paid over by the Government of the empire as the proceeds of new or augmented taxes to the reduction of direct taxes and local dues. The lightening of the burden of the national schools by the abolition of school fees, and the increase of official salaries, were also designated as objects for the application of the prospective revenues. The Catholic question was met by a proposal to simply extend the law of 1880 beyond January 1st. This made the execution of some of the most objectionable of the Falk laws discretionary with the Government. The exercise of these discretionary powers had, in the language of the address, enabled the Government to restore to several Catholic dioceses a regular administration, and to relieve their pressing necessities in the matter of the cure of souls, and also to extend and facilitate the activity of the societies for tending the sick. "The friendly relations with the present head of the Catholic Church place us in a position," it was stated, "to resume diplomatic intercourse with the Roman Curia, which was required for the discharge of public business." The session commenced with favorable prospects for the Clericals and their

ultra-Conservative allies, who were warned by the gains of the Progressive and Liberal parties in the election of 1881 to secure the legislation they desired before another session. They were indignant at the proposal of Bismarck to continue the arbitrary powers granted him respecting the exercise of the May laws instead of repealing the unbearable statutes at once. Von Schlözer returned from the post of ambassador at Washington to take the embassy at the Papal Court, whither he departed on the 31st of January to win the assent of the Pope to the discretionary law. The provision for the support of the new embassy, as well as the other items of the budget, passed through without friction. The proposal for the extension of the discretionary exercise of the May laws was killed in committee. Windthorst moved a bill providing for the unrestricted dispensation of the sacraments and reading of mass. The successor to Puttkamer in the Ministry of Worship, Von Gossler, was not prepared to accept, but unwilling to oppose, the motion of the Clerical leader. He accordingly arranged with the Clerical party, and brought in as a revised form of the measure rejected by the committee, a bill which went almost as far as Windthorst's, and moreover provided for the restoration of the deposed bishops. It was passed over the votes of the Liberals, and signed by the King May 31st. After its enactment Bishop Herzog, of Breslau, took a bold stand on the question of mixed marriages, and the ecclesiastical authorities elsewhere showed a disposition to assert the old constitutional rights of the Church. This attitude prompted the ministry to postpone the recall of the recalcitrant bishops.\*

\* The modern conflict between church and state in Germany began with the Cologne difficulty regarding mixed marriages and the religious instruction of the children. The Curia had officially ignored the regulations introduced in Prussia in 1808; but, when these were extended over the newly-acquired western provinces in 1826, local difficulties arose. The Prussian monarchy, in return for having made the church a state establishment, again looked to Rome for the acceptance of the regulations. Leo XII died before Bunsen could obtain from him the desired concession. Pius VIII sent a brief which recognized mixed marriages, but was not satisfactory with regard to the religious training of the children. Gregory XVI asserted the rights of the Church more vigorously than his predecessors, commencing the campaign in Hanover. Yet he reissued this brief, which had been rejected by the Prussian Government, after making formal alterations. A convention was concluded with the bishops; but difficulties soon occurred, and representations were received from the Pope accusing the Prussian Government of evading their agreement and oppressing the Church. The hostility of the Archbishop of Cologne, and the quiescence of some of the other bishops to the Government, heightened the tension. There was danger of the Rhenish province being taken away and incorporated in Belgium, on account of the religious troubles. In 1887 the archbishop was imprisoned. In the Papal allocution which was called out by this act the chasm between the Church and the Government was laid bare. About the same time occurred an altercation with the Archbishop of Gnesen and Posen on the same subject of mixed marriages, which led to his imprisonment. In 1839 Arnould was chosen Bishop of Treves, without the approval of the Government, and therefore unusual. Diplomatic intercourse with the Curia almost ceased. On the accession of Friedrich Wilhelm IV an accommodation was achieved, after a year or two of negotiation. The Government had to concede every principle in order to re-establish peace and order, and to keep the determined Archbishop Droste, who was their own particular choice originally, away

From a petty revolt of the Progressists against the "reptile fund" the National Liberals held back. Action on the proposition to allow the Guelph fund to accumulate for the benefit of the mediatized royal house of Hanover was postponed on the motion of Von Benningsen, leader of the remnant of Bismarck's old party and Hanoverian deputy, who hinted that the Duke of Cumberland might before long recognize the empire, and with propriety claim the indemnity awarded to his family.\*

The bill providing for the abolition of the four lower grades of the income-tax and of school-fees, the subvention of municipalities, and the improvement of the salaries of civil servants, made contingent upon the adoption of the tobacco monopoly, was intended to meet the objection that the Reichstag was ignorant of the manner in which the revenues from the monopoly would be used. The bill was rejected on the second reading by every vote except the Government Conservatives. The nationalization of the railroads was approved. Except the new ecclesiastical law, this was the only result of the session, which closed May 11th.

The Liberal parties were disappointed in

from Cologne. The bishops were given powers which they had not possessed before; while the Government *placet* was to be construed as only the right of approval, not the right to nominate candidates to vacant sees, and direct communications were allowed between the Prussian bishops and the Curia. According to the new understanding, the hierarchy was to supervise the theological studies at Bonn and in the Cologne Seminary, and could proceed at will against the condemned Hermesian neology. The bishops were accorded full authority over the discipline of the clergy, and discretion to permit or refuse the celebration of mixed marriages. The result of the long conflict was therefore the abandonment of the claims of the state, a result which was embodied in the Prussian Constitution of 1850. In the contest against the Church, which was commenced in 1870, and was apparently triumphant in the enactment of the Falk laws, it was not merely prescriptive rights, fortified by the sentiment of the affected population, but plain provisions of the Constitution which were violated.

\* The fund was created by an act of February, 1868, in fulfillment of an agreement between King William and the de-throned King George, by which the latter was to receive the indemnity of 16,000,000 thalers for the loss of his sovereign rights, the capital to be retained in trust by the Prussian Government, and the interest to be paid in perpetuity to the heirs of the Brunswick-Lüneburg family. Count Bismarck was obliged to use all his powers of persuasion to overcome the opposition among the Liberals to the grant, who objected not only on account of the magnitude of the sum, but because the deposed King had not formally abdicated. By entering into the agreement, which was brought about through the mediation of the British Government, Bismarck argued that the exiled monarch had "in honor" renounced his claim to his dominions. Yet a few days after the vote was granted, the blind King made a public speech in which his royal rights were vehemently asserted. The Government promptly impounded the indemnity fund, which proceeding was approved by the Diet. The problem of what to do with the accruing interest was finally solved by placing it at the disposal of the Government as a secret-service fund, with the understanding that it was to be used in frustrating the intrigues of the Guelph faction. "There is nothing of the spy in me," said Bismarck; "but I think we deserve thanks if we follow evil reptiles into their hiding-places, to watch what they are doing." Hence the fund, which amounts to about 1,800,000 marks annually, came to be known as the "reptile fund." These moneys are supposed to have been used latterly in entertaining the semi-official organs, called sneeringly "of-ficious," which were in derision named the "reptile press." These mysterious journals have been very serviceable in working public opinion, and feeling the way for the Chancellor's designs, and are a stumbling-block to his political opponents.

their expectations by the result of the new elections to the House of Deputies on the 19th and 26th of October. The Progressists lost many seats to the Conservatives, while they gained almost as many from the moderate Liberals. The new Landtag was opened in person by the King on November 14th. The speech urged that, while the other features of the tax reform were awaiting the development of more enlightened opinions in the legislative assemblies, the relief of the poorer classes from the income-tax should be proceeded with immediately. The collection of this tax was stated to necessitate frequent legal executions and entail great distress. To supply the loss of revenue from the abolition of the four lowest grades of the class-tax, the imposition of license-taxes for the sale of beer, wine, spirits, and tobacco, was proposed. The Landtag showed little inclination to accept this new project of the Government, its opponents proposing instead the readjustment of the income-tax.

**BAVARIA.**—The liberal provisions of the Bavarian Constitution regarding change of domicile were not superseded upon the entrance into the empire. The monarchy retains also its post-office and telegraphs, and the separate organization of its army. The President of the Ministry is Dr. von Lutz. The ministry was retained by the King, although the Ultramontane majority in the Chamber in 1882 sought to displace it. Von Lutz showed a willingness to make some concessions to the majority, but held firmly to the interpretation of the ecclesiastical provisions in the organic law, which, since the *Kulturkampf*, has been made to conform to the construction put upon the analogous articles in the Prussian Constitution. The financial statement for the budget period of 1882 and 1883 shows 228,705,333 marks of gross receipts, and 137,718,537 of net receipts. The public debt, on the 1st of January, amounted to 1,341,078,131 marks. The Chamber of Deputies reduced the obligatory school period from seven to six years.

**SAXONY.**—The President of the Ministry is General von Fabrice. The Chambers celebrated on the 1st of September the fiftieth anniversary of the Constitution. The budget for 1882-'83 fixes the revenue and expenditure at 67,767,236 marks. Nearly two thirds of the receipts are from railroads, forests, etc. The debt stood, on January 1st, at 673,445,475 marks.

**WÜRTTEMBERG.**—The President of the Ministry is Dr. von Mittnacht. Elections to the Landtag took place on the 20th of December, in which the Conservative-National party of the ministry obtained a decisive victory over their opponents, the Democratic Volkspartei. The National-Liberal party was merged with the Conservative upon the entrance of its leader, Von Hölder, into the ministry in October, 1881. The budget for 1882-'83 fixes the receipts at 52,303,615 marks.

**ALSACE-LOREINE.**—This province of the

empire is administered under the immediate direction of the General Government. In virtue of the law of July 4, 1879, a lieutenant of the Emperor is placed over it, the administration of which is directed by a ministry, presided over by a secretary of state. The conciliatory intentions avowed since the appointment of Baron Manteuffel as Lieutenant-Governor have not diminished the opposition of the protesting party in the Reichsland. A bill which was introduced in the extra session of the Reichstag, to allow the use of French in deliberative bodies under special circumstances, was defeated in the November session through the influence of the Government, and by the new law the deliberations of the provincial committee must be public and in the German language. The budget for 1882-'83 places the total expenses at 46,830,713 marks. The revenues are derived from imposts on wine, beer, etc., the public forests, and to a less extent than in other states from land and other direct taxes. The gross receipts of the tobacco monopoly are stated at 5,688,000 marks, and the expenses at 4,631,562 marks.

**GREAT BRITAIN AND IRELAND,** a constitutional monarchy of Western Europe. The supreme legislative power resides in Parliament, which must be convoked annually. The prerogative of the crown, which the resistance of the feudal barons prevented from becoming as absolute as in Continental countries, was greatly curtailed in the conflicts with the princes of the Stuart dynasty. During the last three reigns little has remained of the royal authority but the forms. During the same period the hereditary senate of the Peers has been driven to practically relinquish its share of the legislative authority, while the basis of representation in the House of Commons, or elective assembly, has been considerably extended. By the Reform Bill of 1867-'68 the franchise was conferred upon all rate-payers and occupants of real estate of £10 annual value in the towns and cities, and £12 in the country. The executive authority and the initiative in legislation are virtually concentrated in the hands of the Prime Minister, who is appointed as the leader of the dominant party, and who selects his associates to preside over the different departments and to prepare with him the schemes of legislation to be brought forward in Parliament. The Queen, Victoria I, was born May 24, 1819, and succeeded her uncle, William IV, June 20, 1837. The heir-apparent is Albert Edward, born in 1841. The present House of Commons first met in April, 1880. It is the twenty-second since the Union, and the tenth of the reign of Victoria. Unless previously dissolved, it will last until 1887. The House of Commons consists of 187 members representing counties, 295 representing cities and boroughs, and 5 representing universities in England and Wales, together 487 members; 32 representing counties, 26 representing cities and burgh dis-

tricts, and 2 representing universities, together 60 members from Scotland; and 64 representing counties, 39 representing cities, and 2 representing the university, together 105, from Ireland; making 652 members altogether. There are 658 constituencies, but six have been disfranchised for bribery. At the beginning of the term the House was divided as to parties between 203 Conservatives and 286 Liberals from England, 8 Conservatives and 52 Liberals from Scotland, and 24 Conservatives, 19 Liberals, and 60 Home-Rulers from Ireland; together 235 Conservatives, 357 Liberals, and 60 Home-Rulers.

The House of Lords consisted in 1881 of 537 members, of whom 5 were peers of the blood royal, 2 archbishops, 21 dukes, 20 marquesses, 128 earls, 32 viscounts, 24 bishops, 261 barons, 16 Scottish representative peers, and 28 Irish representative peers. Only 12 of the peerages are older than the seventeenth century, and 341 are not older than the present century, 165 having been created during the reign of Queen Victoria.

The Prime Minister is William Ewart Gladstone. Upon forming his Ministry in 1880 he took the office of Chancellor of the Exchequer in addition to his regular duties as First Lord of the Treasury. After the close of the extra session in the autumn of 1882, the Cabinet was reconstituted. Lord Derby entered the Cabinet as Secretary for the Colonies, Lord Kimberley taking Lord Hartington's place in the India Office, and the latter Mr. Childers's place as Secretary of War, while Childers received the Chancellorship of the Exchequer, relinquished by Gladstone. Sir Charles Dilke obtained a seat in the Cabinet as President of the Local Government Board, Mr. Dodson receiving the Chancellorship of the Duchy of Lancaster.

**AREA AND POPULATION.**—The total population of the United Kingdom in 1881 was found at the census taken on April 4th to be 35,246,562, of whom 17,253,947 were males and 17,992,615 were females. The area and population of the separate divisions were as follow:

DIVISIONS.	Area in square miles.	Population, 1881.
England.....	50,938	24,608,891
Wales.....	7,387	1,359,895
Scotland.....	80,685	3,734,370
Ireland.....	81,874	5,159,889
Isle of Man.....	226	53,492
Channel Islands.....	74	87,731
Soldiers and sailors abroad.....		242,844
United Kingdom.....	120,879	35,246,562

The population of England increased from 15,002,443 in 1841 to 16,921,888 in 1851; 18,954,444 in 1861; and 21,495,131 in 1871. The increase between 1871 and 1881 was 1.35 per cent per annum. The population of Scotland increased from 2,620,184 in 1841 to 2,888,742 in 1851; 3,062,294 in 1861; 3,360,018 in 1871; and at the rate of 1.05 per cent per annum in the last census period. The population of Ire-

land decreased from 8,196,597 in 1841 to 6,574,271 in 1851; 5,798,967 in 1861; and 5,412,377 in 1871. The rate of decrease between 1871 and 1881 was 0.48 per cent. The density of population in 1881 was for the United Kingdom 291 to the square mile, being between that of Holland (320) and Italy (248), and exceeded only by Belgium and Holland among European countries. The density of population in England and Wales was 445 to the square mile, being inferior only to that of Belgium (486). The number of inhabitants to the square mile in Ireland was 161, being more than in Hungary (125) and Denmark (136) and less than in France (178) and Switzerland (178). The number to the square mile in Scotland was 121. England contained 53.6 per cent of the population of the United Kingdom in 1831 and 69.8 per cent in 1881; Scotland, 9.7 per cent in 1831 and 10.6 per cent in 1881; Ireland, 31.8 per cent in 1831 and 14.6 per cent in 1881.

The population of London proper in 1881 was 3,814,571; of the suburban districts, 949,741; total population of the metropolis, 4,764,312.

The average rate of increase in the last decade was 16.9 per cent.

The soil of Great Britain and Ireland is in fewer hands than that of any other country. The number of owners of land in the three kingdoms is returned as follows, the lands of the metropolis being excluded:

UNITED KINGDOM.	Number of owners below an acre.	Number of owners above an acre.	Total number of owners.
England and Wales.....	708,289	269,547	972,886
Scotland.....	113,005	19,225	132,230
Ireland.....	36,114	32,614	68,758
Grt. Britain and Ireland	852,408	321,386	1,173,824

The proportion of owners of property to the total number of inhabitants is 1 in 20 in England and Wales, 1 in 25 in Scotland, 1 in 79 in Ireland, and for the whole United Kingdom 1 in 24. The average quantity of land held by each owner is 33 acres, the average rental £102, in England; 143 acres, rental £141, in Scotland; 293 acres, rental £195, in Ireland; and 61 acres, rental £112, for the whole country.

The number of electors in 1879 was 2,999,229 in the United Kingdom, against 2,748,985 in 1874; in England and Wales, 2,459,999, against 2,245,108; in Scotland, 307,941, against 280,308; in Ireland, 231,289, against 223,569.

The proportion of male to female children born in England is 1,048 to 1,000. At about the age of ten years the two sexes become equal in numbers, while in the whole population the females outnumber the males in the ratio of 1,000 to 949. In the total population of England and Wales, numbering 25,968,286, there were in 1881 803,126 paupers. The number of persons convicted of crimes in 1880 was 11,214. The number of births in 1880 was

880,520; of deaths, 528,056; of marriages, 191,634.

In Scotland three fourths of the surface of the country consists of mountains, marshes, and other waste lands. Among the total population of 3,734,441, the number of males was 1,797,592; of females, 1,936,848. The number of registered paupers and their dependents in 1880 was 98,608; the number of convictions for crimes 2,046. The number of births in 1880 was 124,652; of deaths, 75,795; of marriages, 24,489. The population of the eight principal towns, containing together more than one third of the total population of the country, was as follows: Glasgow, 511,532; Edinburgh, 228,190; Dundee, 142,454; Aberdeen, 105,054; Greenock, 68,897; Leith, 61,168; Paisley, 55,642; Perth, 29,755.

Of the 5,159,839 inhabitants of Ireland, 2,522,804 were males and 2,637,035 females. The number of paupers reported in 1881 was 109,655; of convictions for crime, 2,383.

The emigration of 1881, and the origin and destination of the emigrants, were as follow:

EMIGRATION.	To the United States,	To British America,	To Australia colonies,	To other countries,	Total.
English .....	90,527	17,164	15,704	16,551	139,976
Scottish .....	18,288	3,182	2,433	2,973	26,826
Irish .....	67,339	3,566	4,545	759	76,200
Foreigners .....	129,701	10,619	1,410	2,621	144,351
Unknown .....	2,168	.....	1	2,962	5,131
Total, 1881 .....	307,973	34,561	24,093	25,887	392,514

**COLONIES.**—The colonial possessions of Great Britain cover about one seventh of the land-surface of the earth, and contain nearly one fourth of its population. They are divided into forty administrative divisions. The Dominion of Canada, Newfoundland, New South Wales, Victoria, Queensland, South Australia, New Zealand, Tasmania, and the Cape of Good Hope possess responsible government, making their own laws and administering their own government; the Bahamas, Bermudas, Leeward Islands, Windward Islands, Natal, Ceylon, and Western Australia possess representative institutions, but their legislation is more under the control of the home authorities, and the government is administered by crown officers; while the rest are governed entirely by the crown. The cost of the colonies to Great Britain was, in 1879-'80, about £2,338,252, more than half of which was expended upon the naval and military stations of Gibraltar, Malta, Cape Colony and Natal, Mauritius, Bermuda, St. Helena, Cyprus, and Hong-Kong.

The area and population of each of the colonies, dependencies, and occupied stations of the British Empire in Europe, Asia, Australia, Africa, and America, consisting in all of forty-nine, and embracing the Dominion of Canada, and the immense country of India with over two hundred and fifty million inhabitants, are presented in the following table:

COLONIES.	Square miles.	Population.
Heligoland.....	$\frac{1}{2}$	1,913
Gibraltar.....	124 $\frac{1}{2}$	18,881
Malta.....	124 $\frac{1}{2}$	154,892
Cyprus.....	3,707	186,084
Total Europe.....	8,839 $\frac{1}{2}$	361,270
India.....	908,350	252,541,210
Ceylon.....	24,702	2,688,540

British Guiana.....	85,425	243,110
Falkland Islands.....	4,839	1,533
Total America.....	8,859,243	6,016,077
Total British possessions.....	7,684,970	267,935,144

The railroad mileage of the British Islands in 1881 was 18,180 miles, against 17,933 in 1880. The mileage in England and Wales was 12,810; in Scotland, 2,930; in Ireland, 2,440. The total cost of the railroads was reported as £745,519,000; the gross annual receipts £63,873,000; the net receipts £31,828,000.

The length of the telegraph lines belonging to the Government was about 26,000 miles; the length of wires 121,000 miles. The number of dispatches sent in 1881-'82 was 31,345,-

\* Not including the Kuria Muria Islands, Mosha, Kaman, and Keeling Islands, the total area of which is less than one hundred square miles.

† Not including the Chatham Islands, Norfolk Island, and the Islands of Auckland, Lord Howe, Caroline, Starbuck, Maiden, and Fanning. The natives of Australia, estimated at 55,000, and the Maoris of New Zealand, numbering 44,000, are not included.

‡ Not including Whale Bay, Tristan da Cunha, New Amsterdam, and St. Paul.

861. The gross receipts were £1,633,884; expenses, £1,305,006.

The number of post-offices in 1881 was 14,549. The number of letters delivered in the year 1881-'82 was 1,229,000,000: in England and Wales, 1,037,000,000; in Scotland, 110,000,000; in Ireland, 82,000,000. There were besides 135,000,000 postal-cards and 412,000,000

newspapers carried by the mails. The number of postal money-orders was 14,900,000, amounting to £23,471,000,000, besides 200,000 sent to foreign countries, and 500,000 received from abroad.

The total value of the exports and imports of Great Britain for the five years last reported was, in round numbers, as follows:

YEAR.	Imports.	Exports of British products.	Exports of foreign products.	Total exports.	Total commerce.
1881.....	£397,092,000	£234,023,000	£68,060,000	£297,088,000	£694,105,000
1880.....	411,230,000	223,060,000	63,354,000	286,414,000	697,644,000
1879.....	362,992,000	191,532,000	57,252,000	248,783,000	611,775,000
1878.....	368,771,000	192,349,000	52,685,000	245,484,000	614,255,000
1877.....	394,420,000	198,593,000	53,453,000	252,346,000	646,766,000

The declared value of the imports and exports of specie for four years was as follows:

YEAR.	Gold imports.	Gold exports.	Silver imports.	Silver exports.	Total imports.	Total exports.
1881.....	£9,968,000	£15,499,000	£6,901,000	£7,004,000	£16,864,000	£22,503,000
1880.....	9,455,000	11,829,000	6,799,000	7,061,000	16,254,000	18,890,000
1879.....	13,369,000	17,579,000	10,787,000	11,006,000	24,156,000	28,585,000
1878.....	20,371,000	14,969,000	11,552,000	11,718,000	32,423,000	26,687,000

The value of the exports of British products per head of the population was £6 14s. in 1881; £6 9s. 5d. in 1880; £5 12s. 2d. in 1879; £5 14s. 1d. in 1878; and £5 18s. 11d. in 1877. The value of imports per head was £11 7s. 4d. in 1881; £11 18s. 7d. in 1880; £10 12s. 7d. in 1879; £10 18s. 3d. in 1878; and £10 15s. 10d. in 1877.

Articles of consumption made up £187,349,000 of the total value of merchandise imports, and £10,633,000 of the exports of British products.

The largest articles of import are grain and flour, the principal part of which comes from the United States; raw cotton, chiefly from the United States; wool, chiefly from the Australian colonies; sugar, raw and refined; wood and timber; and tea. The leading exports are cotton manufactures, woollen manufactures, iron and steel, coal, linen manufactures, and machinery.

The aggregate tonnage of vessels engaged in foreign commerce entering British ports in 1881 was 28,519,015: 20,437,035 under the British flag, and 8,081,980 under foreign flags. In 1860 the aggregate tonnage was 12,172,785: 6,889,009 British, and 5,283,776 foreign. The aggregate tonnage cleared in 1881 was 29,430,530; 21,106,224 British, and 8,324,306 foreign. The tonnage of laden ships arriving was 23,224,708; departing, 26,336,693. The tonnage of arriving steamships was 19,268,327; 16,038,726 British, and 3,229,601 foreign. The aggregate tonnage of the coasting-trade was 40,364,392 for arriving, and 34,655,235 for departing vessels.

The total number of ships registered in the United Kingdom in 1881 was 24,830, of the aggregate tonnage of 6,692,000 tons, as compared with 25,185 ships of 6,575,000 tons in 1880. The number of steamers was 5,505 of 3,004,000 tons in 1881, against 5,247 of 2,724,-

000 tons in 1880. The number of sailing-vessels 19,325, of 3,688,000 tons, against 19,938, of 3,851,000 tons, in 1880. The number of ships registered in the colonies was 13,922, of 1,844,000 tons, of which 1,732, of 236,000 tons, were steamers. Of the shipping of the United Kingdom, 4,163 sailing-ships, of 2,785,000 tons, and 2,546 steamships, of 2,619,000 tons, are employed in ocean-commerce.

ARMY AND NAVY.—By the law of 1881, the duration of service in the army is fixed at twelve years, five active and seven in the reserve. The 109 regiments of infantry of the line and 131 regiments of militia, in most of which only one battalion exists, are united with the volunteers to form 68 territorial regiments, of from five to seven battalions, each with its recruiting depot. The first two battalions of each regiment are troops of the line. The battalions of the line take turns in the colonial service, each remaining twelve years, the individual soldiers being replaced after eight years of service. The effective of the line battalions is from 562 to 1,040 men in the United Kingdom, 915 in India, and 895 in the colonies. The militia, after two months of instruction, are only called out to drill for from four to eight weeks annually. In the army estimates for 1882-'83, the strength of the regular army is fixed at 10,595 officers and 183,900 men, together 194,495, with 23,584 horses; the regular army reserves at 500 officers and 35,600 men, together 36,100. The yeomanry cavalry and militia number 4,575 officers and 148,157 men, together 152,732, with 14,500 horses which they furnish themselves; the volunteers number 8,192 officers and 238,168 men, together 399,092. The strength of the native forces in India is given as 3,212 English officers and 117,670 native officers and men, together 120,882, with 21,870 horses, elephants, and oxen. The total strength of the imperial forces is ac-

cordingly 27,074 officers and 723,495 men, together 750,569, with 59,954 horses. In the regular army, mustering 194,495 officers and men, 16,618 are cavalry, 33,789 artillery, 5,703 engineers, 128,238 infantry, 2,475 in the colonial corps, and 7,672 in the departmental services. According to a parliamentary return, there were 5,738 English, 785 Scotch, and 1,386 Irish officers in the army in 1878, and of the rank and file 124,708 were of English, 14,235 of Scotch, and 39,121 of Irish birth. Nearly all the colonies maintain militia and volunteer organizations. Separate from the army but having a military organization, are the armed police of Ireland, numbering about 14,000 men. India has a native military police of 190,000 men, in which the superior commands are filled by Englishmen.

The navy, unlike the army, of which the government is vested in the crown, is a permanent establishment, governed according to a settled code, by the Board of Admiralty, which consists of five members. The first Lord of the Admiralty always has a seat in the Cabinet. The navy was composed in 1882 of 74 ironclads, including some not completed, about 300 other steam-vessels, and 120 sailing-ships. (See NAVIES OF EUROPE.)

The British navy is manned by 45,300 officers, engineers, seamen, boys, etc., and 12,400 marine troops, artillery and infantry, with their officers, besides 18,400 in the Royal Navy Reserve, and 3,550 volunteer artillery, making a total effective force of 79,650; 21,513 more are employed in construction.

FINANCES.—The finance accounts for 1881-'82 make the total revenue for the year ending March 31st, £85,822,282. The yield of the customs duties, which are confined to tobacco, spirits, tea, wine, raisins, coffee, chicory, cocoa, and some minor articles, is estimated at £19,-

278,000. The excise taxes produce £27,240,000, of which £23,522,922 comes from the excise duty on spirits and malt, £2,024,619 from the license taxes on brewers and dealers in beer, spirits, wine, tobacco, etc.; £1,562,239 from the licenses for carriages, dogs, hunting, male domestics, coats of arms, right of carrying weapons, and various professions; £12,260,000 from stamp duties on contracts, wills, successions and legacies, receipts, marine insurance, bills of exchange, banks, license certificates, patents, gold and silver manufactures, playing-cards, and proprietary medicines; £2,725,000 from the land and house taxes; £9,945,000 from the income-tax; £7,000,000 from the post-office; £1,630,000 from telegraphs; £380,000 from the domains; £1,219,262 interest on advances for local improvements and on Suez Canal shares; and £4,136,020 from other sources. The balance on hand April 1, 1881, was £5,923,661. Of the expenditures, £29,665,945 go to pay the interest on the public debt, the consolidated debt calling for £21,393,802; £1,664,438 for the civil list, courts of justice, and other charges on the consolidated fund; £16,419,038 for the civil service; £29,201,038 for military and naval expenses, of which £16,309,585 are for the army, £1,100,000 for the army on Indian account, £500,000 on account of the expedition to Afghanistan, £535,000 for wars in South Africa, and £10,756,453 for the navy, and £8,522,097 for the postal and other services; total, £85,472,556.

The total revenues raised for local administration in 1879-'80 were £63,046,664; £30,971,396 from direct taxes, £6,244,327 from indirect, £1,666,227 from public property, £3,396,806 contributions from the national Treasury, £15,103,882 by loans, and £5,664,026 of other receipts. The local expenditures in the three kingdoms were as follow:

LOCAL EXPENDITURES.	England.	Scotland.	Ireland.	Total.
Public charity .....	£8,851,844	£918,217	£1,060,748	£10,830,809
Municipalities, police, and public health .....	88,961,898	2,507,000	2,015,844	88,484,742
Other expenses .....	8,679,100	2,495,273	684,556	11,858,929
Total .....	£51,492,842	£5,920,490	£3,761,148	£61,174,480

FOREIGN RELATIONS.—At the close of the year the British expeditionary forces were still in Egypt. In a circular note, dated January 3d, Lord Granville announced the "desire" of her Majesty to retire them when the state of the country and the organization of the means to maintain the authority of the Khedive will permit. During the interval the position in which the British Government finds itself imposes the duty of giving counsel so as to make sure that the order of things to be established will have a "satisfactory character and possess the elements of stability and of progress." For the future regulation of the Suez Canal, he proposes an agreement among the powers that the canal should always be free for the passage of vessels; that in time of war naval vessels of a belligerent should be subject to a detention,

and should not be allowed to land troops or munitions of war; that no hostilities should take place in the canal or its environment, or anywhere in Egyptian waters, even when Turkey is one of the belligerents; but that the last two rules should not apply to measures necessary for the defense of Egypt. Another rule forbids the construction of fortifications on the canal or in its vicinity. The British minister speaks of a new scheme for the financial administration in the interest of the bondholders to be submitted later. He proposes to place foreigners on the same footing with Egyptians with respect to taxation. The army is to be reduced, and in compliance with the earnest wish of the Khedive will be commanded by English officers. For the maintenance of public order a separate body of police and gen-

darmes will be established. The request of the Egyptian Government for the abolition of the control is approved, its place to be taken by a financial adviser to the Khedive nominated by the Government of Great Britain. The reform of the administration of justice and the suppression of the slave-trade are to be urged upon the Khedive. The note foreshadows finally the "prudent introduction of representative institutions."

The reawakened desires for commercial expansion by force of arms caused the English to be unusually jealous of like propensities on the part of other nations. The operations of Italy in Assab Bay first excited their susceptibilities; but their eyes were turned most anxiously to the movements of France at Tonquin, on the Congo, and in Madagascar. France has long exercised an incipient protectorate over the parts of Madagascar visited by her traders, while English influence in the island has been mostly confined to that exercised over Queen Ranovolo by missionaries. The British public were prepared in advance to espouse a quarrel of the Malagassy Queen with the French Government; but upon the arrival of her embassy, which made the tour of the European courts, it was discovered that she could conduct her own diplomacy.

The commercial treaty with France, concluded in 1860, and several times renewed, expired the 1st of March. The new commercial treaty, on which Sir Charles Dilke and Gambetta worked for ten months, came to nothing at last. The French protectionists were determined to be delivered from subjection to Manchester, which was accomplished by substituting specific for *ad valorem* duties, since in the finer textiles English competition was not feared. Concessions in the amount of the specific duties were not acceptable to the British commissioners, because they would not materially alter the effect. England was willing to continue the Cobden treaty, or to abate the wine duties in order to secure one more favorable for her manufactures. Fiscal considerations stood in the way of offering France a fair equivalent for free access to her markets, for French wines and articles of luxury are taxed for revenue purposes. The exports from France to England have greatly exceeded the imports of British products under the treaty which the French refuse to continue.\*

LEGISLATION.—The session of Parliament opened February 7th. As the whole of the preceding session had been given up to Irish matters, the attention of Parliament was invited by the Ministry to the arrears of home legislation. As many as ten measures were announced in the Queen's speech. Three of these—the bankruptcy, corrupt practices, and river conservancy bills—had been brought down from the previous session. The others included such important subjects as local government, the organization of a municipal government for London, a revised criminal code, and a new patent law. But, through a series of mistakes and mischances, none of the measures enumerated in the royal message were carried except two Scotch bills, one amending the law of entail, and the other providing for the endowment of education. That important Government measures have expired in protracted discussions is no new thing; but that they should not even be introduced, that the main part of the ministerial programme should not be discussed at all, would have been deemed impossible before this session of derangements and surprises. It was not because great and unforeseen exigencies called away the attention of the House, nor because the Irish were more successfully obstructive. They were not, properly speaking, obstructive at all, although they contributed to the delay, as did all of the parties; and none contributed so much to make this, in the words of Gladstone, "a session of ruin and discomfiture" as did the members of the Government themselves.

The question of the year was the reform in parliamentary procedure. The new rules were to take precedence of all other measures. As framed by the Government, providing for the *clôture* by a bare majority, they furnished an issue between the two sides of the House, and both parties were girded for a close struggle. The Irish chapter was to be considered as closed. The address spoke of signs of improvement, of a diminution of intimidation, and a more efficacious administration of justice, giving promise that the operation of the land act, and preliminarily the judicious exercise of the powers of coercion, would bring about "the happy results which are so much to be desired." The debate on the address was prolonged eleven days. The Irish party arraigned the Government for administration of the protection act. The curt and contemptuous replies which they received enabled them the more forcibly to denounce the tyrannies of Forster's administration, to defend the motives of the imprisoned Land-Leaguers, to show the defects of the land law, to justify boycotting, and to unfurl the banners of home-rule as the only deliverance from misgovernment. Mr. Gladstone dumfounded the Conservatives and perplexed even the most advanced Liberals by hinting at the future consideration of "the wider question of a separate Legislature," and challenging the Home-Rulers to draw a line of

\* The general imports from Great Britain into France in 1875 amounted to 708,780,052 francs, in 1879 to 747,707,818 francs, and in 1880 to 721,465,519 francs; the general exports to Great Britain amounted to 1,149,183,464 francs in 1875, to 1,086,957,035 francs in 1879, and to 1,090,390,228 francs in 1880. The special commerce returns give 582,288,891 francs in 1878, 600,828,044 francs in 1879, and 601,861,156 francs in 1880, as the value of imports from Great Britain, against 919,488,895 francs of special exports to that country in 1878, 884,128,197 francs in 1879, and 845,468,215 francs in 1880. In the special commerce of 1880, wool imports from England figured for about 124,400,000 francs, woollen fabrics for 60,200,000 francs, coal for 59,100,000 francs, cotton manufactures for 29,200,000 francs, and silks for 19,400,000 francs. The chief French exports to Great Britain were: silks, 98,600,000 francs; woollens, 98,700,000 francs; refined sugar, 48,000,000 francs; wine, 72,100,000 francs; and butter, 60,400,000 francs.

demarkation between imperial and local interests. Meanwhile the House of Lords had appointed a select committee to inquire into the workings of the land act. Mr. Gladstone then suspended the reform of parliamentary procedure, to carry through a resolution condemning the inquiry as "tending to defeat the operation of the land act and injurious to the good government of Ireland." This retarded for weeks the serious work of the session. The budget, reports of the departments, and other business delayed action on the new rules of procedure; but when the House was approaching the point of a decision on the first rule, which embodied the principle of *clôture*, by a bare majority, the uncertain attitude of many Liberals betokened that the best chance of success was in delay. Irish matters were taken up and engrossed the attention of Parliament to the end of the session. The Government in the mean time recovered the political strength which it was losing in the field of legislation by engaging in the war with Egypt. (See DISCIPLINARY POWERS OF LEGISLATIVE ASSEMBLIES, etc.)

The composition of Parliament was ruffled at the outset by a renewal of the Bradlaugh question (see "Annual Cyclopædia" for 1881). Mr. Bradlaugh presented himself with the new members to take the oath. Sir Stafford Northcote again moved that he be not allowed to "go through the form of repeating the words of the oath," which was carried by a majority of 286 to 228, placing the junior member for Northampton in the same position in which he stood during the previous session. This time the Government opposed the motion, and Mr. Bradlaugh made a plea, in which he offered to take the Chiltern Hundreds and stand again if the House would make an affirmation law. Three weeks afterward his colleague, Labouchère, moved for the issue of a new writ of election for Northampton, but by a nearly unanimous vote the House refused to declare the seat vacant. Then Mr. Bradlaugh advanced to the table, drew out a copy of the New Testament, recited the oath, and signed the formula, which he passed to the Clerk. Ordered by the Speaker to withdraw below the bar, he did so, declaring that he had taken the oath according to law and would now take his seat. He accordingly turned about after just stepping outside and occupied a seat until he was again ordered out. The next day, during the adjourned debate on his case, while Sir Stafford Northcote's motion to render his position still more intolerable, by denying him entrance into the building, was under consideration, Mr. Bradlaugh took a seat within the House, from which he rose, though directed to withdraw, to assert his right to be heard as a sitting member, and then retired upon a repetition of the Speaker's order. Sir Stafford Northcote then made a motion of expulsion, which was carried by an overwhelming majority. The constituency of Northampton did not desert

their champion. A large vote was cast, and Bradlaugh came out a third time at the head of the poll. Without waiting for him to present himself, Sir Stafford Northcote moved to reject an amendment in favor of an optional affirmation law, to which the House agreed.

Several acts were passed relating to the details of public administration, some of them of especial significance. The conveyance of packages by the post-office, which has long been the practice on the Continent of Europe, but which in America is considered to be peculiarly a function of private enterprise, was authorized in the parcels-post bill. The maximum weight of postal packages is seven pounds. The charges for forwarding and delivery range from 3d. to 9d., according to weight. The numerous functions of the British post-office are further increased by an act adding to the business of the postal savings-banks that of providing old-age annuities, or life-insurance. Deposits made indifferently at any of the 6,700 post-offices opened for savings-bank business are applicable, according to previous acts, to the payment of debts and transfer of money all over the United Kingdom, and, when they have accumulated to a certain amount, they can be invested by the Post-Office authorities, at the desire of the depositor, in Government bonds. By the new law, the Post-Office undertakes the payment of deferred annuities and life-insurance policies; and money to meet the annual payments on these may be deposited at any time in any post-office, the excess drawing the usual small interest.

A measure which realizes free trade in land, for which the Radicals have vehemently agitated, was introduced in the House of Lords by Lord Cairns, the former Tory Chancellor, and passed the House of Commons without a debate. The settled-land bill, supplementing previous legislation on the subject, enables tenants for life to sell the estates under restrictions requiring the proceeds to be invested so as to secure the interests of the remainder-men. The moneys are placed in the custody of the trustees of the settlement, or of the court, but may be applied in any way the limited owner selects, and to his profit, so long as the interests of the heirs are not impaired. For the sale of the principal mansion and park, the consent of the trustees or the court is requisite.

The married women's property act completes the revolution of the common-law principle regarding the status of the *feme-covert*, by which her land passed into the possession of the husband for life, and her personality became his absolutely. The new act is clear and thorough. All property, of whatever kind, bequeathed to a married woman, or acquired by her own efforts, is placed beyond all control of the husband, and belongs as absolutely to her as though she were single; but she is made responsible for her debts incurred before or after marriage, must support her children if the husband is unable, and must support him,

to prevent his becoming a charge upon the public.

Parliament guarded against the appropriation of the invention of electric lighting by monopolies inimical to the public interest by a general law on the subject. The electric lighting bill reserves the right to the Board of Trade to impose regulations and conditions on companies licensed to supply the electric light, as to the limits and conditions of supply, safety, price, and with regard to public inspection. New conditions may be inserted when the progress of knowledge shows them to be desirable. The bill also provides for the expropriation of the works of any company after the lapse of fifteen years, if the local or municipal authorities find it advantageous to take the business into their own hands. The price must be the actual value of the plant at the time of purchase, to be determined by agreement, or by arbitration. If municipalities desire to establish public works for electric lighting originally, they are empowered to do so.

IRELAND.—The "new departure" in Ireland, which was announced in the beginning of May, was a reversal of the policy of repressing Irish opinion, and a condemnation of all the utterances of the Ministry since the breaking up of the Land League in the previous October. Earl Cowper resigned the vicereignty so as not to stand in the way of the new policy. He was replaced by Earl Spencer, who had been Lord Lieutenant twice before. As he retained his position as President of the Privy Council, he was the first ruler in Dublin Castle who had a seat in the Cabinet. His active duties as Privy Seal were transferred to Lord Carlingford, Minister without a portfolio. Mr. Forster stood out against a change of policy, and, after a protracted Cabinet meeting, resigned his post. The following day, May 2d, Mr. Gladstone announced to Parliament the release of the three imprisoned members of Parliament, Parnell, Dillon, and O'Kelly, without conditions or stipulations, the intended discharge of all the "suspects" not believed to be complicated in the commission of crimes, and the intention of the Government to take counsel with the Irish representatives on the amendment of the land act, and to rely on the ordinary law, fortified with some new enactments, after the lapse of the protection act.

The ground of the release of the imprisoned members was stated by the Prime Minister to have been information received by the Government that if the question of arrears was settled on the basis of a bill offered by Redmond, one of the Land-League members, they would "range themselves on the side of law and order." A bitter wrangle followed, in which the Conservatives and their new ally, the late Chief Secretary, asserted that Gladstone had made a secret compact with Parnell, and the Government and the Irish members angrily repudiated the charge. Before this question of fact was fairly opened, the hopes of

all who looked forward to peace and reconciliation with the Irish people were dashed by a political murder in Dublin, which was apparently the work of conspirators, whose purpose was to prevent the prospective reconciliation, and keep alive the animosities between the two countries. The successor to Forster in the Chief Secretaryship was Lord Frederick Cavendish, a representative of the Whig section of the party, but one who had betrayed no prejudices or convictions in Irish questions. He was only known as a diligent official, esteemed by the men of all parties for his genial qualities (see OBITUARIES). On May 6th, the day after his arrival in Ireland, while the new Secretary and Under-Secretary Burke (see OBITUARIES) were walking together in Phoenix Park, they were assassinated by four men, who were driven up rapidly in a jaunting-car. They leaped out, stabbed their victims several times with long knives, and drove away. The crime plunged the minds of the Irish representatives into a gloom of despair, and excited in the minds of many Englishmen a ferocious spirit of revenge. A bill for the prevention of crime, more stringent by far than the protection act, was introduced by the Home Secretary, Sir William Harcourt. The Irish party, assisted by Mr. Cowen and a few other English members, contested stubbornly the harsher enactments of this, the severest measure of repression since Lord Grey's coercion act. They openly resorted to obstructive tactics, but conducted them so artfully that no plain instance of obstruction could be singled out. On the 29th of June, when the bill had been twenty-three days in committee, Mr. Gladstone rallied his followers for an all-night sitting. The next morning, when Lyon Playfair, chairman of the committee, returned to the House, he proceeded to name Parnell and fifteen of his followers as guilty of systematic obstruction (see DISCIPLINARY POWER OF LEGISLATIVE ASSEMBLIES, etc.). The sixteen members were suspended *en bloc*, although it was shown that several of the members named were not then in the House, and others had been absent during the night. Mr. O'Donnell, who was understood to speak of the "infamy" of punishing him for obstruction when he was at home asleep, was suspended for two weeks. Later in the day nine other Irish members were named and suspended. By this illegitimate proceeding the bill was carried through committee, and the urgency rule was revived to prevent any further stoppage. George Otto Trevelyan, who succeeded the murdered Chief Secretary, vigorously urged the passage of the measure as one which would be welcomed by the Irish people.

The crimes bill was ostensibly directed against secret societies and illegal combinations, but its provisions were shaped to paralyze the Land League, to destroy the right of meeting and of newspaper discussion, and to make boycotting and resistance to eviction

penal. In districts which may be proclaimed by the Lord Lieutenant, trial by jury is abolished in political and agrarian cases. Those of greater magnitude are tried by a tribunal composed of three judges of the Supreme Bench selected by the Lord Lieutenant, whose verdict must be unanimous, and from which an appeal lies to the Court of Appeals for criminal cases, called the Court of Criminal Cases Reserved, composed of five judges, of whom a majority decide. Cases of a lower category, which embraces boycotting, intimidation, etc., are triable by a court composed of two stipendiary magistrates, which possesses unlimited judicial powers and summary jurisdiction. The police are armed with the power of search and arrest by day or night. The Government struck out the paragraph authorizing nocturnal domiciliary visits, but it was restored in a significant division in which the Whigs joined the Conservatives. The alien act was revived; and, contrary to the wish of the Government, the power to banish suspicious foreigners was extended to Great Britain. Intimidation (including boycotting), incitement to crime, secret conspiracies, and illegal assemblies, were defined as criminal offenses. A censorship of the press was established, with the right to prohibit the importation of foreign publications. The Irishmen opposed most strenuously the suspension of jury trial and the intimidation clauses, and one which punishes the districts in which crimes of murder and maiming are committed without detection, by levying compensation. Such districts are, moreover, burdened with the cost of maintaining an extra police force. It was the struggle over these provisions which resulted in the indignation against the Irish members. The system of a special commission of judges who decide on questions of fact as well as of law was modified by allowing the alternative of a change of venue and trial before a special panel. The bill authorizes the arrest and detention of witnesses, and allows judicial inquiries to be prosecuted while the suspected criminal is still at large, or after he has fled the country. The minor offenses over which summary jurisdiction is given to inferior magistrates, sitting in couples and appointed from the Castle, are punishable with six months' imprisonment, with or without hard labor. Any person found outside of his home between sunset and sunrise, or any stranger found in a proclaimed district, can be arrested, and if they fail to give satisfactory explanations can be committed to prison for six months. The prevention act remains in operation three years.

The "information," on the strength of which the Cabinet had ordered the release of the imprisoned members, Parnell produced after the Premier had refused to disclose it. It was contained in a letter written by Parnell to another Irish member, which was brought to the notice of the Ministers. This letter,

commonly alluded to as the "Treaty of Kilmainham," became the subject of scornful reproaches leveled against the Government. Parnell declared that the settlement of the arrears on the principle adopted in the bill afterward passed, together with the extension of the fair-rent clauses to lease-holders, the amendment of the tenure clauses, and alterations which would render the purchase clauses effective, would be regarded as a practical settlement of the land question, and would enable the Irish representatives "to co-operate cordially for the future with the Liberal party in forwarding Liberal principles." The latter clause of the declaration was omitted from the copy read by Parnell, who, on the challenge of the ex-Secretary, called upon his correspondent, Captain O'Shea, to read the entire letter, which he did from a copy furnished by Mr. Forster. The letter also expressed the confidence of Parnell and his colleagues, that if the arrears were wiped out the exertions which they would "be able to make strenuously and unremittingly would be effective in stopping outrages and intimidations of all kinds."

The remedial legislation to which the Government had pledged themselves was linked with the repressive measure. The arrears bill was introduced almost at the same time with the crimes bill, and promised the first place after the latter had been disposed of. It followed the lines of Redmond's bill, and relieved tenants who were unable to pay off the whole of the arrears of rent for the bad years. Starting from the abortive clause relating to arrears in the land act, but adopting the principle of "gift and compulsion" instead of the principle of "loan and voluntary arrangement," advocated by the Irish Liberals and Moderate Home-Rulers, the ministerial measure proposed to give either landlord or tenant power to apply to the Land Court, under certain conditions, for carrying out a composition with the aid of public funds. The conditions were, that the tenant should have satisfied the landlord as to the year's rent due for 1881, that he should prove his inability to pay the arrears, and that the holding should be under £30 rent, Griffith's valuation, subject to which the state would pay the landlord half the remaining arrears, not in any case exceeding a year's rent, the remainder to be wholly canceled. The Irish Church surplus was appropriated for the state contribution; in case it proved insufficient the excess was charged upon the Imperial Treasury. Prominent Liberals joined with the Conservatives in contending that farmers who possessed a valuable property in their tenant-right ought not to be relieved of their debts by a free gift from the state, and the extinguishment of the landlord's claims by legislative fiat. A provision was inserted that the commissioners "may, if they think it reasonable," take the tenant-right into account in estimating inability to pay. By an amendment tenants of hold-

ings above £30 and below £50 valuation were granted relief on the plan of state loans and voluntary agreement with the landlords. Another amendment provided for a system of state-aided emigration.

The Lords amended the act so as to require the consent of the landlord to the prescribed composition, and to enjoin the commissioners to count the value of the tenant-right as an asset in estimating the solvency of tenants. Gladstone refused to give up the principle of compulsion, but compromised the question of charging arrears upon the tenant-right, accepting the Duke of Abercorn's substitution of "shall" for "may" in the amendment, tacked on in the Commons with limitations as to time and amount, and with the qualification "so far as the commissioners think it reasonable." Lord Salisbury was determined to precipitate a crisis, but the Conservative Peers refused to follow him. The Ministers could have reassembled Parliament, and, while demanding the assent of the Upper House to the measure once more, could have dissolved with a "good cry" by announcing a new reform which they still hold in reserve. This is a county franchise bill, extending the borough suffrage to the rural population.

The Land League, as an organization, was destroyed by Forster's application of the rigors of the coercion laws. The force of the movement in the form which it had taken spent itself with the settlement of the arrears question. While Parliament was in debate over the arrears bill, Michael Davitt, who had been released from Portland Prison a few days after the enlargement of the "suspect" members, propounded a new settlement of the land question, which removed it, except so far as the principles already embodied in legislation would solve it, into the sphere of speculative politics. His solution was the "nationalization of the land,"\* a scheme deduced from the theories of Henry George, the American economist, who was at that time in Ireland as correspondent for the "Irish World." This New York weekly journal from the beginning of the land agitation has circulated widely in Ireland, clandestinely when its open sale was prevented by the police. It was the medium for

the appeals for pecuniary assistance to the American Irish, and its editor, Patrick Ford, acted as agent in the remission of large sums. Already powerful through its passionate advocacy of the aims of the Land League, and formerly of the revolutionary designs, and the subsequent constitutional agitation for the repeal of the Union, this Irish-American newspaper, which has always represented extreme views, became the organ of the Land League after the authorities had gagged the Irish press. The representative organ of Irish sentiment in America and the purveyor of American support, and swaying opinion in Ireland more strongly in the absence of other outspoken journals, the "Irish World"\* sometimes dictated, rather than voiced, the policy of the Irish leaders. This influential organ now embraced Davitt's scheme for realizing the ideas of the "abolition of landlordism" and "the land for the people." The Ladies' Land League had been, except the Prisoners' Aid Society, since the suppression of the Land League, the only outward symbol of the large organization which had rallied under its banner the entire population of three provinces, and the majority of the fourth. Mr. Forster had done all he dared to destroy the ladies' association. Their practical work of providing food and shelter for evicted families was prohibited, and gentlewomen were cast in jail for erecting huts for the roofless sufferers. These harsh measures only aided the high-spirited Irish ladies, under the leadership of Miss Anna Parnell, to keep in fresh remembrance the Land League and its aims. The Ladies' Land League also now declared in favor of Davitt's project. Parnell, with the other leaders, pointed out that the Irish people would have to be educated in entirely new ideas to relinquish their hopes of a peasant proprietary for this theoretical scheme, and that its realization would make them the serfs as well as the subjects of the "alien"

\* Davitt proposes to have the Imperial Government expropriate the landlords, indemnifying them by the payment of one half the former money value of the land, taking that to be their equitable share in the ownership, according to the principles of "conventional justice and prescriptive right." At twenty years' purchase of the present rental, this would be about £140,000,000. An annual revenue collected in Ireland of £7,000,000 would pay the interest at three per cent, and wipe out the principal in fifty years. The annual agricultural product of the country is now about £80,000,000 in crops, and £30,000,000 more in live-stock. Fully twenty-five per cent of the total is drained out of the country in the rents paid to the absentee landlords. Under the more favorable conditions which would result, the out-turn of vegetable products would be at least doubled. He proposes to have the state remain the universal landlord. A rent equal to ten per cent of the value of the annual agricultural yield would amply pay the entire costs of general and local government. Apart from this moderate rental there would be no taxes to pay by any class in the community, after the debt for the landlords' indemnity has been extinguished.

\* Rossa's "United Irishman," the organ of the "dynamite faction," was frequently quoted from in the House of Commons in justification of repression; the arguments based upon the extravagances of this sensational sheet were answered by the Irish representatives with contemptuous sarcasms. They declared that it found its readers chiefly among the Tory party, and that "O'Donovan Rossa was as necessary to Mr. Forster as Mr. Forster was to O'Donovan Rossa." They did not repudiate the "Irish World." The "Irish Nation," founded in the winter of 1881 by John Devoy, a well-known Fenian, is as revolutionary in its tendency as the "United Irishman," and much more ably and eloquently written. It reflects the most advanced doctrines of Irish nationalism, and condemns Davitt's land ideas, deeming that Ireland should gain her independence by physical force, but not undertake the task of reforming civil society. The "Irish World" was a vehicle for the teachings of German socialism before it took up Henry George's agrarian theories. It has always striven to harmonize its social theories with the doctrines of the Catholic Church. By means of the "Spread the Light Fund," which was collected in connection with the revolutionary "Skirmishing Fund," it has been circulated gratis extensively in Ireland. The Boston "Pilot," conducted by the accomplished John Boyle O'Reilly, is the most moderate of the Home-Rule and Land-League journals, and perhaps the ablest and most influential, having a circulation second to no other Catholic paper in America. It advertised a reward of \$5,000 for the detection of the assassins of Lord Frederick Cavendish and Mr. Burke. Its editor was formerly a participant in the attempted Fenian revolution, and is still a nationalist, but looks to Home Rule as the stepping-stone to independence.

Government from whose misrule they had fondly hoped to escape for ages. After their manful resistance to the crimes bill, they relaxed the intensity of their efforts, recognizing the need of Ireland for a repose from agitation in the fruition of the results already attained, especially the substantial benefits of the arrears bill which averted instant distress. The schism of Davitt was only one additional sign of the exhaustion of their mandate. The decisions of the Land Commissioners at the same time became less favorable to the tenants, the judgment in *Adams versus Dunseath* marking the turning-point.

On August 16th, E. Dwyer Gray, High-Sheriff of Dublin and member of Parliament, was sentenced to three months' imprisonment, by Justice Lawson, for contempt of court. The offense consisted in the publication of a letter in the influential "*Freeman's Journal*," of which he was the responsible editor, charging the jurors in a political murder trial with intoxication, and of an editorial comment calling for an investigation. Several witnesses testified to the misconduct of which the jury was accused, when an inquiry was held later. The arrest of Mr. Gray provoked an outburst of indignation throughout Ireland, and was denounced by a portion of the Liberal press in England; and when the sentence had half expired, the judge made repairs for the odium his hasty act had brought upon the Government by releasing him again.

On the 22d of March, Queen Victoria, while passing from a railway-train into her carriage, at Windsor, was again subjected to one of those attempts or feints to assassinate her, seven of which in all it has been her strange fate to experience.\* It is, perhaps, because no precautions are thought necessary to protect the person of a constitutional sovereign whom no one can have any motive in wishing dead, that Victoria has been set upon so many times by crack-brained desperadoes. The last assailant was a demented person named Roderick Maclean, who had been a clerk. His trial for high-treason took place with much pomp and circumstance on April 19th. A single day was sufficient to establish his insanity in the minds of the jury, and he was acquitted on that ground.

The youngest of the royal princes, Leopold, Duke of Albany, was married April 27th, to the Princess Helen, daughter of the reigning Prince of Waldeck and Pyrmont, and sister to the Queen of the Netherlands. The usual grant of £10,000 a year in addition to the annuity of £15,000 voted to the younger sons of

the Queen upon coming to age was opposed by a radical faction in the House of Commons, of which Mr. Labouchere was this time the spokesman. A working-class member, Mr. Storey, created an unpleasant sensation by repeating, in direct terms, the arguments which are familiar to the democratic classes outside, against the cost of royalty, and of sinecures provided in the royal household and in the state departments for members of the aristocracy.

GREECE, a kingdom of Southern Europe. The present Constitution was elaborated by a Constituent Assembly in 1864. The legislative power is exercised by a single Chamber of Deputies elected for four years by direct vote. George I, King of the Hellenes, is the second son of the King of Denmark, born December 24, 1845. He was offered the crown by the National Assembly in accordance with a protocol providing for the annexation of the Ionian Isles, signed June 5, 1863, at London, by the three protecting powers, France, England, and Russia, and began his reign October 31st of that year.

The Ministry, which was formed March 15, 1882, is composed as follows: Tricoupis, President of the Council and Minister for Foreign Affairs, also of the Interior *ad interim*; Rallis, Minister of Justice; Kalligas, of Finance; Lombarδος, of Worship; Karaschakis, of War; and Rufos, of Marine.

AREA AND POPULATION.—The population, according to the census of 1879, was 1,679,470, of which number 880,952 were males and 798,518 females. The area was 51,319 square kilometres. The new territory in Epirus and Thessaly, acquired by the convention of May 24, 1881, has an area of 13,369 square kilometres and a population of 299,958 persons, making the total area of the Hellenic kingdom 64,688 square kilometres, or 24,880 square miles, and the total population 1,979,423. Of the population given in the census returns of 1879, 20,523 were soldiers and seamen, and 5,180 sailors abroad. The rest were divided as to religion into 1,635,698 Greek Orthodox, 14,677 other Christians, 2,652 Israelites, and 740 of other faiths. The number of foreigners residing in Greece was 31,969, of whom 23,133 were Ottoman subjects, 3,104 Italians, 2,187 English, and 534 French. The population of the principal towns was as follows: Athens, 63,374; Patras, 25,494; Hermonopolis, 21,245; Piræa, 21,055; Corfu, 16,515; Zante, 16,250; and Tripoli, 10,057. The number of marriages in 1878 was 8,603, births 44,921, and deaths 30,588, not including still-born; excess of births, 14,333. The population has increased since 1870 at the annual rate of 1.69 per cent. The Albanian race forms a large part of the population, furnishing the greatest number of cultivators, and a large and active section of the maritime population.

The special commerce in 1875 amounted to 114,486,000 drachmas of imports (about \$20,-

\* The first and most determined attempt on the Queen's life was made by Edward Oxford in 1840. In 1842 John Francis fired a pistol at her, and later in the same year Bean took aim at her, with a pistol, but did not succeed in discharging the weapon. In 1849 an Irish bricklayer named Hamilton fired a pistol at her, but it was charged with powder only. In 1850 an ex-lieutenant of hussars struck the Queen with a cane. In 1872 a boy thrust before her a petition for the release of Fenian prisoners, and with the other hand presented an unloaded pistol.

000,000), the exports to 75,764,000 drachmas (about \$13,000,000). The following were the principal imports: cereals, 28,851,000 drachmas; manufactures, 23,531,000; hides, 9,760,000; sugar, 5,546,000; wood, 5,297,000; iron, 3,358,000; cattle, 2,959,000; salted meats, 2,913,000; coal, 2,659,000; coffee, 2,411,000; rice, 1,941,000; sulphur, 1,851,000. The chief articles of export were the following: Zante raisins, or dried currants, 37,813,000 drachmas; olive-oil, 12,933,000; hides, 5,274,000; lead, 4,214,000; figs, 4,009,000; gall-nuts, 1,749,000; wines, 1,197,000; tobacco, 1,178,000; cotton, 971,000; silk, 964,000; soap, 856,000. The following table shows the extent of the trade with different countries:

COUNTRIES.	Imports.	Exports.
	Drachmas.	Drachmas.
Great Britain .....	31,291	40,584
Turkey .....	28,011	7,546
Austria .....	15,868	9,887
Russia .....	15,331	4,882
France .....	18,770	2,542
Italy .....	6,856	8,348
Other countries .....	3,364	6,975
Total, 1875 .....	114,486	75,764

The number of vessels entering Greek ports in 1875 was 10,089, of 1,783,180 tons, engaged in foreign commerce, and 63,465, of 2,210,968 tons, in the coasting-trade. The merchant navy numbered 5,437 vessels, of 262,032 tons, employing 26,760 seamen, including 4,303 vessels of less than 60 tons, and 27 steamers aggregating 8,241 tons.

**ARMY AND NAVY.**—By the law of 1879 every able-bodied man of the age of twenty-one or over is required to serve three years in the active army, six in the reserve, and ten in the militia. The strength of the army on the peace footing was fixed at 24,076, and on the war footing at 35,188 men. The force provided for in the budget for 1879 was 14,061 of all arms. By the royal decree of January 8, 1881, the effective was raised to 82,077 men. After the evacuation of the ceded provinces by Turkey, it was reduced to 27,500 men, by the decree of August 31, 1881, but the enlarged organization was preserved.

The fleet consisted in 1880 of fifteen vessels, two of which were small iron-clad turret-ships carrying 12-ton guns, two were steam-corvettes, and six gunboats. There were added in 1881 two wood-sheathed iron gunboats and an efficient torpedo service.

**FINANCES.**—The budget for 1880 was increased by extraordinary votes from 52,655,455 to 105,056,618 drachmas. (Greece belongs to the Monetary League, the coined drachmas being identical with francs; but they have been driven out by an inconvertible paper currency, which is at a discount, usually about 10 per cent.) The war budget was increased from 11,100,586 to 54,280,101 drachmas, and the navy budget from 2,111,230 to 11,861,879. There was, consequently, a deficit which, on the basis of the budget of receipts,

amounts to 58,368,761 drachmas. The budget for 1881 places the total revenue at 49,051,560 drachmas, and the expenditures at 124,155,139, leaving a deficit of 75,103,579 drachmas. The military expenditures are 71,823,580 drachmas, the naval expenditures 5,282,680 drachmas. The domestic debt requires 19,751,000, the foreign debt 1,272,000 drachmas. There were 8,800,000 drachmas voted for the construction of roads. Of the estimated revenue, 10,596,000 drachmas are derived from direct taxes, 6,011,000 coming from the land-tax and tithes, 1,900,000 from a tax on live-stock, 1,300,000 from licenses, and the rest from a house-tax, a tax of 3 per cent on joint-stock companies, and one on pastures. The indirect taxes yield 24,800,000 drachmas, of which 18,620,000 come from customs, and 5,300,000 from stamps. The revenue from the post-office and telegraphs is 1,350,000; from the domains and public property, 2,780,360; from sales of public property, 4,128,000 drachmas. Receipts of arrears are estimated at 3,000,000 drachmas.

The public debt in March, 1881, amounted to 490,407,309 drachmas. The foreign debt was made up as follows:

FOREIGN LOANS.	Drachmas.
Loans of 1824 and 1825, compromised in 1878. . . . .	26,462,326
Loan of 1832, 60,000,000 francs, guaranteed by England, France, and Russia. . . . .	98,457,458
Indemnity to heirs of King Otho. . . . .	8,751,792
Loan of 1879, 60,000,000 francs. . . . .	62,543,600
Loan of 1881, 124,000,000 francs. . . . .	134,000,000
Total foreign debt. . . . .	820,215,176

The domestic debt of 170,192,133 drachmas was contracted since 1862, except 18,000,000 drachmas given as indemnity to the inhabitants of Hydra, Spezzia, and other isles, for sacrifices in the revolution. Loans amounting to 119,980,000 drachmas were negotiated with a syndicate of French and Greek bankers in 1880 and 1881, to provide for a probable war with Turkey, of which something over 80,000,000 drachmas had been raised at the end of March.

**POLITICS.**—Politics in Greece have heretofore been of a personal character, hingering upon the rivalries and coalitions between the leaders of factions which were attached to their chiefs from personal considerations. Debauchery of the public service, nepotism, bribery and speculation were the inevitable concomitants of this low stage of political development. The accession of Tricoupis to power in March was the result of a national revolt against the old methods. The educated youth aspiring to better ideals, the more intellectual and patriotic elements, under the leadership of Tricoupis, Lombardos, Kehaya, and Petmezas, first organized a reform party in 1870. The late Prime Minister, Coumoundouros, was a skillful political tactician, not without claims to statesmanship; but the scandals which occurred during his ministry were no longer condoned, and his influence had greatly declined long before his retirement. The Opposition dictated the foreign policy of the late

Government, and insisted on the extreme pretensions of Greece in the boundary dispute with Turkey. Coumoundouros sacrificed the remainder of his popularity by breaking his promises during the vacation of the Legislature, in yielding more to the pressure of the powers than the temper of the country would suffer. He used the patronage and influence of the Government in the January elections to the fullest extent, in order to preserve his position; but the Opposition secured a majority of 60 in a House of 245, though the pressure used by the Government resulted in the invalidation of twelve candidates returned on the Government side. The resignation of Coumoundouros depended only on his choice as to the time and manner. When the Chamber met at the end of January, the King's speech was received in absolute silence. In March Coumoundouros took the occasion of a defeat in the election of the Speaker to resign, and Tricoupis formed his Cabinet.

**TURKISH BOUNDARY.**—The new Prime Minister was less disposed than his predecessor to agree to any compromise of the disputes with Turkey, and insisted on the fulfillment of the final award of the Delimitation Commission. The Turks still held three places which lay within the Greek boundary drawn by the commission in accordance with the terms of the Treaty of Berlin. These were the strategic points which the Porte represented to be invaluable for the defense of the Turkish territory, but which were of still greater defensive value to Greece. The points retained by Turkey were Karalik Dervend, the point on the coast of Thessaly where the boundary was to begin, Kotzoukhero, or Zarcos, and Kritzovalli. At Nezeros, Analipsis, or in Turkish Godaman, the Turkish Government also desired a variation of the boundary; but it had evacuated this point with the rest of the territory the preceding year. The Greeks finally concluded that the only way to obtain the disputed points was by the means which were successful in obtaining the award. A collision between the military of the two nations was threatened for some weeks before, finally, August 27th, the Greeks marched into Zorbas, a place near Karalik Dervend, lying within the awarded boundary, and had a pitched battle with the Turkish garrison. Fighting was resumed the next day. Skirmishes took place at other points. Both governments concentrated troops on the frontier, the Greeks collecting at once an army of over 10,000 men on the spot. There were 400 or 500 killed on both sides in the engagements. Then the powers took cognizance of the question, which entered, upon an armistice being arranged, into the diplomatic phase. Tricoupis dispatched a truculent circular to the powers. An informal conference of the ambassadors was held at Constantinople, on September 24th. The efforts of the powers were directed to obtaining a compromise. The Porte offered to give up

the three positions it still held in consideration of the retrocession of Nezeros. Tricoupis kept up his menacing attitude. Finally, the Porte gave way, and yielded up the disputed districts to the Greeks.

Greece has strong motives to assert herself in the Eastern question, and put forward her traditional claims upon Europe, however inconvenient they may be in the momentary diplomatic situation. There are good reasons why these demands should be accompanied by a movement for the purification of Greek politics. In the beginning of the century Greece was treated as the natural heir to the "sick man." The Roumanians, Bulgarians, Albanians, and all the rayas of the Turkish Empire were then dominated by Greek thought, called themselves Greeks, and partook of the aspirations for the establishment of the Byzantine Empire. The political incapacity and corruption displayed by the Hellenes after they obtained their independence, and the gradual development of national aspirations among the Roumanians and Bulgarians, encouraged by the Russians and often by the Ottomans, narrowed the prospects of Greece. The ecclesiastical separation of Bulgaria from the Phanars, and the bestowal of self-government on the two divisions of Bulgaria, have finally brought the Hellenes to a point where they must either display extraordinary vigor and virtue to preserve their succession to Byzantium, or sink forever into the position of a third-rate power.

**GREGORIAN CALENDAR.** The 15th of October, 1882, was the tercentenary of the abandonment of the Julian Calendar, and the introduction of the calendar named after Pope Gregory XIII. It seems fitting, therefore, in noting the events of the year, to make this the occasion of recalling the main features of these systems of time-computation. The history and origin of both calendars are worth looking into, as being of common interest to all civilized peoples. Both the Julian and Gregorian systems have their roots in times far older than the eras of their commencement. The Julian can not be considered apart from the earlier Roman calendar or calendars; the Gregorian is not only based, as to the solar year, upon the Julian, but borrows its lunar calendar from the system of the Greeks Meton and Calippus. But, before entering upon a comparison of these, it is desirable to obtain a clear idea of what we mean by a calendar. The scientific sense of the word (in which we here use it) is not affected by the starting-point whence it begins, whether Jewish, Christian, Mohammedan, or any other; properly it denotes any one of the modes in which time is divided by the different peoples of the earth—in short, the punctuation of time.

It is clear that time can be punctuated both naturally—i. e., in conformity with celestial phenomena—and artificially. There is nothing which would absolutely prevent the framing of

a calendar regulated by the relative positions of the earth and any one of the planets; but, of course, no one would think of calculating time by the motions of any other heavenly body than the sun and moon. The year, therefore, the principal division of every calendar, is either solar or lunar, or a compromise between both. Our civil year is an example of the first. The length of our civil month has now no reference to the duration of the moon's revolution round the earth. It is purely a matter of convenience, a division of the 365 days of the solar year into twelve periods, as nearly equal as possible. The Mohammedan year, on the other hand, is entirely lunar. Its twelve lunations only amount, on the average, to 354 days, 8 hours, 48 minutes, so that it falls short of the solar year by 10½ days, and consequently retrogrades through all the seasons in about thirty-four years. But even the lunar year, in its origin, was luni-solar, for it was always probably a rude attempt to punctuate the solar year by lunar divisions. Of the luni-solar the Jewish year is an example. Like the Mohammedan, it consists of twelve lunar months, but by means of intercalation it is brought every nineteen years into renewed correspondence with the solar year. Besides the solar year, the lunar month and the astronomical day are the other natural divisions of time. The conventional divisions are the week, the civil day, hour, minute, and second. The week of seven days is one among other methods of approximately dividing the month. Its origin is not very clear. The seven-day week, it is true, was widely known by Greeks and Romans, yet for the most part it was used as a measure of time by astrologers, Chaldean and Egyptian. The planetary names for each day of the week came to the Romans (probably before the Christian era) from Alexandria, as an astrological not religious institute. According to this, each of the twenty-four hours of the day, beginning at sunrise, was assigned to one of the seven "planets," taken in the then received order, Saturn, Jupiter, Mars, Sun, Mercury, Venus, Moon, continued without interruption from day to day.\* The Teutonic races, though borrowing the week from the Romans, adopted in place of Latin names of deities those with which they were more familiar, as Tiw, Woden, Thor, Fraya; the other days' names were simply translations, as Sun, Moon, Saturn. Among the early Romans the mode of dividing the month was cumbrous in the extreme, and it seems surprising that such a system as that of calends, nones, and ides, should have held its place so long as it did. The Greeks divided their months into decades of days; and the decade, too, was strongly urged for adoption in the calendar framed at the time of the French Revolution, so as to have ten months instead of twelve in the year. The more natural division, however,

into lunar months proved too convenient to be changed.

Above, the Christian in comparison with the Jewish and Mohammedan calendars has been spoken of; but there is yet a noticeable point to be mentioned. It is, that the Christians alone have two calendars, a purely solar and a luni-solar, a civil and an ecclesiastical, existing side by side. The Gregorian civil calendar is the direct bequest of the Romans, modified in a few respects, but still preserving the features of its progenitor. Passing by the traditional calendars of Romulus and Numa, it is tolerably certain that, until the decemvirs, who threw the calendar into hopeless confusion by a clumsy attempt to introduce Greek methods of calculating the year, the Roman year was exclusively lunar. The early Roman calendar-makers seem to have known of the nineteen years' cycle,\* and the decemvirs employed it by instituting a luni-solar year, supplementing the lunar with intercalations. They bungled, however, in their calculations, and they lengthened or shortened the intercalations, whenever they chose, so as to affect the time of the elections, in the interest of the aristocratic party. Hence, when Julius Cæsar took the matter in hand (in b. c. 46), he found the year in a state of chaos; and, in order to make things straight, he made the "last year of confusion" to consist of no less than 445 days, whereby he was enabled to start fair and square on his own system.

The first Julian year began January 1st, b. c. 45. It was purely solar, consisting of 365 days, with an additional day every fourth year, thus making the average length of the year 365 days, 6 hours. This period was divided into twelve parts, called months as heretofore. In Cæsar's arrangement the months had 31 and 30 days alternately, except February, which had 29 days in common years and 30 in leap-years. Augustus Cæsar, however, meddled with this arrangement; for, being resolved to have place in the calendar, he had the month Sextilis named after himself (just as Julius Cæsar had named Quintilis after himself), and added another day to it, so as not to be inferior to the month of July in any respect. This led to February being deprived of one of its days, and in order not to have three months of 31 days each following one another, a day apiece was taken from September and November and given to October and December. Hence the irregular order of our long and short months.

The average length of the Julian year, as above stated, was fixed at 365 days, 6 hours; but the actual length of the solar year is 365 days, 5 hours, 48 minutes, 48 seconds. The Julian year, therefore, gained upon the true

\* That is, in brief, if the new moon happens on the first day of the solar year, it happens on the first day of the twentieth solar year next following; so that the lunar and the solar year after nineteen solar years, or two hundred and thirty-five revolutions of the moon round the earth, start level on the first day of the twentieth. Though not absolutely correct, this cycle is extremely convenient.

\* For a full explanation of this curious scheme, see Smith's "Dictionary of Christian Antiquities," article "Week."

solar year at the rate of 11 minutes, 12 seconds a year. In the course of centuries the discrepancy hence arising began to show itself very inconveniently, and the popes were often urged to effect a reform. This was pressed chiefly on the ground that Easter and the Church festivals depending on the time Easter is celebrated were all thrown out of their proper seasons. Reiterated remonstrances at last had their effect. Pope Gregory XIII, in 1582, assisted by Aloysius, Lilius, Clavius, and others, took up the work and carried it out thoroughly. The equinoxes at this date appeared seven days earlier than in 325, when the Council of Nice was held, and the prevailing rule as to Easter was established. The mode adopted of reforming the civil year was simple and effective. The Julian year was gaining on the true solar year at the rate of three days and three hours in 400 years. All that was necessary was to drop three days in that period. Therefore every centenary year which was not divisible by four was made for the future a common instead of a leap-year. The years 1600, 1700, 1800, 1900, 2000, were to have been bissextile or leap-years; but, by the regulation of the Pope and his helpers, the years 1700, 1800, and 1900 were to receive no intercalation, while the years 1600 and 2000 were to be leap-years, as before. As by this process the Gregorian year is only twenty-four seconds longer than the mean tropical, it will take 3,600 years (if the world last so long) before posterity will find themselves a day in advance. The bull of the Pope ordering this reform was issued February 24, 1582, and as the year was now ten days in the wrong, it was made right by requiring the 5th of October to be the 15th. This brings us to the date in 1882 which is the tercentenary of the birthday of the Gregorian Calendar.

As was stated above, there is a lunar calendar for the use of those churches in Christendom which follow the rule of the Council of Nice in regard to the great festival of Easter. A lunar cycle is of course a necessity for this purpose, and at different dates different cycles have prevailed. The cycle of Meton, improved by Calippus, introduced at Athens, in the fifth century B. C., obtained much favor, and was adopted at Alexandria, and subsequently at Rome. As revised by Dionysius Exiguus, it was still to a certain extent in error, amounting to a day in excess after 308 years. Hence some method was to be devised of bringing the lunar year into harmony with the Gregorian solar year. A compendious table was wanted to find the new moons for any date in the past or future. The simplest plan was to adopt the tables for finding the new moons which had been previously in use, applying to it the necessary correctives. The "Golden Number," the "Epect," the "Dominical Letter," are the names applied to the Prayer-Book tables in connection with this subject. Our limits do not admit of details. It is sufficient to say that the united devices furnished by these in-

dicate the date of Easter in each year. The Golden Number gives us the place of the year in the cycle of 19. The Epect supplies the age of the moon at the beginning of the first year of the cycle, and by inference its age at the beginning of the other eighteen years, regard being always had to the century. The Dominical Letter informs us upon what days of the year in question Sunday falls. But these methods do not determine Easter with entire accuracy, according to the rules laid down by the Council of Nice. The vernal equinox is assumed to be the 21st of March, at which time it happened to fall A. D. 325, the date of the council. Owing to what is called the "precession of the equinoxes," the vernal equinox is found to vary from year to year, being sometimes on the 20th, and even the 19th of March. But as this one date was fixed, for the purpose in view, on the 21st, it enables calculations to be made on a settled basis for the movable feasts; and certainly, in so far, the laying down the rule by the council was a good thing for the Church and Christian world.

The Gregorian Calendar was introduced into the greater part of Italy, as well as into Spain and Portugal, on the day named in the Pope's bull. It was adopted in France two months after, and, by an edict of Henry III, December 9th was followed by the 20th. The Roman Catholic parts of Switzerland, Germany, and the Low Countries, adopted the correction in 1583, Poland in 1586, Hungary in 1587. The Protestant parts of Europe resisted, for more than a century, the change, mainly owing to an unwillingness to receive anything from the source whence it emanated. At last, in 1700, Protestant Germany, as well as Denmark and Holland, put aside their prejudice in this matter, and the Protestant cantons of Switzerland copied their example the following year. In England, an attempt was made, as early as 1584, to introduce the new style; but it failed of success. Finally, however, in 1751, an act was passed regulating the beginning of the year for the future, and correcting the calendar now in use. The old year began on the 25th of March. The act provided that the new year, 1752, should begin January 1st; and, as the year was now eleven days out of the way, it was enacted that the 3d of September should be reckoned the 14th. Sweden adopted the Gregorian Calendar in 1753. Russia, however, and those countries where the Greek Church is predominant, adhere to the Julian year, or "old style," as it is called.

GUATEMALA (REPÚBLICA DE GUATEMALA), one of the five independent states of Central America. According to recent census returns, the population\* of the republic in October, 1882, was 1,226,602, against 1,200,000 estimated in 1875. Of the number given for the year first mentioned, 381,828 (185,536 males and 196,292 females) were classified as "not In-

\* For statistics relative to area, territorial divisions, population, etc., see "Annual Cyclopædia" for 1875 and 1880.

dians"; the Indian population stood at 844,774 (421,518 males and 423,256 females). The general movement of the population in March, 1882, was as follows: births, 4,564; deaths, 2,298; and in April, births, 4,779; deaths, 2,482. The number of civil marriages registered in these two months was 165 and 155 respectively. Livingston, on the Atlantic coast, has been declared a free port, and made the capital of the Department of Izabal, in lieu of the town of the latter name.

The President of the Republic is General Rufino Barrios, elected May 7, 1873. His term of office was prolonged by decree of the Constitutional Assembly, under date of October 23, 1876, and he was re-elected March 15, 1880, for a period of six years.

The Cabinet was composed of the following Ministers: Foreign Affairs, Dr. F. Cruz; Interior, Dr. C. Diaz Mérida; War, General J. M. Barrundia; Public Instruction, Señor Del-fino Sanchez; Agriculture and Public Credit, Señor A. Peña; Public Works, Señor M. Herrera.

The Guatemalan Minister Plenipotentiary to the United States was Dr. Lorenzo Montúfar,\* and the Consul-General (for the Union), at New York, is Señor Jacobo Baiz.

The United States Minister Plenipotentiary to the five Central American Republics (and resident in Guatemala) is Hon. H. C. Hall, and the United States Consul at Guatemala City, Dr. F. H. Titus.

The armed force of the country comprises some 2,100 men in active service, and about 33,000 militia.

The results of the annual school examinations testified, as in preceding years, to the healthy progressive development of the admirable system of public instruction adopted in Guatemala, and now established on so firm a basis as to warrant the presumption that government aid may soon be in a great measure dispensed with in that direction. "Forty years ago," writes a native journalist, "the estimated annual expenditures of the University of Guatemala did not exceed \$6,600; at the present time upward of \$30,000 are disbursed yearly for the several professional schools in which are taught the branches that formerly comprised the university course. Among the schools just referred to are not included the schools of arts and trades, of agriculture and of commerce, the annual government outlay for which is \$20,490, \$5,900, and \$1,920, respectively. In the report of the Minister of Finance, for 1881, the total expenditure for public instruction figures at \$360,039, against but \$245,695. Measures had been taken for extending the scope of the National Library; an additional librarian had been appointed, and a catalogue of the volumes contained in the institution was in course of preparation.

STATISTICS.—The amounts and branches of the national revenue and expenditures for the

fiscal year 1880-'81 were as shown in the sub-joined table:

REVENUE.	
Balance from the preceding year.....	\$121,477
Custom-house, wharfage, etc.....	2,143,161
Spirit, milling, slaughter-house, and salt taxes....	1,889,835
Stamped paper.....	102,460
Other indirect imposts.....	49,176
Direct taxes.....	85,045
Monopolies (saltpeter, tobacco, etc.).....	889,180
Reimbursements and interest.....	157,390
Loans.....	1,901,980
Deposits.....	435,872
National Bank.....	171,981
Sundries.....	582,212
Total.....	\$7,479,719
EXPENDITURE.	
Administration.....	\$2,539,375
National debt, etc.....	8,418,649
Monopolies (exclusive of spirits and tobacco).....	163,243
Reimbursements.....	48,638
Deposits.....	322,040
Sundries (including the spirit and tobacco monopolies, Post-Office and telegraphs, Mint, charitable institutions, police force of the capital, etc.).....	826,944
Balance.....	165,880
Total.....	\$7,479,719

The *balance* in this table represents, of course, a computed *surplus*, whose presence it is hard to explain where deficits are the almost invariable rule.

In the budget for the fiscal year ending June 30, 1883, the revenue was estimated at \$5,158,096, and the expenditure as follows:

Executive power.....	\$30,000
Legislative power.....	15,370
Ministry of Foreign Affairs.....	77,490
" Interior and Justice.....	278,660
" Finance and Credit.....	450,000
" War.....	1,443,175
" Public Instruction.....	500,000
" Public Works.....	553,857
Payments guaranteed by import duties.....	567,992
Payments guaranteed by export duties.....	797,798
National debt (home branch).....	189,021
National debt (foreign branch).....	230,804
Total.....	\$5,184,157

The Minister of Finance calls attention to the circumstance of a conditional indebtedness of the Government to the unfinished branch of the railway between Esequintla and Guatemala, in the sum of \$500,000, and to the line from Champerico to Retalhulen, now in process of construction, in the sum of \$700,000, and adds: "These eventualities have not been included in the estimated expenditures. Were the corresponding bonds emitted, the redemption of these would in all probability interfere with the equilibrium of the budget; but what matters a deficit representing a step forward on the road of progress?"

According to official reports, the national debt on January 1, 1880, stood as follows:

Foreign debt.....	\$3,804,966
Home debt.....	4,029,892
Total.....	\$7,834,858*

By January 1, 1882, it had been reduced to \$7,139,169.

In 1882 an arrangement was entered into between the Government and the holders of

\* Resigned in August, 1882.

\* See "Annual Cyclopædia" for 1881, p. 380.

home-debt bonds, for the gradual redemption of these. The interest, meantime, was reduced from 9 to 6 per cent; and the bondholders agreed to advance to the Government 10 per cent on the bonds, whereby the national Treasury would benefit by an accretion of \$200,000. As a proof of the stringency of the times in Guatemala, however, it may be stated that the payment of the monthly drawing of the National Lottery for August was postponed until September 15th, a circumstance up to that time unprecedented in the four years of the existence of the institution.

The exports from Guatemala for the year 1881 were of the total value of \$4,084,000; and the imports of the total value of \$3,665,000. The coffee sent out of the country was of the value of \$3,645,220; and other minor staples were represented by the following figures: hides, \$106,879; wool, \$48,000; India-rubber, \$75,271; cochineal, \$45,077; specie, \$117,187. On comparing these results with those for 1878,\* a marked decrease in some of the shipments will be observed in the later of the two years. The cochineal exported in 1881, for instance, shows a value of but \$45,077; while that shipped in 1878 was of the value of \$220,000. Again, in 1878, there were sugar and indigo exports of the respective values of \$110,600, and \$1,300; and these commodities do not figure at all among the exports for 1881. Indeed, a period of general commercial depression seems to have set in for Guatemala, in common with other Spanish-American countries. In regard to coffee, for example, the chief staple of export, Guatemalan shippers exclaim that the present low price of that article in all the markets of the world has completely demoralized business, causing the ruin of many and hampering all. Until either coffee returns to its normal value, or other agricultural products now being cultivated begin to bring in fresh wealth, there is little hope of a return to really prosperous times.

In 1881 the number of vessels entered at the several ports of the republic was as follows: 133 steamers, of an aggregate of 202,242 tons; and 73 sailing-vessels, of an aggregate of 16,991 tons. The clearances were approximately of an equal number. The railway from San José, the principal port of the republic on the Pacific coast, to the capital, has been in operation for nearly two years from the first-mentioned point to Escuintla; and work on the remainder (from Escuintla to Guatemala city) has been carried on, though not uninterruptedly, ever since. The Guatemala Central Railroad Company has been succeeded in its property and franchises by a new corporation, organized in the United States under a law

passed at Albany on June 6, 1882, and called the "Central American Pacific Railway and Transportation Company." A project is talked of to connect the Salvador port of La Unión with the Guatemala system of railways, and another of extending the latter system from Guatemala city to the Atlantic port of Santo Tomás, thereby completing railway communication between either ocean, to the incalculable advantage of the two republics thus united.

A line of horse-car railroad from Guatemala city to the suburb Jocotenango was to be completed in September. Branch lines were to be extended through the principal thoroughfares of the capital. There were in 1881 upward of 3,600 miles of telegraph established, with sixty-three offices. The number of dispatches was 222,456, of which 56,608 were on official service, and the receipts and expenditures were \$51,493, and \$98,230, respectively.

The vexed question of limits with Mexico has at last been settled, to the mutual satisfaction of both countries. President Barrios, accompanied by some of his Cabinet ministers, visited the United States in July, for the purpose of obtaining the good offices of President Arthur as arbitrator. A convention was signed by the representatives of the negotiating republics (Señor Romero representing Mexico), the main articles of which preliminary document are briefly as follows:

1. The Republic of Guatemala relinquishes her claim to the State of Chiapas and its Department of Soconusco.

2. The definitive treaty of limits between Mexico and Guatemala will be concluded on the ground that Chiapas and Soconusco form an integral part of the United States of Mexico.

3. The Republic of Guatemala, satisfied with the expressed appreciation of its conduct on the part of Mexico, and the acknowledgment by the latter that the ends held in view by Guatemala on agreeing to the terms of the preceding articles were noble and honorable, will claim no pecuniary indemnity or compensation for the surrender of rights as above stipulated.

4. In the event of disagreement as to the line of demarkation, and the necessity of appeal to a third party, Mexico and Guatemala will jointly request the arbitration of the President of the United States.

5. In fixing the dividing line, the general rule of the *uti possidetis* will be observed, save where it may be desirable to follow natural lines. And, pending the final determination of said line, each of the contracting parties will respect the present possessions of the other.

6. The Governments of the United States of Mexico and Guatemala bind themselves hereby to sign, in Mexico city, and not later than six months from this date, the final treaty, on the bases herein expressed.

\* See "Annual Cyclopædia" for 1879, p. 463.

## H

**HARVESTS OF THE WORLD IN 1882.** A volume published annually by M. Estienne, of Marseilles, France, contains reports of the harvests of the year from fourteen countries in all, thirteen of these being corn-growing countries of Europe.

FRANCE naturally receives fullest attention. Reports are given from 89 departments against 90 of the year preceding, accompanied by a colored map marking the state of the wheat-crop in each. In 20 departments the wheat-crop is marked *very good*; in 47 it is *good*; in 11 it is *fairly good*; in 10 it is *middling*; and in 1 only it is *bad*. The year preceding the crop was very good in 3 departments, good in 30, fairly good in 23, medium in 24, and bad in 10. In 1880 the figures were: 5 very good, 17 good, 26 fairly good, 16 medium, and 6 bad. From these figures it plainly appears that the reports of 1882 are better than those of either 1881 or 1880. Oats are reported on from 88 departments. In 22 the crops are very good, in 56 good, in 2 fairly good and 1 passable, and in 7 medium. In 1881 the reports gave only 6 very good, 21 good, 18 fairly good, 26 medium, 10 bad (81 departments). Thus, the oat-crop, 1882, is more largely reported and generally superior to the previous year. Maize is not largely grown, there being reports from only 36 departments, chiefly in the south of France, against 25 departments in 1881, and 33 in 1880. In 2 departments it is very good, in 25 good, in 3 fairly good, in 5 medium, in one very medium. This is much better than was reported in 1881. The crop, however, was a very good one in 1880, there being 3 departments very good, 19 good, 5 fairly good, 6 medium. Reports on rye are given from 77 departments; of these 6 are very good, 52 good, 10 fairly good, 1 passable, 7 medium, 1 bad. In 1881 this crop was very good in 6 departments, good in 19, fairly good in 17, medium in 16, bad in 5, very bad in 2. In 1880 in 11 departments it was very good, in 53 good, in 6 fairly good, in 3 medium. Thus the crop in 1882 is superior to that of the two preceding years. Barley is reported upon from 76 departments, as against 70 in 1881; of these 15 are very good, 46 good, 9 fairly good, 4 medium, 1 bad, 1 very bad. The report of 1881 gave 8 departments very good, 33 good, 13 fairly good, 1 passable, 14 medium, 1 bad. In 1880 the crop was very good in 26 departments, good in 40, fairly good in 5, and medium in 8. Thus, as it appears, the crop is good, but hardly equal to that of two years ago. The whole of the figures on the various crops show that the harvest of 1882 is superior, taken all round, to either of the two previous years. With the one exception of barley, all the crops are better, while wheat is superior to that of any year yet reported on.

**GREAT BRITAIN.**—In estimating the harvest of 1882 in Great Britain, inquiries on the state of the crops were sent largely to farmers actually engaged in growing them, and they were asked to give their opinions by numbers, 100 being taken as representing an average. In all, 414 answers were sent in, and these show the following picture of the crops, the figures from a similar return last year being given for comparison:

	Wheat.	Barley.	Oats.	Beans.	Peas.
1882 .....	92·2	95·4	105·1	108·1	101·6
1881 .....	90	110	80	..	..

	Roots.	Potatoes.	Grass Hay.	Clover Hay.
1882 .....	107·1	96·4	112·6	118·4
1881 .....	80	98	65	65

So far as the English counties are concerned, the following are the figures representing the three leading cereal crops, 100 representing an average:

COUNTY.	Wheat.	Barley.	Oats.
Bedford.....	90·1	90·5	100·3
Berks.....	95·2	100·2	100·6
Buckingham.....	97·4	97·3	95·0
Cambridge.....	100·0	95·3	115·0

York, West Riding.....	102·3	101·5	99·5

Allowing that the wheat-crop for 1882 is one of 10,000,000 quarters for consumption, this leaves England (if the wants of the country for the forthcoming year be put at 24,000,000 quarters) dependent upon foreign supply for 14,000,000 quarters. The crops generally are described as

the best for the last seven or more years. Reports from Scotland give the wheat as vigorous, and beyond the average for quality and quantity. Barley suffered for lack of dry and warm weather. A larger than usual acreage of oats was sown, and the yield is considerably beyond an average. Potatoes were fine everywhere, and yielded an abundant harvest. In Ireland cold and damp weather diminished the yield for the year. As at the blooming-time the weather was cold and rainy, and as rust made its appearance in many fields, the wheat-crop is decidedly under average. Oats and barley give a fair average, and potatoes about the same. The acreage planted was one third less than in 1881, which was perhaps the largest and best crop ever obtained.

SPAIN.—The reports stated that the harvest of oats was bad. Barley was poor on the dry lands, but elsewhere good. The reason given is the dry season, and the lack of water for irrigation. For the same reason it was impossible to sow any wheat on the dry lands, and on other lands the crop was poor. All crops in this country for the year were poor, from drought.

BELGIUM.—The weather and temperature in Belgium were very favorable and the harvest abundant. There was an average acreage of wheat, and the yield was good. Oats and rye were reported to be good. Barley yielded well, but the color was bad and the grain light. Potatoes were abundant, and no reports are given of disease anywhere.

HOLLAND.—Elaborate tables are given of the crops in the various provinces. Wheat is reported to be good both for quality and quantity. Rye, though poor for quantity, is very good for quality. Barley, according to the reports, varies for quantity in different provinces, but everywhere quality is pronounced good. Oats are about the same, being slightly better for quality. The *colza* bean (*graines de colza*) is a varied crop, as is also that of hemp (*graines de lin*), good and bad reports being about equal as regards quantity and quality. Potatoes, on the whole, yielded a poor crop.

GERMANY.—Very favorable reports come from Germany. The acreage sown was about the same as in preceding years. Wheat, oats, barley, and rye were each and all good, both for quantity yielded and for quality and weight of grain. The potato-crop was also good.

ITALY.—The reports from Italy on the cereals describe them as excellent both for quality and weight. The yields also were satisfactory. Wheat is reckoned as superb, and weight heavy. Oats and barley were very good; but the bean-crop did not prove so abundant as was hoped.

SWITZERLAND.—On the whole, the weather this year was unfavorable. There was no snow or severe frosts in the winter of 1881-'82, it is true, but in the summer there was too much rain, and before that it was far too dry. Of most crops an average acreage was sown.

Potatoes yielded a fine crop. Wheat was between good and middling, with rust which showed itself in certain areas. Rye and oats gave a good yield.

AUSTRIA-HUNGARY.—In the early part of the year the weather was unfavorable, but during the blooming and earing time it was very fine. There was a smaller acreage under cereals than usual, but potatoes and beans yielded excellent crops. Wheat was good both in quality and quantity, the weight being 78 to 82 kilogrammes per hectolitre (i. e., 170 to 180 pounds avoirdupois per 2½ bushels). Oats are described as a fair harvest, both for quantity and quality, the grain showing a weight of 47 to 48 kilogrammes per hectolitre (i. e., 104 to 106 pounds per 2½ bushels). Maize yielded well. Rye was middling as to quantity, quality good, weight 70 to 72 kilogrammes per hectolitre (i. e., 154 to 158 pounds per 2½ bushels). Barley was good, so far as quantity goes, but of middling quality, weight varying from 61 to 67 kilogrammes per hectolitre (i. e., 134 to 146 pounds per 2½ bushels).

TURKISH PROVINCES ON THE DANUBE.—The reports from this region are very satisfactory. After seed-time the temperature was regular, though previously it had been very dry. A larger than usual acreage was planted, and the result has been excellent. Wheat is very good for quantity, while the grain is of fine quality and heavy. Oats are a good average crop, but the acreage is a little less than in 1881. A good crop of maize was gathered in. Rye was very good, and of a more satisfactory quality than the previous year; weight also good. Barley was very fine for quality, with heavy grain, though a little lighter than in 1881. The reports just given were chiefly from Salonica. Reports from other provinces agree with these in the main. In some places rains caused slight damage at harvest-time, but the result in substance is the same. Maize and beans yielded an abundant supply.

RUSSIA.—Several reports came from Russia. One from Odessa declared the harvest to be generally an average one. Oats were good, and wheat heavy. Rye was mostly middling; in some cases bad. Barley was reported middling, but in many districts (Kherson and Southern Bessarabia being especially mentioned) none at all is grown. Other reports, however, were generally more satisfactory, and one from Taganrog stated that no complaint could properly be made in respect to the harvest of 1882.

Taking these reports altogether, it is plain that never before (at least during the period that these reports have been collected) has the harvest in Europe been so uniformly good. Usually there has been a deficiency, but in 1882 there is no deficiency reported, and no apparent danger of lack of food-products.

UNITED STATES OF AMERICA.—Looking at the country as a whole, the year 1882 has proved to be one of the most abundant, if

not the most abundant, year on record. In 1881 there was a deficiency east of the Rocky Mountains, when the yield of Indian corn fell off more than 500,000,000 bushels as against the previous year's yield. The wheat-crops also fell off 118,000,000 bushels. But the crops of 1882 exceeded in abundance. The yield of wheat is reported to be over 500,000,000 bushels. Corn is estimated by the Agricultural Bureau at 1,680,000,000 bushels, and by other authorities as high as 1,800,000,000 bushels. From the most reliable sources it is ascertained that the United States have produced 440,000,000 bushels more of corn, and 180,000,000 bushels more of wheat, in 1882, than in 1881. It may not be out of place to mention, in this connection, that American flour, made from the choice grades of spring wheat, has of late years become an important item among exports from the United

States of 1882 are good beyond all previous record, and that there is no likelihood of any deficiency in the food-products needful for the support of life throughout the world.

HILL, BENJAMIN HARNEY, American statesman and jurist, was born in Jasper County, Ga., September 14, 1823; and died at his residence, in the city of Atlanta, August 16, 1882, having almost completed his fifty-ninth year. He received his early education at the school of the Rev. Mr. Corbin, at Corinth, Heard County, Ga. He entered the University of Georgia in 1841, and graduated there in 1844, taking the first honor, and delivering the valedictory oration, in which he gave promise of his remarkable power as an orator, receiving the enthusiastic applause of William C. Preston, of South Carolina, and of Judge Berrien, of Georgia, who happened to be present. Soon after he left college, he was admitted to the

BENJAMIN HARNEY HILL.

States. The shipments grew from 2,000,000 barrels in 1868, to 4,000,000 in 1876, and 8,000,000 in 1881. In 1882 they reached from 9,000,000 to 10,000,000 barrels.

Thus it appears true of America, as well as of Europe, that in this great continent the har-

bar, and in a very short time rose to a place in the front rank of the profession. In 1851, being then twenty-eight years of age, he was elected to the Lower House of the General Assembly, from Troup County. From that time until 1860 he was regarded as the leader

of the Whig party in Georgia, and as one of the most earnest champions of the Union cause, opposed to slavery agitation and secession. When his State seceded, in 1861, he acquiesced in her action, and from that time to the close of the war he was prominent and active in his support of the Confederate Government, and in opposition to reunion. From 1865 to 1870 he took every proper occasion to expose the injustice and impolicy of the "reconstruction measures," publishing his famous "Notes on the Situation." For two years, from 1870 to 1872, he withdrew from public life, advising the people to "accept the situation," resistance being no longer possible. In 1872 he supported Mr. Greeley for the presidency. In 1875 he was elected to Congress as Representative of the Ninth District. In 1876 he was re-elected, and, while occupying a seat in the House of Representatives, was elected United States Senator, defeating Hon. Thomas Norwood and ex-Governor James M. Smith. As an orator and constitutional lawyer he had few equals and no superior in either branch of the Federal Legislature. His fame as a jurist and as an advocate before a jury was fully equal to his fame as an orator; and some of his speeches in important cases in the courts are often cited by members of the bar as masterpieces of power. While intensely Southern in his feelings, and ever ready to enter the lists in defense of Southern honor or Southern rights, he was not sectional in his views. The Union under the Constitution strictly construed, a union of co-equal States enjoying all the rights of self-government, were the bases of his political creed. His speech in the House in reply to Mr. Blaine's attack on the South as responsible for the alleged "atrocities at Andersonville," and his speech in the Senate in denunciation of Mr. Mahone's coalition with the Republican party, are probably the most remarkable forensic efforts of his congressional career. In 1878-'79 he experienced some uneasiness from what was thought to be a little pimple on the left side of his tongue. For upward of a year he paid little attention to it; but as the sore became more aggravated, he sought medical advice and was treated at first by a homoeopathic physician, who pronounced the sore a "benign ulcer." After eight months of this treatment, and finding the affection was becoming rapidly worse, he consulted the famous Dr. Gross, of Philadelphia, who pronounced the disease cancer of the tongue. He was operated on with the knife three times, between July 21, 1881, and March 20, 1882, and after the last operation, by which the whole gland was removed, in the hope, which proved vain, that thereby the whole cancerous taint could be eradicated, Dr. Gross declared the case to be hopeless. The sufferings of the distinguished patient were at times excruciating, but he bore them with the patience and fortitude of a true Christian. He went to Eureka Springs, whose waters are said to be marvelously cura-

tive in cancerous affections, but they failed to benefit him. He then determined to return to Georgia, saying: "Whatever God may have in the future, I am willing to bear without a murmur. But, if I must die, I will go back to the old State that gave me birth, and die on her soil, and among my own people." From the day of his return to Atlanta he gradually sank. For a month before his death his power of articulation was almost gone. He was obliged to resort to a writing-pad to make known his wishes. When his throat became so constricted that he could no longer swallow nourishment of any kind, he realized that his end was near, made his will, and prepared to bid farewell to all earthly things. A few hours before his death, when he was rapidly sinking, and had not spoken a word for many days, or written a word for many hours, his pastor, Rev. Clement A. Evans, reports that "the light of life came full into his eyes once more, and with a slight effort he spoke out in clear, full, and even triumphant accent, the deathless legend of a soul conquering in Christ, and in full view of heaven—'Almost home!'" His death, on the 19th of August, was felt as a personal bereavement in every part of the State. Never was a public man more sincerely or universally lamented. His funeral at Atlanta, on the 20th of August, was attended by an immense concourse of people—by all the State officials, by a large delegation from both Houses of Congress, by the Chancellor and Faculty of the University of Georgia, and by delegations from the bar and from all the principal cities and towns in the State. The houses along the route to the cemetery were draped in mourning, the flags were at half-mast, the business houses closed, the bells of all the churches tolled at intervals, and the silence in the thronged streets, and the sorrowful countenances of the people, showed how truly they loved and mourned the illustrious dead.

#### HUNGARY. (See AUSTRIA-HUNGARY.)

HURLBUT, Major-General STEPHEN A., United States Minister to Peru, died on April 3d. He was born at Charleston, S. C., November 29, 1815, and was the son of a Unitarian clergyman, from whom he received his education. He studied law, and practiced his profession in his native city until the breaking out of the Florida War, in which he served as adjutant in a South Carolina regiment. He removed to Belvidere, Boone County, Ill., in 1845, and resumed the practice of the law. He represented his district several times in the Legislature, and was a member of the Illinois Constitutional Convention in 1847. At the commencement of the civil war he was appointed a brigadier-general, and was in command at various points in Missouri from May, 1861, to February, 1862, when he was appointed commandant of Fort Donelson. He was in command of the Fourth Division when the army moved up the Tennessee, and was the first to land at Pittsburg Landing, which he held

for a week alone. He was promoted to major-general for meritorious conduct at the battle of Shiloh, and filled various important military positions in the West and South throughout the war. In 1869 he was made Minister to Colombia, in which position he was retained until 1873, when he was elected, as a Republican, to the Forty-third Congress from the

Fourth Illinois District, and was re-elected to the Forty-fourth Congress. In 1881 he was appointed Minister to Peru, in place of J. P. Christiancy. In this position he came prominently before the public for a time in connection with the Peruvian and Chilean policy of Mr. Blaine. He was a brother of Mr. W. H. Hurlbut, of the New York "World."

## I

**ILLINOIS. STATE GOVERNMENT.**—The following were the State officers during the year: Governor, Shelby M. Cullom, Republican; Lieutenant-Governor, John M. Hamilton; Secretary of State, Henry D. Dement; Treasurer, Edward Rutz; Auditor, Charles P. Swigert; Attorney-General, James McCartney; Adjutant-General, J. H. Elliott; Superintendent of Public Instruction, James P. Slade; Secretary of Board of Agriculture, Samuel D. Fisher; Railroad Commissioners, William H. Smith, George M. Bogue, and William H. Robinson. Judiciary: Supreme Court, Chief Justice, Pinkney H. Walker; Associate Justices, Alfred M. Craig, John Scholfeld, T. Lyle Dickey, John M. Scott, John H. Mulkey, and Benjamin R. Sheldon.

**LEGISLATURE, SPECIAL SESSION.**—The Legislature was convened in special session on the 23d of March by the Governor, for the following purposes:

1. To apportion the State into senatorial districts.
2. To apportion the State into congressional districts, and to provide for the election of Representatives therein.
3. To provide for submitting to a vote of the people of the State, at the next general election, the proposition for the transfer of the Illinois and Michigan Canal to the United States.
4. To provide for the appointment of a commission to report to the next General Assembly a revision of the law in relation to criminal jurisprudence.
5. To appropriate one half of the interest of the College and Seminary Fund for the ordinary expenses of the State Normal University.
6. To make appropriations for the expenses of the special session of the General Assembly.

It remained in session until the 6th of May. Six acts and three joint resolutions were passed, the chief of which were the congressional and senatorial apportionment acts, the act appropriating one half of the interest of the College and Seminary Fund for the ordinary expenses of the Illinois State Normal University, at Normal, the act ceding the Illinois and Michigan Canal to the United States, and the memorial to Congress in regard to the Hennepin Canal. The fourth proposition was not acted upon. The congressional districts are as follow:

First District: the First, Second, Third, and Fourth Wards in the city of Chicago, and the towns of Riverside, Hyde Park, Lake, Lyons, Calumet, Worth, Palos, Lemont, Thornton, Bremen, Orland, Bloom, and Rich, in the county of Cook.

Second District: the Fifth, Sixth, and Seventh Wards in the city of Chicago, and that part of the Eighth Ward in the city of Chicago which is south of

the center of Polk Street and the center of Macalester Place.

Third District: the Ninth, Tenth, Eleventh, Twelfth, Thirteenth, and Fourteenth Wards in the city of Chicago, and that part of the Eighth Ward in the city of Chicago which is north of the center of Polk Street and the center of Macalester Place.

Fourth District: the Fifteenth, Sixteenth, Seventeenth, and Eighteenth Wards in the city of Chicago, and the towns of Lake View, Jefferson, Leyden, Norwood Park, Evanston, Niles, Maine, Elk Grove, Schaumburg, Hanover, New Trier, Northfield, Wheeling, Palatine, Barrington, Cicero, and Proviso, in the county of Cook.

Fifth District: the counties of Lake, McHenry, Boon, De Kalb, and Kane.

Sixth District: the counties of Winnebago, Stephenson, Jo Daviess, Ogle, and Carroll.

Seventh District: the counties of Lee, Whiteside, Henry, Bureau, and Putnam.

Eighth District: the counties of La Salle, Kendall, Grundy, Will, and Du Page.

Ninth District: the counties of Kankakee, Iroquois, Ford, Livingston, Woodford, and Marshall.

Tenth District: the counties of Peoria, Knox, Stark, and Fulton.

Eleventh District: the counties of Rock Island, Mercer, Henderson, Warren, Hancock, McDonough, and Schuyler.

Twelfth District: the counties of Cass, Brown, Adams, Pike, Scott, Greene, Jersey, and Calhoun.

Thirteenth District: the counties of Tazewell, Mason, Menard, Sangamon, Morgan, and Christian.

Fourteenth District: the counties of McLean, De Witt, Piatt, Macon, and Logan.

Fifteenth District: the counties of Coles, Edgar, Douglas, Vermilion, and Champaign.

Sixteenth District: the counties of Cumberland, Clark, Jasper, Crawford, Clay, Richland, Lawrence, Wayne, Edwards, and Wabash.

Seventeenth district: the counties of Macoupin, Montgomery, Shelby, Moultrie, Effingham, and Fayette.

Eighteenth District: the counties of Bond, Madison, St. Clair, Monroe, and Washington.

Nineteenth District: the counties of Marion, Clinton, Jefferson, Franklin, Hamilton, White, Saline, Gallatin, and Hardin.

Twentieth District: the counties of Perry, Randolph, Jackson, Williamson, Union, Johnson, Pope, Alexander, Pulaski, and Massac.

For senatorial purposes the State was divided into fifty-one districts, each entitled to one Senator and three Representatives, of which ten districts are in Cook County, which includes the city of Chicago. The following are the principal provisions of the act ceding the canal:

That the Illinois and Michigan Canal, its right of way and all its appurtenances, and all right, title, and interest which the State may now have in any real estate ceded to the State by the United States

for canal purposes, be and are hereby ceded to the United States for the purpose of making and maintaining an enlarged canal and water-way from Lake Michigan to the Illinois and Mississippi Rivers, and this cession is made upon the condition that the United States shall, within five years from the time this act takes effect, accept this grant, and thereafter maintain the said canal and water-way for the purpose aforesaid. In case the United States shall accept this grant, it is upon the express condition that the canal shall be enlarged in such manner as Congress may determine, and be maintained as a national water-way for commercial purposes, to be used by all persons, without discrimination, under such rules and regulations as Congress may prescribe; and the real estate aforesaid, hereby conveyed to the United States, shall be used, and the avails thereof applied, to carry out the objects of this grant, and for no other purpose, in such manner as Congress may determine. This act shall not take effect until it shall first have been submitted to a vote of the people of the State of Illinois at the general election to be held on Tuesday, the fifth day of November, A. D. 1882, and have been approved by a majority of all the votes polled at such election.

The memorial relating to the Hennepin Canal asked "the Congress of the United States to authorize, provide for, and direct, at its present session, an early construction of a canal for commercial purposes from Hennepin, on the Illinois River, westward to the Mississippi River, on the most feasible route."

**FINANCES.**—The following statement will give a clear idea of the cost of the State government in all its departments—executive, legislative, and judicial—and of the State institutions, educational, charitable, and penal—since the adoption of the present Constitution. These aggregates include every disbursement except for public schools, payment of State debt, and the Military Fund:

From December 1, 1870, to December 1, 1872.....	\$4,102,978 84
From December 1, 1872, to December 1, 1874.....	4,158,061 00
From December 1, 1874, to October 1, 1876 (25 months).....	2,895,319 84
From October 1, 1876, to October 1, 1878.....	3,502,409 45
From October 1, 1878, to October 1, 1880.....	3,462,584 27
From October 1, 1880, to October 1, 1882.....	3,673,446 12

The receipts and disbursements at the State Treasury, omitting local bond fund and other trust funds, for the two fiscal years ending October 1, 1882, were as follow:

There was in the State Treasury, October 1, 1880, deducting all outstanding warrants—	
General Revenue Fund.....	\$1,401,827 43
State School Fund.....	316,841 81
Military Fund.....	18,105 05
Illinois Central Railroad Fund.....	198,001 61
	<hr/> \$1,929,775 89

The receipts for the two years ending October 1, 1882, were:

General Revenue Fund—taxes.....	\$4,442,832 49
Illinois Central Railroad.....	774,845 92
Fees of State offices.....	69,880 92
Miscellaneous.....	8,980 37
State School Fund.....	2,092,298 46
Military Fund.....	143,392 92
	<hr/> \$7,522,181 08

Total.....  
\$9,451,956 97

The disbursements for the two years ending Oct. 1, 1882, were:

General Revenue Fund and Illinois Central Railroad Fund—	
On account of State debt.....	\$265,858 88
Revenue Fund.....	8,681,870 51
State School Fund.....	2,132,125 64
Military Fund.....	188,981 88
	<hr/> \$6,218,881 91

The balance in the State Treasury

October 1, 1882, deducting all warrants outstanding, was:	
General Revenue Fund.....	\$2,949,094 84
State School Fund.....	267,014 88
Military Fund.....	17,566 09

Total balance.....  
\$3,233,675 06

"There is," says the Governor in his message to the Legislature, "a considerable balance of General Revenue Fund in excess of what will be needed to pay existing appropriations, some of which will be available to reduce the amount to be raised on the levy of 1883 for general revenue purposes."

The Governor estimates the amounts required to be raised by taxation for all purposes, for the two years 1883 and 1884, as follow:

#### FOR GENERAL STATE PURPOSES.

Expenses of the several departments not enumerated below—	
Legislative.....	\$272,000
Executive.....	450,000
Judicial.....	571,000
	<hr/> \$1,293,000
Ordinary expenses, repairs, improvements and construction of State charitable institutions.....	1,750,000
Expenses of universities.....	145,000
Expenses and construction of prisons.....	225,000
Canal Contingent Fund.....	60,000
For conveying convicts, arresting fugitives, and for transfer of insane patients.....	98,000
Printing, binding, stationery, and paper for General Assembly and Executive Departments.....	110,000
	<hr/> \$3,681,000

#### FOR STATE SCHOOL PURPOSES.

One million dollars per annum.....\$2,000,000

#### FOR MILITARY PURPOSES.

Seventy-five thousand dollars per annum.....\$150,000

From this aggregate may be deducted the payments of the Illinois Central Railroad to the General Revenue Fund, estimated for the next two years at \$800,000, and the available surplus of General Revenue Fund, remaining after payment of existing appropriations, and after the payment of all appropriations to be made chargeable to the levy of 1882, in excess of the \$1,500,000 which that levy is estimated to yield.

**EDUCATION.**—During the year ending June 30th, there were 11,529 public-school districts in the State. Out of this number, there were 77 districts in which there was no school, 113 in which the school term was less than 110 days, and 11,339 in which school was kept for over 110 days. These schools were in session 85,423 months, or an average of 7-15 months. The total attendance was 713,431 pupils, of whom 364,043 were males and 349,388 were females. There were 22,301 teachers employed, 8,076 of whom were males and 14,225 females. The highest monthly wages paid to any male teacher was \$250, and the lowest \$13.50. The maximum wages paid to female teachers was \$120, and the minimum \$10. The average wages paid to male teachers was \$46.86, and the average wages of female teachers was \$37.76. The total amount earned by the

teachers of the State during the year was \$4,991,070.87, of which sum \$2,013,606.98 was paid to male and \$2,977,463.89 to female teachers.

There were 893 of the school districts which had libraries, the total number of volumes being 59,278, 5,285 of which were added during the year.

There were 1,003 private schools in the State during the year, with a total attendance of 67,380 pupils, 32,614 male and 34,766 female. The number of teachers was 1,789, of whom 698 were males and 1,091 were females.

The financial statement shows the total balance and receipts to be \$10,537,296.23. The total expenditures were \$8,043,430.61, and the amount of loans of district funds was \$89,710.53, leaving a balance of \$2,404,155.09 on hand.

The Supreme Court, in a case decided during the year, holds that colored children, under the Constitution and laws of the State, can not be excluded from the public schools provided for white children.

**RAILROADS AND CANALS.**—The report of the Board of Railroad and Warehouse Commissioners, for the year ending June 30, 1882, shows an addition during the year of over 493 miles to the aggregate of railroad lines in the State, of which the largest amount (83 miles) was constructed by the Wabash lines. The aggregate length of main lines and branches of roads operated in Illinois is 27,475.81 miles, of which 8,541.38 miles are in the State, making, with 394.65 double-track and 1,527.67 side-track, a total of 10,463.70. This is largely in excess of any other State in the Union, Pennsylvania coming second with 6,690 miles, followed by Ohio, New York, and Iowa, each with over 6,000 miles, all other States falling below that amount.

The forty-six roads operated in the State did an aggregate business during the year of \$189,362,978—an increase of over thirteen and a quarter millions since 1881, and nearly \$84,000,000 since 1878. Of the aggregate receipts, \$42,782,977.63 was from the passenger department and \$126,767,839.73 from freights. The gross earnings from Illinois business amounted to \$57,396,287.58, while the total expenses for operating, taxes, etc., were \$37,628,704.77—forty-one companies making a profit of \$18,879,058.63, and five sustaining a loss of \$111,475.82—net profit, \$18,776,582.81. The aggregate operating expenses of all the roads doing business in the State were \$119,757,996.06, against a gross income of \$189,362,997.63—a net income of \$69,357,001.57. Over \$30,000,000 was paid for interest on bonded debt, and between eleven and twelve millions for rentals and other extraordinary expenses, leaving a balance of nearly \$29,000,000 applicable to the payment of dividends, of which 14 roads paid out \$21,208,335.07.

The whole number of passengers carried by Illinois roads was 45,953,045, of which 13,088,-

032 were through and 32,865,013 were local—about half the latter being in Illinois. The tons of freight were 78,093,592—17,694,769 being through and 60,398,823 local; the Illinois business comprised 10,250,946 tons, and of the through freight 24,783,811 tons were carried in Illinois. The leading roads show a material increase of freights during the year.

A noteworthy feature of the report is the evidence which it presents of the gradual submission of the roads to the schedules of freights and fares prescribed by the commission, and the moderate though steady reduction in each, amounting in the aggregate to millions of dollars—the result in large part of putting the railroads under judicious control.

The report of the Canal Commissioners sets forth the operations of the Illinois and Michigan Canal, and the Illinois and Little Wabash River improvement, for the year ending November 30th. The commissioners state that the canal was opened for navigation March 13th, and closed November 30th. The receipts for the year exceed the disbursements by \$4,177.66. In 1880 the expenditures exceeded the receipts \$13,646.73, and in 1881, \$5,601.63. The receipts and disbursements for the several years the present commissioners have had charge of the State works have been as follow:

YEAR.	Receipts.	Disbursements.
1877.....	\$120,568 70	\$126,662 39
1878.....	108,804 21	90,379 82
1879.....	111,742 97	108,669 40
1880.....	115,685 37	129,282 30
1881.....	106,640 57	112,242 20
1882.....	117,245 80	113,071 52
Total.....	\$680,941 10	\$677,307 63

Balance on hand December 1, 1876.....	\$46,489 49
Receipts for the six years.....	650,941 10
Disbursements for the six years.....	677,307 63
Amount on hand December 1, 1882.....	50,122 96

In regard to suits, the commissioners say the suits for 1881 that were brought by the St. Louis and Peoria Packet Company, and by Huse, Loomis & Co., for the collection of tolls at the Henry and Copperas Creek locks, are still pending. The plaintiffs aver that the Illinois River is a national highway, and should be free from tolls. The commissioners claim that, by virtue of powers vested, they have a right to collect tolls levied. Both of these suits are of the greatest importance, not alone to the State of Illinois, but to the commerce of the West.

**STATISTICS.**—The publication of the results reached in the tenth census reveals an astounding increase in the number of deaf and dumb, the blind and the insane, in this State, as in the country at large. For the latter the State has four asylums, which do not contain one half. It may be said that no former enumeration of the afflicted classes has been so complete, and that the increase referred to has been more apparent than real. However this may be, the numbers reported in Illinois in 1870 and in 1880, respectively, are as follow:

	1870.	1880.
Insane.....	1,625	5,184
Idiots.....	1,244	4,170
Deaf-mutes.....	688	2,202
Blind.....	1,042	2,615
Total.....	4,744	14,121

For the deaf and blind, all that the State undertakes to do is to educate such as are of school age. With respect to the deaf, the Superintendent of the Institution for the Education of the Deaf and Dumb reports that there are as many deaf-mutes of school age within the State, who have never been at any school designed especially for their benefit, as there are pupils present in the institution at Jacksonville. Of the 5,000 insane reported, not more than about 2,000 are provided for in State institutions. The number of insane men and women in county almshouses is very great, and constantly increasing, and in several of the larger counties the question what to do with them is a very important and pressing one.

Below are the reports of the wardens of the Illinois Penitentiaries for the month of December, 1882:

## JOLIET PENITENTIARY.

Convicts on hand December 1st.....	1,435
Received from courts.....	48
Returned on <i>habeas corpus writ</i> .....	1
Total on hand December 1st.....	1,484
Discharged during month.....	37
Pardoned during month.....	2
Died during month.....	1
Sent to Insane Asylum.....	2
Out by order of Supreme Court.....	1

Total out..... 43

On hand December 31st.....	1,441
Males.....	1,418
Females.....	23

## CHESTER PENITENTIARY.

Convicts on hand December 1st.....	560
Received during month.....	25
Total.....	585
Discharged during month.....	5
On hand December 31st.....	580
Males.....	572
Females.....	8

The following facts, relating to the charitable institutions of the State, are taken from the report of the State Board of Public Charities for the first quarter of the year:

INSTITUTIONS.	Average number of inmates.	Average cost per capita.
Northern Insane Hospital.....	501.78	\$57.84
Eastern Insane Hospital.....	290.77	77.69
Central Insane Hospital.....	675.96	51.17
Southern Insane Hospital.....	479.22	57.19
Institution for the Deaf and Dumb.....	501.53	51.96
Institution for the Blind.....	116.00	74.10
Asylum for Feeble-Minded.....	295.48	55.21
Soldiers' Orphans' Home.....	802.24	47.50
Charitable Eye and Ear Infirmary.....	70.65	64.90
State Reform School.....	209.84	41.31
Total.....	3,403.48	55.38

The following table gives the acreage, yield, and value of the corn-crops of the State for the past twenty-two years:

YEAR.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Total value.
1860.....	3,589,150	80	115,174,770	\$78,944,277
1861.....	3,589,159	80	115,174,770	27,641,944
1862.....	3,455,908	40	138,356,185	32,521,911
1863.....	3,773,349	22	88,013,681	51,479,442
1864.....	4,192,610	33	138,356,185	103,767,101
1865.....	5,028,996	35½	177,095,852	51,800,586
1866.....	4,931,783	31.6	155,844,340	67,013,070
1867.....	4,583,655	28.8	109,091,000	74,281,580
1868.....	3,928,742	34.2	134,363,000	57,776,090
1869.....	5,237,068	28.2	121,500,000	69,255,000
1870.....	5,720,965	35.2	201,373,000	70,492,890
1871.....	5,310,469	38.3	203,891,000	65,985,120
1872.....	5,468,040	39.8	217,628,000	62,280,720
1873.....	6,330,714	21	143,034,000	45,962,580
1874.....	7,421,055	18	133,573,000	74,804,240
1875.....	8,168,265	34.3	280,000,000	95,200,000
1876.....	8,920,000	25	223,000,000	69,130,000
1877.....	8,935,411	30	269,889,742	77,562,875
1878.....	8,672,088	29	250,560,810	56,085,942
1879.....	7,913,881	38	305,913,377	97,438,052
1880.....	7,574,545	38	250,097,086	88,757,039
1881.....	7,157,384	24	174,491,706	98,328,977

The acreage, yield, and value of the rye-crop of Illinois, during the past ten years, are as follow:

YEAR.	Acres.	Bushels.	Value.
1871.....	123,083	2,170,000	\$1,122,400
1872.....	122,154	2,211,000	1,105,500
1873.....	134,054	2,073,000	1,205,240
1874.....	132,064	2,036,000	1,445,560
1875.....	137,573	2,600,000	1,586,000
1876.....	161,250	2,580,000	1,496,400
1877.....	231,972	3,825,091	2,103,800
1878.....	252,473	2,915,910	1,195,585
1879.....	235,073	4,238,824	1,991,404
1880.....	149,742	2,737,159	1,512,586
1881.....	465,418	2,955,411	2,408,954
1882.....	182,187	.....	.....

The 1882 crop of winter wheat was the largest, with one exception (1880), ever harvested in the State, and amounted to 50,951,529 bushels. The spring wheat-crop made the aggregate yield a little over fifty-two million bushels. The average yield was not far from eighteen and a half bushels per acre, which is but little below that of 1879, when the largest average yield per acre was obtained.

The area of the crop—2,752,108 acres—has been exceeded but twice (1880 and 1881). The quality of wheat was much better than an average, and has seldom if ever graded more uniformly high throughout the State. The crop was saved in good condition, and either thrashed or stacked immediately after harvest. The 1882 crop returned the producer more money than any crop harvested during the past fourteen years.

The following table shows the number and value of live-stock returned by the assessors in 1881:

LIVE-STOCK.	Number.	Value.
Horses.....	981,909	\$25,418,810
Mules and asses.....	112,361	3,539,418
Cattle.....	2,043,866	20,523,846
Sheep.....	1,083,344	1,403,352
Hogs.....	2,872,074	3,354,500
Total.....	7,000,254	\$59,244,726

**POLITICAL CONVENTIONS.**—The Republican State Convention met in Springfield on the 28th of June, and nominated General John C. Smith, of Cook County, for State Treasurer, and Charles T. Stratton, of Jefferson County, for State Superintendent of Public Instruction. The following platform was adopted:

*Whereas*, The Republicans of the State of Illinois, in State Convention assembled, recognize now the necessity for the continued and continuing perpetuation of the Republican party; the best interests of civil liberty upon this continent, the highest considerations of national honor and integrity, the freedom of the ballot and the purity of the ballot-box, and the prosperity of our industries all demand this: therefore—

*Resolved*, 1. That the policy of the Republican party of the nation and State is unchanged, and to that policy the Republicans of the State of Illinois commit themselves. Fair elections and honest counts, North and South; the honest treatment of the public debts and the public creditors; a reduction of taxation; the encouragement, fostering, and protecting of all American industries, and a hearty approval of the policy of the Tariff Commission, which shall regard all interests, and conserve them all; such a practical reform of the civil service as shall relieve the Executive from the pressure of hordes of office-seekers, and as shall, by providing some intelligent method for appointments to office, enable our Representatives in both branches of the national Congress to turn their attention to matters of national concern; such a system of internal improvement by great water-ways, either natural or artificial, as will afford cheap and easy outlets to the sea of the enormous products of the Great West; the encouragement of friendly and cordial relations between all sections of the country. These are among the great national doctrines of the party in its past, and to these it is committed still.

2. Under the wise and patriotic administration of our State affairs, the debt of the State has been honestly paid, and its credit stands unquestioned and unchallenged everywhere. By that wise administration, the Republican party of the State of Illinois is entitled to the confidence of the people of the State, and will receive that confidence.

3. That, with all liberty-loving men and women of the world, we deplore the death of our late President, James A. Garfield, and with all patriots we renew our devotion to the principles of liberty which the foul hand of assassination can never reach; and we extend to President Arthur our hearty support in all efforts to conduct the affairs of state in the interests of good government.

4. Believing that all divisions and dissensions among Republicans can be honorably and satisfactorily healed, we also believe that now is the time to bury our past differences and unite again under the old flag. Such a union means the triumphant success of the party, now and in 1884; and that success means the continued prosperity and happiness of the country.

5. That the Republican party, now as in the past, is in favor of such just laws as shall protect the agriculturist, the manufacturer, and the working-man from the oppression of monopolists.

The following resolution was also adopted:

*Resolved*, That we extend our hearty sympathy to the oppressed of all nations in all honest efforts to establish liberty and a republican form of government, and that our especial sympathy is extended to all lawful efforts now being made to establish republicanism in Ireland.

The Greenbackers, at their State Convention, in Peoria, on the 2d of August, nominated Daniel McLaughlin, of Braidwood, for State Treasurer, and Frank H. Hall, of Kane County, for State Superintendent of Public Instruction.

They reaffirmed their Chicago platform of 1880, and added clauses in favor of female suffrage and prohibition.

The Democratic State Convention met in Springfield, on the 7th of September, and nominated A. Orendorff, of Sangamon County, for State Treasurer, and Henry Raab, of St. Clair County, for State Superintendent of Public Instruction. The following platform was adopted:

*Resolved*, 1. That the Democratic party of the State of Illinois, in convention assembled, reaffirm the great principles which are the foundation of free government, among which are equal rights to all and exclusive privileges to none, protection of the weak against the encroachments of the strong, equal taxation, free speech, a free press, free schools, and first of all a free and incorruptible ballot.

2. That we favor honest reform in the civil service, and denounce the extortion of large sums of money from office-holders to corrupt the ballot and control elections as the most threatening as it is the most insidious danger that besets a free government; and the shameless resort to such methods by the National Republican Committee, and by the Republican repudiation coalition in Virginia, evinces utter abandonment of principle, and meets our unqualified condemnation.

3. That we denounce the reckless extravagance and profligacy of the Republican party in the appropriation of the public Treasury, as manifested during the late session of Congress, which increased the appropriations for the current fiscal year over those of the past year made by a Democratic Congress to the enormous extent of \$78,000,000.

4. That we extend our heartiest sympathy to the Irish people in the struggle for their rights, in which they are now engaged, and recognize in their persistent efforts to obtain their freedom, despite the dungeon, the scaffold, and all the other infamous appliances characteristic of British rule over Ireland, a love of liberty which is unparalleled in history, and sheds a ray of glory upon the Irish national character, commending it to the respect, admiration, and support of freedom-loving people throughout the world.

5. That it is incumbent upon our Government to protect its citizens, native-born and naturalized, at home and abroad, and we denounce and condemn the present Republican Administration for its neglect of duty toward those lately imprisoned as "suspects" in the jails of Ireland, by the arbitrary action of the British Government.

6. That we are in favor of the reduction of Federal taxation to the lowest point consistent with the wants of the Government under an honest and economical administration of its affairs, and that such taxes be so adjusted as to secure an equitable distribution of these burdens.

7. The Republican party of the State has proved false to the pledges it has made to the people. With not a cent of bonded debt against the State, taxes for the past year have been one third greater than the preceding year. The various boards of the various State institutions have been used more to advance the interests of the Republican party than for the care and comfort of the unfortunate men, women, and children committed to their charge. The various radical State officers are surrounded by numbers of unnecessary clerks and attendants, whose salaries are paid from the State Treasury. The humiliating spectacle is presented of the Governor of the State saying, in his annual message, that the sum of \$3,000,000 would be ample to pay all the expenses of the State for two years, and the same Governor approving bills passed by the Republican Legislature appropriating nearly \$7,000,000 for such expenses; and the large sum received annually from the Illinois Central Railroad Company under the wise provisions of a law enacted by a Democratic Legislature, instead of being utilized

to relieve the people from taxation, has been misused as a stimulus to increased extravagance and increased taxation.

8. That the offices of Warehouse and Railroad Commissioners, now filled by appointment of the Governor, should be filled by election by the people.

9. That we demand a revision of the present unjust and in many respects prohibitory tariff, which is framed in the interest of capital; and while it favors and fosters iniquitous monopolies, is unjust and oppressive to the laboring man in all the relations of life. The Constitution confers on Congress the power to raise revenue by duties on imports, and as a just and proper exercise of that power we favor a tariff based on the principle of revenue, which will deal justly with existing business relations and with all legitimate industries; and at the same time discourage monopolies and remove the burdens imposed by the present tariff upon all the laboring people of the country. And we hereby declare that there is no power given by the Constitution to Congress to levy a tariff or tax on the people for the purpose of protection without reference to revenue.

10. That while we have no purpose to interfere with just laws in force in Illinois for the regulation of the traffic in intoxicating liquors, and conceding the right of the people to an amendment, if necessary, of such laws to prevent or correct the evils to society growing out of abuses in the use of intoxicating liquors, this convention declares that it is not the legitimate province of government to control the habits, tastes, appetites, and liberties of the people as long as they are peaceable and orderly, and do not encroach upon the rights of others or of society; and we therefore declare that the prohibition by the Constitution, or by general laws, of the manufacture or sale of vinous, spirituous, or malt liquors would be in violation of individual and personal rights, and contrary to the fundamental principles of free government.

11. That we appeal to the people of this State, without regard to former political affiliations, to unite with us at the ensuing election in carrying into effect the foregoing principles.

The third annual convention of the Liquor Dealers' and Manufacturers' Protective Association of Illinois met in Rock Island, on the 19th of September, and adopted the following resolutions:

*Whereas*, The danger arising from the prohibition movement is steadily increasing in this State; and

*Whereas*, The thorough organization of all business-men directly interested in the liquor-traffic is now, more than ever, a matter of imperative necessity; and

*Whereas*, The ensuing election of members of the Legislature will, to a great extent, determine the issue of prohibition against personal liberty in our State: be it

*Resolved*, That we consider the maintenance and further development of our present State Association as one of the most effective means of protecting ourselves in our rights as business-men, tax-payers, and citizens, and that the Board of Trustees spare no efforts at once to secure the co-operation of all the various branches of the liquor interest in this State; and be it further

*Resolved*, That we will use our best endeavors to defeat, at the next election, any candidate, for any office, who can not be fully relied upon as being uncompromisingly opposed to all attempts at sumptuary or prohibitory legislation; and be it further

*Resolved*, That we are decidedly in favor of abolishing all the abuses incident to the liquor-traffic, by a proper system of licensing and regulating the business in such manner as to protect our interests and welfare.

*Resolved*, That the manly, outspoken declaration against a prohibitory amendment to our State Con-

stitution, as adopted by the last Democratic State Convention at Springfield, is deserving of the highest praise on the part of this convention.

In January the Illinois State Christian Temperance Union and the Illinois State Temperance Alliance met in Springfield, and the two organizations were consolidated under the name of the Illinois State Temperance Union.

The Prohibition State Convention met in Bloomington, on the 9th of August, 158 delegates, representing twenty-nine counties, being present, and adopted the following platform:

We, delegates assembled, representing the voters of the State of Illinois, having determined to organize a political party and place in the field candidates for various offices to be filled by the electors of the State, declare the following reasons, based on the fundamental principles of this Government, to be the basis of our action:

1. The people having for years and in large numbers exercised the sacred right of petition, asking for submission to the vote of the people of a constitutional amendment prohibiting the liquor-traffic, were refused this right of self-government at the dictation of twelve thousand liquor-dealers, with the excuse that it was not in their party platform.

2. The people, believing that these legislators misrepresented their parties, sent a committee to the Republican State Convention, the dominant political party of the State, asking it to place in its platform a plank affirming the right of the people to amend their Constitution by the only method provided in that instrument, the exercise of which right had been refused by the Legislature. The convention refused to consider this most reasonable request by a vote of 613 to 133. The Democratic party having, by a larger majority of its representatives, in a legislative declaration of its party platform in the past year and the utterance of its well-known leaders, courted the support of the liquor-traffic and opposed even the submission of an amendment to a vote of the people, we can not hope for favorable action by them.

3. All governments must grow with the development of mankind, and must meet new problems as they arise, or the onward march of civilization will overthrow them. The founders of our Government recognized this law, and provided in the Federal and State Constitutions for their peaceable amendment. Consequently, the submission asked for was in accordance with the genius of our institutions.

4. The plank which the dominant party refused to consider is as follows: "*Resolved*, That the Republican party is in favor of submitting to a vote of the people of the State of Illinois a constitutional amendment, prohibiting the manufacture and sale of intoxicating liquors as a beverage."

5. Political parties being a controlling power in our Government, constitutional changes can only be effected by the reorganization of the people as sovereign, and voluntarily submitting amendments for their adoption or rejection, as in Iowa, or on their refusal to do so, as in Illinois, to build up a political party pledged to these principles; and this action is rendered necessary by the fact that this betrayal of the people, if left unrebuked, establishes a dangerous precedent for future party action.

6. All political power is in the people. To deny this is a subversion of the fundamental principles of the Government. The liquor-power, by fighting the submission of the amendment asked for, and seeking, through boycotting and bribery, to prevent the election of men to the Legislature favorable to such submission, and by intimidating and corrupting those already elected, compel aggressive action and thorough organization of all men who love their country, and who favor a free ballot and fair count.

For these reasons we ask all lovers of our free institutions to disregard old party lines, and unite with

the Prohibition party, which not only affirms the governmental principles herein enunciated, but which is ready to engage in the most important contest of the day, the overthrow of the liquor-traffic.

*Whereas*, The manufacture and sale of intoxicating liquors as a beverage are a sin against God, and a crime and a curse to man, which no human enactment nor usage can make right, and that Christianity, humanity, and patriotism demand its prohibition: therefore we favor—

1. The adoption of an amendment to the Constitution of the State of Illinois, prohibiting the manufacture and sale of alcoholic beverages in the State.

2. *Whereas*, The people have petitioned the Legislature to submit an amendment to the State Constitution, prohibiting the manufacture and sale of alcoholic beverages, we are in favor of its submission; and

*Whereas*, The people have also petitioned the Legislature to submit an amendment enfranchising women, we are therefore in favor of its submission.

3. That while we favor all proper legislation in the interest of common schools, yet we are decidedly opposed to applying funds raised from the liquor-traffic for that purpose, thereby giving such traffic a degree of respectability to which it is not entitled.

The following was also adopted:

That we require of all candidates for legislative offices a pledge not to go into a caucus of either of the two old parties.

The following nominations were made: State Treasurer, Judge J. J. Irwin, of Madison; State Superintendent of Public Instruction, Professor Andrews, of Galesburg, for whom another candidate was afterward substituted.

Twenty-three counties in the State grant no license for the sale of spirituous liquors.

An Anti-Monopoly State Convention met in Springfield, on the 15th of March, about one hundred delegates being present, and adopted the following resolutions:

1. That we believe in the doctrine embodied in the railroad legislation of Illinois, and confirmed by the highest courts of the nation, viz., that corporations are subject to the control of the legislative bodies that created them.

2. We believe in the strict enforcement of the present railroad laws of Illinois, and urge our Governor and Railroad Commissioners to more prompt action in prosecuting the almost constant violations of said laws.

3. That we condemn the giving of passes, as an indirect system of bribery and a mode of compelling the public to contribute to the railroad corruption fund, and that in the future we will not support any candidate for any office, whether legislative, executive, or judicial, who will take such a bribe, and who will not use his influence in favor of the enactment and enforcement of a law making the giving or taking a pass bribery, and an offense which will disqualify any man guilty thereof from holding office.

4. That this convention select, as far as possible, a State Committee composed of one or more from each county to detect, report, and prosecute every violation of the laws by the railroad corporations of the State.

5. That this State Committee be recommended to proceed against railroad corporations for the violation of our laws, either through *quo warranto* or the Railroad Commissioners, and that the Attorney-General be notified of the commencement of such proceedings and be requested to prosecute the same.

6. That our commission will not do its duty unless it shall at once give us a passenger rate of two cents a mile on the leading roads of the State, and shall also reform its schedule and cut down the freight rates to an amount at least equal to that now charged to the

people of other States over our railroads in cases where competition compels them to just rates; and that we emphatically condemn the failure of the commission to make a just reduction of the rates of freight on short hauls, in which the people of this State are chiefly interested.

7. That in our judgment the theory and policy of our railroad laws require that the Railroad and Warehouse Commission shall itself, on its own motion, and without formal complaint, begin and prosecute proper suits to punish abuses brought in any way to its notice; that the course heretofore taken by the Railroad and Warehouse Commission, requiring the complaint of the shipper to be filed, exhibited to the railroad, and then answered and heard, unless by terrorism or purchase he is silenced, is the surest way of preventing and suppressing complaints and defeating the enforcement of the law.

8. That while we regard our railroad laws as the most useful known and only needing proper execution and enforcement to fully protect our people in the use of the public highways, and had a right to expect from the Railroad Commissioners protection from railroad extortion and unreasonable charges, these expectations have thus far only resulted in failure and disappointment; that instead of guarding the interests of the people, as duty required, these reputed servants have oftener acted as servants of the railroads.

**ELECTION RETURNS.**—The election in November resulted in the choice of Smith, Republican, for State Treasurer, by a plurality of 5,484; and of Raab, Democrat, for State Superintendent of Public Instruction, by a plurality of 2,869. The vote was as follows:

	Treasurer.	Superintendent.
Republican.....	254,551	250,276
Democratic.....	243,067	258,145
Greenback.....	15,520	14,806
Prohibition.....	11,344	11,202

The Legislature, to meet in January, 1883, will consist of 81 Republicans and 20 Democrats in the Senate, and 77 Republicans, 75 Democrats, and 1 Independent in the House. The proposition to appropriate \$531,712.18 for the completion of the State-House was defeated, not receiving a majority of the total vote cast at the election (532,583), though 281,283 votes were cast for it and only about 153,000 against it. For the act ceding the Illinois and Michigan Canal, 363,855 votes were cast, and against it 59,675, and it was ratified. Eleven Republican and nine Democratic Congressmen were elected, as follow:

First District, Ransom W. Dunham, Republican; Second District, John F. Finerty, Independent Democrat; Third District, George R. Davis, Republican; Fourth District, George E. Adams, Republican; Fifth District, Reuben Ellwood, Republican; Sixth District, Robert R. Hitt, Republican; Seventh District, Thomas J. Henderson, Republican; Eighth District, William Cullen, Republican; Ninth District, Lewis E. Payson, Republican; Tenth District, Nicholas E. Worthington, Democrat; Eleventh District, William H. Neece, Democrat; Twelfth District, James M. Riggs, Democrat; Thirteenth District, William M. Springer, Democrat; Fourteenth District, Jonathan H. Rowell, Republican; Fifteenth District, Joseph G. Can-

non, Republican; Sixteenth District, Aaron Shaw, Democrat; Seventeenth District, Samuel W. Moulton, Democrat; Eighteenth District, William R. Morrison, Democrat; Nineteenth District, Richard W. Townshend, Democrat; Twentieth District, John R. Thomas, Republican.

**IMMIGRATION, CHINESE.** The "Burlingame treaty," concluded between the United States and China in 1868, secured to Chinese the right of immigration into the United States, and stipulated that "Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation." The right of naturalization was excepted from the privileges guaranteed by the treaty. The provisions of this treaty relating to immigration were modified by the treaty concluded between the two governments November 17, 1880. The first two articles of this compact are as follow:

**ARTICLE I.** Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

**ART. II.** Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States, shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nations.

**ACTION OF CONGRESS.**—Early in 1882 an act was passed by Congress suspending Chinese immigration to the United States for the period of twenty years. The representative of the Chinese Government, at Washington, protested against the provisions of this measure, and President Arthur vetoed it, mainly on the ground that prohibition for twenty years was not a "reasonable" suspension within the meaning of the first article of the treaty of November, 1880. The President also pointed out other objections to the bill, among others one mentioned in the protest of the Chinese representative that the act prohibited Chinese from passing through the United States on their way from one foreign country to another. This act originated in the Senate. Another bill was then brought forward in the House, fixing the period of suspension at ten years, but in other respects being substantially the

same as the first one. The second bill was signed by the President May 6th.

**THE SECOND ACT.**—This law is entitled "An act to execute certain treaty stipulations relating to Chinese." The preamble recites that "in the opinion of the Government of the United States the coming of Chinese laborers to this country endangers the good order of certain localities within the territory thereof." Section 1 enacts that after the expiration of ninety days after the passage of the act the coming of Chinese laborers to the United States shall be suspended for ten years, and that during such suspension it shall not be lawful for any Chinese laborer to come to the United States, or, having come after the act takes effect, to remain here. The ninety days expired August 4th, and the law went into operation August 5th. Section 2 declares that the master of any vessel, knowingly bringing within the United States and landing or permitting to be landed any Chinese laborer from any foreign port or place, shall be deemed guilty of a misdemeanor, and punishable by a fine of not more than \$500 for every Chinese laborer so brought, and may be also imprisoned not exceeding one year. Section 3 provides that the two foregoing sections shall not apply to Chinese laborers who were in the United States November 17, 1880, the date of the amended treaty with China—or who shall have come here before the act takes effect, "and who shall produce to such master before going on board such vessel, and who shall produce to the collector of the port in the United States at which such vessel shall arrive, the evidence hereinafter in this act required of his being one of the laborers in this section mentioned; nor shall the two foregoing sections apply to the case of any master whose vessel, being bound to a port not within the United States, shall come within the jurisdiction of the United States by reason of being in distress or in stress of weather, or touching at any port of the United States on its voyage to any foreign port or place; provided that all Chinese laborers brought on such vessel shall depart with the vessel on leaving port."

Section 4 is as follows:

That for the purpose of properly identifying Chinese laborers who were in the United States on the 17th of November, 1880, or who shall have come into the same before the expiration of ninety days next after the passage of this act, and in order to furnish them with the proper evidence of their right to go from and come to the United States of their free will and accord, as provided by the treaty between the United States and China, dated November 17, 1880, the collector of customs of the district from which any such Chinese shall depart from the United States shall, in person or by deputy, go on board each vessel having on board any such Chinese laborer and cleared or about to sail from his district for a foreign port, and on such vessel make a list of all such Chinese laborers, which shall be entered in registry-books to be kept for that purpose, in which shall be stated the name, age, occupation, last place of residence, physical marks, or peculiarities, and all facts necessary for the identification of each of such Chinese laborers, which

books shall be safely kept in the custom-house; and every such Chinese laborer so departing from the United States shall be entitled to, and shall receive, free of any charge or cost, upon application therefor, from the collector or his deputy at the time such list is taken, a certificate signed by the collector or his deputy and attested by his seal of office, in such form as the Secretary of the Treasury shall prescribe, which certificate shall contain a statement of the name, age, occupation, last place of residence, personal description, and facts of identification of the Chinese laborer to whom the certificate is issued, corresponding with the said list and registry in all particulars. In case any Chinese laborer, after having received such certificate, shall leave such vessel before her departure, he shall deliver his certificate to the master of the vessel, and if such Chinese laborer shall fail to return to such vessel before her departure from port, the certificate shall be delivered by the master to the collector of customs for cancellation. The certificate herein provided for shall entitle the Chinese laborer to whom the same is issued to return to and re-enter the United States upon producing and delivering the same to the collector of customs of the district at which such Chinese laborer shall seek to re-enter; and upon delivery of such certificate by such Chinese laborer to the collector of customs at the time of re-entry in the United States, said collector shall cause the same to be filed in the custom-house, and duly canceled.

**CHINESE LABORERS.**—By section 5 any Chinese laborer mentioned in section 4, being in the United States and desiring to depart by land, is entitled, free of charge, to a certificate of identification similar to that provided for in section 4 in case of such laborer desiring to leave by water.

Section 6 is as follows:

That in order to the faithful execution of Articles I and II of the treaty in this act before mentioned, every Chinese person other than a laborer who may be entitled by said treaty and this act to come within the United States, and who shall be about to come to the United States, shall be identified as so entitled by the Chinese Government in each case, such identity to be evidenced by a certificate issued under the authority of said Government, which certificate shall be in the English language, or (if not in the English language) accompanied by a translation into English, stating such right to come, and which certificate shall state the name, title, or official rank, if any, the age, height, and all physical peculiarities, former and present occupation or profession, and place of residence in China, of the person to whom the certificate is issued, and that such person is entitled, conformably to the treaty in this act mentioned, to come within the United States. Such certificate shall be *prima facie* evidence of the fact set forth therein, and shall be produced to the collector of customs, or his deputy, of the port in the district of the United States at which the person named therein shall arrive.

Section 7 subjects to a fine not exceeding \$1,000, and imprisonment for not more than five years, any person who shall make or knowingly use a fraudulent certificate.

Section 8 requires lists of Chinese passengers on vessels arriving at ports of the United States to be kept and delivered by masters of such vessels to collectors of customs.

By section 9 collectors are required to examine and compare certificates and lists.

Section 10 provides for the forfeiture to the United States of vessels violating the provisions of the act.

Section 11 declares that "any person who

shall knowingly bring into or cause to be brought into the United States by land, or who shall knowingly aid or abet the same, or aid or abet the landing in the United States from any vessel of any Chinese person not lawfully entitled to enter the United States, shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be fined in a sum not exceeding \$1,000, and imprisoned for a term not exceeding one year." Section 12 is as follows:

That no Chinese person shall be permitted to enter the United States by land without producing to the proper officer of customs the certificate in this act required of Chinese persons seeking to land from a vessel. And any Chinese person found unlawfully within the United States shall be caused to be removed therefrom to the country from which he came, by direction of the President of the United States, and at the cost of the United States, after being brought before some justice, judge, or commissioner of a court of the United States, and found to be one not lawfully entitled to be or remain in the United States.

Section 13 exempts from the provision of the act officers of the Chinese Government traveling on business of that Government, and makes their credentials equivalent to the prescribed certificate. The servants of such officers are also exempt. Section 14 declares that no State court or court of the United States shall admit Chinese to citizenship. By section 15 "Chinese laborers" as used in the act shall be taken to mean "both skilled and unskilled laborers, and Chinese employed in mining."

**JUDICIAL INTERPRETATION: CASE OF AH SING.**—The provisions of this law have been the subject of judicial interpretation in several important cases. In the case of Ah Sing, heard in the United States Circuit Court in California in August, 1882, by Justice Field, of the United States Supreme Court, and Circuit Judge Sawyer, it was held that the prohibition of the act does not apply to a Chinese seaman who shipped on an American vessel leaving the United States before the passage of the act, and returning from a foreign port after the act went into effect. The facts proved were that Ah Sing, a subject of the Emperor of China, had come to this country six years ago. On May 5, 1882, he shipped as a cabin waiter on the American steamer City of Sydney, which left San Francisco for a voyage to Australia and returned to San Francisco August 8th. The Act of Congress being then in force, the master of the vessel refused to land Ah Sing, whereupon the case was brought before the Circuit Court on a writ of *habeas corpus*. The law on this point was interpreted by Justice Field as follows:

We do not, however, find any difficulty in arriving at the meaning of the act. Its provisions are plain. The master of a vessel is prohibited from bringing within the United States, and landing or permitting to be landed, any Chinese laborer from any foreign port or place; and that means, from bringing any Chinese laborer embarking at a foreign port or place. The prohibition does not apply to the bringing of a laborer already on board of the vessel when it touches at a foreign port. When we speak of merchandise as

brought from a foreign port, the port of shipment is always understood, and not any intermediate port at which the vessel bringing the goods may have stopped. This is the common understanding of the terms by merchants, and is the interpretation given to them by the courts. They must be held to have the same meaning when used with reference to the importation of persons from a foreign port, as when used with reference to the importation of goods. The eighth section of the act confirms this view, if it needed any confirmation; that requires the master of the vessel to deliver a list of Chinese passengers "*taken on board* his vessel at any foreign port or place." It is the laborers thus taken on board that the master is prohibited from bringing into the United States.

Any other construction would compel a master of an American vessel, leaving a port of the United States with a Chinese seaman or waiter, to send him adrift at a foreign port, at which the vessel might touch, and prohibit the master from bringing him back in accordance with the bond which he is required by existing law to execute. (U. S. Revised Statutes, section 4,576.)

The object of the act of Congress was to prevent the further immigration of Chinese laborers to the United States, not to expel those already here. It even provides for the return of such laborers leaving for a temporary period, upon their obtaining certificates of identification. It was deemed wise policy to prevent the coming among us of a class of persons, who, by their dissimilarity of manners, habits, religion, and physical characteristics, can not assimilate with our people, but must forever remain a distinct race, creating by their presence enmities and conflicts, disturbing to the peace and injurious to the interests of the country. But it was not thought that the few thousands now here, scattered, as they must soon be, throughout all the States, would sensibly disturb our peace or affect our civilization.

This case is reported in 13 "Federal Reporter," 286.

**CASE OF AH TIE.**—In the case of Ah Tie and others, brought before the court at the same time, the facts were substantially the same, with one exception, as in the case of Ah Sing. Ah Tie and others were seamen on the same steamer during the same voyage. The distinction between the two cases was, that at Sydney the petitioners on several occasions, by permission of the captain, went ashore, and remained a few hours, without, however, intending to leave the service of the steamer. "This fact," said Justice Field, "is the only one distinguishing this case from that of Ah Sing. We there held that the prohibition upon the master of a vessel, contained in the Act of Congress, to bring within the United States from a foreign port or place any Chinese laborer, was intended to prevent the importation of such laborers from the foreign port or place—laborers who there embarked on the vessel—and did not apply to his bringing a Chinese laborer already on board of his vessel touching at the foreign port or place. We also held that, while on board the American vessel, the laborer was within the jurisdiction of the United States, and did not lose, by his employment, the right of residence here previously acquired under the treaty with his country.

"The status of the petitioners, and their relation to the vessel, were not changed in any respect by the fact that they were permitted

by the captain to land for a few hours at the port of Sydney. They were bound, by their contract of shipment, to return with the vessel; and the captain was bound to bring them back. He could not have forced them ashore in a foreign port; nor could he have abandoned them there. Had he done either of these things, he would have rendered himself liable to criminal prosecution. . . . A Chinese laborer on an American vessel can not be held to lose his residence here, so as to come within the purview of the act, by such temporary entry upon a foreign country as may be caused by the arrival of the vessel on her outward voyage at her port of destination, or her touching at any intermediate port in going or returning, or her putting into a foreign port in stress of weather. And we should hesitate to say that it would be lost by the laborer passing through a foreign country in going to different parts of the United States by any of the direct routes, though we are told by the counsel of the respondent that a Chinese laborer having taken a ticket by the overland railroad from this place to New York, by the Central Michigan route, which passes from Detroit to Niagara Falls through Canada, was stopped at Niagara and sent back, as within the prohibition of the Act of Congress, and on attempting to retrace his steps was again stopped at Detroit. A construction which would justify such a proceeding can not fail to bring odium upon the act, and invite efforts for its repeal. The wisdom of its enactment will be better vindicated by a construction less repellent to our sense of justice and right." (13 "Federal Reporter," 291.)

**CASE OF LOW YAM CHOW.**—In the case of Low Yam Chow (13 "Federal Reporter," 605), the essential facts were these: The petitioner was a Chinese merchant, and not a laborer. He was for ten years engaged in business in Peru, and afterward established himself at Panama. For the past five years he has also been a member of the mercantile firm of Chow, Kee & Co., in San Francisco. On July 31st he left Panama by steamer for San Francisco, where he arrived August 17th. He was not allowed to land, because he had no certificate. These facts raised two questions: First, whether Chinese merchants, who resided, on the passage of the Act of Congress, in other countries than China, on arriving on a vessel in a port of the United States, are required to produce certificates of the Chinese Government, establishing their character as merchants, as a condition of their being allowed to land; and, second, whether their character as such merchants can be established by parole proof. The Circuit Court of the United States in California decided the first of these questions in the negative, and the second in the affirmative. It holds that only laborers, and not merchants, are prohibited from entering the United States, and that a certificate is required only of those coming from their "place of residence in

China," as is prescribed by section 6 of the Act of Congress. After quoting this section, Justice Field says: "The certificate mentioned in this section is evidently designed to facilitate proof by Chinese other than laborers coming from China, and desiring to enter the United States, that they are not within the prohibited class. It is not required as a means of restricting their coming. To hold that such was its object, would be to impute to Congress a purpose to disregard the stipulation of the second article of the new treaty [November, 1880], that they should be 'allowed to go and come of their own free-will and accord.' Nor is it required, as a means of proving their character, from merchants and others not laborers, domiciled out of China when the law was passed, and coming here from such foreign jurisdiction. The particulars which the certificate must contain show that it was to be given to those then residing there, for their *place of residence in China* is to be stated. Independently of this consideration, that Government could not be expected to give, in its certificate, the particulars mentioned of persons resident—some, perhaps, for many years—out of its jurisdiction. Neither the letter nor the spirit of the act calls for a construction imputing to Congress the exaction of a condition so unreasonable. . . . Its purpose will be held to be, what the treaty [of November, 1880] authorized, to put a restriction upon the immigration of laborers, including those skilled in any trade or art; and not to interfere, by excluding Chinese merchants, or putting unnecessary and embarrassing restrictions upon their coming, with the commercial relations between China and this country. Commerce with China is of the greatest value, and is constantly increasing. And it should require something stronger than vague inferences to justify a construction which would not be in harmony with that treaty, and which would tend to lessen that commerce. It would seem, however, from reports of the action of certain officers of the Government—possessed of more zeal than knowledge—that it is their purpose to bring this about, and thus make the act as odious as possible.

"We are of opinion that the section requiring a certificate for Chinese merchants coming to the United States does not apply to those who resided out of China on the passage of the Act of Congress, and that proof of their occupation may be made by parol."

CASE OF GEORGE MONCAN AND AH KEE.—In the case of George Moncan and Ah Kee (14 "Federal Reporter," 44), United States District Judge Deady, of the Oregon District, held that a Chinaman who had shipped as a seaman on an American vessel, in a foreign port, before the passage of the Act of Congress, and reached a port of the United States after the act went into force, had a right to enter the country and remain; and he interpreted section 3 of the act which excepts from its prohibitory provisions a vessel "touching at any port of the

United States on its voyage to any foreign port or place; provided, that all Chinese laborers brought on such vessel shall depart with the vessel on leaving port." It appeared that Moncan had shipped as cook on the American vessel Patrician, at London, in March, 1882, which was before the passage of the act. The vessel went to Yokohama, Japan, where, on September 11th—after the law went into effect—Moncan was made steward and Ah Kee was taken on as cook. It then proceeded to Astoria, Oregon, which port it reached in October, and there took on a load of wheat for Europe. Moncan and Kee, being forbidden to land, appealed to the court to define their rights. On these facts the law was interpreted by Judge Deady as follows:

Counsel for the Chinese contends: 1. That under the circumstances the Patrician is a vessel "touching" at a port of the United States "on its voyage" to a foreign one, and therefore within the exception contained in section 3 of the act; and, 2. That the crew of a vessel arriving at a port of the United States from a foreign port or place, in the ordinary course of commerce and navigation, are not "laborers" within the meaning of the act.

When the Patrician entered the Columbia River, the *terminus ad quem*, or place of termination of her voyage, was not definitely known. It might be either in Europe or the United States; and, so far as now known, it is in the former. But even so long as it might be in either country, I think she ought to be for the purpose of this act considered as on a voyage to a foreign port. But it is certain that her port of final destination was not Astoria, at which place she merely called for orders. Nor had the voyage then terminated as to the steward and cook, whose engagements were for twenty-four months each from the date of signing the articles, unless sooner discharged.

The word "touching" is evidently used in the act to signify the opposite of "staying." And it does not apply to the case of a compulsory entrance on account of distress or stress of weather, for that is specifically provided for. A vessel does not ordinarily touch at her home port, but remains there until a new voyage is undertaken. But in course of a trading-voyage, from England to Asia and back to Europe or the United States, she may touch at many ports and for many purposes. Calling at a port for orders is, in my judgment, a plain case of "touching" at such port; and if, in pursuance of the order obtained, or being there, the vessel remains long enough to take in a cargo for a foreign port, I see no reason, under the circumstances, for concluding that she is henceforth "staying" but not "touching" at such port. Upon this view of the case, the Patrician has simply touched at this port. Her stay here is only temporary and for an object necessary to enable her to prosecute her voyage to a foreign port with profit to her owners. Nor do I think that the Chinese members of the crew of the Patrician are laborers within the meaning of this act. True, their vocation is labor; but they are not brought here to remain and enter into competition with the labor of the inhabitants of the country. . . .

It is not to be supposed for a moment that Congress intended by the passage of this act to impede or cripple commerce with China by prohibiting, in effect, all vessels engaged in the carrying-trade to and from the United States, and particularly those on the Pacific coast, from employing Chinese cooks, stewards, or crews, when for any reason it is necessary or convenient to do so; for such would necessarily be the result of holding that the Chinese crew of a vessel coming from a foreign port to one of the United States

are "laborers" within the meaning of the act. . . . Of course a Chinese seaman, although allowed to come into the ports of the United States as one of the crew of a vessel from a foreign port, does not thereby obtain the right to remain in the country and become a laborer therein; and if the master allows him to go ashore permanently, the latter would be liable to removal, and the former to the punishment prescribed in section 2 of the act. But such seaman would have the same right to be on the shore temporarily and not otherwise employed than in the business of the vessel during her stay in port, as those of other nationalities.

As to Moncan, the court held that he had a right not only to land, but to remain permanently, for the reason that he had joined an American ship prior to the passage of the act, and remained on her until his arrival here. This was in accordance with the view expressed by Justice Field in the case of Ah Sing, that "an American vessel is deemed to be a part of the territory of the State within which its home port is situated, and as such a part of the territory of the United States; the rights of its crew are measured by the laws of the State or nation, and their contracts are enforced by its tribunals."

**CASE OF HO KING.**—It was held by Judge Deady, in the case of Ho King (14 "Federal Reporter," 724), that a Chinese actor is not a laborer, and is therefore entitled to enter the United States on satisfactory evidence of his professional character. "The term 'laborer,'" said Judge Deady, "is used in the supplementary treaty with China, of November 17, 1880, and also of the act of May 6, 1882, by section 15 of which it is made to include 'both skilled and unskilled laborers,' in its popular sense, and includes only persons who perform physical labor for another for wages. It does not, therefore, include an actor any more than it does a merchant or teacher. . . . Neither the treaty nor the act has in view the protection of what are called the professional or mercantile classes, or those engaged in mere mental labor, from competition with the Chinese. No grievance of this kind was ever complained of, and the language of the remedy provided plainly indicates that it was not contemplated by either of the parties to the treaty, or the Congress that passed the act."

In this case Judge Deady further decided that any Chinese non-laborer entitled to come to this country may enter without the certificate prescribed by section 6 of the act, provided he gives satisfactory proof that he is not a laborer, and a satisfactory explanation why he has no certificate. On this point the court said:

In the case of Low Yam Chow (13 "Federal Reporter," 605, also given above) it was held by Justices Field and Hoffman that Chinese not laborers, who, at the passage of the act, did not reside in China, were not required to produce this certificate to prove they were non-laborers prior to being allowed to land. The reasoning by which this conclusion is reached, would justify the conclusion that the certificate is not absolutely necessary in any case. The non-laboring classes of Chinese are still entitled by treaty stipulation to come to and reside in the United States, and to en-

joy all the "rights, privileges, immunities, and exemptions" which may be accorded to "the citizens and subjects of the most favored nation" (treaty of November 17, 1880).

If section 6 of the act of 1882 is construed to absolutely require the production of the certificate therein provided for, before a Chinaman who is not a laborer can come within the United States, then it will operate as a serious restriction upon the right and privilege given him by the treaty, because in this respect no such condition or restriction is imposed upon the subject of any other nation. Indeed, the fact of being compelled to make proof of his condition or character at all is a burden and inconvenience upon the Chinese coming to the United States, which is not required of any other immigrant or visitor coming to this country. But probably this much is unavoidable under the circumstances, and must be submitted to as a necessary incident of the right of the United States, under the amended treaty, to exclude from the country Chinese laborers. . . .

Read, then, in the light of the treaty, and considered as an aid rather than an impediment to its enforcement, section 6 ought to be construed as a declaration on the part of the United States that, for the purpose of facilitating the entry into the country of the Chinese not within the prohibition, it will accept the certificate of the Chinese Government that the bearer is not a laborer, and is *prima facie* entitled under the treaty to come into the United States at pleasure; but that, in the absence of such certificate, a Chinaman claiming the right to enter and reside in the United States must establish the fact that he is not a laborer by evidence, as in ordinary cases of the *ex parte* proof of a fact.

But the non-production of a certificate, unless satisfactorily explained, may raise the presumption that the claimant is one of the prohibited class. In the case under consideration, Ho King explained that, when he left China, it was his purpose to go to Honolulu, and that he had no intention of coming to the United States. This was considered by the court as a satisfactory explanation of why he had no certificate.

This view of the law was also taken by Chief-Justice Greene, of Washington Territory, in the case of Lee Yip, decided near the close of 1882.

**TRANSIT OF CHINESE LABORERS.**—The important question was raised during the year, but was not brought before any court, whether Chinese laborers are entitled to enter and pass through the United States on their way from one foreign country to another. It was represented that there were from 40,000 to 50,000 Chinese laborers in the West Indies whose contracted term of service there was about to expire, and who wanted to return to China by way of the United States. On this question Attorney-General Brewster gave two conflicting opinions. In the first, dated July 18th, and given to Secretary Folger, he held that the coming of all laborers to the United States was prohibited by the act, whether they came to remain or simply to pass through the country. In the second, dated December 26th, and given to Secretary of State Frelinghuysen, he held that the prohibition of the act does not extend to Chinese laborers desiring to cross the United States from one foreign country to another. "My first opinion on this subject," writes Mr.

Brewster to Mr. Frelinghuysen, "was given under circumstances somewhat too urgent, pressed as I was by your department, because it was pressed by others, and I am gratified to have an opportunity to reconsider my former conclusions with care." The Attorney-General then proceeds as follows:

The preamble of the act is in these words: "Whereas, in the opinion of the Government of the United States, the coming of Chinese laborers to this country endangers the good order of certain localities within the territory thereof." The first section enacts "that from and after the expiration of ninety days next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby, suspended; and during such suspension it shall not be lawful for any Chinese laborer to come, or, having so come after the expiration of said ninety days, to remain within the United States."

The treaty stipulations referred to in the title of the act are those contained in the treaty between this country and China, bearing date the 17th of November, 1880, which is twice referred to in the body of the act.

The preamble of the treaty recites that the necessity for "a modification of existing treaties" has arisen in consequence of the *increasing immigration of Chinese laborers*, and the embarrassments caused by such *immigration*. The first article provides that "whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as *laborers*, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration; and immigrants shall not be subject to personal maltreatment or abuse."

There can be no doubt that the Act of Congress now under consideration was intended to carry into effect the stipulation in this article that the Government of the United States might suspend immigration of Chinese laborers to this country. But, in applying the statute, a serious doubt has arisen as to whether it was the intention of Congress to prohibit all persons answering to the description of Chinese laborers and not embraced by the exceptions in the third section, who should come to our shores merely for the purpose of going through the country on their way to China, or only such portions of that class, not coming within the said exceptions, as should come here to seek occupation as laborers.

The preamble of the act, stating that in the opinion of the Government "the coming of Chinese laborers to this country endangers the good order of certain localities within the territory thereof," would seem to have exclusive reference to the Chinese laborer as a dweller in our midst and a competitor with our own laboring classes, for it is in this way only that he is a disturbing element, and not to him as a passenger over our territory, in which character he has never been objectionable. The statute, being in pursuance of the treaty, must be construed as in harmony with it, and as intending to suspend only the coming of Chinese laborers in the way contemplated by the treaty. Upon reference to the provisions of the treaty already referred to and quoted, we find that it is as immigrants into this country that Chinese laborers are dealt with, and that the right of the United States to suspend the coming of such persons is confined to cases in which they come as "*laborers*." Looking, then, at the mischief to which the act was directed and the language

of the treaty, I do not think that a Chinese laborer coming to this country merely to pass through it can be considered as within the prohibition of the law, he being neither an immigrant nor a laborer coming here *as a laborer*.

As the prohibition of the act applies to Chinese laborers coming into the country to stay as *laborers*, and as the regulations touching certificates of identification prescribed by the fourth and sixth sections are ancillary to that end and intended to prevent frauds upon the act, and applicable therefore to Chinese coming here for permanent or temporary residence, I am of opinion that Chinese passing through the country to other countries are not required, before crossing our borders, to produce the specified certificates of identification, provided they competently prove, in some other manner, their status as mere transient passengers; of course, the certificates would dispense with the proof. The character of such proof may very properly be regulated by the Secretary of the Treasury.

**OTHER IMMIGRATION ACTS.**—Two other important laws relating to immigration were passed by Congress during the year. The act of August 2d regulates the carriage of alien passengers by sea with the view of promoting their health, comfort, and safety. It prescribes regulations as to their food, drinking-water, treatment, etc., and as to the space, light, ventilation, etc., of immigrant-vessels.

The act of August 3d imposes a tax of fifty cents on every immigrant brought to the United States. The tax is to be paid to the collector of the port by the master or owner of the vessel bringing the immigrants. The money thus collected is to be paid into the Treasury of the United States, and "shall be used, under the direction of the Secretary of the Treasury, to defray the expense of regulating immigration under this act, and for the care of immigrants arriving in the United States, for the relief of such as are in distress, and for the general purposes and expenses of carrying this act into effect." The Secretary of the Treasury is empowered "to enter into contracts with such State commission, board, or officers, as may be designated for that purpose by the Governor of any State, to take charge of the local affairs of immigration within said State."

Pursuant to this law, arrangements were made by the Secretary of the Treasury, with the New York Board of Emigration, for continuing at the port of New York the work which the board has carried on at the expense of the State since the head-tax levied by the State was declared unconstitutional by the United States Supreme Court.

**INDEBTEDNESS OF THE UNITED STATES, OF THE STATES, AND OF THE WORLD.** It is not a rash assertion to declare that the political organizations of the world are bankrupts, and that civil government on the part of mankind is at the present moment a financial failure. The population of the earth is estimated at 1,433,887,600, and the national debts of the principal countries of the world amount to \$23,286,414,753, which is nearly twenty dollars for every man, woman, and child now living on the earth. This immense

sum of indebtedness is to be raised by taxation of the inhabitants of the indebted countries, and paid out through the national treasuries.

Of this vast sum, the total net indebtedness of the United States is \$2,997,000,000, of which \$1,942,000,000 is public debt, and \$1,055,000,000 belongs to the States, counties, townships, school districts, and municipalities.

A want of space will only permit here some brief notes of the origin, progress, and present condition of these classes of indebtedness of the United States, and of the indebtedness of the other countries of the world. The full details belong to the census of 1880, and have been very carefully compiled by Rafael A. Bayley and others, under the direction of Robert P. Porter.

**FIRST LOANS.**—The indebtedness of the United States began with the war of the Revolution. The sympathy of France with the American cause led both the Government and people to contribute to its success. As early as September, 1775, Caron de Beaumarchais, an ardent patron of the cause, addressed a memorial to the King on the subject. This was followed by others, in which he urged that it would be impossible for Great Britain to subdue the colonies, if they were assisted in their struggle; that if not assisted, they might succumb, join the English, and turn their arms against France. He says: "We are not in a fit state for making war. We must prepare ourselves, keep up the contest, and, with that view, send secret assistance in a prudent manner to the Americans." These memorials led the Government to determine to give the assistance, and to employ their author as its agent. In the spring of 1776 he was sent to London to make the arrangements, as there was no American agent in France. In London he was introduced to Arthur Lee, a law-student in the Temple, who bore some kind of commission from the secret committee of Congress. Beaumarchais informed him that the French Government wished to send 200,000 louis-d'or (equal to \$816,750) in arms, ammunition, and specie, for the assistance of the Americans, but in a secret manner, and that all they wanted was to know through what source it was best to make the remittances. Beaumarchais then returned to Paris, and about July 1, 1776, Silas Deane arrived there, with full powers as a political and commercial agent for the United States in France. His instructions were to obtain, if possible, one hundred cannon, with ammunition; also arms and uniforms for 25,000 men. These Beaumarchais contracted to furnish *from the arsenals of France*, in addition to a large amount of other articles thought needful for the supply of the colonies. Deane, on his part, agreed that the United Colonies should pay for them by remittances of American produce, the business to be transacted by Beaumarchais, under the name of the Spanish firm of Roderigue, Hortales & Co. This contract, with its

accompanying letters, appears on its face to be perfectly regular; an ordinary commercial contract, by which the United Colonies were to receive the supplies they needed, and to pay for the same within one year by shipments of produce to the imaginary firm of Roderigue, Hortales & Co. Had it been what it appears to be, the United Colonies would have been bound in common honesty not only to pay in full for the stores, but to pay dearly for the risks to which the contractor would be exposed. But there is evidence that both parties knew the contract as it stood to be but a sham, drawn up to mask the fact that it was the Government of France which was to supply England's rebellious colonies. The first million of livres was then advanced from the French treasury, and a few days afterward another million was received from the Spanish treasury, as both countries were united in their foreign policy. As shipments went on, and remittances came slowly from America, a third million was contributed by the King of France. Subsequently two million livres more were granted by France in 1777, and in 1781 six millions, making a total of ten millions, of which Beaumarchais received two, and the rest was paid through Benjamin Franklin. Thus the French and Spanish subsidy amounted to eleven million livres; equal to \$1,996,500. As this money was a free gift, it has not been repaid, unless the sums paid to Beaumarchais be taken as a partial reimbursement.

The first loan negotiated by the Continental Congress was obtained in the year 1777 from the "Farmers-General of France." It amounted to 1,000,000 livres, and was partly repaid with tobacco, and finally settled with the French Government. The next loan was 18,000,000 livres from the French Government. It is probable that it was, in its inception, not so much a loan as a subsidy, a payment of 750,000 livres every three months to the American commissioners in France, to enable the colonies to keep up the unequal struggle with Great Britain. The money was advanced without an expectation of repayment, though with a stipulation that it should be repaid.

A loan from Spain in 1781 is mentioned, but little is known of it. In making up a statement of the foreign debt after the adoption of the Constitution, it appeared that a small sum was due Spain for advances of money, which amounted to \$174,011.

**FINANCIAL SITUATION.**—The financial situation of the Continental Congress was at its worst in 1779 and 1780. Over \$200,000,000 in Continental currency had been issued, and this currency, at first circulating readily at its face value, had depreciated as the amount issued increased, until it only passed at forty to one. Even at this discount it soon ceased to circulate at all, and in the year 1780 "it quietly expired in the hands of its possessors." The army was reduced to extremity. In 1778

nearly 4,000 men were returned as unfit for duty from want of clothes. In January, 1780, the army had been nearly three months on a short allowance of bread. It was determined to attempt to negotiate a loan in Holland. Applications for loans in that country had hitherto been unsuccessful. The Hollanders either distrusted the security, or were unwilling to incur the resentment of Great Britain by lending the Americans money to enable them to carry on the war. The King of France had, through his minister at the Hague, offered his assistance to the Americans in procuring loans in that country, but without effect. He now engaged to become, himself, responsible for the sums which might be furnished. In consequence of this, and the exertions of Mr. Adams, a loan of 10,000,000 livres was obtained in Holland. Although intended solely for the United States, this money having been obtained on the credit of France, became a debt due to that country.

The loan of 10,000,000 livres obtained from France in 1781 was soon exhausted; very little of it in cash ever reached the United States; one half of it was immediately paid into the French Treasury for supplies previously furnished. So utterly exhausted was the American Treasury that in 1782, when, peace having become a certainty, it was determined to reduce the army, the utmost difficulty was experienced in obtaining a small sum to pay the discharged soldiers enough to take them to the places of their enlistment. Congress therefore resolved to make new efforts for a loan, both in France and Holland. As a result, the King of France determined, "notwithstanding the pressing necessities of his own service, to grant to Congress a new pecuniary assistance, which he fixed at the sum of 6,000,000 livres Tournaix (\$1,089,000). This was in February, 1783, and the money was advanced in twelve monthly payments.

**THE AID OF FRANCE.**—On the settlement of the account with France, it appeared that the amount received from her during the war of the Revolution, in the way of loans and subsidies, was 45,000,000 livres, equivalent to \$8,167,500.

"If the gold of France aided the United States through the war in which independence was obtained, it was from Holland that the money came which assisted the Government through the difficult years of peace that followed."\*

An attempt to negotiate a loan in Holland was commenced in 1780, but continued unsuccessful until the result of the war was apparent, and the independence of the country had been acknowledged in Europe, when 5,000,000 guilders (\$2,000,000) were obtained in 1782.

Another loan, of 1784, was rendered necessary by the slow progress made in realizing on the previous loan. A "bonus and gratifica-

tions" were given in this instance, by which the United States agreed, for a principal of 2,000,000 guilders received, to return 2,891,800. Although Mr. Adams, the American agent, thought the contract "involved an enormous sacrifice," yet it amounted to less than 6½ per cent annual interest. He had been authorized by Congress to pay 6 per cent.

**EFFECTS OF THE FINANCIAL CONDITION ON THE GOVERNMENT.**—The next loan, that of 1787, appears to have been contracted in order to raise money with which to pay the interest on the previous loans in Holland made in 1782 and 1784. The interest which had before fallen due had been paid, partly by remittances from America, and partly by some portions of the amount received on the original loans. Although the vast amounts of paper money which had been issued had become greatly depreciated, yet a new emission had been made, which, on its face, was redeemable by the different States individually, but indorsed by the United States, and was by act of March 18, 1780, to be issued at a not greater rate than one dollar of the new for each twenty of the old. Such imposts and duties as the Continental Congress was able to command or persuade from the States, were mostly paid in this new currency, which, being worthless abroad, rendered the payment of debts due in foreign countries by Congress a difficult matter. "It was the financial difficulties experienced under the old system of government that, more than anything else, brought about the calling of the convention which, in 1787, framed the present Constitution of the United States. The Continental Congress possessed sufficient authority to carry on war, to make peace, to conclude treaties, and to carry on most of the functions of government; but to do all this required a revenue, and for this they were dependent on the will of the States. It was evident that such a system could not last. At the time Mr. Adams began the negotiations for the loan, delegates to the Constitutional Convention had been chosen in most of the States, and the convention was in session before the loan was completed."\* This loan was for 1,000,000 florins for ten years at 5 per cent. The United States received ninety-two guilders for each hundred of obligation.

**THE NEW CONSTITUTION.**—The next loan, of 1788, was to meet the expenses in Europe, and to afford a financial basis on which to start the new government at home. It was known in Europe, early in 1788, that the new Constitution would be ratified, and as the Continental Congress was entirely without funds to turn over to its successors, money must be provided in some way. This loan was for one thousand guilders for ten years, at 5 per cent.

At this period, the Government of the United States was reorganized under the present form, and went into operation on April 30, 1789. The 4th of March is the constitutional

day, but at this time it was found impossible to get the members of Congress together on that day. A Treasury Department was created, and Alexander Hamilton appointed the secretary. There was a debt of millions to be provided for, and not a dollar on hand even to meet current expenses. The measures by which to raise a revenue from an exhausted country were to be devised and put in operation, and a financial system prepared which should promise to conduct the Government to independence and financial strength.

**SYSTEM ADOPTED.**—The first step taken was to lay duties on imports, which was approved on July 4, 1789, but no revenue was obtained until September. The next step was to obtain temporary loans from banks in New York. For the year 1789 the expenditures were estimated at \$8,285,603, the greater portion of which was for principal and interest due on the foreign and domestic debt. The current expenses of the year were estimated at \$630,101. No payments on the debt were made during the year, except interest on the Holland loans. No way of relief was open but to audit or adjust the details of the debt and fund them on longer bonds. For this object money was required. Congress, therefore, passed an act appropriating any surplus revenue to payment of the debt, and authorizing a loan of \$12,000,000 to apply on the foreign debt, and a further loan of \$2,000,000 to be applied to purchase the debt.

**THE DEBT.**—The following is a statement of the debt of the United States at the organization of the present form of government, including arrearages of interest to January 1, 1790:

French loan of 18,000,000 livres.....	\$8,267,000 00
French loan of 10,000,000 livres.....	1,815,000 00
French loan of 6,000,000 livres.....	1,089,000 00
Loan from Farmers-General of France, balance due.....	153,688 89
Loan from Spain in 1781.....	174,017 13
Holland loan of 1782.....	2,000,000 00
Holland loan of 1784.....	800,000 00
Holland loan of 1787.....	400,000 00
Holland loan of 1788.....	400,000 00
Total principal of foreign debts.....	\$10,098,706 02
Balance due France for military supplies.....	24,332 86
Arrearages of interest to January 1, 1790.....	1,760,277 03
Debt due foreign officers who had served in the war of the Revolution.....	156,988 73
Arrearages of interest to January 1, 1790.....	11,219 82
Principal of the domestic debt, estimated.....	28,858,180 65
Arrearages of interest to January 1, 1790, estimated.....	11,398,621 80
	52,338,326 51
Add to this arrears and claims against the late government outstanding and subsequently discharged.....	450,895 52
Making the total debt of the United States, January 1, 1790.....	\$52,788,722 03

To this should be added the individual debts of the several States, the precise amount and character of which was then unknown, estimated by Hamilton at that time to aggregate about \$25,000,000.

There were two kinds of debt in the adjustment of which there seems to have been no difficulty: One was the undisputed foreign

debt, where the lenders had paid for their bonds in gold, on the faith of the Continental Congress; the other was the paper money issued by Congress and the several States.

Authorities vary much as to the amount of paper money issued during the struggle for independence. Possibly Mr. Jefferson's statement in his writings may be taken as approximate to the truth, and it affords, at the same time, a striking exhibit of the effects of the inflation of our paper currency:\*

On the commencement of the late Revolution Congress had no money. The external commerce of the States being suppressed, the farmer could not sell his produce, and, of course, could not pay a tax. Congress had no resource then but in *paper money*. Not being able to lay a tax for its redemption, they could only promise that taxes should be laid for that purpose, so as to redeem the bills by a certain day. They did not foresee the long continuance of the war, the almost total suppression of their exports, and other events which rendered the performance of their engagements impossible. The paper money continued for a twelvemonth equal to gold and silver; but the quantities which they were obliged to emit, for the purpose of the war, exceeded what had been the usual quantity of the circulating medium.

It began, therefore, to become cheaper, or, as we expressed it, it depreciated, as gold and silver would have done had they been thrown into circulation in equal quantities. But not having, like them, an intrinsic value, its depreciation was more rapid and greater than could ever have happened with them. In two years it had fallen to two dollars of paper money for one of silver; in three years to four for one; in nine months more it fell to ten for one; and in the six months following, that is to say, by September, 1779, it had fallen to twenty for one.

Congress, alarmed at the consequences which were to be apprehended should they lose this resource altogether, thought it necessary to make a vigorous effort to stop its further depreciation. They therefore determined, in the first place, that their emissions should not exceed \$200,000,000, to which sum they were then nearly arrived, and though they knew that twenty dollars of what they were then issuing would buy no more for their army than one silver dollar would buy, yet they thought it would be worth while to submit to the sacrifice of nineteen out of twenty dollars if they could thereby stop further depreciation. They, therefore, published an address to their constituents, in which they renewed their original declarations that this paper money should be redeemed at dollar for dollar. They proved the ability of the States to do this, and that their liberty would be cheaply bought at this price. The declaration was ineffectual. No man received the money at a better rate. On the contrary, in six months more, that is, by March, 1780, it had fallen to forty for one. Congress then tried an experiment of a different kind. Considering their former offers to redeem this money at par as relinquished, by the general refusal to take it but in progressive depreciation, they required the whole to be brought in, declared it should be redeemed at its present value of forty for one, and that they would give to the holders new bills, reduced in their denomination to the sum of gold or silver which was actually to be paid for them. This would reduce the nominal sum of the mass in circulation to the present worth of that mass, which was five millions, a sum not too great for the circulation of the States, and which they therefore hoped would not depreciate further, as they continued firm in their purpose of emitting no more. This effort was as unavailing as the former. Very little of the money was brought in.

It continued to circulate and to depreciate till the

\* Jefferson's "Works," vol. ix, p. 248.

end of 1780, when it had fallen to seventy-five for one; and the money circulated from the French army being, by that time, sensible in all the States north of the Potomac, the paper ceased its circulation altogether in those States. In Virginia and North Carolina it continued a year longer, within which time it fell to one thousand for one, and then expired, as it had done in the other States, without a single groan. Not a murmur was heard on this occasion among the people. On the contrary, universal congratulations took place on their seeing this gigantic mass, whose dissolution had threatened convulsions which should shake their infant Confederacy to its center, quietly interred in its grave.

Mr. Jefferson estimates the value of the two hundred millions of Continental currency at the time of its emission at \$36,367,719 in specie, and says: \* "If we estimate at the same value the like sum of \$200,000,000 supposed to have been emitted by the States, and reckon the Federal debt, foreign and domestic, at about \$43,000,000, and the State debts at \$25,000,000, it will form an amount of \$140,000,000, the total sum which the war cost the United States. It continued eight years from the battle of Lexington to the cessation of hostilities in America. The annual expense was therefore equal to about \$17,500,000 in specie."

The foreign loans now contracted, practically to pay and to refund portions of the debt, were as follow: Holland loan, 1790; the same, March, 1791; the same, September, 1791; the same, December, 1791; the same, 1792; the same, 1793; the same, 1794; Antwerp loan, 1791. Of the \$9,400,000 thus borrowed, over \$3,000,000 was paid into the Treasury of the United States and used in buying up the domestic debt, under the operations of the sinking fund; the balance was used to pay the debt due to Spain, debts due to foreign officers who served in the armies of the Revolution, and a large portion in paying off a part of the debt due to France.

**ASSUMPTION OF STATE DEBTS.**—The individual debts of the several States were contracted partly in defending themselves against the common enemy, partly in carrying on their governments, or in undertakings with which the rest of the country had nothing to do.

A proposition was now made for the Federal Government to assume these debts, and thus add them to the amount of its indebtedness. The following considerations were urged by the Secretary of the Treasury, Alexander Hamilton, as inducements to the assumptions:

1. To consolidate the finances of the country and give an assurance of permanent order in them; avoiding the collision of thirteen different and independent systems of finance under concurrent and co-equal authorities, and the scramblings for revenue which would have been incident to so many different systems.

2. To secure to the Government of the Union, by avoiding those entanglements, an effectual command of the resources of the Union for present and future exigencies.

3. To equalize the condition of the citizens of the several States in the important article of taxation; rescuing a part of them from being oppressed with

burdens beyond their strength on account of extraordinary exertions in the war, and through the want of certain adventitious resources which it was the good fortune of others to possess.

When the bill to authorize the assumption of the State debts was before Congress, it became combined with a bill to fix a seat of government. Each had failed by small majorities. There was a strong sectional party for each, but not a majority. The Eastern and Middle States were for the assumption, but the Southern States were against it. These latter were for the Potomac for the seat of government, and the former for the Susquehanna. The discontent was extreme on each side at losing its favorite measure. At last the measures were combined. Two members from the Potomac who had voted against the assumption agreed to change their votes; a few from the Eastern and Middle States who had voted against the Potomac agreed to change in its favor, and so the two measures were passed. But the account of this arrangement, by President Jefferson, omitting his strictures, deserves to be stated:

This measure (the assumption) produced the most bitter and angry contest ever known in Congress, before or since the union of the States. I arrived in the midst of it: but a stranger to the ground, a stranger to the actors in it, so long absent as to have lost all familiarity with the subject, and, as yet unaware of its object, I took no concern in it. The great and trying question, however, was lost in the House of Representatives. So high were the feuds excited on this subject that, on its rejection, business was suspended. Congress met and adjourned from day to day without doing anything, the parties being too much out of temper to do business together. The Eastern members threatened secession and dissolution. Hamilton was in despair. As I was going to the President's one day I met him in the street. He walked me backward and forward before the President's door for half an hour. He painted pathetically the temper into which the Legislature had been wrought—the disgust of those who were called the creditor States—the danger of the secession of their members, and of the separation of the States. He observed that the members of the Administration ought to act in concert—that though this question was not of my department, yet a common duty should make it a common concern—that the President was the center on which all administrative questions ultimately rested, and that all of us should rally around him, and support with joint efforts measures approved by him; and that the question having been lost by a small majority only, it was probable that an appeal from me to the judgment and discretion of some of my friends might effect a change in the vote, and the machine of government, now suspended, might be again set in motion. I told him that I was really a stranger to the whole subject; that not having yet informed myself of the system of finances adopted, I knew not how far this was a necessary sequence; that undoubtedly, if its rejection endangered a dissolution of the Union at this incipient stage, I should deem that the most unfortunate of all consequences, to avert which all partial and temporary evils should be yielded. I proposed to him, however, to dine with me the next day, and I would invite another friend or two, bring them into conference together, and I thought it impossible that reasonable men, consulting together coolly, could fail, by some mutual sacrifices of opinion, to form a compromise which would save the Union. The discussion took place. I could take no part in it but an exhortatory one, because I was a stranger to the circumstances

\* Jefferson's "Works," vol. ix, p. 260.

which should govern it. But it was finally agreed that whatever importance had been attached to the rejection of this proposition, the preservation of the Union, and of concord among the States, was more important, and that therefore it would be better that the vote of rejection should be rescinded—to effect which some members should change their votes. But it was observed that this pill would be peculiarly bitter to the Southern States, and that some concomitant measure should be adopted to sweeten it a little to them. There had before been propositions to fix the seat of government either at Philadelphia, or at Georgetown on the Potomac; and it was thought that by giving it to Philadelphia for ten years, and to Georgetown permanently afterward, this might, as an anodyne, calm in some degree the ferment which might be excited by the other measure alone: so two of the Potomac members (White and Lee, but the former with a revulsion of stomach almost convulsive) agreed to change their votes; and Hamilton undertook to carry the other point.

Thus, on August 4, 1790, an act, making provision for the payment of the debt of the United States and embodying provisions for assumption of the State debts, was approved. The following statement, taken from the official reports, shows the amount authorized to be assumed in the redemption of the debt of each State, and the amount which was assumed:

STATES.	Amount authorized.	Amount assumed.
New Hampshire.....	\$300,000 00	\$282,593 51
Massachusetts.....	4,000,000 00	3,951,733 05
Rhode Island.....	200,000 00	200,000 00
Connecticut.....	1,600,000 00	1,600,000 00
New York.....	1,200,000 00	1,183,716 69
New Jersey.....	800,000 00	695,202 70
Pennsylvania.....	2,200,000 00	777,938 43
Delaware.....	200,000 00	59,161 65
Maryland.....	800,000 00	517,491 03
Virginia and Kentucky..	3,500,000 00	2,984,416 00
North Carolina.....	2,400,000 00	1,798,303 85
South Carolina.....	4,000,000 00	3,999,651 73
Georgia.....	300,000 00	246,030 73
Total.....	\$21,500,000 00	\$18,271,786 47

U. S. BANK.—The public debt on January 1, 1791, was about \$75,250,000. A portion of it having been funded, and payable at future dates, the next step was taken to make additional provision for temporary emergencies. Accordingly, on December 14, 1790, Secretary Hamilton, with his annual report, transmitted to the House of Representatives a plan for a National Bank with a capital of \$10,000,000, divided into 25,000 shares, at \$400 each. The bill of incorporation passed the Senate on January 20, 1791. Debate on it in the House began on February 1st, and continued until February 8th, when the bill passed by yeas 39 to nays 20. The corporation was allowed to sell the evidences of the public debt subscribed to its stock, but was not to purchase any public debt whatever. Notes were allowed to be issued, payable to any person or persons, assignable and negotiable, or to bearer, assignable by delivery. The directors were to establish offices, for discount and deposit only, wherever they should think fit in the United States. The President of the United States was authorized to subscribe to the stock of the corporation \$2,000,000, borrowing an equal

sum of the bank, the money to be paid out of that which should be obtained under previous acts of Congress, relating to the public debt. The charter was to expire March 4, 1811. The bank was of great benefit to the Government. More than \$100,000,000 of Government money was received and disbursed by it, without the loss of a dollar. It made semi-annual dividends, averaging about  $8\frac{1}{2}$  per cent, and its stock rose to a high price.

At the close of 1792 the condition of the Treasury was unsatisfactory. The expenditures had increased in consequence of Indian troubles, the large amounts required for interest, and the growing current expenses seemed likely to exhaust the revenues. The House, therefore, referred to the Secretary of the Treasury the subject of a plan for the redemption of the public debt, and for the reimbursement of the subscription loan made to the bank. He replied by recommending for the first, temporary loans and additional revenues by taxation as the only resources remaining; and, for the second, that power be given to borrow the sum due, to be applied to the reimbursement of the loan.

WAR MEASURES.—A series of loans followed. Trouble arose with the Barbary powers on the north coast of Africa, in 1794, and an attempt was made to create a small navy of six frigates, four of forty-four guns and two of thirty-six guns each, for the protection of American commerce in the Mediterranean. These frigates were begun under many disadvantages—one each at the ports of Portsmouth, in New Hampshire, Portsmouth, in Virginia, Boston, New York, Philadelphia, and Baltimore. The timber from which they were to be constructed was still standing in the forest, the iron was still in its native ore, the seed for the flax and hemp was yet to be sown. Copper could not be procured in the United States. The Government possessed neither navy-yards nor cannon-foundries. It was resolved to build the ships of live-oak, and agents, with a force of lumbermen, were sent to Georgia to obtain it. They met with so many discouragements from the unhealthiness of the climate, the constant rain, and other causes, that little progress was made. In January, 1796, the frigates remained unfinished, and peace had been concluded with the Barbary powers. In 1797 the vessels were still on the stocks, but, owing to troubles with France, it was resolved to complete the frigates, to build galleys for the defense of the coast, and to purchase not more than twelve merchant-vessels adapted to naval service. In payment for these stock was to be issued.

War, although not formally declared, was carried on by France, upon the ocean, with virulence. Constant captures were made of American vessels, on the ground of having property of the enemy on board. Full preparations were set on foot to resist a French invasion, and, for the management of naval affairs, a naval department was now created.

The debt had now increased to \$88,000,000. In 1803 fifteen millions more were added to it by the purchase from France of the province of Louisiana.

**TREASURY NOTES.**—No special emergencies arose or unusual measures were taken until 1812, when the second war with Great Britain was declared by the Congress of the United States. This closed in 1815, and increased the debt to \$127,300,000; a higher figure than it had ever touched before, or afterward, until 1862. The only new measure adopted at this time was the issue of Treasury notes. The bill to authorize the issue was opposed in Congress on the ground that "it was ingrafting on our system of finances a new and untried measure." The measure, however, was successful, and it has since been one of the occasional aids of the Treasury Department. The embarrassment of the Government at the close of the war furnished a basis for an irresistible argument in favor of the recharter of the United States Bank. No less a person than Mr. John C. Calhoun, of South Carolina, introduced, from a special committee of the House of Representatives, the bill for its incorporation on January 8, 1816. The constitutional question relating to it received little attention on its passage. Thus, by means of revenue from imports, and other domestic sources, temporary loans, Treasury notes, and five, six, and seven per cent loans, the financial affairs were honorably conducted until 1821, when the Secretary of the Treasury reported an expected deficit of over four and a half millions to be provided for by taxation.

At this period the country was suffering from the effects of a financial crisis in 1819. A committee from the House of Representatives, in a report, thus described the general distress:

It is not a matter of very great consolation to know that, at the end of thirty years of its operation, this Government finds its debt increased \$20,000,000, and its revenue inadequate to its expenditure; the national domain impaired, and \$20,000,000 of its proceeds expended; \$35,000,000 drawn from the people by internal taxation, \$341,000,000 by impost, yet the public Treasury dependent on loans; in profound peace, and without national calamity, the country embarrassed with debts, and real estate under rapid depreciation; the markets of agriculture, the pursuits of manufactures diminished and declining; commerce struggling, not to retain the carrying of the produce of other nations, but our own. There is no national interest which is in a healthful, thriving condition; the nation at large is not so; the operations of the Government and individuals alike labor under difficulties which are felt by all. . . . The sea, the forest, the earth yield their abundance; the labor of man is rewarded; pestilence, famine, or war commit no ravages; no calamity has visited the people; peace smiles on us; plenty blesses the land. Whence, then, this burst of universal distress?

**STATE DEPOSITS.**—An improvement soon came; higher taxes followed, under which South Carolina denied its constitutionality, owing to the extreme protective form given to it at that time. This supplied the Treasury, and enabled the Government to dispense with the aid of the United States Bank, the charter of

which was allowed to expire about 1835. The final result was that, in 1834, the Government of the United States was, for the first time in its history, practically out of debt, for the last installment of the debt had been paid. Nay, so abundant was the money in the Treasury that the Government returned over \$28,000,000 back to the people, under the form of a "deposit," made proportionally to the States. All of the States accepted the unasked deposit at the time, and generally appropriated it to educational purposes. The following statement shows the amount of money thus "deposited" with the several States under the act of June 23, 1836. The fund originally proposed to be distributed among the States was \$36,000,000, and \$28,101,644.91 was really distributed, in three quarterly installments, the first in February, 1837, the second in April, and the third in July. The fourth and last installment was not paid. A series of disasters, ending in the panic of 1837, so disordered the finances of the General Government that a new act of Congress was passed, on October 2d, postponing the transfer of the fourth installment until January 1, 1839. By a subsequent act it was postponed indefinitely; and it was further provided that the amount deposited should remain with the States until otherwise directed by Congress. Here the matter has remained:

Now followed the memorable contest on the question of sub-Treasuries, located in different places, as depositories of the money of the Government, a service which had been rendered by the branches of the defunct United States Bank. At the same time (1837) commenced a state of extraordinary financial depression, which continued for some years. Issues of Treasury notes and loans were resorted to for relief; so that, in 1846, when war with Mexico was declared, the public debt had reached \$15,500,000. It immediately mounted up to \$63,000,000 on the final closing up of the expenditures.

There were some incidental expenditures which resulted from this conflict. A bill was

passed by Congress in September, 1850, to pay \$10,000,000 to the State of Texas, if the State should consent that her boundary on the north should commence at a point at which the meridian of one hundred degrees west from Green-

with the channel of said river, to the Gulf of Mexico, and should cede to the United States all her claim to the territory exterior to these boundaries, and relinquish all claim on the United States for liability for her debts, and

wich is intersected by the parallel of 36° 30' north latitude, and run thence due west to the meridian of one hundred and three degrees west from Greenwich, then south to the thirty-second degree of north latitude, then on said parallel to the Rio Bravo del Norte, and thence,

for compensation for the surrender of her ships, forts, custom-houses, public buildings, etc. These terms were accepted, and the "Texas indemnity" stock was issued.

LEGAL TENDERS.—In 1860 the debt of the Government was \$64,800,000. The war com-

menced in the following year, and the wants of the Government were so great that it was obliged to resort to almost every conceivable form of loan to obtain money. The first loans were on Treasury notes of various denominations, and at various rates of interest, with seven per cent thirty-year and five per cent twenty-year bonds, which were known as "seven-thirties" and "five-twenties." The demand for money, however, was so great that as early as January 22, 1862, a bill was introduced into the Lower House of Congress for the issue of a hundred million Treasury notes, with the proviso that there should be printed on the back of the notes the following words: "The within note is a legal tender in payment of all debts, public and private, and is exchangeable for bonds of the United States bearing six per cent interest." With some amendments, the bill was passed by Congress, and approved February 25, 1862. It authorized the Secretary of the Treasury to issue, on the credit of the United States, Treasury notes to the amount of \$150,000,000, bearing no interest, and payable to bearer, of such denominations as he might deem expedient, not less than five dollars each. These notes were to be "receivable in payment of all taxes, internal duties, excises, debts, and demands of every kind due to the United States, except duties on imports, and of all claims and demands against the United States, of every kind whatsoever, except for interest upon bonds and notes, which shall be paid in coin, and shall also be lawful money and a legal tender in payment of all debts, public and private, within the United States, except duties on imports and interest as aforesaid."

They were to be exchangeable in sums of \$50, or any multiple thereof, for bonds of the United States, bearing interest at the rate of six per cent, payable semi-annually, the bonds to be redeemable at the pleasure of the United States after five years, and payable twenty years after date. The notes were made receivable the same as coin, at their par value, for any loans that might thereafter be sold or negotiated by the Secretary of the Treasury, and when received for such loans, or for public dues, might be reissued from time to time, as the exigencies of the Government might require.

An act of July 11, 1862, authorized an additional issue of \$150,000,000 in legal-tender notes, of such denominations as the Secretary of the Treasury might deem expedient; but no note was to be for the fractional part of a dollar, and not more than \$35,000,000 of lower denominations than five dollars. An act of March 3, 1863, authorized another issue of \$150,000,000 in legal-tender notes, including the amount authorized by resolution of January 17, 1863, of such denominations not less than one dollar as the Secretary might prescribe.

Under these acts legal-tender notes have been

issued amounting, in the aggregate, to \$1,640,559,947. The difference between the amount authorized and the amount issued is accounted for by reissues from time to time, as authorized by law. Thus originated, under the form and effect of a loan, the "greenback" currency, so called from the color of back of the notes. It continues in circulation to this day, and is exchangeable for gold, in ordinary transactions, at dollar for dollar.

On July 9, 1864, gold was quoted at 266½ and 267, as compared with legal-tender notes. The question of the constitutionality of these notes has an interesting history, which may be found in earlier volumes of this "Cyclopædia." The Secretary of the Treasury (Chase), who issued the notes, relied entirely for their justification on the ever-serviceable doctrine of *necessity*. He said: "It is not unknown to the committee that I have felt—nor do I wish to conceal that I now feel—a great aversion to making anything but coin a legal tender in payment of debts. It has been my anxious wish to avoid the necessity of such legislation. It is, however, at present impossible, in consequence of the large expenditures entailed by the war, and the suspension of the banks, to procure sufficient coin for disbursements; and it has, therefore, become indispensably necessary that we should resort to the issue of United States notes."

Certificates of indebtedness were another form of loan, issued, in satisfaction of audited accounts, in amounts not less than \$1,000, at 6 per cent interest, payable in one year, or sooner at the option of the Government. The amount issued of these certificates was \$561,753,241.

Still another and a novel form of loan was the fractional currency. A bill "to authorize payments in stamps, and to prohibit the circulation of notes of less denomination than one dollar," was introduced in the Lower House of Congress on July 17, 1862, and was passed and approved on the same day. A letter from the Secretary of the Treasury urged the following reasons for the passage of the bill: "The depreciation of the currency, resulting, in great measure, from the unrestricted issues of non-specie-paying banks and unauthorized associations and persons, causes the rapid disappearance from circulation of small coins. To supply the want of these coins, tokens and checks for sums less than one dollar are being issued by hotels, business houses, and dealers generally; and the most serious inconveniences and evils are apprehended unless these issues can be checked and the small coins of the Government kept in circulation, or a substitute provided." The amount issued of this currency was \$368,720,079.

STATE BANKS.—In his report of December 4, 1862, the Secretary advanced the idea that banking associations should be formed for the improvement of the public credit, and to supply a safe and uniform currency to the people. This was approved by Congress, and resulted

in the adoption of a system of State national banks, and a tax of 2 per cent was laid on the issues of State banks above a certain percentage of their capital. The object was to tax them out of existence. The circulation of the national banks was to be secured by bonds of the United States, with a small sum in specie.

**Bonds.**—On March 3, 1863, an act passed authorizing the issue of \$900,000,000 of 10-40 bonds, payable in coin, and in denominations of \$50 and upward, and exempt from taxation by State or municipal authority. The same act authorized the issue of \$400,000,000 in Treasury notes of not less than \$10, bearing 6 per cent interest, and payable within three years, and exempt from taxation; also \$200,000,000 in Treasury notes, bearing 7½ per cent interest. Of the first notes, \$44,520,000 were issued redeemable in one year, and \$166,480,000 redeemable in two years. They were known as "one- and two-year notes of 1863." Of the latter notes, \$248,601,680 were issued.

On March 3, 1864, a further issue of \$500,000,000 of 10-40 bonds was authorized; and on June 30, 1864, an issue of \$400,000,000 of 5-30 bonds was authorized. Both classes of bonds were to be exempt from State and municipal taxation. Subsequent loans of a similar nature were made until the close of the war. One year afterward, in July, 1866, the debt was stated at its largest amount, \$2,773,200,000.

A recapitulation, showing the amount of the principal of the public debt of the United States, annually issued and redeemed from July 4, 1776, to June 30, 1880, presents the following results:

Issues .....	\$10,690,055,968 32
Redemptions.....	8,569,664,280 85
	<b>\$2,120,391,787 47</b>
Unadjusted, over.....	92,815 46
	<b>\$2,120,484,552 93</b>
Unadjusted, short.....	69,182 30
Outstanding June 30, 1880.....	<b>\$2,120,415,370 63</b>

LOCATION.	AMOUNT.			
	Male.	Female.	Corporation.	Total.
New England States.....	\$50,142,500	\$20,829,550	.....	\$70,972,050
Middle States.....	228,225,150	55,783,100	.....	279,008,250
Southern States.....	10,241,250	2,898,550	.....	13,139,800
Western States.....	43,576,600	10,842,150	.....	54,418,750
Banks, insurance companies, trust companies, etc.....	.....	.....	\$227,451,550	227,451,550
Total.....	<b>\$327,185,500</b>	<b>\$90,853,850</b>	<b>\$227,451,550</b>	<b>\$644,990,400</b>

These tables show that while over 36 per cent of the holders reside in the New England States, not more than 11 per cent of the aggregate amount of bonds are credited to New England. On the other hand, over 42 per cent of the holders have their residence in the Middle States, and upward of 43 per cent of the aggregate amount of bonds is held in that section. Over 3½ per cent of the holders reside in the Southern States, and about 2 per cent of the bonds are owned there. In the Western States are 15 per cent of the holders, and nearly 8½ per cent of the bonds. The

**THE HOLDERS OF THE BONDS, AND AMOUNTS.**—The bonded debt of the United States consists of two classes of bonds—the registered bonds and the coupon bonds. Of the registered bonds there are four species—the 4 per cent, 4½ per cent, 5 per cent, and 6 per cent and they are held as follow:

LOANS.	No. of holders.	Amounts.
4 per cent.....	55,278	\$834,742,800
4½ per cent.....	10,745	125,681,800
5 per cent.....	7,091	184,616,900
6 per cent.....	7,688	180,926,700
Total.....	80,802	\$825,917,100

Omitting the 6 per cent bonds from the calculation, the total number of holders of the other species is 73,114, of whom 42,262 are males and 29,325 are females, and 1,527 are corporations; and of the amount held, the males own \$327,185,500, the females \$90,853,850, and the corporations \$227,451,550. Of these holders, also, 51 per cent, or 37,256, reside in 117 cities of the United States; and they hold 85 per cent of the amount, or \$549,200,600.

The number of holders of registered bonds of 4, 4½, and 5 per cent, who live in different sections of the Union, is shown by the following table:

LOCATION.	Male.	Female.	Corporations.	Total.
New England.....	14,638	11,986	.....	26,619
Middle States.....	18,728	12,580	.....	31,308
Southern States.....	1,721	914	.....	2,635
Western States.....	7,185	8,845	.....	11,030
Banks, insurance companies, trust companies, etc.....	.....	.....	1,527	1,527
	42,262	29,325	1,527	73,114

The amounts of the 4, 4½ and 5 per cent bonds held in the different sections of the Union by the above-mentioned holders are shown in the following table:

LOCATION.	AMOUNT.			
	Male.	Female.	Corporation.	Total.
New England States.....	\$50,142,500	\$20,829,550	.....	\$70,972,050
Middle States.....	228,225,150	55,783,100	.....	279,008,250
Southern States.....	10,241,250	2,898,550	.....	13,139,800
Western States.....	43,576,600	10,842,150	.....	54,418,750
Banks, insurance companies, trust companies, etc.....	.....	.....	\$227,451,550	227,451,550
Total.....	<b>\$327,185,500</b>	<b>\$90,853,850</b>	<b>\$227,451,550</b>	<b>\$644,990,400</b>

banks, insurance companies, and other corporations, representing in number only 2 per cent, own about 35 per cent of the bonds.

The District of Columbia contains more bondholders, in proportion to its population, than any of the States of the Union. The Middle States take high rank in the proportion of bondholders to their population, while in the Western and Southern States a small percentage of the population is represented in the total number. The number of the holders of these bonds residing in the different States of the Union is as follows:

Light represents amounts held  
by males.  
Dark, by females.

STATES, ETC.	Number.	Per cent of bondholders.	Per cent of population.	STATES, ETC.	Number.	Per cent of bondholders.	Per cent of population.

California.....	411	0.56	1.72	Oregon.....	14	0.02	0.34
Total.....					78,114	100.00	100.00

From this table it appears that Massachusetts, with only  $3\frac{1}{2}$  per cent of the total population of the country, has 23 per cent of the total number of bondholders; while New

York, with over 10 per cent of the total population, has 20 per cent of the bondholders. Ohio has over 6 per cent of the total population and over  $5\frac{1}{2}$  per cent of the bondholders.

The 6 per cent registered bonds, which are not included in the preceding tables, amount to \$180,926,700, and were held by 7,688 corporations and private individuals. Of these holders 4,239 received their interest in New York city; 1,611 in Boston; 1,306 in Philadelphia; 243 in Baltimore; 42 in Chicago; 54 in Cincinnati; 169 in Washington; 5 in San Francisco; 10 in St. Louis; and 9 in New Orleans.

Thus it appears that the whole number of

holders of registered bonds is 80,802, and the aggregate amount held is \$825,917,100.

**COUPON BONDS.**—These bonds are of different species, like the registered bonds, and on June 30, 1880, they amounted to \$537,532,250. The coupons of the bonds are often used as cash, and are presented for the interest on the bond by the holder. It is thus impossible to trace the ownership of the bond with the same accuracy as that of the registered bond.

# INDEBTEDNESS OF THE UNITED STATES, OF THE STATES, ETC. 405

The following table shows the amount of each class of bonds as represented by the coupons paid at the U. S. Treasury, and the nine sub-Treasuries, for the date nearest the census year:

DEBTS OF THE STATES.—The assumption by the United States Government, in 1790, of the debts of the States which were contracted during the War for Independence, is related on a preceding page. Subsequent to that date until 1820, only a small amount was contract-

ed. It was after the latter date that public improvements were undertaken. In 1812 a small war debt was contracted by some States.

The following table shows the amount of stocks issued by the several States named, from 1820 to 1838:

STATES.	1820-'25.	1825-'30.	1830-'35.	1835-'38.	Total.

\* It is claimed by the people of Mississippi that the debt of \$5,000,000 was contracted in violation of the Constitution, and that the State was not liable therefor.

† \$4,500,000 redeemed.

‡ South Carolina had a Revolutionary debt of \$193,770.

§ Virginia had a war debt contracted before 1820 of \$343,189.

The following table shows the amount and the purpose of each State debt in 1838:

STATES.	For banking.	For canal.	For railroads.	For turnpikes.	Miscellaneous.	Total.

Early in 1840 the question of the United States assuming the States' debts, contracted during the period described, was agitated in Congress. The first figures that bear evidence of authenticity, as showing the amount and the purposes for which the State debts had been contracted, appear in the speech of Senator Benton, made before the Senate in January, 1840, the figures being supplied by Mr. Flagg, the Comptroller of the State of New York. From these tables it seems that \$170,000,000 of debt had actually been contracted or authorized by the eighteen States previous to 1840, without counting the \$28,101,644.91 received from the surplus revenue funds of the Federal Government. Taking into the calculation the amount probably incurred in the period between the report of Mr. Flagg and the speech of Senator Benton, together with the Florida debt of \$5,000,000, and making allowance for possible omissions from Mr. Flagg's table, the whole debt might then have been estimated at more than \$200,000,000. Eight of the States of the Union at that time, viz., New Hampshire, Vermont, Rhode Island, Connecticut, New Jersey, Delaware, North Carolina, and

Georgia, had no debt. Maine and Missouri were only nominally in debt, the former having created but half a million of debt.

The tenth census of the United States contains not only a statement of the amount of the debt of each State, but a history of the details of each, showing the purpose for which each sum was incurred, and the progress of its payment. Previous to the war there was little change in the amount of these debts, except in those States which engaged extensively in internal improvements. But in the period from 1860 to 1870 there was a large increase of war debts. For the purpose of showing the aggregate of 1880, it is presented separately for each division of the Union.

**NEW ENGLAND STATES.**—There was but little fluctuation in the debts of the New England States from 1839 to 1860, when there were slight changes in those of Maine, New Hampshire, and Massachusetts. Vermont had contracted a debt for a new State-House. Rhode Island and Connecticut continued to be free from debt. The following table shows the debts of the six New England States at six different periods:

NEW ENGLAND STATES.	1839.	1842.	1858.	1860.	1870.	1880.
		Funded debt.	Funded debt.	Funded debt.	Funded debt.	Funded debt.
Maine.....	\$554,976	\$1,734,861	\$471,500	\$699,500	\$8,067,900	\$5,848,900
New Hampshire *.....			74,899	50,087	2,752,200	3,501,100
Vermont.....				175,000	1,002,500	4,000
Massachusetts †.....	4,290,000	5,424,187	6,445,000	6,817,127	27,128,164	88,020,464
Rhode Island.....					2,918,500	2,584,500
Connecticut.....					7,275,900	4,967,600
Total.....	\$4,844,976	\$7,158,998	\$6,991,399	\$7,741,714	\$49,140,164	\$49,876,564

\* In 1870 New Hampshire had an extra debt of \$65,000.

† In 1860 Vermont had an extra debt of \$24,636; and in 1880, of \$135,000.

‡ In 1860 Massachusetts had an extra debt of \$815,000; and in 1880, of \$9,360.

**MIDDLE STATES.**—Under the title "Middle States," New York, New Jersey, Pennsylvania, Delaware, and Maryland are included. Of these five States, New Jersey and Delaware have no debt excepting that incurred for war purposes. The former had in its Constitution of 1844 a provision which prohibited the State from aiding or in any way loaning its credit to public improvements. New York, Pennsylvania, and Maryland were among the first States to aid in

the construction of canals and railroads, and in loaning their credit to State banks. As early as 1839 these three States were indebted to the extent of \$54,984,389. In 1842 Pennsylvania and Maryland were obliged to suspend interest, and New York was on the verge of bankruptcy.

The following table shows the amount of the debt of each of the Middle States at six different periods:

MIDDLE STATES.	1839.	1841.	1858.	1860.	1870.	1880.
		Funded debt.	Funded debt.	Funded debt.	Funded debt.	Funded debt.
New York *.....	\$18,262,406	\$17,561,567	\$24,328,898	\$27,064,584	\$32,409,144	\$8,988,360
New Jersey.....					2,996,200	1,996,300
Pennsylvania †.....	25,229,008	33,301,013	40,272,285	87,849,125	81,111,662	21,561,990

DETAILS OF LOCAL INDEBTEDNESS.—In the cities and towns of the United States containing a population of 7,500 and upward, the total population in 1880 was 11,600,768. The number of the cities and towns was 311; the total bonded debt, \$682,096,460; the total floating debt, \$28,439,464; the gross debt, \$710,535,924; the sinking fund, \$117,191,506; and the net debt, \$593,344,418; the net debt per capita, \$51.15.

The debt of the municipalities having less population than 7,500 is as follows: bonded, \$41,995,999; floating, \$14,380,858; total, \$56,376,857; sinking fund, \$559,731; net debt, \$55,817,126.

The amount of the debts of the counties in the United States is as follows: bonded, \$106,767,946; floating, \$18,703,609; total, \$125,471,555; sinking fund, \$1,593,869; net debt, \$123,877,686.

The amounts of debts of townships in the Middle and Western States, where this civil division exists, are as follow: bonded, \$30,120,048; floating, \$1,789,597; total, \$31,909,645; sinking fund, \$308,401; net debt, \$31,601,244.

The amount of school-district debt in the States and Territories is as follows: bonded, \$9,869,242; floating, \$7,638,169; no sinking fund.

The purposes for which the outstanding

bonded State and local debts of the United States were contracted are briefly stated in the report as follow:

Bridges.....	\$24,853,888
Cemeteries.....	283,516
Fire Department.....	2,514,032
Funding floating debt.....	153,949,095
Improvement of harbors, rivers, wharves, canals, and water-power.....	36,224,548
Parks and public places.....	40,612,536
Public buildings.....	48,499,952
Railroad and other aid.....	185,638,948
Refunding old debt.....	188,749,730
Schools and libraries.....	26,509,437
Sewers.....	21,370,536
Streets.....	86,674,560
Miscellaneous.....	180,374,753
War expenses.....	75,154,400
Water-works.....	146,423,865
<b>Total.....</b>	<b>\$1,117,821,671</b>

Of this total indebtedness, there is due from the Eastern States, \$178,654,977; from the Middle States, the sum of \$488,638,655; from the Southern States, \$204,887,805; from the Western States, \$243,984,183; and from the Territories, \$1,656,951.

ASSESSED VALUATION.—The following table presents the population of the United States and of the five geographical sections, the assessed valuation and the per capita valuation, the bonded debt, and the per capita bonded debt, and the amount of the annual charge, with the per capita annual charge:

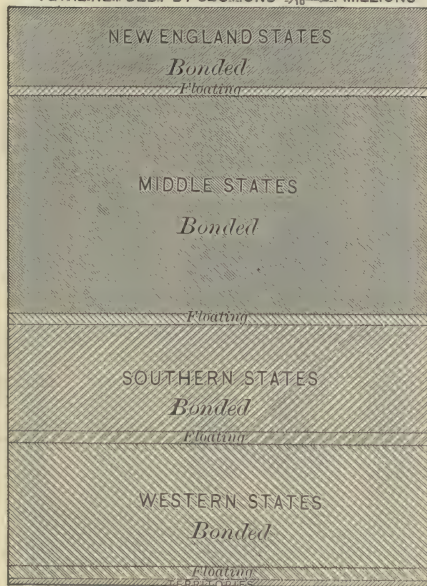

SECTIONS.	Population.	ASSESSED VALUATION.		BONDED DEBT.*		ANNUAL CHARGE.	
		Amount.	Per capita.	Amount.	Per capita.	Amount.	Per capita.
New England States.....	4,010,529	\$2,651,555,822	\$661 15	\$173,654,977	\$44 54	\$9,918,143	\$2 47

\* The taxes of townships are not included in this sum. Township officers, in so many cases, combined the school-district taxes with those of the township proper, that it was found necessary to ignore the reports made by them. The taxes of the township proper thus omitted in the detailed exhibit of States and in the above summary are estimated as follows: Indiana, \$1,500,000; Illinois, \$5,302,605; Wisconsin, \$1,750,000; Iowa, \$500,000; Minnesota, \$540,849; Kansas, \$564,829. These amounts being added to the taxes of corporations exhibited in the tables give the following sums as the total taxation of minor civil divisions for local purposes: Indiana, \$5,313,638; Illinois, \$16,112,020; Wisconsin, \$5,134,882; Iowa, \$5,954,229; Minnesota, \$2,275,769; Kansas, \$2,035,633; and for the group of Western States, \$69,999,071. The total taxation of the States under consideration is thus increased to the following amounts (the total of Minnesota being further enlarged as explained afterward): Indiana, \$12,343,630; Illinois, \$24,586,015; Wisconsin, \$7,588,325; Iowa, \$11,061,605; Minnesota, \$4,346,300; Kansas, \$4,979,650; and the grand total of the group of Western States to \$129,117,979. The total taxation for the United States of minor civil divisions for local purposes is thus increased to \$191,031,951, and the grand total of all taxation for the United States to \$312,750,721. It is to be noted in regard to Minnesota that a special State tax (not shown in the tables) laid in the census year upon certain counties, known as the "seed-grain" tax, amounting to \$92,244, is likewise included in arriving at the total taxation of that State.

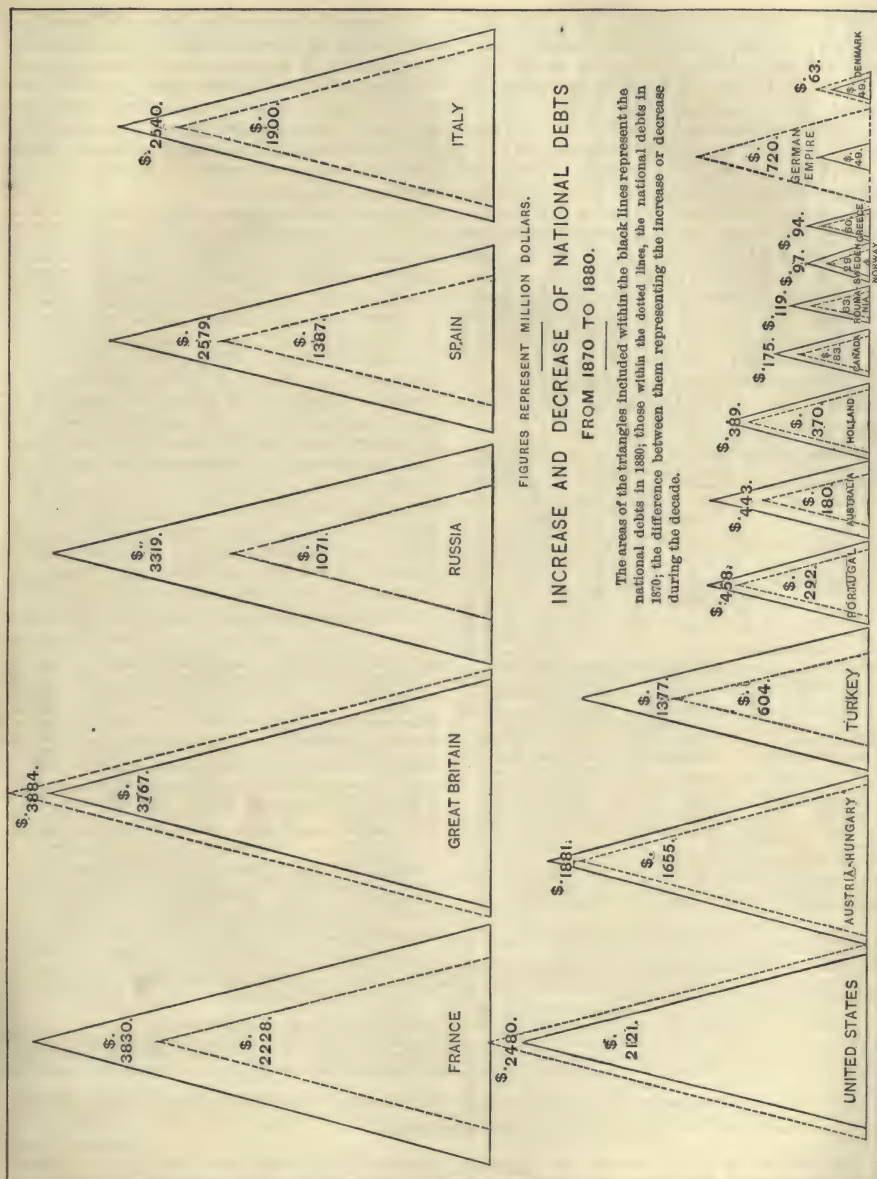

It thus appears that the amount of the assessed valuation is \$16,902,993,543; and the total amount of State and local taxation is \$302,200,694. If to this amount of taxation there is added the taxation by the Government of the United States, which is laid entirely on personal property, and consists of the receipts from internal revenue for the fiscal year ending June 30, 1881 (\$135,264,385), and the receipts from customs for the same period (\$198,159,676), the gross amount of money drawn from the people in 1880-'81, to defray the expenses of their civil and political institutions, was \$635,624,755. This taxation is about three fourths of one per cent of the val-

uation, and amounts to \$10.81 for every man, woman, and child in the country.

**NATIONAL DEBTS OF THE WORLD.**—A very large proportion of the debts of the civilized world have accumulated since 1848, at which date the aggregate was placed by the best authorities at \$7,627,692,215. In 1860 they had increased to \$10,399,341,688; in 1870 to \$17,117,640,428; and, in 1880, to \$23,286,414,753.

**DEBT OF FRANCE.**—France has the largest national debt, which amounts to \$3,829,982,339. At the fall of the first Napoleon it amounted to \$141,635,200. It has chiefly increased by expensive wars. The Crimean War cost France about \$450,000,000.

The following statement shows the progress of the debt during the last thirty years:

	Fixed and floating.
1850.....	\$975,166,500
1851-59.....	1,167,960,000
1854-55.....	1,333,421,000
1856.....	1,640,010,500
1857.....	1,718,008,000
1858.....	1,829,804,000
1859.....	1,810,338,000
1860.....	1,849,270,000
1870.....	2,277,522,000
1880.....	3,829,982,399

DEBT OF ENGLAND.—According to the statement of Mr. Dudley Baxter, one of the best authorities on national debts, the debt of England commenced after the Revolution of 1688, and passed the debt of France about 1750; advanced during the wars of the elder Pitt; made a longer stride in the eight years of the American War, and finally the great French Wars, from 1793 to 1815, made it tower over the debts of all other nations. The funded

debt in 1700 was, exclusive of annuities, \$61,317,900; but in 1763 it had reached nearly \$647,244,500. After a reduction of \$27,252,400 during the eleven years of peace that followed the American War, in ten years it doubled in amount, and with \$145,885,000 capitalized value of terminable annuities, left it in 1784 at \$1,328,554,500. During the next ten years a second reduction of \$16,546,100 was made, when the French War that followed, in twenty-one years, added \$3,022,096,500, and made the total debt and terminable annuities amount, in 1815, to \$4,389,583,000. Thirty-nine years of peace now diminished it \$496,383,000. The Crimean War of two years raised it with annuities, in 1856, to \$4,058,761,000. A reduction has since ensued, so that in 1877 the amount of the debt was \$3,879,368,565.

The amount of this debt added by three wars was as follows:

Seven Years' War, 1756-'63.....	\$291,990,000
American War, 1775-'83.....	486,650,000
French and American War.....	2,919,900,000

**DEBT OF RUSSIA.**—The debt of Russia has been made up largely of deficits arising during the issue and depreciation of paper money. The depreciated currency under one form has been removed by the forced issue of similar currency under another form. Nevertheless, the Government has never failed in its obligations to foreign creditors. The progress of the debt has been as follows:

1853.....	\$608,312,500
1854.....	642,875,000

**DEBTS OF OTHER COUNTRIES.**—The lack of space will not permit a further relation of the details of the debts of the other countries of the civilized world. The gross amounts are, however, presented in the following tables, with percentage of increase or decrease, from 1848 to 1880:

COUNTRIES.	1848.	1860.	Per cent 1848-'60.		1870.		Per cent 1860-'70.		1880.		Per cent 1870-'80.		Per cent 1848-'80.

\* Debt in 1868 by Baxter given as \$1,776,272,500; no authorities for 1870; amount stated approximately.

† The debt November 30, 1881, was \$2,009,704,370.18; but, as no data could be obtained from other countries for that date, it would not be a fair comparison.

‡ Debt of 1878, Kolb; no authority for 1880.

§ Debt in 1868 by Baxter given as \$58,898,000; no authority for 1870; amount stated approximately.

¶ The debt given for the German Empire in 1880 does not include any of the debts of states composing it, but only the empire proper. The amounts given for this country in 1870, and previous, represent the debt of the old German federation, which debt having been pro-rated among the different states since 1870, and in greater part paid off by the new empire, has thereby been reduced to the amount given in 1880.

Note.—1848 taken from Baxter's figures; 1860 taken from Levi's figures; 1870 taken from Mulhall's figures; 1880 taken from Mulhall's figures and report of Secretary of the Treasury. Amounts marked a are from Treasury report as being correct; balance are Mulhall's, Treasury report not being definite enough.

The following table presents an imperfect statement of the debts of certain other countries, from which the information is incomplete:

§ Treasury reports.

**TOTAL INCREASE.**—The total increase of the national debts of the world, from 1848 to 1880, is shown in the following figures: 1848, \$7,628,000,000; 1860, \$10,399,000; 1870, \$17,118,000; 1880, \$23,287,000. This is an increase of sixteen thousand millions in a period of thirty-two years, or five hundred thousand millions in each of the thirty-two years before 1881.

**INDIA**, an empire in Asia, subject to the British crown. The government is carried on in the name of the Queen of Great Britain and Ireland, who in 1877 assumed the title of Empress of India. The legislative and executive powers are united under the control of the Secretary of State for India, in the British Cabinet, who is responsible only to the British Parliament. Under his directions or supervision the executive authority is exercised by the Governor-General, or Viceroy, and the laws are elaborated by the Governor-General in council. The council of the Governor-General consists of five ordinary members and the commander-in-chief of the military, appointed by the crown, who preside over the departments of Foreign Affairs, Finance, the Interior, Military Administration, and Public Works; but their functions are simply administrative. The governors of presidencies and provinces are appointed by the crown, the lieutenant-governors of provinces by the Governor-General, subject to the approval of the Secretary of State for India.

The Secretary of State for India was the Marquis of Hartington, until the latter part of 1882, when he was succeeded by Earl Derby. The Governor-General of the British Indian Empire is the Marquis of Ripon, who succeeded Lord Lytton upon the accession of the Gladstone Government in 1880.

**AREA AND POPULATION.**—The preliminary results of the enumeration of February, 1881, as compared with the first general census, taken between 1868 and 1876, with the area of the states of British India, were as follow :

PRESIDENCIES AND PROVINCES.	Square miles.	Population, 1868-'76.	Population, 1881.
<b>Under the Governor-General:</b>			
Ajmere.....	2,711	396,889	453,076

<b>Total British administration.</b>	<b>902,500</b>	<b>191,096,608</b>	<b>203,159,156</b>

The area and population of the native states were as follow :

NATIVE STATES.	Square miles.	Population.
<b>Under Governor-General of India.....</b>	<b>312,070</b>	<b>31,754,651</b>
<b>Under the Lieutenant-Governors of—</b>		
Bengal.....	37,988	2,928,440
Northwest Provinces.....	5,125	745,675
Punjab.....	114,742	8,853,282
Central Provinces.....	29,112	1,049,712
<b>Under the Governors of—</b>		
Madras.....	9,818	3,001,436
Bombay.....	66,403	6,941,631
<b>Total native states.....</b>	<b>575,193</b>	<b>49,674,827</b>

Berar and Mysore, included in the first table, were only temporarily under British administration. Mysore was handed over to the native government in March, 1881. The native states exceed 450 in number. Some of the frontier states, like Nepaul, merely acknowledge British protection. The Afghan war brought Afghanistan, with an area equal to that of the British Islands and a population estimated at 4,000,000, under a British protectorate. The other native states are feudatory, paying tribute or furnishing a military contingent.

The British-born population of India, exclusive of the army, numbered, in 1871, 64,061 persons, of whom 38,946 were males and 25,115 females. The European community is mainly confined to Lower Bengal and Bombay. It has received large accessions of late years from British workmen brought over to labor on the railroads and other engineering and manufacturing enterprises. The result has been the growth of a degraded class of Europeans and Eurasians, who, unable to compete with native labor, and without the education for employments which would afford them subsistence, are driven to infamous occupations, or sink into pauperism. An investigation, instituted by the Marquis of Ripon, shows that of about 26,000 European and Eurasian children in India nearly one half are growing up without any education.

The religious statistics of British India, as ascertained by enumerations taken in the years 1868-'76 and verified by the returns of the general census, were as follow :

CREEDS.	Numbers.
Hindoo.....	139,248,563
Mohammedans.....	40,882,287
Buddhists.....	2,832,531
Sikhs.....	1,174,436
Christians.....	897,216
Other creeds.....	5,102,823
Not known.....	1,977,400
<b>Total.....</b>	<b>192,115,831</b>

The classification of the adult male population of British India, as to occupations, is as follows :

OCCUPATIONS.	Adult males.
Officials and the professions.....	2,404,855
Domestic service.....	4,137,429
Agriculture.....	37,462,220
Commerce.....	3,440,951
Industries.....	8,746,508
Laborers.....	8,174,600
Independent and non-productive.....	2,264,838
<b>Total.....</b>	<b>66,631,416</b>

The population of the principal cities was as follows in 1881: Calcutta, 683,458 (without the suburbs; with which the population, at the former enumeration, was 794,645); Bombay, 753,000; Madras, 405,948; Lucknow, 261,485; Benares, 207,570; Agra, 137,908; Allahabad, 150,378; Cawnpore, 119,603; Bareilly, 101,688; Rangoon, 132,004.

COMMERCE.—The total imports of the Indian Empire increased, with considerable fluctuations, from £39,913,942 in 1871 to £52,821,398 in 1880. The fluctuations are mostly in the importation of treasure. In the last five years the specie imports varied between £5,000,000 in 1876, £11,000,000 in 1877, £17,000,000 in 1878, £7,000,000 in 1879, and £11,000,000 in 1880, the exact figures for the latter year being £11,655,395. The merchandise imports increased in the ten years from £33,348,246 to £41,166,003. The total exports increased from £57,556,951 to £69,247,511. The exports of treasure averaged something over £2,000,000 a year. The growth in the merchandise export trade was from £55,336,186 in 1871 to £67,212,363 in 1880. The imports of bullion and coin in 1880 consisted of £2,050,393 of gold and £9,605,002 of silver. The exports were £299,889 of gold and £1,735,259 of silver; but in the preceding three years over £4,500,000 of gold were exported, being more than the imports and nearly equal to the exports of silver.

The exports from India to Great Britain in 1880 amounted to £30,117,980, and the imports of British products to £30,451,314. The consumption of British products has increased over 50 per cent in ten years; but the exports to England, owing to the decline in quantity and price of the cotton exports, have not increased in value. The exports of raw cotton were 3,843,491 cwts. in 1871. Cotton is still the largest article of export to Europe, the quantity in 1880 being 1,841,059 cwts., valued at £4,781,541. The next most important is jute, of which 4,633,327 cwts., valued at £4,014,699, were shipped in 1880. The exports of rice were 6,563,849 cwts., of the value of £3,134,556; of tea, 45,138,111 pounds, value £3,072,922; of hides, 463,764 cwts., value £1,616,634. Two thirds of the British imports into India consist of cotton goods, iron being the next largest article. Next to Great Britain, the countries having the largest trade with India are China, the Straits Settlements, and Ceylon.

The total value of imports in 1880-'81 rose to £62,114,000, £53,117,000 of which were merchandise and £8,997,000 precious metals; the exports to £75,995,000, of which £74,555,000 were merchandise and £1,440,000 precious metals. The exports of rice, paddy, and cereals were £12,385,000; of textile materials, £20,295,000; of opium, £13,600,000, against £14,323,000 in 1879-'80.

The number of vessels arriving in the ports of India in 1877-'78 was 6,353, of 2,877,649

tons, classified as follows: British, 1881, of 2,157,155 tons; Indo-British, 1,572, of 219,786 tons; foreign, 777, of 393,913 tons; native, 2,123, of 106,795 tons.

RAILROADS.—The contracts under which the Indian railroads were built, on the plan instituted by Lord Dalhousie, were exceedingly advantageous to the companies. Under this system 6,122 miles of road were constructed, for which nearly £100,000,000 was raised. Their net revenue is £6,210,775. During the viceroyalty of Lord Lawrence the system of state lines was inaugurated. On these the narrow gauge of 3 feet 3½ inches was adopted, instead of five feet six inches, as on the existing lines. The capital was mostly raised by state loans bearing from 3 to 4½ per cent interest. The construction and management have been intrusted to Government officers. As these lines were built purely for the object of developing the country and supplying the people with the means of communication, while all the profitable routes had been taken up by the companies which had built the first roads under state guarantees, they could not be expected to yield such returns as the guaranteed lines. Their cost, including 1,583 miles not yet constructed, was over £34,000,000, while the net revenue in 1881-'82 was only £741,939. The Government have recently returned to the policy of having the railroads built by private companies, although they do not grant as valuable privileges as formerly. The railroad network built on the two different plans is very extensive. It extends from Peshawar, in the extreme northwest, to Assam and the confines of China in the east, and from the foot of the Himalayas to Tutikorin, at the extremity of the peninsula. With the purchase of the East Indian line by the Government, the state railroads are equal in length with the guaranteed. Of the total mileage in 1880, aggregating 9,179 miles, 4,587 miles belonged to the state, and 4,592 miles to the guaranteed companies. The number of passengers carried vastly increased in ten years, being 48,040,940 in 1880, against 15,999,633 in 1869, during which period the mileage has about doubled. The gross receipts of all the lines in 1880 amounted to £12,099,593. The expenses were 51·17 per cent of the receipts. The total mileage in operation July 1, 1882, was 9,875 miles. About 500 miles have been laid out by native rulers. A line is under construction in Assam from Dibrugarh, on the Brahmapootra, which has steamboat communications with Calcutta, to Sadiya, the last British post in the direction of China. With the line from Attock to Peshawar now completed, the only link wanting in railroad communication between Calcutta and the northwest frontier is the projected bridge over the Indus, which will be a massive structure with two girder spans of 300 and three of 250 feet. A railroad system has been sanctioned which will open up new districts in the west of India.

POSTS AND TELEGRAPHS.—The number of let-

ters carried by the mails in 1880 was 128,567,058; of newspapers, 11,251,021. The postal traffic nearly doubled in the course of the decade. The number of messages sent by telegraph was 1,569,907. The number of miles of telegraph line was 20,468; of wire, 51,834, against 22,834 in 1871. The total receipts in 1880 amounted to £422,463, the working expenses to £292,291.

**ARMY.**—The strength of the European army in India in 1880 was 64,520 officers and men. In the estimates laid before Parliament for 1881-'82, 62,575 were provided for. The native army in 1880 mustered 124,978 officers and men, making a total force of 189,498. Indians impugn the truthfulness of the official statements regarding the native army, contending that it has been enormously reduced since 1856, and that a reduction of 9,000 men has taken place since 1878. The armies of the native princes of India in 1879 aggregated 305,235 men, with an artillery of 5,252 guns. The maintenance of the armed force necessary to uphold British rule in India is the heaviest branch of the Government expenditure, consuming more than the combined revenues from opium and salt. The cost of the army in 1877-'78 was £16,639,761; in 1879-'80, £21,712,862. The cost of the Indian contingent which fought in the Egyptian war under General McPherson is, like the expenses of the Afghan war, to be defrayed out of the Indian revenues. Several of the native princes made offers of men and money to assist in the Egyptian expedition. Among these were the chiefs of Nepal and Cashmere, the Begum of Bhopal, the Nawab of Bhawalpur, and the Rajahs of Patiala, Kapurthala, and Malerkotla. Similar assistance had been offered, and in some cases accepted, in the Afghan war. The motives were principally to escape the reduction of their military forces which the British authorities are pressing. The native rulers are exceedingly sensitive on this point, while the British live in constant fear of these large armaments.

**NATIVE DISTURBANCES.**—A sanguinary conflict broke out in the spring in the chiefship of Kalahandi, or Karond, on the western slope of the East Ghauts, between the Khonds, who are the aboriginal inhabitants, and the Kultas, a class of Hindoo cultivators who perform most of the agricultural work of the country. The two races have long entertained hostile feelings for each other. In January the Khonds commenced depredating the Kulta villages. In May the troubles took the serious form of wholesale massacres. As many as 100 Kultas were put to death with shocking barbarity. The energy of the civil magistrate in charge of the district prevented the outrages from being much worse. A regiment of Madras infantry arrived soon and put an end to the violence. The Khonds attempted to face the troops only on one occasion, when they were speedily dispersed with a loss of about twenty.

In Nepal, a border state which is nominally

independent, a serious conspiracy was discovered at the beginning of the year. The new King is a mere puppet in the hands of Sir Rindip Singh, the Prime Minister, and Shumshere Jung, commander-in-chief, both of which posts were filled by the late Sir Jung Bahadur, a distinguished Indian statesman. The commander-in-chief was unpopular in the army, which desired to be commanded by General Juggut Jung, the son of Sir Jung Bahadur. A conspiracy was concocted, which was betrayed by one of the conspirators, to throw a bomb into a room where the council of the commander-in-chief and other sirdars were assembled, and cut down all who attempted to escape. There were eighty-five persons arrested, of whom twenty-one boldly avowed their complicity, and were immediately put to the sword.

Salem, in Madras, was in July and August the scene of riot and violence, arising out of the antipathies between the Mohammedans and the Hindoos. The Mohammedans constitute only about one twelfth of the population. They have often been annoyed in their religious observances. Toward the end of July a Hindoo funeral procession, with music, was stopped while passing the mosques. A riot ensued, in which a couple of lives were lost. The fray was quickly stopped by troops from Bangalore. About the middle of August an organized attack was made by the Hindoos upon the Mohammedan community. Acts of hideous atrocity were committed. The streets were filled with corpses. The principal mosque was razed to the ground, and its splendid furniture destroyed. Dead pigs were thrown into wells with corpses of Mohammedan children. Military precautions were taken against another outbreak, and one hundred and sixty-three rioters were arrested and brought to trial. The original cause of the troubles was due to the action of the Municipal Council of the city, which purposely incited the funeral procession to take a route specially obnoxious to the Mohammedans. The councilors are chosen on the elective system. No Mohammedan had been elected a member.

**FOREIGN RELATIONS.**—Russia continues to strengthen her position and extend her influence in Central Asia. From her late enemies, the Tekke Turkomans, a military contingent, 5,000 strong, has been recruited. A railroad has been constructed from Krasnovodsk, on the Caspian, to Bami, and is to be continued to Sarakhs and Gorian. A treaty changing the boundary between the Russian Empire and Persia not only gives Russia ingress into the Persian plains, within the otherwise impregnable mountain barriers on the north and east, but brings her within striking distance of Herat, and would enable her forces to overrun Afghanistan and advance upon India without breaking the promise that Merv should not be occupied. The British endeavor to keep alive the loyalty of Abdurrahman, whom they placed on the Afghan throne, by liberal supplies of treasure out

of the Indian exchequer. Their agent in Cabool, Mohammed Afzul Khan, is, through his birth, education, and character, *persona grata* with the Ameer. The small but important province of Maimanah in Northern Afghanistan, which has often before attempted to throw off the yoke of the Ameer, has entered into relations with the Russians through the Turkomans, and with arms supplied by them rebelled against Abdurrahman. The approaching dissolution of the Khan of Bokhara, farther east, furnished the British ambassador in St. Petersburg with new material for diplomatic questionings and protests, which are usually treated by the Russians as empty formalities. With Bokhara a Russian province, the dominions of the Czar will extend to the Oxus from its source to its mouth, the limit prescribed by Lord Clarendon in 1872.

The dissipated King Thebaw of Burmah still holds out against the aggressive designs of the British. As the present home Government is not inclined to gratify the traders, eager for a new field of exploitation, and the military thirsting for action in India by new aggressions on the frontiers, the matter has hung in suspense since the hasty flight of the British embassy from Mandalay. An embassy was sent by the King to arrange the subjects in dispute, which ranged from the question of the British ambassador's wearing shoes at the Mandalay court to that of maintaining a fortified residency and guard, and forcing the Burmese Government to abolish its trade monopolies for the benefit of British merchants. The last question furnishes the key to the situation. It was this which called out vigorous representations from Lord Ripon to the court of Ava, that led to the sending of the Burmese envoys. When the Burmese Government sounded the position of the British authorities, it immediately recalled their ambassadors.

**LEGISLATION AND FINANCE.**—The most important sources of revenue are the land-taxes, the opium monopoly, and the salt-tax. Of the total revenue in 1880, amounting to £68,484,666, £22,463,548 came from the land, £10,319,162 from opium, and £7,266,413 from salt. The East India Company, in drawing more than half of the revenues of the Government from the land, continued the practice of former conquerors. The English found the ryots enslaved by rulers who treated the land as their own. There was no basis for peasant proprietorship but the ancient communal ownership. This was equally repugnant to their ideas as the plan of assuming the title to the whole country and the direction of all agricultural operations. They accordingly endeavored to abolish both the village communities and the overlying rights of the princes by cutting up the land into large estates, like those to which they were accustomed in England, and granting them in fee simple to the former tax-gatherers. The class of landlords thus created have not, however, been

treated as absolute owners. In the tax system and in the schemes for agricultural improvement, the idea of joint state ownership is retained, except in Bengal, where a permanent settlement was made in the last century; and in Benares, where the land was permanently settled about the same time. In the temporary settlements made in the other provinces, usually for thirty-year periods, the Government takes as its share about two thirds on the average of the annual profits from the land. The proportion grows less during the period of the settlement as the land improves in value. In some parts of India, as in Bombay and Madras, there are no zemindars, or large proprietors. In those provinces the ryots stand in the position of tenants from the Government, which can eject them when they fail to meet their annual assessments. In some districts village proprietorship still prevails. The Marquis of Ripon, pursuing the policy of decentralization inaugurated by Lord Mayo, has assigned additional heads of revenue to the unfettered control of the provincial governments, and also a fixed proportion of the land revenue, varying from 22 per cent in the Northwest Provinces to 50 per cent in Bombay, and averaging about 33 per cent. The reform is to be carried still further by placing the receipts and expenditures in the charge of local bodies, composed of non-official and elective members. These local boards are expected to aid in devising the system of taxation best suited to the character of the people. The smallest administrative divisions will be the *taluka* or the *tahsil*, not larger than counties. These bodies, municipal and rural, will be composed for the most part of representative, non-official natives, whose action will be revised, but not inspired, by the bureaucratic authorities. The employment of natives in the civil service is increasing. Major Baring reports that, out of 4,082 appointments in the covenanted and uncovenanted services, 2,024, or as nearly as possible one half, are held by natives.

The financial estimates for 1882-'83 place the revenue at 664,590,000 rupees, and the expenditure at 661,740,000 rupees. The railway receipts are counted at 4,680,000 rupees less than in 1881-'82; the loss by exchange at 5,190,000 rupees less, the rupee being calculated at 1s. 8d. The military expenditure is estimated at 155,920,000 rupees, being less than in any year since 1877. The Government carries out this year two bold and somewhat hazardous measures of fiscal reform—the repeal of the import duties and the reduction of the salt impost—in addition to further steps in the direction of decentralization and local self-government which involve losses to the Imperial Treasury.

The Indian Government have made the expected clean sweep of the remaining import duties in obedience to the desires of British manufacturers and in defiance of public opin-

ion in India. The resentment against this unpopular measure was embittered by the reflection that English pressure had brought about a condition of affairs in which England was actually protected against Indian products, since Indian silver-work, for instance, must pay a heavy import duty in England, while the Indians must admit British silverware free, and in which Indian tea and tobacco must pay high duties in England, while free entry is given to China teas and foreign tobacco in India. The chief of the custom imposts was the duty on cotton fabrics, which yielded in its curtailed form but little revenue, yet protected the Indian manufacturers from Manchester competition. The only duties retained are those on wines and spirits, opium and salt, and those on arms and ammunition; the first to balance internal imposts, and the latter for political reasons. A more important fiscal reform is the reduction of the salt-tax. This oppressive impost is lowered to two rupees per maund (82 pounds), and is made uniform all over India. The reduction amounts to 80 per cent in Bengal, and 20 per cent in the other provinces. The tax per capita is about ten cents, which is equal to two days' wages for field-labor. The duty in Burmah and in the Punjab districts was already lower than this, and has not been altered. The Government wisely granted this relief to the poorer classes instead of removing the obnoxious license-tax imposed on traders. This objectionable tax has encountered vehement opposition from the beginning, and the Government has lessened its evil effects by exempting all whose incomes are less than 500 rupees; but it insists on keeping it in force, not only because it is an indispensable source of revenue at present, but as a precedent which will render easier the introduction in the future of an extensive and more rational system of direct taxation. The Indian authorities refuse to entertain the notion of giving up the Bengal opium monopoly. It is in reliance upon the increased receipts from this source that a revenue, estimated for 1882-'83 at 11,080,000 rupees, or half that many dollars, from the import duties, has been abandoned, and a reduction to the amount of 14,230,000 rupees made in the salt-tax. The only evil in the opium revenue in official eyes is the uncertainty of the yield. The contingency of a bad year has usually been guarded against by purposely underestimating the income from opium in the financial statements. To make up for the remitted taxes, the estimate must be placed for the present at higher figures than have been customary in the future Indian budgets. This is perhaps warranted by the increased gross revenue and the diminished cost of collection. In the budget for 1882-'83, Major Baring estimates the net receipts from opium at 72,500,000 rupees, whereas in 1881-'82 they were entered in the estimates as 65,000,000 rupees. The present estimate is 6,000,000 rupees less than the probable re-

ceipts in 1881-'82, and less by twice that amount than the actual receipts in 1880-'81. The danger of relying solely on this one source to make good the surrendered revenues is seen from the fact that in the preceding ten years (1871-'80), the average net annual receipts from opium were only 68,100,000 rupees, and that for three years together (1875-'77) they never exceeded 63,000,000 rupees. Short crops for the last three years had obliged the Government to draw heavily upon the reserve stock, and doubts were expressed whether they can continue to supply 56,490 chests of Bengal opium per annum. Meanwhile the native Chinese and the Persian production are increasing, and the prices must sink; so that a permanent reduction in the opium revenue may be looked for before long. Some elasticity in the general finances can undoubtedly be counted on; for grievously as the people are ground down by taxation and many oppressions, war or famine may not visit them again soon, and capitalists are slowly improving the productive resources of the land. The abatement of the salt duty will aid in the process of recuperation.

INDIANA. STATE GOVERNMENT.—The State officers during the year were as follow: Governor, Albert G. Porter, Republican; Lieutenant-Governor, Thomas Hanna; Secretary of State, Emanuel R. Hawn; Treasurer, Roswell S. Hill; Auditor, Edward M. Wolfe; Attorney-General, Daniel P. Baldwin; Superintendent of Public Instruction, John M. Bloss; Secretary of Board of Agriculture, Alexander Herne; State Librarian, Mrs. Emma Winsor; Judiciary, Supreme Court: William E. Niblack, James L. Worden, George V. Howk, Byron K. Elliott, Horace P. Biddle, and William A. Woods.

The general condition of the State during and at the close of the year was prosperous. The Governor, in his message to the Legislature, says:

The circumstances under which you assemble could not well be more satisfactory. The condition of the State has never been more prosperous. During the year just ended the products of our fields have been unusually abundant. Our manufacturing and mining industries have yielded good returns. Within the past year 560 miles of railway have been built within the State—a larger number than in any previous year. Of the ninety-two counties in the State, there are only four through which railroads do not pass, and three of these, happily, border on the Ohio River. More than 225,000 acres of land have during the year been brought for the first time into cultivation. The practice of underdraining soils charged with an excess of moisture has never been so energetically prosecuted. Along with it has come increased productiveness, and a lessening of all malarial diseases. Our common schools, under the careful superintendence of a diligent and capable officer, have increased in usefulness and in public favor.

FINANCES AND RAILROADS.—From the report of the Auditor of State for the year ending October 31, 1882, it appears that the cash in the Treasury November 1, 1881, was \$740,650.72. Add to this the net cash receipts during the year, amounting to \$3,067,843.50, and the

aggregate, from all sources, is \$3,808,494.22. Deducting the cash disbursements, \$3,110,424.74, there is left, making a cash balance chargeable to the Treasury, at the date of the report, \$698,069.48.

The foreign and domestic debt of the State, as it now stands, is as follows: Foreign—five per cent stock outstanding, \$16,469.99; 2½ per cent stocks outstanding, \$2,355.13; 5 per cent bonds due December 1, 1889, \$200,000; 5 per cent bonds, \$385,000; 5 per cent non-negotiable bonds, due April 1, 1901, \$340,000; twenty-four internal improvement bonds, past due, \$24,000; six 5 per cent internal revenue bonds, due July 1, 1886, \$6,000. Domestic debt—six per cent non-negotiable bonds, due the common-school fund, \$3,904,783.22. Total debt of the State, \$4,876,608.34.

The Auditor estimates that the expenses of the executive and administrative government in 1884 will be \$68,170, and in 1885 \$68,770. The judiciary expenses are estimated at \$187,200 for each year. Other expenses are estimated as follow, for each of the two years: Educational, \$28,500; benevolent, \$317,000; penal and reformatory, \$211,500; public printing and advertising, \$12,000 for 1884 and \$24,000 for 1885; interest on non-negotiable school-fund bonds and temporary loan, \$281,000; general expenses, \$8,500; legislative expenses for 1885, \$120,000. Total for 1884, \$1,113,870. Total for 1885, \$1,246,470.

The value of the real and personal property of Indiana in 1881 amounted to \$805,202,792, of which \$261,775,350 was personal. The total amount of taxes on the different county duplicates of the counties of the State for all purposes was \$10,627,014.75.

The aggregate of county expenditures was \$4,070,589.07.

The table in the next column shows the number of miles of railroad operated in the State by each company named, together with the rate of assessment per mile, and the total assessment fixed by the State Board of Equalization. The total assessment given includes the main and side tracks, improvements, and rolling-stock of each company; but only the miles of main track are given. The whole number of miles of side-track in operation is 802.09, and the assessment upon it reaches \$2,256,713. The rolling-stock includes 4,764.26 miles, assessed at \$9,179,082, and the improvements on the right of way in daily use by all railroads are taxed at \$1,073,781.

EDUCATION.—The number of persons in the State of school age, viz., between the ages of six and twenty-one years, is 709,424. The number admitted to the schools was, in 1882, 498,792. The average daily attendance of pupils last year was 305,513. The number of school-teachers is 13,259. The number of school-houses in the State is 9,556, of which 48 are log, 83 are stone, 2,481 are brick, and 6,944 are frame.

The amount of the public-school fund is

\$9,138,408.31. The addition made to it annually, taking as a basis an average of the past five years, exceeds \$54,000. This sum does not include the large sum (about \$260,000 a year) received from particular licenses and other sources, and applied each year to tuition.

The amount of tuition-money derived from interest on the school funds in 1882 was \$650,173.41. The whole amount received from State and local tuition taxes was \$2,059,616.44. The proportion of the entire expense of tuition paid from taxes, State and local, was 75 per cent.

During the year ending October 31, 1882,

the average enrollment of students in the State Normal School was 320. Seventy per cent are the children of farmers, ten per cent of mechanics, four per cent of merchants, six per cent of professional men, ten per cent of laborers, railroad men, etc. Since the organization of the school, in 1870, it has been attended by 3,500 students.

The General Assembly has invested all the endowment funds of Purdue University in one Indiana State bond of \$350,000, which yields annually \$17,000, an amount that is sufficient to pay the salaries of the members of the faculty. During the year ending October 31, 1881, the students were classified as follow: Post-graduates, 2; college classes, 90; school of chemistry, 11; industrial art, 25; agricultural, 2; mechanics, 10; academic, 141. Total, 254.

**PUBLIC INSTITUTIONS.**—The report of the trustees of the Deaf and Dumb Asylum, for the fiscal year ending with October, gives the following facts: The appropriation for the support of the institution was \$55,000, and of this amount \$52,816.87 was expended, leaving \$2,181.33 in the treasury. The appraised value of the property of the institution is \$457,782 in real, and \$35,527.05 in personal, making the total appraised value \$493,309.05. The number of pupils during the year was 383. Of these 44 were dismissed from the institution, and 342 remain. The cost *per capita*, exclusive of clothing, was \$156.30. The necessity for more buildings is urgent, and repairs upon the present property are needed. An appropriation of \$62,000 for annual expenses is asked for the next two years. Of the pupils now in attendance, 206 are males and 177 are females. The number of counties represented is 84, the largest number being 33, from Marion. Vanderburg County has 13 pupils, and Wayne, Tippecanoe, and Montgomery, each 11. During the year fifty-six applicants for admission were refused, for want of room to accommodate them.

In their twenty-sixth annual report the Trustees of the Blind Asylum state that the total resources of the institution during the year were \$29,210.80, and the total expenditures \$28,906.86. The cost of maintenance *per capita* was \$206.48, exclusive of clothing, for the year. The total number of persons now under the care of the asylum is 128. Additional room, for the accommodation of one hundred more pupils, is urgently needed.

In the Asylum for Feeble-Minded Children and Soldiers' Orphans' Home, an average of 235 children were cared for during the year, at \$127 *per capita*.

The thirty-fourth annual report of the Indiana Hospital for the Insane shows a total value of the property of the institution, real and personal, amounting to \$1,430,003.15. During the last year the revenue was \$245,000 for maintenance, \$12,000 for clothing, and \$7,500 for repairs, making a total of \$264,500. Disbursements amounting to \$233,519.84 were

made, \$216,690.52 being for maintenance, \$7,490.84 for repairs, and \$9,338.48 for clothing. During the year the daily average number of inmates was 1,085, who have been maintained at a *per capita* expense per annum of \$194. The Legislature is urged to complete the department for women, to meet the demand for greater accommodations. The number of cases refused admittance was 79, and over 200 chronic patients were discharged for this reason solely.

The number of patients treated was 1,827. Of those discharged 378 were restored to reason, 121 improved, 116 not improved, 10 were not insane, 2 were idiotic, and 105 died. The ratio of recoveries is 48 per cent, and of deaths 5.1% per cent. The superintendent recommends the construction of a central hospital, with a capacity of about four hundred patients, for the recently insane; and the use of the present institution, by slight alterations in the buildings, for the 1,800 chronic cases solely.

The annual report of the Superintendent of the House of Refuge shows that the current expenses of the institution were \$45,000. The State Treasurer received \$20,000 from counties, which was placed to their credit, and the earnings were \$3,000, leaving about \$22,000 to be paid by the State. There is an enrollment of 372 boys confined at the house, forty-nine of whom are colored. During the year 200 boys were refused admittance on account of lack of room for keeping them, and 182 were released. Of this number 95 per cent are doing well, and four former inmates have been sentenced to imprisonment in the Penitentiary. During the year a new laundry and new gymnasium have been added. In the system of conducting the school the boys are divided into eight families. One half of each day in the week is devoted to school duties, and the remainder to work. The mode of punishment is deprivation of privileges, slow promotion, and extension of term of confinement. Homes were found for sixty-nine, one was made an officer for exemplary conduct, and thirty-two boys, out on tickets-of-leave, were returned to the institution.

The annual report of the Board of Managers of the Indiana Reformatory for Women and Girls states that there are fifty-five convicts in the penal department, and thirty-three were received during the year. Twenty-two were discharged upon the expiration of their terms, and one released for a new trial. The number of girls in the reformatory department is 144. During the year fifty-one were committed and seven returned from tickets-of-leave. Twenty-one were discharged, forty released on tickets-of-leave, and one died. The average number of inmates during the year was 192, five more than in any previous year. The expenditures, including salaries, repairs, and improvements, amounted to \$28,000. The cost of maintaining and educating the inmates of the institution is \$2.39 a week each. The girls are instructed in the rudimentary branches, and,

where practicable, the illiterate prisoners are taught to read and write. The superintendent reports that, out of the number of inmates who were discharged during the year, 88 per cent are doing well. The average cost of maintaining infants committed to the institution is estimated at \$136 a year. The average sentence of the convicts received during the fiscal year is one year and six months. The oldest life-prisoner is now seventy-six years of age, and has served twenty-six years of the sentence. In summing up the condition of affairs the managers state that "the results of the work of the six years since the institution has been entirely controlled by women will, we think, compare favorably with those of the initial years of the movement when under the control of men."

The State Prisons at Jeffersonville and at Michigan City are more nearly self-supporting than they have been for several years. The average number of prisoners at the former prison during the past year was 564. The average number of prisoners at the prison at Michigan City was 621.

**STATISTICS.**—According to the report of the State Bureau of Statistics, the agricultural productions of the State in 1881 and 1882 were as follows:

CROPS.	1881.		1882.	
	Acres.	Yield.	Acres.	Yield.
Wheat, bushels.....	3,201,547	30,625,668	3,063,348	46,928,643
Corn, bushels.....	3,135,173	71,387,075	3,812,683	115,699,797
Oats, bushels.....	.....	14,898,617	684,822	19,615,516
Rye, bushels.....	15,839	208,912	36,695	584,405
Barley, bushels.....	26,296	526,361	44,242	1,188,717
Flax-seed, bushels.....	.....	.....	187,814	905,451
Tobacco, pounds.....	13,615	6,565,732	17,284	18,593,486
Hay, tons.....	988,560	1,303,217	984,982	1,599,948
Apples, bushels.....	.....	.....	.....	20,180,688
Peaches, bushels.....	.....	.....	.....	2,063,630
Irish potatoes, bush.....	.....	2,396,850	72,984	7,264,530
Sweet-potatoes, bush.....	.....	289,511	10,596	696,245

There are 233,082 pear-trees of bearing age in the State, 112,222 plum-trees of bearing age, and bearing quince-trees 52,933.

Taking the average prices of these productions as a basis for estimating their value, it would stand about as follows:

LEADING PRODUCTIONS OF 1882.		Home value.
Wheat.....	.....	\$44,552,211 00
Corn.....	.....	57,949,895 00

Tile-drainage is now largely resorted to.

The reports from thirty-one counties to the State Bureau of Statistics show that there was a reduction of the mortgage indebtedness on real estate during the year then expired of \$600,000. The counties embraced represent

about one fourth of the State, and will give a proportionate average for the entire State. Reports from twenty-three counties, just one fourth of the State, show an increase in the number of owners of real estate in the aggregate of 8,649.

According to the reports of the township assessors, the number of acres of timbered land in the State is 4,585,012. Benton, Starke and Newton Counties show the smallest acreage, and Harrison County has the largest in the State.

Indiana is now the fourth coal-producing State in the Union. It is expected that the new mines in Pike and surrounding counties will largely increase the supply. Pike and two of the adjoining counties are underlined with two immense beds of coal, extending under the whole section of that country. One of these seams runs from three to four feet and the other from seven to ten feet in thickness. The coal of this new district is not of the best quality, but will compare very favorably with other coals of the State. The seam is generally level. Most of the openings are drifts. The seams are reached in some places by slopes, and in a few places shafts are sunk. The region is crossed by the New Albany and St. Louis Air-Line and the Evansville and Indianapolis Railroads, and some of the coal has already been shipped to St. Louis markets.

The Bureau of Statistics has compiled a very full report upon the mineral resources of Indiana, from which the following comparative summary for the years 1881 and 1882 is taken:

MINERALS.	1881.	1882.
Sandstone, cubic yards.....	615,927	961,768
Lime, bushels.....	1,193,280	896,623
Cement, bushels.....	144,599	82,938
Coal mined, tons.....	2,125,977	1,418,520
Gravel sold, cubic yards.....	281,732	190,433
Fire-clay, tons.....	202,888	2,769
Limestone, quarried, cubic feet.....	2,743,459	3,094,750

A remarkable decrease is shown in the quantity of coal and fire-clay produced, and the amount of sandstone quarried is largely in excess of the year previous.

The following statistics of poultry are given:

POULTRY.	1880.	1881.	1882.
Chickens, dozen.....	662,940	558,491	628,286
Turkeys, dozen.....	53,713	28,067	44,039
Geese, dozen.....	48,848	26,408	25,403
Ducks, dozen.....	21,535	14,068	15,054
Guineas, dozen.....	4,748	2,410	2,976
Peafowls, dozen.....	.....	2,829	6,125
Eggs, dozen.....	.....	17,150,661	19,188,733
Feathers, pounds.....	518,757	346,681	310,733

The statistics of eggs include the production from all kinds of fowls; the feathers are only those picked from geese.

The Bureau of Statistics has also completed some interesting figures as to the churches of the State. The total number of church-buildings in the State is 4,462, and of church organizations 4,921. The number of members ad-

mitted to all denominations during the year was 43,839. The salaries paid to the pastors of these churches annually amount to \$1,246,913, and the other expenses aggregate \$295,965. The amount of money collected through the various religious organizations and expended for benevolent or charitable purposes amounted last year to \$187,227. There are 24,003 Sunday-school teachers, and they have 257,673 pupils. The average attendance on public religious services reaches 428,812. The value of church property is \$10,825,553. The Methodist Episcopal denomination leads, with 1,547 organizations and 118,949 members. The Christians follow, with the Baptists third, the United Brethren fourth, and the Catholics fifth, with 286 organizations, but the latter ranks second in number of members, having 86,872.

A report made by the same bureau shows the advance of manufactures in the State. The statistics show 12,088 different establishments, \$50,169,061 as the capital employed, and \$167,067,443 as the value of manufactured products. The value of the products is about \$19,000,000 more than reported by the census of 1880. The value of raw material used was \$94,296,477. The average number of males employed was 69,273, and of females 3,698, making a total of 72,971. The aggregate amount of the wages paid these employes was \$28,944,894.

**THE KANKAKEE SURVEY.**—In December, Professor John L. Campbell, appointed by the Governor, submitted his report upon the straightening of the channel of the Kankakee, and the drainage of the swamp-lands. The Kankakee region is chiefly within the counties of St. Joseph, Laporte, Starke, Jasper, Porter, Newton, and Lake. The number of acres which may be recovered in the marshy region is estimated as follows: In St. Joseph County, 39,633 acres; Laporte, 124,253; Porter, 75,544; Starke, 153,625; Jasper, 90,459; Newton, 79,854; Lake, 61,438; total, 624,806. Estimating the increase in value at \$20 an acre, the aggregate addition to the wealth of the State will be \$8,000,000, while the general increase of the entire section of the Kankakee region will make it not less than \$10,000,000. There are 2,000 bends in the Kankakee River between South Bend, Indiana, and Moline, Illinois, and the length of the stream is 240 miles. The cost of drainage is estimated at \$600,000, and the national and State Legislatures will be asked to undertake the work, so far as straightening and lowering the bed of the river is concerned, leaving to land-owners the work of lateral drainage.

**PARTY CONVENTIONS.**—Two amendments to the State Constitution were proposed by the last Legislature, one for the prohibition of the liquor-traffic, and the other to confer the right of suffrage upon women. The prohibition amendment was adopted by the following vote:

Yeas—Senators—Republican.....	20
Senators—Democratic.....	6—26
Representatives—Republican.....	44
Representatives—Democratic.....	11—55
Nays—Senators—Democratic.....	17
Senators—Republican.....	3—20
Representatives—Democratic.....	28
Representatives—Republican.....	8—36

This amendment formed the chief local issue in the fall campaign, the Republicans pronouncing in favor of its submission to the people at a special election, while the Democrats, pronouncing against it in principle, demanded its submission at a general election.

The Democratic State Convention, consisting of 1,121 delegates, met in Indianapolis, on the 2d of August, and adopted the following platform:

The Democratic party of Indiana, in convention assembled, renews its pledge of fidelity to the doctrines and traditions of the party as illustrated by the teachings of Thomas Jefferson, its founder, and exemplified in the administration of the Government under Democratic rule. And we insist upon an honest and economical administration on the principles upon which it rests—conceding to the Federal Government its just rights and full powers as delegated in the Federal Constitution, and claiming for the States and the people respectively the powers therein reserved to them.

We arraign the Republican party at the bar of public opinion for its long and continued course of usurpation and misrule. It has disregarded the rights of the people and the States. It has held on to its ill-gotten power in defiance of the popular will, by the corrupt use of money in the elections, and it has corrupted the public morals by elevating to high places men who are known to be dishonest.

We condemn the Republican party for enacting and enforcing laws designed to place the elections under Federal control, in violation of the rights of the State.

We condemn it for the fraud and perjuries of 1876, by which the will of the people was set aside, and a usurper placed in the presidential office for four years.

We condemn it for having kept up and maintained in time of peace an onerous and unjust system of taxation, by means of which large sums of money have accumulated in the Treasury, which ought to have been left in the pockets of the people; and we condemn it for its wasteful extravagance in the expenditure of the public money.

We condemn it for its shameless disregard of its pledges in favor of "civil-service reform," and its corrupt use of the public patronage under the "spoils system."

We condemn it for its systematic levy of black-mail upon the clerks and minor office-holders of the United States, in violation of law, to raise a fund for the corruption of the ballot-box; and we call especially upon the voters of Indiana to vindicate their honor and to erase the stain that was placed upon them by the "Dorseyites" in 1880.

We demand that the present wasteful and unnecessary expenditure of the public money shall be stopped, and that the surplus revenue shall be faithfully applied to the payment of the national debt.

We demand that Federal taxes be reduced to the lowest point consistent with the wants of the Government under an honest and economical administration of its affairs, and that such taxes be so adjusted as to secure an equitable distribution of these burdens.

We demand that there shall be such reforms in the civil service as will again result in the employment in the public service of those only who are honest and capable, and that no assessments or exactions of any kind shall be required of them for political purposes.

We demand protection to our citizens, native and

adopted, at home and abroad, and we denounce and condemn the present Republican Administration for its neglect of duty toward those lately imprisoned as "suspects" in the jails of Ireland by the arbitrary action of the British authorities.

We demand a revision of the present unjust tariff. The Constitution of the United States confers upon Congress the power to establish a tariff for revenue, and, as a just and proper exercise of that power, we favor such an adjustment of its provisions, within the revenue standard, as will promote the industries of the country and the interests of labor, without creating monopolies.

The Democratic party is now, as it has always been, opposed to all sumptuary legislation, and it is especially opposed to the proposed amendment to the Constitution of Indiana known as the prohibitory amendment, and we are in favor of the submission of said proposed amendment, as well as other proposed amendments, to the people according to the provisions of the Constitution for its own amendment, and the people have the right to oppose or favor the adoption of any or all the amendments at all stages of their consideration; and any submission of constitutional amendments to a vote of the people should be at a time and under circumstances most favorable to a full vote, and therefore should be at a general election.

That we freely indorse and approve the laws passed pursuant to the demands of former Democratic Conventions, making provision for the safety and protection of laborers and miners, and providing for the collection of their wages, and are in favor of all other enactments to that end which may be necessary and proper.

The free schools of Indiana are the pride and glory of the State, and we will see to it that they are not poisoned by the breath of sectarianism, nor destroyed by waste and extravagance in their management.

In the relations between capital and labor we favor such policies as will promote harmony between them, and will adequately protect the rights and interests of labor.

We esteem Daniel W. Voorhees as an able and faithful representative of our State in the Senate, and specially commend him for his active sympathy in behalf of the soldier.

The following is the ticket nominated: For Secretary of State, William R. Myers, of Madison; for Auditor of State, James H. Rice, of Floyd County; for Treasurer of State, John J. Cooper, of Marion; for Attorney-General, Francis T. Hord, of Bartholomew; for Clerk of Supreme Court, Simon P. Sheerin, of Cass; for State Superintendent, John W. Holcombe, of Porter; for Judge Supreme Court—First District, William E. Niblack, of Knox; for Judge Supreme Court—Second District, George V. Hawk, of Floyd; for Judge Supreme Court—Fourth District, Allen Zollars, of Allen.

The Republican State Convention, consisting of 1,157 delegates, met in Indianapolis, on the 9th of August, and adopted the following platform:

The Republican party of Indiana, represented in delegate convention, recalls, as an incentive to further exertions for the public welfare, the achievements of the party in restoring the national Union; in overthrowing slavery; in securing to disabled soldiers and to the widows and orphans of those who fell in battle, or died from wounds or diseases contracted in the service of the Union, laws providing for liberal bounties and pensions; in building up an unexampled credit upon the simple foundation of an unchangeable public faith; in reducing the great debt necessarily incurred for the suppression of the rebellion one half, and the

interest on the remainder to so low a rate that the national debt is no longer regarded as a burden; in establishing a currency equal to any in the world, based upon the convertibility of greenbacks and national bank notes into gold or silver at the option of the holders; in increasing the value of agricultural productions and the wages of labor, by building up home markets on the policy of reasonable protection to domestic industries; in exalting the value of our naturalization laws to our foreign-born fellow-citizens, by securing to American naturalization everywhere the full rights of American citizenship; in founding American citizenship upon manhood, and not on complexion, and in declaring that citizenship and the ballot shall ever go hand-in-hand; in maintaining and cherishing as a chief safeguard of liberty our system of free schools, supported by a tax imposed upon all property for the education of all children; and in the submission, from time to time, in the respectful obedience to what has been deemed the popular will, of amendments to the national Constitution and the Constitution of the State. Animated by these recollections, it is resolved—

1. That, reposing trust in the people as the fountain of power, we demand that the pending amendments to the Constitution shall be agreed to and submitted by the next Legislature to the voters of the State for their decision thereon. These amendments were not partisan in their origin, and are not so in character, and should not be made so in voting upon them. Recognizing the fact that the people are divided in sentiment in regard to the propriety of their adoption or rejection, and cherishing the right of private judgment, we favor the submission of these amendments at a special election, so that there may be an intelligent decision thereon, uninfluenced by partisan issues.

2. That we feel it due to the memory of President Garfield to express our sense of the great loss suffered by the nation in his death. We recall with pride the fact that, springing from the humblest conditions in life, Lincoln and Garfield arose, step by step, without any help but the force of their abilities and exertion, to the front rank among Americans, and were chosen by the Republican party to bear its banner in its struggles to maintain the supremacy and glory of the national Union.

3. That lapse of time can not efface from the grateful recollection of the Republican party its memory of the brave soldiers, from whatever section or party ranks they may have come, who offered their lives in support of its policy of restoring and maintaining the union of the States.

4. That a revenue greatly reduced in amount, being all that is now needed to pay the interest on our public debt and the expenses of the Government, economically administered, the time has arrived for such a reduction of taxes and regulation of tariff duties as shall raise no more money than shall be necessary to pay such interest and expenses. We therefore approve of the efforts now making to adjust this reduction, so that no unnecessary burdens upon the consumers of imported articles may exist, and that no injury be inflicted upon our domestic industries, or upon the industrial classes employed therein.

5. That we are gratified to observe that the laws for the protection of miners and securing their wages, under the constant administration of them by Republican mine-inspectors, has done much for the comfort of the workers in mines, and that we hope to see important suggestions of the present inspector for amendments further to promote their comfort adopted by the next Legislature.

6. That the relations between capital and labor should be so adjusted that the rights of laborers shall be fully protected.

7. That the fees of all State and county officers should be so regulated as to give a fair compensation to them, but not so great as to tempt applicants to corrupt methods to obtain the same, or to impose unjust burdens upon the people.

8. That we join with our Irish fellow-citizens in sincere sympathy with the efforts of their brethren in Ireland to break up, by means of just legislation, the large landed estates in that island, and to introduce upon these lands, for the general good of the people, peasant proprietorship. We join with them, also, in the hope that efforts for home-rule in all matters of local concern will prove successful.

9. That it is the duty of Congress to adopt laws to secure a thorough, radical, and complete reform of the civil service, by which the subordinate positions of the government should no longer be considered rewards for their party zeal, which will abolish the evils of patronage, and establish a system making honesty, efficiency, and fidelity the essential qualifications for public position.

10. That the industry, wisdom, and firmness of President Chester A. Arthur meet the cordial indorsement of the Republicans of Indiana.

E. R. Hawn, Secretary of State; Edward H. Wolfe, Auditor of State; Roswell S. Hill, Treasurer of State; D. P. Baldwin, Attorney-General; Jonathan W. Gordon, Clerk of the Supreme Court; and John M. Bloss, Superintendent of Public Instruction, were renominated. For Supreme Judges, Judge William P. Edson, from the First Judicial District; Judge J. G. Berkshire, from the Second Judicial District; and Judge John F. Kibbey, from the Fourth Judicial District, were nominated.

The Greenback State Convention met in the spring, and made the following nominations: For Secretary of State, Hiram Z. Leonard, of Cass County; for Auditor, J. N. Armantrout, of Clinton County; for Treasurer, John Studebaker, of Wells County; for Attorney-General, M. W. Lee, of Muncie County; for Superintendent of Public Instruction, Carleton Bull, of Howard County; for Clerk of the Supreme Court, Jared Saiter, of Clark County.

The Woman's Christian Temperance Union held a session in May, and put forth the following platform:

*Whereas*, By the action of the last Legislature of Indiana amendments have been prepared to the Constitution for the prohibition of the liquor-traffic, and for conferring the right of suffrage upon the women of the State, subject to the concurrence of the next Legislature and a submission thereby to a vote of the people; and, *whereas*, we believe that both of these proposed amendments are of vital necessity to the ends of good government and the interests of humanity: *therefore*—

*Resolved*, That we will put forth our utmost endeavors and use all our talents and influence to secure the election of men to the next Legislature who will submit the question of the adoption of those amendments to the people for decision, and will use our utmost influence, after such submission, to secure a favorable result at the polls.

*Resolved*, That we will not intermit our moral work meanwhile, especially among the children, scattering temperance literature, presenting our cause to religious and educational bodies, holding gospel temperance meetings, helping the fallen, and encouraging the weak and tempted.

*Resolved*, That we cordially and earnestly indorse "Our Herald," and believe that we greatly need, in the peculiar phase of the work in our State, a home organ, and that we will do all we can, by reports of work done and soliciting subscribers, to make it fully what it ought to be, as an agent to put forward our cause to the final adoption of both amendments, which we consider of equal value.

*Resolved*, That as money must supply "the sinews of war," we, as workers of the local unions, pledge ourselves to use every available means to raise money for the State Treasury, and promptly forward it.

*Resolved*, That as we have no wish to add to the already large list of ignorant and thoughtless voters, we recognize the expediency of establishing a department of franchise in our State work, in accordance with the action of the last National Convention, having a superintendent with whom local workers can correspond, and who can supply information and literature bearing on the duties of woman toward the Government, and the relation of the home to the Government, that we may be well qualified to act as becomes intelligent citizens, legislating for the home.

In October the Grand Temperance Council of Indiana issued an address recommending temperance people to support the Republican ticket. On the other hand, those interested in the liquor-traffic organized for the support of the Democratic ticket.

ELECTION RETURNS.—The election resulted in the success of the Democratic ticket. The following is the vote:

For Secretary of State—Hawn, 210,234; Myers, 220,918; Leonard, 13,520; Myers's plurality, 10,684.

For Auditor—Wolfe, 210,540; Rice, 220,639; Armantrout, 13,439; Rice's plurality, 10,099.

For Treasurer—Hill, 210,499; Cooper, 220,378; Studebaker, 13,359; Cooper's plurality, 9,879.

For Supreme Court Clerk—Gordon, 208,802; Sheerin, 220,246; Saiter, 13,284; Sheerin's plurality, 11,444.

For Attorney-General—Baldwin, 210,032; Hord, 221,011; Lee, 13,438; Hord's plurality, 10,979.

For Superintendent of Public Instruction—Bloss, 210,634; Holcombe, 219,177; Bull, 13,264; Holcombe's plurality, 8,543.

Supreme Court Judges—Edson, 212,213; Niblack, 229,550; Niblack's majority, 17,337; —Berkshire, 212,345; Howk, 223,053; Howk's majority, 15,708; —Kibbey, 217,474; Zollars, 222,625; Zollars's majority, 5,151.

The official vote for the congressional candidates is as follows, Republicans being elected in the Sixth, Seventh, Eleventh, and Thirteenth Districts, and Democrats in the other nine:

First District—Heilmann, Republican, 16,399; Kleiner, Democrat, 18,048; Nesbit, National, 512. Kleiner's plurality, 1,649.

Second District—Cobb, Reg. Dem., 16,339; Hostetler, Ind. Dem., 13,288. Cobb's majority, 3,051.

Third District—Walker, Rep., 12,538; Stockslager, Dem., 17,123; Green, Nat., 788. Stockslager's plurality, 4,585.

Fourth District—Holman, Dem., 16,640; Johnson, Rep., 13,146; Thomas, Nat., 250 (?); Holman's plurality, 3,494.

Fifth District—Matson, Dem., 16,851; Wallingford, Nat. Rep., 13,293. Matson's majority, 3,553.

Sixth District—Brown, Rep., 19,562; Pender, Dem., 12,249; Smith, Nat., 789. Brown's plurality, 7,313.

Seventh District—Peelle, Rep., 17,451; English, Dem., 17,364; Medkirk, Nat., 535. Peelle's plurality, 87.

Eighth District—Peirce, Rep., 17,823; Lamb, Dem., 18,110; Copner, Nat., 1,859. Lamb's plurality, 287.

Ninth District—Orth, Rep., 16,482; Ward, Dem., 17,357; Jacks, Nat., 1,114. Ward's plurality, 875.

Tenth District—De Motte, Rep., 16,223; Wood, Dem., 17,237; Moore, Nat., 1,377. Wood's plurality, 1,014.

Eleventh District—Steele, Rep., 19,863; Daily, Dem., 19,539; Thompson, Nat., 1,456. Steele's plurality, 333.

Twelfth District—Glasgow, Rep., 14,223; Lowry, Dem., 16,986; Butler, Nat., 615. Lowry's plurality, 2,763.

Thirteenth District—Calkins, Rep., 17,478; Winterbotham, Dem., 17,087; Shiveley, Nat., 1,935. Calkins's plurality, 391.

The new Legislature consists of 28 Democrats and 22 Republicans in the Senate, and 58 Democrats, 41 Republicans, and 1 Greenbacker, in the House.

Prior to the election there was some discussion whether the whole number or only half of the Senators should be voted for, some prominent Democrats contending that all must be then chosen, but this position seems to have been abandoned.

**PROHIBITORY AMENDMENT.**—Since the election it has been alleged that the Democrats have been seeking for grounds upon which to avoid submitting the prohibitory amendment to the people. The Constitution provides that an amendment must be proposed by one Legis-

lature and set out on the record with the yeas and nays, and referred to the succeeding Legislature. The pending amendments were not set out as required, and it is therefore claimed that they are void, and that there is nothing for the next Legislature to act upon. On the other hand, the Republicans argue that the same defect existed in the case of the Wabash and Erie Canal amendment, that Governor Baker took the ground that it did not invalidate it, and that the amendment was adopted and went into effect. There is also a decision of the Supreme Court of the State upon an appropriation bill, that it is not competent for a court to go beyond the attesting signature of the President of the Senate and the Speaker of the House, and that the bill being properly enrolled and attested, the courts are precluded from attacking the measure collaterally by showing a faulty record.

Another alleged defect, which is not thought to be of serious consequence, is, that the amendments were not expressly "referred" to the next General Assembly.

**INSURANCE.** Statistics relating to the various insurance companies of the United States are reported for the first time by the Federal Government in the census returns for 1880. The year covered by the statistics is that ending December 31, 1879. The chief results for the United States are here given.

**LIFE INSURANCE.**—The number of companies in the United States is 59. The names of the companies, the place of principal office, and the year of beginning business are shown in the following table:

NAME.	Principal office.	Commenced business.
Alabama Gold Life Insurance Company.....	Mobile, Ala.....	1868
Mobile Life Insurance Company.....	Mobile, Ala.....	1871
Pacific Mutual Life Insurance Company.....	Sacramento, Cal.....	1868
Etna Life Insurance Company.....	Hartford, Conn.....	1850
Charter Oak Life Insurance Company.....	Hartford, Conn.....	1850
Connecticut General Life Insurance Company.....	Hartford, Conn.....	1865
Connecticut Mutual Life Insurance Company.....	Hartford, Conn.....	1846
Continental Life Insurance Company of Hartford.....	Hartford, Conn.....	1864
Hartford Life and Annuity Insurance Company.....	Hartford, Conn.....	1867
Phoenix Mutual Life Insurance Company.....	Hartford, Conn.....	1851
Travelers' Insurance Company.....	Hartford, Conn.....	1864
National Life Insurance Company of the United States of America.....	Washington, D. C.....	1868
Cotton States Life Insurance Company.....	Macon, Ga.....	1869
Franklin Life Insurance Company.....	Indianapolis, Ind.....	1866
Equitable Life Insurance Company of Iowa.....	Des Moines, Iowa.....	1867
Southern Mutual Life Insurance Company of Kentucky.....	Louisville, Ky.....	1866
Missouri Valley Life Insurance Company.....	Leavenworth, Kans.....	1867
Louisiana Equitable Life Insurance Company.....	New Orleans, La.....	1863
Union Mutual Life Insurance Company.....	Augusta, Me.....	1849
Maryland Life Insurance Company of Baltimore.....	Baltimore, Md.....	1865
Mutual Life Insurance Company of Baltimore.....	Baltimore, Md.....	1870
Berkshire Life Insurance Company.....	Pittsfield, Mass.....	1851
John Hancock Mutual Life Insurance Company.....	Boston, Mass.....	1862
Massachusetts Mutual Life Insurance Company.....	Springfield, Mass.....	1851
New England Mutual Life Insurance Company.....	Boston, Mass.....	1843
State Mutual Life Assurance Company.....	Worcester, Mass.....	1845
The Michigan Mutual Life Insurance Company.....	Detroit, Mich.....	1867
Covenant Mutual Life Insurance Company of St. Louis.....	St. Louis, Mo.....	1853
German Mutual Life Insurance Company of St. Louis.....	St. Louis, Mo.....	1858
Mutual Benefit Life Insurance Company.....	Newark, N. J.....	1845
Prudential Insurance Company of America.....	Newark, N. J.....	1875
Brooklyn Life Insurance Company.....	New York, N. Y.....	1864
Equitable Life Assurance Society of the United States.....	New York, N. Y.....	1859
Germania Life Insurance Company.....	New York, N. Y.....	1860
Home Life Insurance Company.....	Brooklyn, N. Y.....	1860
Homeopathic Mutual Life Insurance Company.....	New York, N. Y.....	1863

NAME.	Principal office.	Commenced business.
Knickrbocker Life Insurance Company.....	New York, N. Y.....	1853
Manhattan Life Insurance Company.....	New York, N. Y.....	1850
Metropolitan Life Insurance Company.....	New York, N. Y.....	1867
Mutual Life Insurance Company of New York.....	New York, N. Y.....	1848
New York Life Insurance Company.....	New York, N. Y.....	1845
Provident Savings Life Assurance Society.....	New York, N. Y.....	1875
United States Life Insurance Company in the city of New York.....	New York, N. Y.....	1850
Washington Life Insurance Company.....	New York, N. Y.....	1860
Universal Life Insurance Company.....	New York, N. Y.....	1865
Western New York Life Insurance Company.....	Batavia, N. Y.....	1868
North Carolina State Life Insurance Company.....	Raleigh, N. C.....	1873
Toledo Mutual Life Insurance Company.....	Toledo, Ohio.....	1872
Union Central Life Insurance Company.....	Cincinnati, Ohio.....	1867
American Life Insurance Company.....	Philadelphia, Pa.....	1850
Girard Life Insurance, Annuity, and Trust Company of Philadelphia.....	Philadelphia, Pa.....	1845
Penn Mutual Life Insurance Company of Philadelphia.....	Philadelphia, Pa.....	1846
Presbyterian Annuity and Life Insurance Company.....	Philadelphia, Pa.....	1759
Provident Life and Trust Company of Philadelphia.....	Philadelphia, Pa.....	1865
National Life Insurance Company.....	Montpelier, Vt.....	1850
Vermont Life Insurance Company.....	Burlington, Vt.....	1869
Life Insurance Company of Virginia.....	Richmond, Va.....	1871
Piedmont and Arlington Life Insurance Company*.....	Richmond, Va.....	1869
Northwestern Mutual Life Insurance Company.....	Milwaukee, Wis.....	1858

The figures given below are the aggregate statistics for all of these companies:

## CAPITAL STOCK.

Authorized maximum.....	\$15,770,000
Paid up in cash.....	8,634,190
Subscribed, but unpaid.....	864,209

Liabilities as to policy-holders.....	865,668,976
Excess of assets over liabilities as to policy-holders.....	76,608,494

The number of policies written in 1879 was 122,868; aggregate amount, \$187,049,113; number terminated, 104,165; amount, \$210,336,483; number in force December 31, 1879, 725,560; amount, \$1,560,756,437.

FIRE AND MARINE INSURANCE.—The total number of fire and marine insurance companies in the United States in 1879, as returned

\* Receiver appointed December 23, 1880.

by the census of 1880, was 1,647. Of these 1,462 were doing a fire business only, 140 a fire marine business, and 45 a marine business only. Of the whole number, 424 were doing business with a joint-stock capital, and 10 with a guarantee capital; 235 were doing a general business on the mutual plan, and 978 were doing a farm or local business on the mutual plan. The aggregate amount of joint-stock or guaranteed capital was: authorized, \$144,939,200; paid up in cash, \$99,090,788; paid up in notes, \$2,691,051. The aggregate assets of all companies were returned as follow:

Market value of real estate owned, less all encumbrances.....	\$18,477,914
Amounts loaned on bond and mortgage (first liens).....	44,859,286
Market value of United States bonds and securities actually owned.....	75,035,442
Market value of State, county, city, and town bonds and securities actually owned.....	21,020,352
Market value of all other bonds, stock, and securities actually owned.....	36,484,707
Amounts loaned on collateral securities.....	11,188,471
Amounts of cash or available assets not previously specified.....	89,761,595
Total amounts of cash or available assets.....	247,184,203
Contingent assets.....	645,137,843
Total cash or available and contingent assets (ledger assets).....	\$892,271,556

The aggregate liabilities of all companies were as follow:

Amount due for unpaid losses.....	\$10,358,906
Miscellaneous cash liabilities.....	12,525,268
Total cash liabilities.....	22,884,174
Contingent liabilities.....	43,297,127
Total cash and contingent liabilities (liabilities as to policy-holders).....	71,181,301
Excess of cash or available and contingent assets over cash and contingent liabilities (policy-holders' surplus).....	821,090,225
Capital and scrip liabilities.....	757,451,984
Excess of cash or available and contingent assets over cash, contingent, capital and scrip liabilities (stockholders' surplus).....	69,639,959
Excess of all assets over all liabilities (net assets).....	\$69,387,382

The aggregate income and expenditures of all companies were as follow:

#### CASH INCOME.

Net amount of fire premiums and assessments received in cash.....	\$65,763,600
Net amount of marine and inland premiums received in cash.....	16,087,163
Total amount of premiums and assessments received in cash.....	81,850,763
Cash received from investments.....	11,619,592
Cash received from increased capital and calls on capital.....	788,022
Cash received from miscellaneous sources.....	1,873,602
Aggregate cash income and receipts during the year.....	95,566,979

#### CASH EXPENDITURES.

Net amount paid in cash for fire-losses.....	\$87,887,240
Net amount paid in cash for marine and inland losses.....	10,551,745
Total paid in cash for losses.....	48,438,985
Amount of stockholders' dividends paid in cash and (mutual companies) cash returned as profits or surplus.....	14,283,118
Amount paid in cash on account of expense.....	26,321,948
Miscellaneous cash expenditures.....	1,655,188
Aggregate cash expenditures during the year.....	90,699,284

The risks of fire, fire-marine, and marine companies written during 1879, and in force at the end of the year, were as follow:

Fire-risks written.....	\$8,189,453,076
Marine and inland risks written.....	1,975,687,446
Premiums charged on marine and inland risks written.....	18,389,073

Total amount of all risks written.....	10,115,140,522
Losses incurred during 1879.....	48,128,564
Fire risks in force December 31, 1879.....	10,000,528,643
Marine and inland risks in force.....	258,524,213
Total amount of risks in force.....	10,284,652,856

The following summary shows the ratios of the business of fire, fire-marine, and marine companies for the year 1879:

#### RATIOS OF LOSSES.

Fire-losses paid to fire premiums and assessments received in cash.....	0.5736
Marine and inland losses paid to marine and inland premiums received in cash.....	0.6580
Total losses paid to total premiums and assessments received in cash.....	0.5901
Total losses paid to total cash income.....	0.5058
Total losses paid to total cash expenditures.....	0.5341
Fire-losses paid to fire-risks written.....	0.0047
Marine and inland losses paid to marine and inland risks written.....	0.0053

#### RATIOS OF DIVIDENDS.

Dividends paid to paid-up capital stock.....	0.1605
Dividends paid to ledger assets.....	0.0404
Dividends paid to total cash income.....	0.1650
Dividends paid to total cash expenditures.....	0.1904
Dividends paid to income from investments.....	1.8807

#### RATIOS OF EXPENSE.

Expenditures on account of expense to cash received from premiums and assessments.....	0.8090
Expenditures on account of expense to total cash income.....	0.2746
Expenditures on account of expense to total cash expenditures.....	0.2902

#### RATIOS TO CASH INCOME.

Cash received from premiums and assessments to total cash income.....	0.8562
Income from investments to total cash income.....	0.1212
Total cash expenditures to total cash income.....	0.9461

#### RATIOS TO LEDGER ASSETS.\*

Paid-up capital stock to ledger assets.....	0.4876
Cash and contingent liabilities to ledger assets.....	0.0798
Cash, contingent, and capital liabilities to ledger assets.....	0.9156
Cash, contingent capital, and scrip liabilities to ledger assets.....	0.9287

The ratio of liabilities as to policy-holders to cash or available assets was 0.2880. The ratio of net assets to risks in force was 0.0845; amount of risks in force to each one dollar of net assets, \$11.83.

IOWA. STATE GOVERNMENT.—The State officers during the year were: Governor, Buren R. Sherman, Republican; Lieutenant-Governor, O. H. Manning; Secretary of State, John A. T. Hull; Treasurer, E. H. Conger; Auditor, William V. Lucas; Attorney-General, Smith McPherson; Adjutant-General, W. L. Alexander; Superintendent of Public Instruction, John W. Akers; Register of Land-Office, James K. Powers; Railroad Commissioners, A. R. Anderson, Peter A. Day, and M. C. Woodruff; State Librarian, Mrs. S. B. Maxwell. Judiciary—Supreme Court: Chief-Justice, William H. Seevers; Associate Justices, Austin Adams, Joseph M. Beck, James G. Day, and James H. Rothrock.

LEGISLATURE.—The Legislature met on the 8th of January, and remained in session until the 17th of March. On the 12th of January the Governor and Lieutenant-Governor were inaugurated. On the 17th United States Sena-

\* I. e., total cash or available and contingent assets.

tors were elected for the full term of six years, commencing March 4, 1883, and for the term ending on that day, to fill the vacancy occasioned by the resignation of Samuel J. Kirkwood, appointed Secretary of the Interior in President Garfield's Cabinet. For the full term James F. Wilson, Republican, was chosen, receiving thirty-five votes against three in the Senate, and fifty-nine against twenty-four in the House. For the vacancy, James W. McDill was chosen, receiving thirty-six votes against three in the Senate, and sixty-five against twenty-four in the House.

The following are the most important of the measures passed at this session:

Acts reapportioning the State for members of the Senate and House.

An act to authorize incorporated cities and towns to procure and donate to railroad companies sites for depots, machine-shops, and other buildings.

An act to increase the number of circuit judges in each circuit of this State containing a city having a population in excess of 22,300, and to provide for the election of said judges. Provides for the election of an additional circuit judge in all circuits situated as above, at the general election in 1882, said judges to hold their offices four years from January, 1883.

An act to provide for the levy of a half-mill State tax for the years 1882 and 1883, to reimburse the general revenue fund of the State for money paid on account of war debts, and for the completion of the new Capitol, and other purposes. Provides that the State tax shall be two and a half mills for 1882 and 1883.

An act providing for the cancellation of taxes voted to aid in the construction of railroads. Provides that where aid has been voted for the construction of a railroad, and the company neglects or refuses to receive such taxes for a period of six months, the company shall forfeit all its right to such aid or tax. The Board of Supervisors shall give such railroad companies due notice before such cancellation can be made.

An act to amend chapter 114, laws of Sixteenth General Assembly, in relation to the submission of amendments to the Constitution of the State to a vote of the people. This act authorizes the submission of amendments to the Constitution to a vote of the people at a *special* election, as the General Assembly may provide.

An act to resume all the lands and rights conferred upon the Sioux City and St. Paul Railroad Company, by or under an act of Congress, approved May 12, A. D. 1864, to lands not heretofore owned by said company.

By act of April 3, 1866, the State of Iowa granted to the Sioux City and St. Paul Railroad Company certain lands; and by the terms of said grant, if said road was not completed within ten years from the date of acceptance, and the railroad accepted said grant on the 20th day of September, 1866, and has failed to

complete said road, therefore the State resumes the lands.

An act granting additional powers to cities organized under the general incorporation laws of the State; provides for taxing itinerant doctors and junk-dealers; prohibits second-hand dealers purchasing from minors without consent of parents; requiring all buildings to be numbered; to change the channels of water-courses; to control the construction of chimneys, ovens, stove-pipes, and, in general, to have supervision of all chimneys, boilers, and heating apparatus of whatsoever kind or nature, as well as deposits of ashes, lights in stables, shops, and factories, to provide for the inspection of all steam-boilers; in short, to have full and complete charge of all things which will promote the safety and health of the inhabitants.

An act to amend chapter 110, acts of Thirteenth General Assembly, and chapter 35, Acts of Fourteenth General Assembly, and making an additional appropriation for completing the Capitol building. This act appropriates the sum of \$525,000, in order to complete the new Capitol, to be drawn as follows: \$75,000 to be drawn in the year 1882; \$275,000 in the year 1883; \$175,000 in the year 1884. It provides for the completion of the Senate-chamber, hall of House of Representatives, library-room, and as much more as may be found practicable.

An act to authorize cities of the first and second class to change their corporate names, and to prescribe the manner in which such change may be made. This act authorizes the council of any city of the first or second class, or of any incorporated town, to change its name by resolution of said council, said resolution to be ratified by a vote of the qualified electors, provided that the name shall not be the same as that of any other city or town in the State.

An act to repeal section 487 of the Code, and to enact a substitute, in relation to poll-tax. This act repeals section 487 of the Code, and re-enacts the greater portion thereof, changing the age for liability to poll-tax from fifty to forty-five years, and increases the penalty for each day's failure to attend and perform labor from two to three dollars, and makes all property and wages of the defendant liable to execution in payment of poll-tax, judgment to be obtained before the mayor of a corporation or justice of the peace of a township, the money so collected to be expended upon the streets of the corporation.

An act to amend chapter 143 of the acts of Sixteenth General Assembly, entitled an act to provide for establishing superior courts in cities of a certain grade. This act repeals the words 5,000, and inserts 8,000; changes two-thirds into a majority; provides for change of name to circuit court; judgments to be made liens on real estate by filing transcripts; does not affect any actions already commenced in any superior court.

An act to repeal part of section 521, title 4,

chapter 10, of the Code, and enact a substitute therefor in relation to the election of aldermen in cities of the first class. Provides for the election of aldermen for each ward, and two at large, in the year 1882, and arranges for the term of office of one alderman to expire each year.

An act to legalize the sale and transfer by the St. Paul and Sioux City Railroad Company of its railroads in Iowa to the Chicago, St. Paul, Minneapolis, and Omaha Railway Company, and to legalize the issue of its stock and bonds thereon by the last-named company.

An act to submit to a vote of the people the proposed amendment to the Constitution prohibiting the manufacture and sale of intoxicating liquors as a beverage within this State, fixing Tuesday, June 27, 1882, as the date upon which to submit said proposed amendment to a vote of the people.

An act was also passed to divide the State into eleven congressional districts. These districts are constituted as follow:

First District: the counties of Lee, Des Moines, Henry, Van Buren, Jefferson, Washington, and Louisa.

Second District: the counties of Jones, Jackson, Clinton, Cedar, Scott, and Muscatine.

Third District: the counties of Dubuque, Delaware, Buchanan, Black Hawk, Bremer, Butler, and Grundy.

Fourth District: the counties of Clayton, Fayette, Winneshiek, Allamakee, Howard, Mitchell, Floyd, and Chickasaw.

Fifth District: the counties of Marshall, Tama, Benton, Linn, Johnson, and Iowa.

Sixth District: the counties of Jasper, Poweshiek, Mahaska, Monroe, Wapello, Keokuk, and Davis.

Seventh District: the counties of Guthrie, Dallas, Polk, Adair, Madison, Warren, and Marion.

Eighth District: the counties of Clarke, Lucas, Ringgold, Decatur, Wayne, Appanoose, Union, Adams, Page, and Taylor.

Ninth District: the counties of Pottawattamie, Cass, Mills, Audubon, Crawford, Montgomery, Shelby, Fremont, and Harrison.

Tenth District: the counties of Boone, Story, Hardin, Hamilton, Webster, Franklin, Wright, Humboldt, Hancock, Cerro Gordo, Worth, Winnebago, and Kossuth.

Eleventh District: the counties of Lyon, Osceola, Dickinson, Emmet, Sioux, O'Brien, Clay, Palo Alto, Plymouth, Cherokee, Buena Vista, Pocahontas, Woodbury, Ida, Sac, Calhoun, Monona, Carroll, and Greene.

The prohibitory amendment to the Constitution was agreed to.

The following joint resolutions, among others, were adopted:

Joint resolution, proposing to amend section 1, of Article II, of the Constitution of Iowa, by striking therefrom the word "male" (female suffrage).

Joint resolution, proposing amendments to the constitution and providing for their reference and publication. This resolution proposes four separate amend-

ments to the Constitution, to wit: 1. To hold the general election for State, district, county, and township officers on the Tuesday next after the first Monday in November. 2. That at any regular session of the General Assembly the State may be divided into the necessary judicial districts for district court purposes, or the said districts may be reorganized and the number of the districts and the judges of said courts increased or diminished, but no reorganization of the districts or diminution of the judges shall have the effect of removing a judge from office. 3. The grand jury may consist of any number of members, not less than five nor more than fifteen, as the General Assembly may by law provide, or the General Assembly may provide for holding persons to answer for any criminal offense without the intervention of a grand jury. 4. That section 13, of Article V, of the Constitution be stricken therefrom and the following adopted as such section: "The qualified electors of each county shall, at the general election in the year 1886 and every two years thereafter, elect a county attorney, who shall be a resident of the county for which he is elected, and who shall hold his office for two years, and until his successor is elected and qualified."

By a congressional act the State was divided into two Federal districts for judicial purposes. The Southern District will have court at Des Moines, Council Bluffs, and Keokuk, and the Northern at Dubuque, Fort Dodge, and Sioux City.

**PROHIBITORY AMENDMENT.**—The temperance campaign was opened early. On the 26th of January a State Convention was held in Des Moines, with a view to influencing legislative action, in which sixty-five of the ninety-nine counties were represented by 200 delegates. The following preamble and resolutions were adopted:

Rejoicing in the patriotic recognition of the fundamental principles of republicanism and democracy as expressed by the Legislature of Iowa in 1880, by their action proposing to submit to a vote of the people the pending prohibitory amendment, and relying upon the fidelity of the majority in the present General Assembly to both these principles, and their pledges already made, we hail the near approach of the day of decisive battle for the happiness, prosperity, and future glory of Iowa, and do inscribe upon our banners the constitutional amendment passed by the Eighteenth General Assembly, and based upon Article I, section 2, of the Constitution of the State of Iowa, which declares that "all political power is inherent in the people. Government is instituted for the protection, security, and benefit of the people, and they have the right at all times to alter or reform the same, whenever the public good may require it."

We, the representatives of the temperance sentiment of the people, do therefore make the following declaration of principles and purposes:

*Resolved*, That the saloons and other places where intoxicating liquors are sold as a beverage, now existing under the law and tolerated in this State, add nothing to the health, peace, prosperity, and happiness of the people, but on the contrary are the chief source of crime, lawlessness, poverty, and wretchedness, and their effectual suppression can only be effected by the adoption of the principle and policy of constitutional prohibition.

*Resolved*, That we ask the Legislature to provide for the holding of said special election on the first Saturday of September, 1882, being the 2d day of said month.

*Resolved*, That the selling of intoxicating liquors as a beverage by many hundreds of drug-stores, under the cover and protection of the pharmacy laws of Iowa, is an infamy more base than ordinary saloon-

keeping, because it seeks to hide its piratical hypocrisy under the guise of a legitimate business. And we would encourage our Representatives in the present General Assembly to push forward the proposed amendment to the pharmacy laws, so as to correct the abuses now existing, and to prevent the druggist from selling intoxicating liquors except for strictly medicinal purposes, as contemplated by the proposed constitutional amendment.

*Resolved*, That we condemn the bill recently introduced into the national Senate, proposing to convert the revenues accruing from the traffic in intoxicants into a fund for the education of our youth. We join the virtue-loving legions of the nation in most emphatic denunciation of any attempt to ally education, which involves our most cherished hopes for the nation's future prosperity, with drunkenness and drunkard-making, the notorious, wanton, and profit-mother of the nation's crimes, impoverishments, and woes; and we earnestly request our Senators and Representatives in the council of the nation to voice the sentiment of Iowa; that the consummation of such an illogical and unnatural alliance would impeach the virtue and insult the intelligence of the American people.

*Resolved*, That while we commend the papers of our State directly devoted to the cause of temperance, to the earnest support of all, we hail with satisfaction the action of a large portion of the political press of the State who are ranging themselves on the side of prohibition and good government in this contest, and commend all such papers to the hearty and liberal moral and pecuniary support of all the people, and especially the merchants and tradesmen whose business is invariably robbed by the expenditure of money in saloons that ought to be expended for the necessities of life.

*Resolved*, That we again hail with gladness upon this floor our invaluable and invincible allies to this great struggle—the representatives of the Woman's Christian Temperance Union of Iowa, and other lady-workers for the promotion of the public good. The work already accomplished by them is above all praise. Deprecating any attempt to impede their work, or to impugn the motives or actions of any member of this noble army of Christian workers, we bid them Godspeed and pledge them every possible assistance, only regretting that they are powerless to help us at that one point where, could they only strike one blow, it would exterminate this monster infamy at once and forever.

*Resolved*, That we do now appeal to the intelligent and virtue-loving people of the State of Iowa, and in particular to the parents of the children soon to come into the inheritance we are preparing for them by our institutions and our laws, to improve this golden opportunity to transmit to the generations following an inheritance of indemnity against drunkenness and consequent crime which shall be to them an occasion for thanksgiving and everlasting rejoicing. To the accomplishment of this noble and patriotic endeavor, let every Christian, every parent who loves his child, every patriot, and every lover of his fellow-beings, unite in one persistent and tireless struggle until the legal prohibition of the traffic in intoxicating beverages is finally and fully assured.

*Resolved*, By this largest State Temperance Convention ever held in Iowa, that all the churches in the State, of whatever name, both Catholic and Protestant, be hereby most respectfully and earnestly urged to devote one Sunday evening in each month to union and other meetings especially in the interest of temperance and the success of the prohibition movement now going on among the people.

The twenty-third annual meeting of the Iowa brewers was held in Des Moines on the 12th of April. This meeting, which was attended by over one hundred delegates from every city in the State and a number of towns,

issued an address to the people of the State against the proposed amendment, and adopted the following resolutions:

*Resolved*, That the proposed prohibitory amendment to the Constitution of this State, which now threatens the complete destruction of the brewing interest, so entirely overshadows all other subjects as to demand the undivided consideration of this association.

*Resolved*, That we appeal to the candid, thinking, and intelligent voters of Iowa to do us the simple justice of looking into and investigating the merits of our objections to this measure before voting, among which objections are the following:

1. The only practical effects of the said proposed amendment will be to substitute distilled liquors in the place of beer as a beverage.

2. Beer is comparatively a harmless beverage, containing only about 4 per cent of alcohol, and experience has shown that its use tends materially to diminish the amount of distilled liquors required, and thereby decreases drunkenness and promotes temperance.

3. Experience has taught us, beyond all controversy, that men will use *some stimulating drink* as a beverage. Since men have any knowledge of history such has been the case. If we are to admit that anything can be settled by the uniform concurrence of ages, then this fact must be considered as established. It necessarily follows that the use of all stimulating beverages can not be prohibited, and that the good of the people is best promoted by encouraging the use of the milder beverages instead of the stronger.

4. In the year 1858 the Legislature of this State voluntarily enacted that henceforth in Iowa the making and vending of beer should be a valid and legal business. This necessarily implied that property invested in that business should be recognized and protected the same as any other property. It has been so recognized, has paid its full share of taxes, and borne its full part of the burdens of government. We, having confidence in the honor and good faith of the State, have invested all our means in the business, and now it is proposed to change all this, and enact that our said business shall be unlawful, and the property invested therein a nuisance; and that no compensation shall be made to us for our property thus destroyed. We insist that this is unjust, oppressive, and unworthy of a free government.

5. The said proposed amendment to the Constitution is in no sense a constitutional law, but is in the nature of a police regulation, over which the Legislature should have full and immediate control. It does not belong to the fundamental law of the State.

6. No State has had such a constitutional provision, but it has been found to increase drunkenness, pauperism, and crime, and consequently taxation, and in every such State it has been repealed, or steps are now being taken to that end, and a license law enacted.

7. The said amendment, if adopted, will destroy not less than four million dollars of permanent property, will deprive of employment a very large number of laborers, who must seek work in other avocations already supplied; and will largely increase deception, hypocrisy, and contempt of law.

8. Said proposed amendment is of doubtful meaning, and must necessarily produce strife and litigation; and in voting for it no one can know with a certainty what he is voting to make a part of our constitutional law.

*Resolved*, That we will use all honorable means to defeat said proposed amendment at the polls, and, if we are unsuccessful, will resist its unjust and oppressive provisions by every method known to law.

*Resolved*, That we will never knowingly support for any office or place of trust any one who shall vote for this proposed outrage upon our property and rights.

*Resolved*, That the recent elections in Ohio, which followed the passage of the Pond bill, is only a forerunner of what will occur in this State if the Republican party adheres to its policy of favoring fanaticism as against the liberal element.

At the election on the 27th of June, 1855, 436 votes were cast for the amendment and 125,677 against it—majority for the amendment, 29,759. Of the counties, 74 gave majorities for it, 24 against it, and one county (Van Buren) gave a tie-vote. The amendment thus ratified reads as follows:

No person shall manufacture for sale, sell, or keep for sale as a beverage any intoxicating liquors whatever, including ale, wine, and beer. The General Assembly shall, by law prescribe regulations for the enforcement of the prohibition herein contained, and shall thereby provide suitable penalties for violation of the provisions thereof.

Discussion immediately arose as to the time when the amendment went into operation, and as to the necessity of legislation to enforce its provisions. A State Convention of the friends of the amendment was held in Des Moines on the 27th of July, to which a committee, previously appointed, reported that the amendment was in force from the day of its adoption (June 27th), that the manufacture and sale of intoxicating liquors, including ale, wine, and beer, became illegal from that time, and that contracts relating thereto could not be enforced; but that existing laws affixed no penalties to the manufacture and sale of ale, beer, and wine from native fruits, and that further legislation in that behalf was necessary. This convention adopted the following resolutions:

*Resolved*, That it is with feelings of profound gratitude we recognize the hand of God in the victory achieved by the adoption of the prohibitory amendment to the Constitution of Iowa.

*And, whereas*, The existing laws of the State are now uncertain and inadequate to secure the due enforcement of said amendment; therefore—

*Resolved*, That it is the sense of this convention that an extra session of the General Assembly should be called at the earliest practicable day to enact such laws, with suitable penalties, as will certainly secure the speedy enforcement of said amendment.

*Resolved*, That the general officers of the State Prohibitory Amendment Association of Iowa be charged with the duty of conferring with the Governor of this State, and secure the calling of an extra session of the General Assembly, as contemplated by the above resolution.

*Resolved*, That the thanks of this convention are due, and are hereby tendered, to the Legal Committee for their very able and exhaustive reports, which they have submitted to this convention, and we recommend that said reports be published in the proceedings of this convention for the information of the public.

*Resolved*, That the Legal Committee above named be appointed a committee on legislation, to represent the temperance people of Iowa before the next term of the General Assembly.

*Resolved*, That said committee be instructed to present to the General Assembly, also, the necessity of more stringent penalties than have heretofore existed, for the certain suppression of intemperance within the State.

*Resolved*, That we express to the friends of temperance in other States our sincere appreciation of their great interest in our recent conflict, and their often expressed congratulations on the grand result.

*Resolved*, That we are profoundly thankful to those

members of the press, both within and without the State, who rendered aid to the temperance cause in the advocacy of the constitutional amendment.

*Resolved*, That we appreciate the careful and efficient work of the State Central Committee in their conduct of the campaign, and hereby express to them our sincere thanks for the same.

*Resolved*, That while we rejoice in present success, and realize in some sense its magnitude, we are profoundly impressed that, to conserve these results, and to increase their beneficent influence, we will in no measure abate our efforts along the old lines of temperance work. We will still educate the children, circulate temperance literature, offer the total-abstinence pledge, and give succor and aid to the victims of strong drink. Thus shall the union of legal and moral suasion secure the absolute banishment of the evils of intemperance throughout the Commonwealth of Iowa.

On the 10th of October the Woman's Christian Temperance Union held a State Convention in Des Moines, which resolved to carry on the work by efforts to enforce the amendment by educational work among the young, and by enlightening public sentiment. It also pronounced in favor of female suffrage, against the use of tobacco, and in favor of a special session of the Legislature. The Governor, however, did not see fit to call a special session. In December the case of Koehler and Lange *vs.* Hill, involving the question of the legal adoption of the prohibitory amendment, was argued in the Supreme Court. This case arose in Davenport, the plaintiffs suing for the value of beer sold to the defendant, who defended on the ground that such sale was illegal under the amendment. The chief contention of the plaintiffs was that the amendment had never been legally adopted, having passed the Senate in one form and the House in another. The court upheld the claim of the plaintiffs, and declared the amendment void. (For details, see "Annual Cyclopædia" for 1883.)

**RAILROADS.**—The report of the Railroad Commissioners for the year ending June 30, 1882, shows that 911 miles were added during that period.

The total number of miles of railroad in Iowa, reported by the various companies to the board, is 6,337 $\frac{43}{100}$  miles. The commissioners' estimate of the stock of these roads representing the parts of them in Iowa, added to the stock of the roads entirely in Iowa, amounts to \$121,160,084.81, or \$19,117.54 per mile. The total number of stockholders in the State is returned at 734; the total amount of stock reported as owned by persons living in the State is \$2,096,341.41.

The total debt of the roads in Iowa, as reported and estimated by the commissioners, is \$118,657,183.16, or \$18,628.40 per mile. Of this amount \$112,637,966.05 is funded debt—\$5,419,217.11 is unfunded or floating debt.

The stock and debt of the roads in Iowa amount to \$239,217,267.97, or \$34,745.94 per mile.

The report says:

It is difficult to arrive at the cost of the Iowa roads, as many of them came into the hands of the present

holders by purchase at foreclosure, consolidation, or through the medium of construction companies; the amount reported is \$215,979,324.81, or \$23,237,943.16 less than the reported stock and bonds. It is hardly probable that the commissioners will ever be able to arrive at more than an approximation of the cost of the roads.

The entire earnings for the roads in Iowa are:

Passenger, mail, and express.....	\$8,646,470 83
Freight and miscellaneous.....	23,377,495 20
Total earnings for the year ending June 30, 1882.....	32,023,966 03
Total earnings for the year ending June 30, 1881.....	28,452,181 91
Increase of earnings over previous year.....	3,571,774 12
The total operating expenses returned for the Iowa roads for the year 1882 were.....	20,512,393 05
Total operating expenses for 1881.....	10,788,404 80
Excess of operating expenses over previous year.....	\$3,728,988 66
Excess of earnings over previous year.....	3,571,774 12
Making the net earnings less than previous year.....	\$152,214 54

The mileage was increased 911 miles, but the net earnings show but a slight increase for so large an increased mileage, the mileage being much greater than any year since the establishment of the board. The operating expenses per mile of road were \$3,552.64.

The earnings for these roads for the 11,739.59 miles reported in 1880 were \$64,433,179.53, or \$5,491.23 per mile; the operating expenses for the same year were \$35,624,124.79, or \$3,036.51 per mile. The earnings for the 14,109.37 miles reported in 1881 were \$76,530,450.99, or \$5,083.73 per mile; the operating expenses were \$46,043,845.22, or \$3,346.87 per mile. The earnings for the 16,544.46 miles reported in 1882 were \$92,757,206.22, or \$5,606.66 per mile; the operating expenses were \$53,776,474.53, or \$3,552.64 per mile.

Forty-nine per cent of the entire roads of the State, exclusive of sidings, is steel rail. For the year 1881 there was reported 40 per cent; for the year 1880, 32 per cent; for the year 1879, 27½ per cent; for the year 1878, 22 per cent. This indicates, what is the fact, that wherever the traffic is heavy, steel rails have been put down. The percentage of steel to iron rails will not increase as rapidly in the future as it has in the last four years.

The board finds that the average rate of freight per ton per mile varies from 9 cents on the Crooked Creek road; 4.24 on the Burlington and Northwestern; 3.08 on the Des Moines and Fort Dodge, to 1.60 on the Chicago, Milwaukee and St. Paul; 1.47 on the Northwestern; 1.24 on the Rock Island; and .96 on the Wabash. The rates are a little higher than last year.

The total number of persons regularly employed in operating the roads of the State is 28,397, the amount paid them for their services is \$14,071,612.54, or two and one half millions more than the earnings of the roads of the State above operating expenses and the taxes.

During the year 165 persons were killed; of these 7 were passengers, 89 employes, and 69

others: 5 by derailment, 2 by collisions, 4 caught in frogs, 16 coupling cars, 31 falling from train, 19 getting on and off trains, 4 at highway crossings, 41 from miscellaneous causes, 10 stealing rides, 21 while intoxicated, and 33 while trespassing on track. Of this number, 3 were reported as suicides.

There were 635 persons injured during the year; 61 were passengers, 502 were employes, and 72 others: by derailment 59, collisions 37, caught in frogs 4, coupling cars 182, falling from trains 57, getting on and off trains 56, at highway crossings 10, miscellaneous 192, overhead obstructions 6, stealing rides 8, trespassing on track 24.

The report states that one great source of accident, resulting in a very large percentage of injury and death to the railroad employe, is the present method of coupling cars. While we believe the theory is, and most of the time-tables require, the use of the coupling-hook, in practice men go between the cars, and if for any cause the dead-woods of the different cars fail to meet, they are crushed. Others are caught in frogs, the car-wheel catching them before the foot can be removed. In the report for this year, 4 employes were killed, being caught in frogs, and 16 in coupling cars; 4 were injured, being caught in frogs, and 82 in coupling cars.

The following is a classified statement of the tonnage carried during the year:

ARTICLES.	Tons.	Per cent.
Grain.....	2,471,986	35.89
Flour.....	199,405	2.04
Provisions.....	115,186	1.18
Animals.....	980,518	10.08
Other agricultural products.....	160,608	1.65
Lumber and forest products.....	1,551,515	15.87
Coal.....	1,767,044	18.07
Lime, cement, etc.....	108,265	1.11
Salt.....	110,646	1.13
Oil, petroleum, etc.....	81,458	.83
Iron and castings.....	209,707	1.43
Stone and brick.....	207,906	2.13
Manufactures.....	109,862	1.12
Merchandise and other articles not enumerated.....	1,820,215	18.62
Total.....	9,777,415	100.00

Add to this amount an estimated tonnage for the Chicago, Burlington, and Kansas City; the Kansas City, St. Joseph, and Council Bluffs; the St. Paul, Minneapolis, and Omaha; the Minneapolis and St. Louis; Keokuk and Northwestern; the Wabash, St. Louis, and Pacific; and the Fort Madison and Northwestern roads (whose officers were unable to separate their Iowa tonnage), 1,198,427 tons, and we have a total of 10,975,642; deducting from this the freight twice reported, that is, the freight delivered to and received from the smaller roads by the trunk lines (as estimated by the commissioners), 380,688 tons, and we have the Iowa tonnage as 10,595,184.

RAILWAY LAND GRANTS.—The net amount realized from congressional land grants by the railroad companies to date of report:

The Chicago, Burlington, and Quincy .....	\$3,164,243 66
The Chicago, Milwaukee, and St. Paul.....	1,129,669 00
The Chicago, Rock Island, and Pacific.....	2,597,308 61
The Iowa Falls and Sioux City .....	2,229,829 24
The Des Moines and Fort Dodge.....	14,933 43
The Cedar Rapids and Missouri River (956- 597.40 acres).....	63,961 60
The Sioux City and Pacific.....	200,000 00
The Sioux City and St. Paul (report of 1878) ..	286,919 43
Total.....	\$10,186,879 02

**PARTY CONVENTIONS.**—The Republican State Convention met in Des Moines, on the 2d of August, and renominated J. A. T. Hull, for Secretary of State; E. H. Conger, for Treasurer; Smith McPherson, for Attorney-General; and William H. SeEVERS, for Judge of Supreme Court. J. L. Brown, of Lucas County, was nominated for Auditor; G. B. Pray, of Hamilton County, for Clerk of the Supreme Court, and E. C. Ebersole, of Tama County, for Supreme Court Reporter. The following is the platform adopted:

The Republican party of Iowa, reaffirming its support of the national platform of the party of 1880, and its own declaration in the past, submits the following as its platform for the present year:

1. In reaffirming the platform of 1880, and insisting upon its enforcement in its relation to the several affairs of the nation, the State, and the Territories, in order that sound policies shall prevail in the nation, and ample protection be afforded to its citizens in all of their rights of citizenship, we especially commend the present Congress in its course in vindication of an honest ballot and fair count by its action in seating the members legally elected to that body.

2. That the personal and official bearing of President Arthur, in his succession to the lamented Garfield, is worthy of all respect and commendation, and the general administration of the duties of his office meets with the approval of the Republicans of Iowa.

3. We commend with equal pleasure and pride the faithful and efficient administration of the affairs of our State.

4. We favor the creation by Congress of a department of industry and the taking of prompt measures to protect Western cattle from contagious diseases.

5. We favor an equitable revision of the tariff, and yet so as to encourage home industries and protect labor.

6. We are in favor of and demand a modification of the patent laws to prevent reissues, and to protect innocent purchasers of patented articles in open market.

7. We favor national legislation regulating interstate commerce, to the end that the system of pooling by parallel and competing lines of railway, and unjust discrimination against non-competing points, may be so controlled as to afford healthy competition to all sections of the country in the carrying-trade.

8. We also favor, as a further solution of the question of transportation, the renewed efforts looking to the practical and judicious improvements of the waterways which Nature has afforded for cheaply transporting the commerce of the States.

The Democratic State Convention met in Marshalltown, on the 16th of August, and nominated T. O. Walker, for Secretary of State; John Foley, for Treasurer; William Thompson, for Auditor; J. H. Brennerman, for Attorney-General; H. T. Bonarden, for Clerk of Supreme Court; A. L. Palmer, for Reporter; and C. G. Bronson, for Judge.

The following is the platform adopted:

1. The Democratic party, in convention assembled, declare for the great principles which are the foundation of free government, among which are equal rights

to all, special privileges to none; the protection of the weak against the encroachments of the strong; equal taxation, free speech, free press, free schools, and, first of all, a free and incorruptible ballot.

2. *Resolved*, That we favor reform in the civil service, and denounce the extortion of money from office-holders to corrupt the ballot and control the elections as the most threatening as it is the most insidious danger that besets the Government this day.

3. *Resolved*, That we denounce the reckless extravagance of the Republican party, and demand an immediate reduction of taxes to the lowest figures which will enable the Government to meet all its obligations.

4. *Resolved*, That no special industry should be fostered to the injury of another; that no class of men should be taxed directly or indirectly for the benefit of another; that every description of industry should stand or fall on its own merits; that the existing protective tariff is an outrageous scheme to plunder, and in principle and detail violates every principle of right and justice.

5. *Resolved*, That the late amendment to the pharmacy law of the State has made the same burdensome and is unjust, and we favor the repeal thereof.

6. *Resolved*, That the Democracy of Iowa are opposed to all sumptuary enactments. While we deplore the passage of the prohibition amendment to the Constitution, we are resolved by every legal measure to eliminate the obnoxious measure from the Constitution of the State.

7. *Resolved*, That the right of the State to regulate the railways of the State in their charges for the transportation of freight and passengers having been fully established and declared by the courts, we demand the exercise of this right by our State Legislature, and we arraign the Republican party of this State for their failure to give the people relief. The establishment of that principle entitles to a large amount of public lands and subsidies these corporations have received from the Government, and the people demand that they should be regulated by law; that the Constitution confers on Congress complete power to give the people redress in control for carrying from one State to another. Possessing such power, it is the duty of Congress to compel these corporations to perform their duty to the public as common carriers for a reasonable compensation.

The following additional resolution was adopted:

*Resolved*, That we tender our sympathy to the oppressed of all nations, and to Ireland especially, in her present struggle to attain her freedom.

The Greenback State Convention was held in Des Moines on the 7th of June. The following nominations were made: For Secretary of State, William Gaston; for Auditor, D. A. Wyant; for Treasurer, George Derr; for Attorney-General, James A. Rice; for Judge, W. H. Jones; for Clerk, E. M. Clark; and for Reporter, J. H. Williamson.

The platform adopted is as follows:

1. That we reaffirm the principles of our party as declared at our State Convention in 1881.

2. We are opposed to the monopoly of money through the national banking system, and favor the General Government issuing all currency, making it a full legal tender, and keeping its volume uniform with the requirements of increasing business and population.

3. We are opposed to all refunding of the interest-bearing national debt, which places it beyond the power of the national Government to pay at will; and we demand that said debt be paid as rapidly as possible.

4. We favor the unlimited coinage of gold and silver on equal terms.

5. We are opposed to the present system of allow-

ing railroad and telegraph monopolies to determine the rates for transporting persons or property over railroads or for the use of telegraphs, and hold that all corporations created by law should be governed by law in the interest of the people, and we regard the Iowa Railroad Commission as a willful and intentional hindrance to that end.

6. We are opposed to the monopoly of land, and demand that all public lands, including those forfeited by non-compliance with law, shall be held for actual settlers.

7. We hold that the representatives of labor have the right to combine, to protect all their constitutional rights, and that they should be protected by law in the exercise of that right.

8. That our present laws for the granting of patents should be so amended as to prevent the courts from assessing damages against innocent purchasers, who in open market purchase any patented article, which may be an infringement on any other patent.

9. We are opposed to all monopolies, and are in favor of equal rights, equal taxation, and equal benefits for all, with special privileges for none, and we hold that that is the best government wherein an injury to one concerns all.

10. We favor a revision of the tariff laws in the interest of American labor, and not in the interest of corporations and monopolies.

11. We urge upon all anti-monopolists of this State to consider the utter hopelessness of obtaining the relief by them demanded at the hands of either of the old parties, and request them to unite with us to assist in gaining these ends, and we pledge them to make that question one of great prominence, and that our candidates shall constantly labor to secure these desired reforms.

**ELECTION RETURNS.**—The election in November resulted in the choice of the Republican ticket. The following is the vote:

Secretary of State: J. A. T. Hull, 149,051; T. O. Walker, 112,180; William Gaston, 30,817; scattering, 350.

Auditor of State: John L. Brown, 148,396; William Thompson, 112,211; P. A. Wyantt, 30,830; scattering, 342.

Treasurer of State: Edwin H. Conger, 148,329; John Foley, 112,561; George Derr, 30,209; scattering, 340.

Attorney-General: Smith McPherson, 148,344; J. H. Brennerman, 112,427; James A. Rice, 30,867; scattering, 329.

Judge of Supreme Court: William H. SeEVERS, 149,220; Charles E. Bronson, 112,060; M. H. Jones, 27,865; scattering, 347.

Clerk of Supreme Court: Gilbert H. Pray, 148,648; H. F. Bonarden, 112,087; E. N. Clark, 29,514; scattering, 375.

Supreme Court Reporter: Ezra C. Ebersole, 148,710; L. A. Palmer, 112,494; J. H. Williamson, 27,175; scattering, 28.

Eight Republican Congressmen were elected, two Democratic (Second and Ninth Districts), and one Greenback (Fourth District).

**TORNADO.**—On the 17th of June, one of the most destructive tornadoes on record swept over central Iowa. Its greatest devastation seems to have been wrought at Grinnell, where a considerable part of the town, including the buildings of Iowa College, was destroyed, and many persons were killed and wounded. Throughout its course over one hundred persons are said to have been killed, while the loss

of property was estimated at \$2,000,000 to \$3,000,000.

**ITALY**, a kingdom of Southern Europe, constituted in 1861, when Victor Emanuel assumed for himself and his descendants the title of King of Italy, and proclaimed the Constitution granted by his father, Charles Albert, to Sardinia in 1848. The executive power is vested in the sovereign, and is exercised through responsible ministers. The legislative power belongs jointly to the two Houses of the Legislature and the King. The Senate is composed of an unlimited number of members, nominated by the King, the conditions of their nomination being the occupancy of an important office, distinction acquired in literature, science, or other honorable occupation, or the payment of 3,000 lire, or francs, in taxes annually. In the Chamber of Deputies a member is allowed for every 40,000 inhabitants. The Deputies are elected by ballot, every citizen over twenty-five years of age who pays taxes amounting to forty lire yearly being entitled to vote. The lower ranks of officials and the ordained clergy are ineligible. Senators and Deputies serve without indemnity. The number of Senators in 1880 was 270, and the number of Deputies in 1881, 508. Legislation can originate in either House, but the Chamber of Deputies has the exclusive right to vote money.

The King, Humbert I, born March 14, 1844, the eldest son of Victor Emanuel, succeeded to the throne January 9, 1878.

The Ministry, formed May 29, 1881, is composed as follows: President of the Council and Minister of the Interior, Agostino Depretis; Minister of Finance, Agostino Magliani; Minister of Justice and Ecclesiastical Affairs, Giacomo Zanardelli; Minister of Foreign Affairs, P. S. Mancini; Minister of War, General Eduardo Ferrero; Minister of Marine, Vice-Admiral Baron F. Acton; Minister of Public Works, Antonio Baccarini; Minister of Agriculture, Industry, and Commerce, D. Berti, successor to Carlo Miceli; Minister of Public Instruction, Giambattista Bacelli.

**STATISTICS.**—The total population of Italy, according to the census of December 31, 1881, and of each of the main political divisions, with their areas in square kilometres (one square kilometre = 0.386 square mile), were as follow ::

POLITICAL DIVISIONS.	Area.	Population.
Piedmont.....	29,494	3,070,879
Liguria.....	5,407	892,373
Lombardy.....	24,205	3,850,615
Venetia.....	24,025	2,514,173
Emilia.....	20,749	2,138,391
Umbria.....	9,474	572,060
The Marches.....	9,835	989,279
Tuscany.....	24,062	2,208,516
Rome.....	12,170	903,472
The Abruzzi and Molise.....	17,008	1,817,315
Campagna.....	16,556	2,506,579
Apulia.....	20,510	1,587,713
Basilicata.....	10,854	524,886
Calabria.....	15,048	1,267,907
Sicily.....	25,798	2,928,841
Sardinia.....	23,342	632,002
Total.....	288,589	28,450,451

The population of the principal cities was as follows:

CITIES.	Commune.	Town.
Naples.....	494,314	468,172
Milan.....	321,839	214,004
Rome.....	300,467	272,010
Turin.....	252,832	226,307
Palermo.....	244,991	205,712
Genoa.....	179,515	138,081
Florence.....	169,001	122,039
Venice.....	132,826	129,276
Messina.....	126,497	76,982
Bologna.....	123,274	103,998
Catania.....	100,417	97,355
Leghorn.....	97,615	77,781
Ferrara.....	75,518	25,814
Padua.....	72,174	47,384
Verona.....	68,741	60,708
Lucca.....	68,063	20,421
Alexandria.....	62,464	30,761
Brescia.....	60,680	43,354
Bari.....	60,575	53,266
Ravenna.....	60,573	12,100
Modena.....	58,053	81,053
Pisa.....	53,924	26,557
Pistoia.....	51,552	12,224
Perugia.....	51,354	17,395
Reggio.....	50,651	18,694
Ancona.....	47,739	28,557
Parma.....	45,217	44,492

The emigration in 1881 amounted to 135,832 persons, against 119,901 in 1880, 119,831 in 1879, 96,263 in 1878, 99,213 in 1877, and 108,771 in 1876.

The number of marriages and births and deaths, including still-births, for the last five years reported, was as follows:

YEAR.	Marriages.	Births.	Deaths.	Excess of births.
1876.....	225,453	1,116,790	829,439	287,351
1877.....	214,972	1,060,443	819,223	241,220
1878.....	199,885	1,048,730	844,835	193,895
1879.....	213,096	1,097,773	870,307	227,471
1880.....	196,738	983,305	900,397	82,908

The Roman Catholic faith is nominally the state religion; but since the establishment of the kingdom and the subsequent suppression of the temporal government of the Pope, the church and the clergy possess no authority in the state that is not regulated by the Government, which has placed all creeds on practically the same footing. There have been futile attempts, under the new laws, to propagate Protestant creeds. Of the total population in 1871 of 26,801,154 souls, 26,658,679, or 99½ per cent, were Catholics, 58,651 Protestants, 35,356 Israelites, and 48,468 of other faiths and professed non-believers. There are 45 archiepiscopal and 198 episcopal sees, many of which, during the conflict between the Government and the Church, have been left vacant, owing to the refusal of the Government to accept the nominees of the Pope, the royal consent being necessary for their installation. The number of religious houses was reported in 1865 to be 2,382; the number of religious persons, 28,991, of whom 14,807 were men and 14,184 women. The proportion of priests to the general population was reported in 1869 to be 7 per thousand, the average proportion

in other Catholic countries being 4½ per thousand. The Siccardi law, passed by the Sardinian Chamber in 1850, and extended over the rest of Italy in 1861, had the effect of diminishing the number of the clergy by cutting off a great part of their incomes. In 1866 a law was passed abolishing the corporate existence of the religious orders and confiscating their property.

A large part of the confiscated property of the monastic establishments was applied to popular education. In 1882 there were primary schools maintained in 7,533 of the 8,276 communes. The number of teachers employed was about 41,000, of whom one half were women. The annual appropriation for the schools is 31,000,000 lire.\* There were also 7,422 private elementary schools, employing 7,422 male and 4,444 female teachers, and attended by 63,000 male and 92,228 female pupils. There are besides 11,161 evening schools for males and 492 for females, the former with 439,624, the latter with 16,063 scholars. In the twenty-two universities there were 12,580 students in 1878. An inquiry into the illiteracy of conscripts called into service at the age of twenty-one, in 1868, revealed the fact that 64·27 per cent at that time were without the rudiments of education. From statistics collected in 1871, the proportion of totally illiterate above six years of age was 42 per cent of the males and 53 per cent of the females, throughout Italy. In 1882 the proportion was found to have diminished to 35 per cent of the males and 47 per cent of the females. Between the ages of twenty and twenty-five there were 28 per cent fewer totally illiterate persons than ten years before. The proportion of illiterate conscripts decreased to 52 per cent† in the conscriptions of 1879 and 1880, about the same as in Hungary.

The lines of railroad in operation at the beginning of 1881 had an aggregate length of 8,713 kilometres. The receipts in 1880 were 180,106,819 lire. The total cost of their construction was 2,616,737,000 lire.

The post-offices in 1880 numbered 3,328; the number of letters and postal-cards sent, 165,824,944; of printed inclosures, 155,218,754; of postal-orders, 3,972,418. The receipts were 28,189,618 lire, and the expenses 24,357,935 lire.

The length of telegraph lines at the beginning of 1882 was 26,880 kilometres; of wires, 89,150, besides 185 kilometres of submarine cable. The number of dispatches sent was 6,250,496, of which 5,015,005 were private domestic, and 517,599 private international mes-

\* One lire = 19·3 cents.

† Austria has made more rapid progress than Italy in education. In 1867 the proportion of illiterate conscripts was about the same in both countries; but it has been reduced to 39 per cent in Cisleithan Austria. In France the proportion is only 14 per cent, in Belgium 19. In Germany, the levy of 1880 showed 1·37 per cent. In Württemberg there were virtually no illiterates arriving of age, in Bavaria only 0·47 per cent, and in other provinces low percentages; but in Slavie Posen the proportion rises to 11 per cent.

sages. The receipts amounted to 12,051,308 lire.

COMMERCE.—The special imports in 1881 amounted to 1,225,600,000 lire, the exports to 1,192,300,000 lire, as compared with 1,225,600,000 lire of imports and 1,132,300,000 of exports in 1880; 1,261,700,000 lire of imports and 1,170,000,000 of exports in 1879; 1,070,600,000 lire of imports and 1,045,300,000 of exports in 1878; 1,156,300,000 lire of imports and 953,200,000 of exports in 1877; and 1,327,200,000 lire of imports and 1,216,800,000 lire of exports in 1876. The falling off of exports in 1876 was due to a deficient harvest, the second in three years. Of the imports of 1881, cereals stood for 70,400,000 lire, which were nearly balanced by the exports; while in the preceding year the imports were 163,400,000 lire, and the exports 76,200,000 lire. The exports of wines, etc., amounted to 64,900,000 lire, against 51,000,000 lire the year before; the imports to 7,200,000, against 17,200,000 lire. Tropical produce was imported to the amount of 85,800,000 lire, against 65,000,000 lire the year before; tobacco to the amount of 17,700,000 lire. The exports of fruits, etc., amounted to 59,900,000 lire. The exports of animal-food products amounted to 85,300,000 lire, a decrease of 17,600,000 lire; the imports to 90,700,000 lire, an increase of 11,400,000 lire. The total imports of articles of consumption amounted to 290,000,000 lire, a decrease of 76,600,000 lire; the total exports to 286,600,000 lire, a decrease of 9,400,000 lire. The total imports of raw materials amounted to 341,900,000 lire, a decrease of 56,700,000 lire; the exports to 418,800,000 lire, a decrease of 3,300,000 lire. The coal imports, which amounted to 60,700,000 lire in 1880, almost ceased, and the metal imports declined from 57,900,000 lire to 36,200,000 lire. Textile materials, of the value of 194,600,000 lire, showed slight, and minerals, hides, etc., larger increments. The export of silk makes up the bulk of the exports of raw materials, the exports under the head of textile materials amounting in 1881 to 351,800,000 lire, being 6,800,000 lire more than the preceding year. The imports of manufactured articles amounted to 262,500,000 lire, a decrease of 23,500,000 lire; the exports to 118,200,000 lire, a decrease of 62,100,000 lire. There was a smaller importation of plant and partly manufactured articles, and an increased importation of articles for consumptive use. The imports of the miscellaneous class amounted to 344,500,000 lire, an increase of nearly 200,000,000 lire, and the exports to 340,900,000 lire, an increase of nearly 66,000,000 lire. The efforts to return to a specie basis increased the imports of precious metals from 39,500,000 to 93,100,000 lire, while the exports were 27,800,000 lire, against 28,900,000 lire.

The commercial intercourse with the principal foreign countries is shown in the following table, giving the imports from and the exports to each in millions of lire:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1880.	1881.	1880.	1881.
France .....	304	364	503	551
England .....	239	361	83	82
Austria .....	181	218	166	150
Switzerland .....	84	37	102	134

German Empire .....	87	66	78	68
South America .....	42	37	26	32
Turkey, Servia, and Roumania .....	85	27	14	17
Other countries .....	119	126	84	70
Total .....	1,225	1,332	1,132	1,192

The total number of vessels engaged in foreign commerce entering Italian ports in 1881 was 16,294, of 4,781,130 tons, of which 10,015, of 1,463,644 tons, sailed under the Italian flag; 12,911, of 3,881,172 tons, were laden; and 4,508, of 3,539,879 tons, were steamers, among them 979 Italian steamers, of 663,535 tons. The number departing was 15,663, of 4,429,872 tons, of which 10,860, of 2,980,280 tons, were laden, and 4,251, of 3,169,703 tons, steamers. The number of arrivals in the coasting-trade was 93,890, of 11,334,633 tons; the number of departures, 93,751, of 11,525,069 tons. Of the arrivals, 90,153, of 8,676,214 tons, were Italian, and 20,516, of 8,990,990 tons, steamers. The above returns do not include 352,235 vessels which put into port from necessity. The number of vessels registered in Italy was, in 1881, 7,815, of 989,057 tons, against 7,980, of 990,196 tons, in 1880. The sail-ships decreased from 7,822, of 922,146 tons, to 7,639, of 895,359 tons; the steamers increased from 158, of 77,050 tons, to 176, of 93,698 tons.

ARMY AND NAVY.—The Italian army is constituted on the system of universal liability to arms. Enough young men to keep up the active army are called into the service every year. The rest are drilled for forty days and enrolled in the reserve. The time of service in the standing army is three years in the infantry and five years in the cavalry. The carabinieri and certain of the administrative troops have the option of prolonging their time to eight years, which releases them from further liability to service. The time is reduced to one year, as in Germany, for such as are able to pass the requisite examination. By a law passed June 9, 1882, the war effective was augmented by 100,000 men. The army is now organized as follows:

STANDING ARMY.—Ninety-six regiments of infantry of the line and 12 regiments of bersaglieri, each regiment with 3 battalions of 4 companies and a depot, besides 6 regiments of Alpine troops, and 98 companies distributed over 87 military districts; 22 regiments of cavalry, each of 6 squadrons and a depot, besides 5 depots of remount; 12 regiments of field-artillery, each of 10 batteries, with 3 companies of train and a depot, 2 brigades of new flying artillery, of 2 batteries each, 5 regiments of heavy artillery, of 12 fortress or coast batteries and a depot each, and 2 brigades of

mountain-artillery of 4 batteries each, besides 5 companies of artificers and 1 of veterans; 4 regiments of engineers, comprising 2 of sappers, 1 of pontonniers, and 1 of railroad and telegraph troops; and 11 territorial legions of carabinieri, besides 1 of *élèves*. There are in the departmental services 4 companies in the invalid corps, 12 in the sanitary corps, and 12 in the commissariat, besides the *personnel* of the paymaster's department, the veterinary corps, the corps of administration, and the establishments and institutions of instruction, with 15 companies and 2 houses of correction connected with the penitentiary establishments.

**MOBILE MILITIA.**—Forty-eight regiments of line infantry, with 3 battalions of 4 companies each, 18 battalions of bersaglieri, of 4 companies each, and 36 companies of Alpine troops; 13 brigades of field-artillery, of four batteries each, 32 companies of artillery for fortress and coast service, and 4 batteries of mountain-artillery; 25 companies of engineers, formed into 5 brigades of sappers, 1 of pontonniers, 1 of railroad troops, and 1 of telegraphists; 12 companies in the sanitary service, and 12 in the commissariat; and the special militia of Sardinia, consisting of 3 regiments of line infantry, 1 battalion of bersaglieri, 1 squadron of cavalry, 1 brigade of field-artillery, etc.

**TERRITORIAL MILITIA.**—Three hundred and twenty battalions of infantry, of 4 companies each; 30 battalions of Alpine troops, forming 72 companies; 100 companies of heavy artillery, and 30 of engineers. The territorial militia is required to drill only thirty days every four years, but may be called into camp for a portion of this time every year.

The nominal war effective of the Italian army was 1,990,000 men; 690,000 in the standing army, 300,000 in the mobile militia, and 1,000,000 in the territorial militia. The new law adds 100,000 by increasing the annual contingent of the standing army. The effective on September 30, 1881, was as follows:

<b>Standing army:</b>	
Infantry .....	251,152
Military districts .....	284,007
Alpine companies .....	16,050
Bersaglieri .....	42,741
Cavalry .....	86,012
Artillery .....	62,544
Engineers .....	14,733
Carabinieri .....	19,637
Subsidiary services .....	12,096
Officers .....	14,710
<b>Total .....</b>	<b>733,712</b>
<b>Mobile militia:</b>	
Line and bersaglieri .....	267,067
Artillery .....	22,606
Engineers .....	8,068
Officers .....	2,840
<b>Total .....</b>	<b>295,061</b>
<b>Territorial militia .....</b>	<b>825,084</b>
<b>Total war footing .....</b>	<b>1,856,036</b>

The navy consisted in 1881 of 72 vessels. (See NAVIES OF EUROPE.)

**FINANCES.**—There have been annual deficits since the establishment of the kingdom, aver-

aging nearly 500,000,000 lire, or francs, between 1863 and 1868, and over 200,000,000 lire from the latter year down to 1876. The deficits have been much smaller of recent years, and shown a tendency to decline, the accounts for 1878 actually exhibiting a small surplus. The financial estimates have almost invariably overstated the revenue, while the expenditures turned out to be greater than was calculated, mainly on account of the excessive disbursements for the army. There was a saving on the estimated expenditures of 6,000,000 lire and an increased productiveness of the taxes of 43,000,000 beyond the estimated amount. The income tax, the register and stamp duties, the grist-tax, the building-tax, and the customs, all showed augmented receipts, the increase in the custom-house receipts amounting to nearly 19,000,000 lire. The tobacco duties and the octrois, in which the state shares, showed, on the other hand, a falling off.

The budget estimates for 1882 place the ordinary receipts at 1,360,842,338 lire, the ordinary expenditures at 1,321,405,359, and the extraordinary receipts at 837,061,690 and expenditures at 857,998,509 lire; total receipts 2,197,904,028, and expenditures 2,179,403,868 lire, leaving an estimated surplus of 18,500,160. The large increase over the receipts and expenditures of the foregoing years is due to the raising of a loan of 650,440,000 lire and its application to the resumption of specie payments. The product of direct taxes, embracing the land, building, and personal property taxes, is estimated at 381,627,451 lire; of stamps, registry and succession duties, tax on railroad receipts, etc., 169,021,900 lire; of state and ecclesiastical funds, 27,228,750 lire; of customs duties, imposts on the manufacture of beer, powder, etc., monopolies of tobacco and salt, octrois, and grist-tax, 472,199,245 lire; of the state lottery, 72,500,000 lire; of the railroads, telegraphs, posts, and other public services, 116,201,825; from other sources, 17,823,559; compensatory, or repayable receipts, 94,237,608. Of the extraordinary receipts, 28,957,805 lire come from the sale of ecclesiastical property, domains, etc., 28,886,688 from the recovery of debts, 668,077,185 from new loans, and 102,188,317 from funds for the construction of new railroads. The interest on the consolidated debt consumes 428,393,509 lire of the ordinary expenditures; interest on the temporary debt, 42,077,218; liquidation of debts, 41,915,039; annuities for the purchase of railroads in Upper Italy, 28,981,095; the floating debt, 42,869,714; pensions, 21,374,024; civil list and appanages, 15,250,000; expenses of collection and administration, 133,233,800. The annual dotation of 3,225,000 lire, granted to the Supreme Pontiff, has been refused by the present as well as the late Pope, and is paid over to the ecclesiastical fund.

The public debt amounted to 2,439,000,000 lire in 1860, the year before the consolidation of the monarchy. The constant deficits had

increased it to 9,750,000,000 lire in 1873, made up as follows:

	Lire.
Funded debt.....	7,091,829,661
Redeemable debt.....	1,642,773,107
Treasury bonds.....	183,010,500
Paper currency.....	840,000,000
Total.....	9,757,613,268

The consolidated debt, except a small portion, bears interest at 5 per cent. The interest on most of the redeemable loans is also 5 per cent, though some bear 3 per cent interest. The total expenditure on account of the public debt in 1881 was 527,611,000 lire.

The gradual reduction of the enormous deficits of twenty years, and the final attainment of a surplus, notwithstanding heavy incidental expenses and considerable remissions of taxes, has occurred during Magliani's ministry, and is to some extent his work. The Minister of Finance, in presenting the most satisfactory financial statement ever heard in Italy, expressed the belief that the forced paper currency would be abolished in accordance with the law, and that the remaining grist-tax would be removed by 1884, the date set, but that it would be unsafe to exceed the limit of military expenditures agreed upon with the Minister of War, which is 200,000,000 lire a year, besides the extraordinary army expenditures for projects which will take 324,000,000 between 1880 and 1885.

FOREIGN RELATIONS.—The progress made by Italy in the direction of good government and well-ordered finances has not occupied the thoughts of the Italians as much as foreign affairs. Besides the differences with the Pope, which have been aggravated recently, the volatile Italian public has been in a constant fever over questions of foreign policy. The Government, of which Bismarck made the famous speech, that one step further to the Left would plunge Italy into the abyss of republicanism, has been prudent enough when it came to final action; but to court the popular favor it has endeavored to secure the extension of Italian power in various ways, and been repeatedly obliged to withdraw from an untenable position, while at home it has allowed the Irredentist and Anti-Clerical Radicals to compromise it by their inadequately rebuked excesses. At the beginning of the year the irritation over the French seizure of Tunis was still acute. The Italians, in their desire for external expansion, had first cast their eyes on Albania, where their consular agents were long busy preparing the way for Italian annexations on the opposite shore of the Adriatic. When the Berlin Congress commissioned Austria to take possession of Bosnia and Herzegovina, the idea of "compensation" for Italy was suggested in the press, while the Irredentist longings for the acquisition of the Trentino, Istria, and Dalmatia, were agitated afresh. Count Corti, the then Minister for Foreign Affairs, was wise enough to avoid exposing

his country to the certain rebuff which the advocates for compensation would have risked, although he sacrificed his popularity by his decision. The Italians next turned their attention to Tunis. The Italian diplomatic agent, Maccio, and the French agent, Roustan, engaged in a conflict for predominant influence in the regency, which the republic ended by invading the territory of the Bey, on the pretext of punishing the Kroumirs, and reducing him to the condition of a French vassal. The helpless position in which they stood when their prize was wrested from them, led the Italians to abandon their policy of keeping their "hands free," and sinking their differences with Austria, to seek an understanding with the German powers.

The Papal question was another element in the situation. At the beginning of 1882 Bismarck was seeking to arrange a *modus vivendi* with the Vatican, and courting the support of the Clerical party for his internal schemes. Simultaneously, the Pope for the first time took a firm and vigorous stand for the rights of the Church. The alarm of the Government circles was not justified by any immediate interposition of foreign influence; but the question seems to be arriving at a phase where, if Italy does not assure to the Church a tolerable status, other powers will intervene.

The European situation forbade anything further than a platonic friendship with the German powers, which would be the last in Europe to support Italy in any schemes for immediate territorial aggrandizement. When the Egyptian question arose, Italy relied on this alliance and the European concert to secure her the position in Egypt which she has long demanded, and refrained from seizing the opportunity to co-operate with England after the retirement of France. The stand which she took in the negotiations was a more dignified and important one than had before fallen to her share in the European concert (see EGYPT). The bold and rapid action of England produced an outburst of angry denunciation in Italy similar to that called forth the year before by French operations in Tunis. If the apathy of Germany continues, and England is permitted to take full possession of Egypt, Italy will perhaps awaken from her dream of empire and discover that, in spite of her expensive armaments she is a great power only on sufferance. By the settlement of the Papal question, without the sacrifice of unity or liberal institutions, by calling all her citizens into her political councils, and by reducing the burden of military expenditure, Italy can not only develop her internal resources and improve the material condition of her people, but extend her commerce in the undeveloped parts of the world without the aid of cannon and protectorates. There is no people in Europe with equal faculties for endurance, economy, application to details, and all the practical elements of success, when not misled by impracticable illusions.

The Government has pursued a scheme for extending Italian commerce in East Africa, ever since the opening of the Suez Canal. In 1870 the head of the Rubattino Steam Navigation Company purchased a strip of coast in the bay of Assab, in the Red Sea, on the eastern coast of Africa, north of the Strait of Babel-Mandeb. In June the Chambers passed a bill authorizing the Government to acquire the territorial rights purchased by Rubattino from the native chiefs, and establish a colony there. The law exempts the colony from taxation for thirty years, makes the port free to all the world, and empowers the Government to grant concessions of land to Italians, natives, or strangers. The Mussulman laws are to be administered to Mohammedans, and Italian laws to Europeans. The Government proceeded to establish the trading colony. England raised a question as to the rights acquired by the Italian Government. The Porte claimed suzerainty over the African shores of the Red Sea, and the Khedive asserted these powers by delegation from the Porte. England had herself purchased territorial rights in these regions from the native chiefs, but afterward, when the Khedive, Ismail, seized upon territories of the Sultan of Zanzibar, she recognized the assumed sovereignty of Egypt over the east coast of Africa, as far as the ninth parallel of latitude. After taking possession of Egypt, England induced the Khedive to revive his claim of jurisdiction over this region in order to exact conditions from Italy with respect to this, her first colonial establishment. The extent of the territory acquired was also called in question. Italy was fain to agree to the demands of the British Government, which were that no fortifications or military forces should be maintained in the colony, that a large portion of the acquired territory should be relinquished, and a corollary with reference to the suppression of the slave-trade.

The commercial treaties with England, Germany, Belgium, Spain, and Switzerland were extended until June 30, 1883. A resolution was adopted recommending that they should not be prolonged after that date, and that, if arrangements could not be made like those with France and Austria, retaliatory duties

should be imposed on imports from countries which subject Italian products to differential treatment.

**LEGISLATION.**—The extension of the suffrage which was passed in 1881 was supplemented before the close of the session by the change of the mode of elections to the *scrutin de liste*, or collective ticket, which was adopted by a vote of 286 to 133. The completion of the Government project for electoral reform was the only important result of the session. With this accomplished, and the arrangements for the return to specie payments made and for the needed revision of the tax system under way, Mancini announced in the royal address at the reopening of Parliament the inauguration of important projects of social reform.

**PUBLIC EVENTS.**—The death of Garibaldi in June called forth an exhibition of national regret and gratitude which has not been equaled upon the departure of any man of modern time. In obedience to the will of the nation, the body of Garibaldi was not burned, as he requested, but was given a state funeral. The celebration, on March 31st, of the anniversary of the Sicilian Vespers, was the occasion of another of these demonstrative exhibitions of patriotism. The Republicans and Irredentists were unusually noisy in 1882. The crime of Overdank, which he expiated in Trieste (see AUSTRIA), was made the subject of political demonstrations in the latter part of the year. The press and the public elevated the executed conspirator into a national hero. The Austrian envoy to the Papal court, Count Paar, was attacked in the street by a man named Valeriani. Though the Radicals applauded this double insult to Austria and to the Church, the Government proceeded more vigorously to suppress these dangerous manifestations, confiscating newspapers and arresting agitators.

Northeastern Italy was visited in the autumn by devastating floods like those which occurred on the other side of the Alps in Tyrol. Verona and the whole valley of the Adige were inundated. The sufferers were relieved by aid sent from all parts of the kingdom; but the crops, the mills, and houses of large tracts of country were destroyed.

## J

**JAMES, HENRY**, died at his home in Cambridge, Mass., on December 18th, at the age of seventy-one years. He was a graduate of Union College, and studied at the Princeton Theological School, though he never entered the ministry. He is chiefly known as an able and brilliant writer upon theological and allied themes, his chief works being "Moralism and Christianity," "The Church of Christ not an Ecclesiasticism," "The Nature of Evil," "Christianity the Logic of Creation," and

"Lectures and Miscellanies." Professor William James, of Harvard, and the well-known novelist, Henry James, Jr., are his sons.

**JAPAN**, an empire in Eastern Asia. The supreme power resides in the Tenno, or Emperor, usually called the Mikado, who acts through an executive ministry. The reigning Emperor is Mutsu Hito, born November 3, 1852, who succeeded his father, Komei Tenno, in 1867. The succession is limited to the four imperial families known as the Shi Shinno, and usually de-

volves upon the most distinguished or powerful relative of the Emperor. The throne has often been filled by a woman, but she must take a husband, who must be a member of one of the royal houses. The government is constituted in part on European models, the Mikado ruling in accordance with the counsels of his regularly appointed advisers. These are the Ministry, which was established in imitation of European cabinets; the Council of State, of an indefinite number of members; and the Senate, composed of thirty-two members, most of whom are persons who have filled high posts. The first president of the Council of Ministers is Sandjo, the second Prince Arisugawa, the third Iwakura. The ministers at the head of the different departments are: Foreign Affairs, Inuye; Interior, Yamada; Finance, Matsukata; War, Oyama; Marine, Kawamura; Agriculture and Commerce, Saigo; Public Works, Sasaki; Justice, Ogi; Instruction, Fukuoka; Imperial Household, Takeda; Postmaster-General, Nomura.

**AREA AND POPULATION.**—The area and population of Japan, on January 1, 1880, were as follow:

ISLANDS.	Square miles.	Population.
Hondo, or Nippon .....	86,435	27,242,847
Kiushiu .....	14,598	5,212,997
Shikoku .....	7,008	2,618,142
Iki, Tsushima, Awadji, Oki, and Sado .....	998	377,271
Total Japanese islands .....	109,339	35,451,257
Yezo and Curles .....	35,866	163,355
Liuchiu .....	1,556	310,345
Bonin Isles .....	83	156
Total empire .....	147,094	35,925,313

The number of males was 18,210,500; of females, 17,714,813. The density of the population is 325 inhabitants to the square mile on the Japanese islands, about equal to that of the Netherlands, and 244 for the whole empire, or about the same as in Italy.

The population of the empire, on the 1st of January, 1881, is stated to be 36,357,212, classified according to rank as follows: Emperor and family, 5; royal house, 34; Kazokou, 3,146; Shizokou, 1,933,882; Heimin, 34,415,392; and 4,753 persons whose class is not known. The number of Ainos, or aborigines of the Island of Yezo, is estimated by the most recent travelers at only about 17,000. The number of foreigners residing in Japan in 1879 was reported as 2,398 Europeans and Americans, and 3,649 Chinamen.

The city of Tokio had, in 1878, 796,785 inhabitants, and, with the suburbs, 1,064,333. The population of the city was returned, in 1879, as 811,510, and, in 1881, that of the city and suburban districts as 1,140,566. The next largest city is Osaka, the population of which was returned, in 1881, as 291,086. Kioto had 229,810 inhabitants in 1877. Kagoshima, the principal city of the Satsuma Province, has not been enumerated. Nagoya had, in 1880,

a population of 114,978; Kanazawa, in 1877, 108,263; Hiroshima, 75,760; Yokohama, in 1879, 67,499. There are forty other towns of over 20,000 inhabitants.

The number of post-offices, in 1880, was 4,377. The number of letters carried was 34,627,343; of postal-cards, 17,345,212; of newspapers, 14,256,795; total number of mis-sives, 68,944,782, against 55,775,206 in 1878-'79. The receipts amounted to \$1,173,692; the expenses to \$1,091,900.

The length of telegraph in operation, in 1882, was 3,929 miles; of wires, 9,345 miles. The number of dispatches forwarded, in 1881, was 1,272,756.

The total length of railroads in operation was about 100 miles, consisting of short lines connecting Tokio with the port of Yokohama, Osaka with Hiogo and Kioto, and the latter place with Otsu, besides a line on the Island of Yezo, between Otarunai and Sapporo.

**COMMERCE.**—The total imports and exports for the last six years reported were as follow:

YEAR.	Imports.	Exports.
1879 .....	\$32,681,000	\$28,364,000
1878 .....	33,334,392	26,259,419
1877 .....	25,900,541	22,566,708
1876 .....	29,969,004	27,578,851
1875 .....	28,174,194	17,917,845
1865 .....	14,076,988	13,491,480

The staple imports are cotton and woolen fabrics. The imports of European cotton goods in 1879 amounted to \$12,112,000, against \$12,739,000 in 1878; of woolen goods, \$4,172,000, against \$4,637,000; of cotton and woolen mixed, \$1,308,000, against \$1,156,000. The imports of metals amounted to \$1,645,000; of miscellaneous merchandise, \$8,288,000; of Asiatic products (sugar, cotton, etc.), \$5,106,000. The exports of staple articles for 1879 and the preceding year are given in thousands of dollars in the following table:

EXPORTS.	1879.	1878.
Raw silk .....	11,148	8,995
Silk cocoons .....	583	683
Tea .....	7,446	4,413
Copper .....	854	886
Tobacco .....	142	108
Vegetable-wax .....	330	106
Camphor .....	457	310
Coal .....	755	857
Dried fish .....	1,288	1,081
Rice .....	1,029	4,642
Various merchandise .....	4,392	4,248
Total .....	28,364	26,259

The foreign commerce of Japan is divided mainly between Great Britain and the United States, the American share being less than half as great as the British.

Of 992 vessels, of 1,101,502 aggregate tonnage, entering Japanese ports in 1879, 286, of 464,346 tons, were Japanese; 408, of 351,144 tons, British; 153, of 191,488 tons, American; 29, of 44,286 tons, French; and 87, of 37,034 tons, German.

**ARMY AND NAVY.**—Universal and obligatory military service was introduced by an edict of 1875; but exemptions for various causes or for a money price, which is fixed at \$270, are allowed. By the reorganization of the army in 1879 the military forces are divided into four classes, corresponding to the military organization of the German Empire: 1. The active army, recruited by lot from all able-bodied young men as they reach the age of twenty, the time of service being three years. The active army comprises the army of the line and the Imperial Guard, which is composed of picked men from the line regiments who have served six months, and who remain three years longer in active service. 2. The active army reserve, formed of the soldiers who have served their time in the active army; they remain three years in the reserve, and are called out to drill a short time every year. 3. The Landwehr, which is trained in military exercises annually. 4. The Landsturm, composed of all between seventeen and forty years of age who are not in the active army or the reserve; they are to be called out in the case of invasion when the active army and reserves are already in the field. According to the new law, advancement to the grade of officers depends on merit and intelligence. The Guard consists of 2 regiments of infantry, a squadron of cavalry, and a division of artillery. The army of the line is composed of 14 regiments containing 3 battalions of 4 companies each of infantry, 2 squadrons of cavalry; 9 divisions of artillery, each containing 2 batteries of 6 cannon; 9 companies of heavy artillery, and 9 of engineers. The effective in 1880 was as follows:

ARMY.	Peace footing.	War footing.
Infantry (46 battalions).....	86,106	41,382
Cavalry (8 squadrons).....	507	567
Artillery (120 guns).....	3,206	3,800
Engineers (10 companies).....	1,570	1,840
Train (6 platoons).....	510	680
Ministry of War, staff, etc.....	588	588
Gendarmerie and police.....	18,473	18,473
Total.....	61,680	68,180

The navy consists of 31 vessels with 196 guns, including five ironclads, one of which is a frigate with casemates, one a turret-ship, and three corvettes.

**FINANCE.**—The budget for 1879-'80 places the total revenue at 55,651,379 yen, or dollars, and the total expenditures at the same amount. (The gold yen, which is the unit of account, is almost identical in value with the American gold dollar. The silver yen is the same in weight and fineness with the Mexican dollar, and is exactly equal in value to the American trade-dollar. The paper yen, of which there is a large quantity in circulation, is at a discount usually ranging from 25 to 30 per cent.) The total revenue and expenditure in the preceding three years were as follow:

YEAR.	Receipts.	Expenditures.
1876-'77 .....	\$59,481,086	\$59,308,956
1877-'78 .....	52,444,308	48,534,494
1878-'79 .....	61,862,109	59,615,208

The revenue and expenditure for the year ending June 30, 1881, is taken in the budget estimate as \$59,933,507. The estimates for 1882-'83 place the total at \$66,814,122. Of the estimated receipts \$42,945,853 come from the land-tax, and \$10,512,806 from the tax on the manufacture of saké and other alcoholic liquors. Only \$2,600,330 are derived from customs duties. The net profits of the railroads, mines, mint, and other public undertakings, are estimated at \$2,001,166. Of the expenditures \$23,293,204 are on account of the public debt, \$15,055,592 for interest, and \$8,237,612 for liquidation. The civil list and appanages amount to \$1,398,785. The sum of \$1,200,000 is set aside as a reserve against famines. The expenditures for the military are \$6,605,872; for the navy, \$3,161,692; for justice, \$2,070,556; for provincial administration, \$4,185,081; for police, \$2,838,032. The Department of Agriculture and Commerce receives \$1,000,300. Among the extraordinary expenditures are \$5,260,000 reserved as a fund for the encouragement of industry, and \$703,100 for industrial undertakings.

There is a large domestic debt and a small foreign debt. The latter was raised in England, and consisted originally of a 9 per cent loan issued in 1870, of £1,000,000, and a loan of £2,400,000, bearing 7 per cent interest, which was placed in 1875, at the price of 92½. By the operation of a sinking fund the entire foreign debt had been reduced at the beginning of 1882 to £2,134,700. The home debt stood in July, 1880, as follows:

LOANS AT—	Amount.
Four per cent.....	\$11,152,650
Five per cent.....	46,412,555
Six per cent.....	42,104,420
Seven per cent.....	108,131,090
Eight per cent.....	12,245,275
Ten per cent.....	9,098,625
	\$229,139,615
Without interest .....	9,211,776
Total.....	\$238,351,391
Paper money in circulation.....	108,688,204
Total home debt.....	\$347,034,595

The mountainous character of the Japanese islands is strikingly shown by the fact that the tillable plains, inclusive of the cultivated mountain-vales, form only about 12 per cent of the total area. Mountain and valley alternate constantly, the only considerable plains being the alluvial bottom-lands at the mouths of the larger rivers.

The volcanic phenomena of these islands have not yet been examined to any extent. There are eighteen active and a much greater number of extinct volcanoes. Earthquakes are of continual occurrence, but destructive convulsions do not happen oftener than once in

twenty years on the average. Thermal springs are scattered all over the empire, and occur in places remote from the active volcanoes. They are counted by hundreds. Sulphur and neutral waters predominate, while decided chalybeate and alkaline springs are exceptional. The favorite temperature of 40–50° C. is common; but some, notably the sulphur-baths, reach the boiling temperature. The Hakone Mountains, in the Peninsulas of Idju and Atami, are particularly rich in hot springs.

Geological explorations have, until a recent examination, which has been confided to German geologists, been confined to researches for useful minerals. Gold, silver, quicksilver, tin, zinc, and lead are present in no great quantities; but copper and antimony are abundant, and coal and iron have been found in large quantities. Coal-beds have been discovered in numerous parts of the country, but principally on the Island of Yesso. They are not very thick nor of the best quality, but contain all varieties from the oldest anthracite to the most recent bituminous deposits. Petroleum is obtained in several provinces, but not in sufficient quantities to supply the home demand.

The climate of Japan, allowing for the wide difference in latitude between the northern and southern portions of the island empire, is essentially regulated by the monsoons. It takes its character from the warm, moist south winds of the summer and the cold and raw north and northwest winds of the winter. The east and west coasts vary considerably in climatic character. The coast-lands on the Yellow and Japan Seas resemble the opposite coast of the Asiatic Continent in their hot and moist summer and long and relatively cold winter, while the other side of the islands, under the influence of the Kuro Siwo, is characterized by cooler summers and milder winters and by constant moisture throughout the year. The winter is so severe as to limit the period of vegetation for most plants to five months in Yesso, to six months in middle, and to seven months of the year in southern Japan; the growth of even the evergreen trees is interrupted. Even in the south vegetation is still very backward in April; but in the beginning of May commences the luxuriant and rapid development of a flora which is tropical in its profusion and variety. The rich and strange insular flora of Japan deserves the attention which botanists have given to it. The Japanese themselves, by their careful descriptions and drawings of plants, which they were prompted to make by their national love of flowers and by their cultivation of the ancient Chinese medical art, have assisted the systematic botanists considerably to understand these peculiar forms which throw a new light on the questions of the development of the vegetable kingdom and the geographical distribution of plants. The climatic paradoxes are exaggerated in the familiar illustration of the bamboo and the palm growing side by side with the fir and the

evergreen oak. The bamboo reed is the product of artificial culture, and is not raised, except in spots, north of the Bay of Yeddo. The indigenous *Cycas revoluta* must be protected at Tokio by straw bands from the wintry frosts.

According to the seventh annual report of the Minister of Education, there are 28,025 common schools, of which 16,710 are public and the remainder private, an increase of 1,316 and 125 respectively within the year. There are, besides these, a great number of primary and kindergarten schools. The law of 1872 provided for the gradual establishment of 53,000 elementary schools. Of the 5,251,807 children of school age, 40 per cent are now receiving instruction. In the 31 public and 358 private middle schools 20,000 pupils are instructed. The zeal for knowledge attracts hundreds of students to the house of a private master, famed for thought and erudition, especially in European culture, and is comparable only to that displayed in Europe at the time of the revival of letters. The most famous of these leaders of youth is Fukusawa, of Tokio, author of many treatises on political and social subjects and translations from European languages. His students fill many important offices in the state. Some of them have established a newspaper, in which they criticise the acts of the Government with vigor and acumen. There are 112 daily newspapers and 132 periodical journals, with an annual circulation of 33,500,000 copies. The direction of the extraordinary intellectual activity existing in Japan is revealed in the character of the books licensed to be printed by the Interior Department. In 1881, 545 works on political subjects were issued, against 281 in 1880; 255 on law, against 207. In the natural sciences and mathematics there was a decrease, in the latter, from 116 to 107 only. Books on ethical subjects increased from 32 to 93; on historical subjects, from 196 to 276; on poetry and poetical works, from 491 to 556; on drawing and writing, from 127 to 339; on engineering, from 8 to 28; on commerce, from 70 to 113. School-books are more numerous than any other class, 704 having been published, 4 less than the preceding year. There were 266 journals founded in 1880, of which 47 succumbed. Of the 149 new newspapers started in 1881 only 35 survived. Only one paper of the 415 started in the two years was suppressed by the Government. The total number of works published in 1881 was 4,910, against 3,792 in 1880. Very many are translations or adaptations from European or American books.

FOREIGN RELATIONS.—Japan, like China, is bound in its commercial treaties with Western nations, under the lead of England, by harsh restrictions as to the amount of duties it is allowed to impose upon imports. The Tokio statesmen have endeavored for one or two years to secure a relaxation of these conditions in order to raise the larger revenues which are

necessary for the redemption of the forced paper currency, the extinction of the public debt, and the accomplishment of the important internal reforms which have been undertaken by the Government. Having appealed in vain to the British Government for the revision of the treaties, they propose to call a conference at Berne between representatives of Japan and of the European states to agree upon a common basis for new treaty arrangements. The commercial concessions granted, through the violent proceedings of Commodore Perry, to the United States in 1854, were promptly taken advantage of by England, which, however, demanded far harsher conditions from the intimidated Shogun. Instead of the general import duty of 20 per cent *ad valorem* in Commodore Perry's treaty, the treaty extracted by Lord Elgin in 1858 restricts the tariff on cotton and woolen manufactures to 5 per cent.

The case of O'Neil, tried for murder and convicted of manslaughter by the United States consul at Hiogo, and afterward pardoned by the President, called up in Congress the question of the constitutionality of the laws conferring, in virtue of treaty arrangements, criminal jurisdiction on consuls, vice-consuls, and ministers in Japan, China, and other countries of the East. Murders are almost never punished by these extra-territorial courts, because universal feeling demands the verdict of a jury.

JEVONS, WILLIAM STANLEY, English economist, was drowned while bathing in the sea, near St. Leonard's, on August 13th. Professor Jevons was the son of an iron-merchant, and was born September 1, 1835. His mother was the daughter of the author William Roscoe, and herself wrote poetry. Her son was educated in the Mechanics' Institution High-School at Liverpool and at University College, Lon-

don. From 1853 to 1858 he was assayer to the Royal Mint in Sydney, Australia. He devoted his leisure to scientific observations, the fruit of which was "Data concerning the Climate of Australia and New Zealand." Returning to England, he completed his studies at University College, graduating with honors and becoming a Fellow. In 1866 he was appointed Professor of Logic and Philosophy, and Cobden Lecturer on Political Economy, in Owens College, Manchester. He published before this date works which established his fame as a thinker, a treatise on the "Value of Gold," one on the "Theory of Political Economy," and one on the "Coal Question." In the latter work he took the ground that the coal-supply in Great Britain would eventually become exhausted. His theory excited so much discussion that a royal commission was appointed to investigate the subject. Another work of the earlier period treated of "Pure Logic, or the Logic of Quality." After his connection with Owens College he published in 1869 his "Substitution of Similars the True Principle of Reasoning"; in 1870, "Elementary Lessons in Logic"; in 1871, the "Theory of Political Economy"; in 1874, the "Principles of Science"; and, subsequently, "Money and the Mechanism of Exchange." In 1876 he left Owens College to take the professorship of Political Economy in University College, London. A year before his death he gave up professorial duties to devote himself entirely to writing. In the "Principles of Science" were expounded his logical theories, which were a development of the mathematical method first applied by Boole. The "Theory of Political Economy" is the application of the same methods of reasoning to economics, and embodies his ripest ideas of the fundamental principles of that science.

## K

KANSAS. STATE GOVERNMENT.—The State officers during the year were as follow: Governor, John P. St. John, Republican; Lieutenant-Governor, D. W. Finney; Secretary of State, James Smith; Treasurer, John Francis; Auditor, P. J. Bonebrake; Attorney-General, W. A. Johnston; Adjutant-General, P. S. Noble; Superintendent of Public Instruction, H. C. Speer; Secretary of Board of Agriculture, F. D. Coburn; Insurance Commissioner, Orrin T. Welch; State Librarian, H. J. Dennis. Judiciary, Supreme Court: Chief-Justice, Albert H. Horton; Associate Justices, David J. Brewer and D. M. Valentine.

GENERAL CONDITION.—Referring to the general condition of the State at the close of the year, the new Governor, in his message to the Legislature, says:

An abundant harvest has rewarded the husbandman for his labor; the stock interests of the State

have been prosperous and remunerative, while labor has been fairly rewarded. All business has been reasonably productive, while the material wealth of the State has steadily and fairly increased, and demonstrates in an eminent and satisfactory manner that our State, while yet in its infancy, is capable of a development that will surprise the thoughtless, and create wonder and admiration in the minds of those who can appreciate the grand development of the past and contemplate its capabilities for the future.

The Secretary of the State Board of Agriculture shows in his report that our wheat-crop was over 35,000,000 bushels, worth over \$24,000,000, and over 157,000,000 bushels of corn, worth nearly \$53,000,000, with a value of our cereal crops alone over \$83,000,000, and a total value of all farm products of \$108,177,520.93, while our live-stock interests represent a cash value of \$83,874,530, making a showing of the capabilities of our young State that we can all rejoice at.

FINANCES.—The cash in the Treasury at the close of the fiscal year amounted to \$644,323.76, belonging to the several funds as follows:

General revenue.....	\$215,188 22
Capitol extension.....	5,882 23
Sinking fund.....	21,714 87
Interest fund.....	74,881 22
Permanent school fund.....	187,769 95
Annual school fund.....	103,726 00
Normal School permanent fund.....	8,578 71
Normal School interest fund.....	1,458 07
University permanent fund.....	10,695 82
University interest fund.....	6,767 99
Railroad fund.....	7,888 60
Military.....	272 03
Total.....	\$644,823 76

In addition to the cash in the Treasury, the sinking fund contained United States and State bonds to the amount of \$218,125. The State debt falling due in July, 1883, amounts to \$61,800, of which \$32,000 is now in the sinking fund, \$16,000 is held by the permanent school fund, \$800 by the State University fund, \$3,700 by the State Normal School fund, and \$8,900 by individuals. On the 1st of July, 1884, \$189,675 falls due, and of this amount \$2,125 is held by the sinking fund, \$47,425 by the permanent school fund, and \$140,425 by individuals. The income to the sinking funds from interest on investments and from the present rate of taxation will be ample to meet these obligations.

The next bonds fall due on the 1st of July, 1886, at which date \$100,000 mature; these, however, can be provided for by the Legislature of 1885.

The present rate of taxation of four tenths of one mill on the dollar, to pay interest on the bonded debt, will prove sufficient to meet all liabilities.

The permanent school fund, in addition to the \$187,769 cash in the Treasury at the close of the fiscal year, contained \$2,280,121.07 in United States, State, and school district bonds. This fund is rapidly increasing, and further legislation will be necessary to provide for its judicious investment. For the past four years a tax of one half mill on the dollar has been annually levied for the purpose of building the State Capitol. "I would suggest," says the Governor, "that this tax be discontinued, and that authority be given to borrow, from time to time, as it may be found necessary to successfully carry on the work, from the uninvested school fund, paying interest thereon at the rate of 4 per cent per annum." The amount subject to investment will soon be \$350,000.

The Legislature of 1879 discontinued the levy of a direct tax for school purposes, hence since that date the annual school fund has been derived wholly from the interest upon the invested permanent school fund, including interest on the unpaid principal of school lands sold, and the fifty-dollar tax on foreign insurance companies doing business in the State. This income from June 30, 1880, to June 30, 1882, amounted to the sum of \$542,928.70, to which should be added the balance in the Treasury July 1, 1880, \$116,000.48—making in all \$659,929.19.

The disbursements during the same period

were \$558,076.18, leaving a balance on hand, July 1, 1882, of \$100,953.01. The sum collected by the several school districts of the State by direct taxation for educational purposes during the same period amounted to \$2,791,825.85—making the total amount expended for the support of common schools in that time of \$3,350,002.03.

The State University permanent fund, at the close of the fiscal year, amounted to \$48,723.59, of which amount \$10,690.82 was cash in the Treasury, and \$38,027.17 in State and school-district bonds. The income from the invested fund, together with the interest on the unpaid principal of university bonds sold, for the two years ending June 30, 1882, amounted to \$12,106.05, to which should be added the balance of the interest fund in the Treasury, July 1, 1882, viz., \$518—making a sum total of \$12,624.05. Of this amount there was drawn from the Treasury during that period the sum of \$5,851.05, leaving a balance on hand to the credit of the State University interest fund on July 1, 1882, of \$6,767.99. The direct appropriations made by the Legislature for the support of this institution for the two years amounted to the sum of \$64,000.12. Of this amount \$63,826.79 was drawn from the Treasury, to which should be added the sum of \$5,851.06 interest fund expended—making a total of \$69,697.85.

The permanent fund of the State Normal School at the close of the fiscal year, June 30, 1882, amounted to \$85,073.71, \$26,475 of which is invested in bonds of the State of Kansas and school-district bonds. The balance, \$8,578.71, is cash in the Treasury. The income to this fund from July 1, 1880, to June 30, 1882, amounted to the sum of \$20,308.07, derived from the interest on bonds and interest on the unpaid principal of sales of Normal School lands. The appropriations made by the Legislature to the State Agricultural College for the two years ending June 30, 1882, amounted to the sum of \$36,729.09, of which \$17,979.09 was paid for the purpose of restoring the endowment and income funds, and the balance for buildings and experiments.

The following is a financial statement of the Penitentiary for the two years:

Cash earnings.....	\$89,548 94
Coal furnished state institutions.....	12,691 81
Improvements and buildings.....	18,467 25
Total earnings.....	\$120,702 50
Total expenditures.....	120,045 99
Balance in favor of prison.....	\$656 51

The total assessed value of the railroad property in the State is \$25,088,156.46; average per mile, \$6,786.43; gross earnings, estimated, \$45,000,000.

The extent and assessed value of the several classes of railroad property for the year 1882 were as follow:

Number miles of main track.....	3,697
Value per mile of main track.....	\$5,151 65
Total value of main track.....	\$19,155,571 00

Number miles of side track.....	346
Average value of side track per mile.....	\$2,000 00
Total value of side track.....	\$691,290 00
Value per mile of rolling-stock.....	\$1,145 84
Total value rolling-stock.....	\$4,288,989 00
Value per mile of tools, machinery, moneys, credits, etc.....	\$94 25
Total value of tools, machinery, moneys, credits, etc.....	\$348,911 29
Value of buildings.....	\$653,945 00
Total value of all property.....	\$25,088,156 46
Average value per mile of all property.....	\$6,786 49

The amount of taxes for all purposes paid by the several railroad corporations in the State of Kansas for the year 1881 was \$740,786.57.

This amount does not include taxes paid on lands, but includes only taxes paid on right of way, track, road-bed, rolling-stock, tools, materials, etc.

The following statement shows the taxes levied upon the property of the people of Kansas for the year 1881, *for all purposes* for which taxes are collected—State, county, city, township, and school district:

State taxes.....	\$857,553 64
County taxes.....	2,178,846 84
City taxes.....	513,117 83
Township taxes.....	612,377 16
School-district taxes.....	1,992,868 08

Total.....\$6,154,258 00  
Average rate on each \$100, \$3.60.

The State debt amounts to \$1,181,975.

#### COUNTY DEBT.

On July 1, 1880, the aggregate county indebtedness amounted to.....	\$7,676,894
Same debt in 1882.....	8,056,736
An increase of.....	\$386,842

#### TOWNSHIP DEBT.

Township debt, July 1, 1880.....	\$2,260,055
Township debt, July 1, 1882.....	2,250,847
A decrease of.....	\$9,707

#### CITY DEBT.

City debt, July 1, 1880.....	\$2,016,797
City debt, July 1, 1882.....	2,102,159
An increase of.....	\$85,662

#### SCHOOL-DISTRICT DEBT.

School-district debt, July 1, 1880.....	\$2,041,858
School-district debt, July 1, 1882.....	2,082,475
An increase of.....	\$40,617

Total debt—State, county, city, township, and school district—July 1, 1882, \$15,653,994.72. This is an increase in the last two years in the aggregate debt, of \$473,415, or 3 per cent. In the same period of time the taxable property of the State has increased 16 per cent. The aggregate debt of all kinds as stated above is equal to 8½ per cent of the taxable property.

STATISTICS.—According to the Secretary of the State Board of Agriculture, there were in the State at the close of the year, 1,404,488 head of neat-cattle, valued at \$49,192,408; 1,228,683 swine, valued at \$12,286,880; and 980,767 sheep, valued at \$2,942,301.

The State has 9,000,000 acres of land under cultivation; \$91,000,000 of taxable lands; \$22,000,000 of town lots; \$22,000,000 of railroad property; \$34,000,000 of personal property, or

an aggregate taxable valuation of \$170,000,000, the true valuation being \$341,000,000.

Of the 1,000,000 people in the State, 348,000 are of school age; 249,000 are enrolled, and 139,000 attend school. Eight thousand teachers are employed to teach in 5,752 school-houses, valued at \$4,800,000.

There have been planted in Kansas, since its settlement, forest-trees as follow:

VARIETY.	Acres.
Walnut.....	9,512
Maple (mostly soft).....	18,545
Honey locust.....	1,916
Cottonwood.....	47,863
Other varieties.....	67,669
Total acreage.....	189,995

The number of fruit-trees planted in the same time is as follows:

VARIETY.	Bearing.	Non-bearing.
Apple.....	3,023,110	3,590,388
Pear.....	97,369	164,302
Peach.....	5,983,140	4,089,808
Plum.....	293,474	389,516
Cherry.....	767,498	756,576
Total.....	11,169,597	8,940,981
Grand total of the five varieties of fruit-trees set out.....		11,169,597
		20,110,123

As a rule, the forest-trees have been set out under the timber-culture act, but a number of thousands have been started by farmers and others who have not a timber claim.

A rough estimate of the amount of spontaneous growth in Kansas is 20 per cent of the number of acres set out. This would make 27,945 acres.

GUBERNATORIAL RECOMMENDATIONS.—The Governor, in his message, makes the following observations and recommendations regarding the death-penalty, assessment of real estate, highways, etc.:

The law fixing the death-penalty should be amended. As it now stands, it is left discretionary with the Executive to issue his warrant to carry out the sentence of the court. No one is willing to exercise discretionary power in a case of life and death, while any Executive would obey the law and issue the warrant in such cases were it mandatory. The warrant then would issue as a matter of course, and the law, and not the Executive, would be responsible for its effect. Though I am clearly of the opinion that the court that renders the judgment and fixes the penalty of the law should provide for carrying into execution the sentence, I am aware that there is a divided sentiment as to whether or not the death-penalty should be invoked in cases of murder. But this is no excuse for leaving the law in its present unsatisfactory condition, as our manhood dictates that the death-penalty should be executed in a reasonable time after sentence, or that the horrors of an anticipated hanging should be ended by a sentence of imprisonment for life. The person who now commits the crime of murder, with all its attendant horrors, is on an equality with the criminal who steals but twenty dollars, and is free to murder his keeper, or the warden of the prison, with the assurance that a score of murders does not increase his punishment. There are now in the Penitentiary about twenty-five persons who are under the sentence of death, who have all the kindly treatment, and the benefits of all rules, and the laws

made to ameliorate the sad condition of prison-life, while the victims of their crime sleep in death, and the relatives of the deceased are taxed to feed and clothe the ones who robbed the wife of a husband, and the children of a father. The existing law is simply an evasion of a plain manly duty, and should be amended at once, though not made retroactive in its operations; it should be certain as to the murders committed in the future.

The present system of appraising or valuing real estate for taxation is very defective. This work is performed by township trustees and city assessors, and thus in many counties there are a dozen or more persons engaged who have different ideas on the subject of values, some interested in reducing them; while others may be giving honest and fair values to real estate, each appears to be anxious to have the land in his township valued less than the others in the county.

This system results in great inequality of appraisal, even in the same county, and places the taxable value of the real estate far below what it should be. While this does not benefit the tax-payer, or reduce or increase the amount of tax necessary to be raised, it works a real injury to the State, and especially our municipal organizations, by making the rate of taxation appear higher than it really is, and suggests to those not cognizant of the abuse of our system, a heavy rate of taxation, when in fact it is quite the reverse. It also fails to show the rapid increase of values, and the true value of the taxable wealth of the State.

I therefore recommend to your favorable consideration, as a means of remedying, in a measure, the more serious defects of the present system, the appointment or election of a county assessor, whose duty it should be to appraise real estate only, every third year, leaving trustees to appraise new structures, as now provided by law. This would secure an equal, or at least a more uniform, valuation of real estate, would come nearer ascertaining the true value of the wealth of our State, reduce the rate of taxation from fifty to one hundred per cent, furnish a potent and conclusive argument in favor of bringing wealth and population to our State, and take away all temptation to reduce values to save State taxation. It would also relieve county boards of the necessity of raising the value of each single tract of land in a township, for the purpose of protecting some townships against the wrongs of an intentional low assessment in another.

County boards have no authority now, under the law, to appropriate money out of the county Treasury for making or repairing roads. I have no special plan to suggest to remedy these defects of our road laws, but suggest that you give the matter serious attention, with a view of remedying the defects of the system, and securing better highways for the use of the public, in as economical and satisfactory a manner as possible. To this end I would recommend, however, that the Board of County Commissioners be authorized to levy a tax annually, not exceeding one mill on the dollar, to be used exclusively by the county board for the repair of, or grading roads, where public necessity may require such work to be done, as the means now provided by law are inadequate. There is no tax that could be levied that would be of so great a benefit to the farming interests, as one that could be used exclusively, in a prudent and economical manner, for the bettering of public highways, and none that will give a more immediate and beneficial return to the farmer for such a small expenditure.

The Governor also recommends an increase in the number of judicial districts, the appointment of a veterinary surgeon in connection with the Board of Agriculture, and an increase in the capacity of the insane asylums.

**RAILROADS.**—On the subject of railroads he says:

In addition to these oppressive discriminations against localities and individuals, these corporations have for ten years persistently defied the law in refusing to comply with the enactment requiring them to establish and keep their general offices within the State, but have moved them beyond our limits, and now even deny and defy the jurisdiction of our courts, thus violating the will of the people in this regard. And perhaps one of the worst features of this vexed railroad problem is the constant tendency on the part of railroad managers to manipulate the politics of the State; to seek not only to control conventions, to make platforms, to nominate and elect candidates, but also to improperly influence legislation by subsidizing and establishing newspapers, and by employing paid lobbyists to defeat proper legislation so that corporate greed may still override and oppress the people. Hitherto these wrongs have been borne patiently, and the people in their magnanimity have given the railroads every opportunity to prove themselves the real friends of the State, and for that reason have postponed legislative action, in the hope that these corporations would see the folly and injustice of their methods and adopt a wiser and more equitable policy. It seems, however, that forbearance on the part of the public has only emboldened these corporations to perpetrate still greater wrongs; for example, when it was ascertained that our wheat and corn crop of 1882 was a certainty, the railroads of the State at once advanced the rate of freight above the rate of last year, to such an extent as to place an additional burden upon the wheat and corn crops, amounting to over \$1,500,000, so that, as we increase the agricultural products of Kansas, the railroads adopt the unnatural policy of advancing their rates, thus preventing a good crop from returning any more money to the producer than a poor one.

Therefore I deem it my duty not only to call your attention to these evils, and to warn you of the danger of delay in dealing with them, but also to impress upon you the following propositions:

1. That railroads are public highways, created by the authority of the State, for the benefit of the State.
2. That railroads are common carriers, and as such shall receive and have the right to demand just and reasonable compensation for service rendered, and have no legal or equitable rights to charge excessive or exorbitant rates.
3. That all persons have a right to their use, on like conditions.
4. That the Legislature has the right and power to regulate them in all these respects and particulars mentioned, including the right to fix rates of freight and fare.

With these propositions in view it is clearly the duty of the law-making power to exercise a most thorough, fearless, and just management and control of its corporations, including telegraph and express companies, so as to prevent these valuable adjuncts of the business of the State from becoming oppressive monopolies. And should the Legislature, in its wisdom, deal with this important question as the public demand, and should it be decided that the railroads shall be placed under the control of a commission appointed for that purpose, I would fail in my duty to the State and to you did I not specially request that you shall fix by law, independent of any commission, the rate of passenger fare at three cents per mile, and that you provide by law, independent of any commission, that railroads shall be prohibited, under proper penalty, recoverable by civil action, from charging more for a short distance than for a long distance; that you shall fix by law, independent of any commission, a low but just and fair maximum rate of freight for coal, wheat, corn, oats, broom-corn, cattle, sheep, hogs, and lumber, so that no contingency of weather or combinations shall deprive the public of fuel at reasonable rates, or prevent the agriculturist and stock-raiser from getting his produce to market at reasonable rates and in the quickest time, so as to

give him the advantage of the best markets, and enable him to obtain a reasonable return from his labor and capital invested.

Railroads should not be permitted to increase their rates on any articles transported by them, until thirty days' notice posted in the station where the goods are received and delivered; and they should not be allowed to increase the rates on car-lots by excessive terminal charges, or for switching; and the rate per hundred pounds shall be specified in the shipping bill or receipt given for the article shipped, and the consignee should not be required to pay a greater rate than that named in the shipping bill or receipt.

The Union Pacific Railway Company, Kansas Division, received from the General Government, in the way of subsidies, six million acres of public lands, of which four million acres are in Kansas and two millions in Colorado. Notwithstanding this company came into possession of the lands over twelve years ago, it has neglected to take out patents, for the sole purpose, as is alleged, of evading taxation. On the first day of January, 1882, the total number of acres patented to this company by the Government was 883,772, leaving 3,116,228 acres of these lands still in the hands of the railroad company for all other purposes excepting taxation. These lands are to-day worth over \$13,000,000; and, at the rate of levy by the several counties on adjacent tracts, more than \$250,000 annually are thus withheld from the county and State Treasuries.

Efforts have been made by the State to obtain an act of Congress compelling the company to patent its lands.

**PROHIBITION.**—The Governor's observations on the prohibitory amendment are as follow:

At the session of the Legislature of 1879, a proposition to amend the Constitution of the State was adopted, to be submitted to the people at the general election, held November 2, 1880, in the following words: "The manufacture and sale of intoxicating liquors shall be forever prohibited in this State, except for medical, scientific, and mechanical purposes."

At the election in November, 1880, this proposed amendment to the Constitution was, by a majority of the votes cast upon that question, but not by a majority of the electors of the State, ratified, and became a part of the fundamental law of the State. The succeeding Legislature, in 1881, enacted a law whose provisions were intended to make the constitutional inhibition in respect to the traffic in intoxicating liquors effectual and operative.

The public policy embodied in this amendment and statute has been in force since their adoption, but during all that time this policy has been a failure, and injurious to the cause of genuine temperance, diverting immigration from our State, engendering strife in neighborhoods, promoting excessive litigation, loading down the dockets of the courts, making heavy cost bills to be paid by the people, inducing the clandestine use of intoxicating liquors in club-rooms and in the homes of the people, setting a frightful example of the use of intoxicating liquors before the young, drinking to excess caused by the purchase of liquors in quantities, and losing to the cause of temperance good and sincere temperance people by the meddlesome interference with the habits and established customs of long standing of many good and worthy citizens, by busy-bodies whose only ambition was to magnify their own importance, instead of working for real temperance.

It was premature, and indeed unfortunate, to have ingrafted into the fundamental law of the State a

policy which from its nature was an experiment of doubtful utility and of uncertain success, and which has proved a failure wherever tried in other States. Whatever mutations attend the ordinary statute law, it is of the first importance that the body of constitutional laws should be permanent and inflexible in its character.

During the last year of local option and license, the United States Revenue Office of Kansas issued 1,132 permits to sell intoxicating liquors, or one permit to 879 persons, placing Kansas as the first temperance State in the Union; while in the first year of prohibition there were issued 1,788 permits, an increase of 656, and also an increase of 58 per cent, or one permit to 551 persons, and taking Kansas from the first and ranking her the seventh temperance State, while in the first forty-five days of the second year of prohibition, 1,148 permits were issued, sixteen more than in the whole year of local option and license. If we consider these facts in connection with the clandestine sales of intoxicating liquors, and consider the vast amount that is daily delivered to individuals in concealed packages, by express companies, we are forced to the conclusion that the cause of true temperance reform has not progressed very rapidly under our present coercive system.

These, with other reasons that might be urged, constrain me to invite your attention to the necessity, or at least the policy and wisdom, of submitting to the people, in accordance with the provisions of the Constitution, a proposition to repeal the prohibition clause in the Constitution, and to amend the existing statute, with a view to rendering it less offensive to the people, and more effective in its operation. These views and suggestions are submitted in obedience to a public duty, rendered imperative by what I believe to be the wish of a large majority of the people who desire to overthrow true temperance, in lieu of the present free-liquor system.

**PARTY CONVENTIONS.**—The Republican State Convention met in Topeka, on the 10th of August, and made the following nominations for State officers: Governor, John P. St. John; Lieutenant-Governor, D. W. Finney; Secretary of State, James Smith; Auditor, E. P. McCabe; State Treasurer, Samuel T. Howe; Attorney-General, W. A. Johnston; Superintendent of Public Instruction, H. C. Speer; Associate Justice of Supreme Court, D. J. Brewer. Governor St. John was renominated by a vote of 287 to 76 for all others. Mr. McCabe is colored. The following is the platform adopted:

We, the Republicans of the State of Kansas in delegate convention assembled, affirming our faith in and adherence to the principles of the Republican party, hereby express confidence in our present national and State administrations, and we pledge ourselves to their support, and announce the following as our declaration of principles:

*Resolved*, That we declare ourselves unqualifiedly in favor of the prohibition of the manufacture and sale of intoxicating liquors as a beverage, and pledge ourselves to such additional legislation as shall secure the rigid enactment of the constitutional provision upon this subject, in all parts of the State.

*Resolved*, That we demand the enactment of such laws as will prevent unjust discrimination by railroad companies, and will provide for such freight and passenger tariff as shall fully protect the interests of the people.

That we are in favor of the strict and immediate enforcement of all laws now on the statute-book for the regulation of railways.

*Resolved*, That we request the Legislature of the State to submit to a vote of the women of the State the question of woman suffrage.

*Resolved*, That we request our delegation in Congress to secure such an amendment to the revenue laws as will prevent the issuing of receipts or stamps to sell intoxicating liquors to any persons other than those authorized so to do under State laws.

*Resolved*, That we ask of the Republican majority of the Congress of the United States to pass such laws as will compel the railways of this State to take patents for the lands granted them from the public domain, to the end that all property in this State shall pay its just proportion of the taxes levied to support the government.

*Resolved*, That the Republicans of Kansas heartily indorse President Arthur's veto of the extravagant River and Harbor Bill, and the action of the united Kansas delegation in sustaining that veto.

By other conventions the following nominations were made for Representatives in Congress: First District, John A. Anderson; Second District, D. C. Haskell; Third District, Thomas Ryan; at large, S. R. Peters; at large, E. N. Morrill; at large, Louis Hancock; at large, B. W. Perkins.

The Greenback State Convention met in Topeka, on the 22d of August, and made the following nominations: For Governor, Charles Robinson; Lieutenant-Governor, J. G. Bayne; Secretary of State, A. P. Elder; Auditor, W. A. Garretson; Treasurer, J. H. Ludlow; Attorney-General, J. D. McBryan; Superintendent of Public Instruction, J. S. Whitman; Associate Justice of Supreme Court, L. C. Uhl; Congressmen-at-large, H. L. Phillips, S. N. Wood, John Davis, and Allen Williams (colored).

The Democratic State Convention met in Emporia, on the 30th of August, and nominated the following ticket: Governor, George W. Glick, of Atchison; Lieutenant-Governor, Frank Bacon, of Neosho County; State Treasurer, Charles E. Gifford, of Clay Center; Auditor of State, W. E. Brown, of Rice County; Attorney-General, — Moore; State Superintendent, D. E. Lantz, of Riley County.

The following were nominated for Congressmen-at-large: C. A. Leland, of El Dorado; John C. O'Flanagan, of Pottawattamie.

The platform adopted is substantially as follows:

The Democratic party of the State of Kansas, in convention assembled, recognizing the people as the source of all political power, and the Constitutions of the United States and the State of Kansas as the fundamental laws of the land, and that the chief object and end of government is to protect and defend its citizens in the enjoyment of life, liberty, and property, does declare its political faith and purposes. . . .

2. We will defend and ever maintain the doctrine of equal rights to all and special privileges to none, the protection of the weak against the strong, equal and just taxation, free speech, free press, free schools, and a free, uninterrupted ballot fairly given and honestly counted, freedom for all men and women of every race, creed, and color, and a perpetual and absolute separation of Church and State.

3. We demand a revision of the present unjust tariff laws of the United States: no kind of industry should be fostered by the Government to the injury of another; no class of men should be taxed directly or indirectly for the comfort, convenience, or interest of another; that every description of industry should stand or fall upon its own merits, and we especially

demand that agricultural pursuits and productions be encouraged and made free from all unjust discrimination in favor of gluttonous and selfish corporations.

4. We maintain that the State has and must retain the power to control and regulate the right and duties of all corporations created by it, and we demand that the Legislature exercise this power so as to protect the people against unjust discrimination and exorbitant charges for the transportation of freight and passengers by railroad corporations, and we particularly demand the enactment of such laws as will compel all corporations existing by the favor of the laws of this State to keep and maintain their general offices within the State. . . .

7. We demand that the relations between capital and labor be so adjusted by wise and just legislation as to secure to each its just rights, and at the same time to make it impossible for avarice and greed to override and imperil the rights, interest, personal freedom and independence of working-men; and we demand that every law, combination, and policy that is unjust and too onerous upon those engaged in manual labor be removed and utterly destroyed. . . .

9. We demand an immediate reduction of taxes, Federal, State, and municipal, to the lowest rate sufficient to meet all public dues and obligations. So long as the people are burdened with debt, the industries of the country suspended by labor-strikes, and thousands of men out of employment by reason of the tyranny, avarice, and cupidity of exacting and oppressive monopolies, it is neither right nor just to collect money from the people to be squandered by an incompetent, reckless, and corrupt Congress in the pretended improvement of stream-harbors and waterless rivers; and we further demand that the surplus money in the Treasury be applied in payment of our national debt.

10. We demand that the Congress of the United States propose and submit to the States for their action such amendments to our Federal Constitution as will accomplish the following objects: 1. The election of a President and Vice-President by a direct vote of the people. 2. The extension of the term of office of President and Vice-President to six years, and making the President ineligible for a second term. 3. The election of United States Senators by a direct vote of the people of the United States respectively. 4. Fixing the term of offices of Senators the same as the presidential term, and of Representatives in Congress at four years. 5. The election of postmaster by a direct vote of the people of the city, town, or district in which the office is located. 6. Biennial sessions of Congress. 7. The election for all Federal officers to be under the control of the Federal Government, and to be held at a time other than the time of holding State elections. . . .

12. We demand the enactment of additional and more stringent laws, both Federal and State, for the punishment of bribery and corruption in office, and to secure the purity of elections, general, special, and primary.

13. That we are opposed to monopolies of all kinds, believing them to be at war with the best interests of the country, imperiling its power, prosperity, and security, and contrary to the genius and spirit of free institutions. . . .

15. We are opposed to national banks, and insist that gold, silver, and a greenback currency shall be the only money of the country.

George W. Glick was born on the 4th of July, 1827, at Greencastle, Fairfield County, Ohio. The early years of his life were spent on a farm. He acquired a fair English education, and some knowledge of the higher mathematics, and the languages. He read law in the law-office of Messrs. Buckland & Hayes, the latter being afterward the President of the United States. Mr. Glick early took an active part in politics. In 1858 he was nominated

by the Democratic Convention of his district for Congress, but declined the nomination. He was nominated the same year as the Democratic candidate for the State Senate, and ran against his preceptor, Mr. Buckland, being defeated, but running nearly 2,000 votes ahead of his ticket. He was elected Judge Advocate of the Second Regiment of the Seventeenth Division of the Ohio militia, with the rank of colonel, and was commissioned by Governor Chase.

He removed to Kansas in the spring of 1859, located at Atchison, and resumed the practice of law. In 1874 Mr. Glick relinquished a lucrative practice on account of a severe throat affection, giving his entire attention from that date to the management of his fine farm, when not filling a public position. He served nine terms in the Kansas Legislature—oftener than any other citizen of the State. During five sessions of the House he was chairman of the Judiciary Committee. In 1868 he was the Democratic candidate for Governor, and ran 1,600 votes ahead of the Democratic candidate for President.

**ELECTION RETURNS.**—The election in November resulted in the choice of the Democratic candidate for Governor, while the other State officers and the Congressmen elected are Republicans. The defeat of Governor St. John was due to his pronounced views in favor of prohibition. The vote was as follows:

#### CONGRESSMEN-AT-LARGE.

Peters.....	99,866

Uhl.....	21,146

The Legislature chosen at this election will consist of 37 Republicans, 2 Democrats, and 1 Greenbacker in the Senate, and of 86 Republicans, 26 Democrats, and 13 Greenbackers in the House.

**MISCELLANEOUS.**—A convention of colored voters was held in Topeka in June, which passed resolutions claiming recognition from the Republican party in nominations for office. During the year the Supreme Court decided that the prohibition act, so far as it provides a punishment for drunkenness, is unconstitutional, on the ground that the title of the act only purports to provide for the manufacture and sale of liquor, and not for intoxication. This renders the section void under the clause in the Constitution which provides that the subject of the law must be expressed in the title.

**KENTUCKY. STATE GOVERNMENT.**—The State officers during the year were as follows: Governor, Luke P. Blackburn, Democrat; Lieutenant-Governor, James E. Cantwell; Secretary of State, James Blackburn; Treasurer, James W. Tate; Auditor, Fayette Hewitt; Adjutant-General, Joseph P. Nuckols; Superintendent of Public Instruction, J. D. Pickett; Attorney-General, W. P. Hardin; Register of Land-Office, Ralph Sheldon; Commissioner of Agriculture, Charles E. Bowman; Insurance Commissioner, L. C. Norman; State Librarian, Mrs. Anna B. Cook. Judiciary, Court of Appeals: Chief-Justice, Joseph H. Lewis; Associate Justices, T. F. Hargis, Thomas H. Hines, and William S. Pryor.

**LEGISLATIVE ACTS.**—The Legislature, which was in session at the beginning of the year, adjourned on the 24th of April, after a session of one hundred and forty-eight days. Among the acts passed are the following:

An act to prescribe the mode of condemning land for the use of railroad and turnpike companies; an act providing that the stated biennial sessions of the Legislature shall hereafter begin on the 30th of December, or the day following, if that be Sunday; an act prescribing that the fiscal year shall hereafter end on the 30th of June; an act to amend an act to establish a State Board of Health, to provide for the appointment of local boards of health and superintendent, and acts amendatory thereof; an act to require railroad companies to post notices of delays in passenger trains; an act to apportion the State into eleven congressional districts, as follow:

First District, composed of the counties of Fulton, Hickman, Graves, Ballard, McCracken, Marshall, Cal-

Ioway, Trigg, Lyon, Livingston, Crittenden, and Caldwell.

Second District, of the counties of Christian, Hopkins, Webster, Union, Henderson, McLean, Daviess, and Hancock.

Third District, of the counties of Muhlenberg, Todd, Logan, Butler, Edmonson, Warren, Simpson, Allen, Monroe, Cumberland, and Clinton.

Fourth District, of the counties of Ohio, Grayson, Breckenridge, Meade, Hardin, Bullitt, Nelson, Larue, Marion, and Washington.

Fifth District, of the county of Jefferson.

Sixth District, of the counties of Trimble, Carroll, Gallatin, Grant, Boone, Kenton, Campbell, and Pendleton.

Seventh District, of the counties of Oldham, Henry, Owen, Franklin, Scott, Harrison, Bourbon, Fayette, and Woodford.

Eighth District, of the counties of Shelby, Spencer, Anderson, Mercer, Boyle, Lincoln, Garrard, Jessamine, Madison, Rockcastle, Jackson, Owsley, and Laurel.

Ninth District, of the counties of Bracken, Mason, Robertson, Nicholas, Fleming, Bath, Rowan, Lewis, Greenup, Carter, Boyd, Lawrence, Johnson, and Martin.

Tenth District, of the counties of Pike, Letcher, Floyd, Magoffin, Morgan, Elliott, Menifee, Wolfe, Powell, Montgomery, Clark, Estill, Lee, Breathitt, Perry, Clay, Leslie, Knox, Bell, and Harlan.

Eleventh District, of the counties of Whitley, Wayne, Pulaski, Casey, Russell, Adair, Taylor, Green, Metcalfe, Barren, and Hart.

An act was also passed establishing a Superior Court, to be held in Frankfort. The principal features of this act appear in the following extracts:

SECTION 1. *Be it enacted by the General Assembly of the Commonwealth of Kentucky*, That there is hereby established a court of justice for the Commonwealth of Kentucky, known as the Superior Court, to consist of three judges, who shall have the same qualifications as are now required by law for judges of the Court of Appeals. Any two of them may constitute a court for the transaction of business. On the first Monday in August, 1882, there shall be elected by the qualified voters of this Commonwealth three persons, qualified as aforesaid, as judges of said court, whose term of office shall commence on the first Monday in September, 1882, and continue until the first Monday in September, 1886. They shall determine by lot who shall be the presiding judge. The State shall be divided into three Superior Court districts, and one judge of said court shall be elected from each of said districts by the qualified voters thereof.

SEC. 2. The Superior Court shall have exclusive appellate jurisdiction over the final orders and judgments of all other courts of this Commonwealth that the Court of Appeals now has, except as provided in this act; and all the laws now in force in regard to appeals to the Court of Appeals, and the trial thereof, shall be applicable to appeals to the Superior Court, unless otherwise provided in this act.

SEC. 3. The Superior Court shall not have appellate jurisdiction of any appeal where there is involved (1) the validity of a statute; (2) the title to a freehold or right to a franchise; (3) nor in cases of felony, (4) the probate of a will, (5) judgments for money or personal property, if the value in controversy be greater than \$3,000, exclusive of interest and cost; and the said court shall have the original jurisdiction in fiscal cases heretofore vested in the Franklin Circuit Court by Article IX of chapter 28 of the General Statutes, and so much of said chapter as vested said jurisdiction in the Franklin Circuit Court is hereby repealed, and the terms of said Superior Court for the hearing of fiscal cases shall be as provided for the Franklin Circuit Court in said chapter.

SEC. 5. The Court of Appeals shall have appellate

jurisdiction over the final orders and judgments of the Superior Court in all cases except the following: 1. Those for fines, or for the recovery of money or personal property, where the amount of the fine, or the value in controversy, is less than \$1,000, exclusive of interest and costs. 2. Those where the judgments of the lower court have been affirmed by the Superior Court without a dissenting vote; but if, in any case coming within either of the above exceptions, any two of the judges of the Superior Court shall certify that, in their opinion, the question involved is novel, and is one of sufficient importance, the party against whom the decision was rendered shall be entitled to take the same by appeal to the Court of Appeals, as in other cases.

SEC. 17. The judges of the Superior Court shall each receive an annual salary of three thousand six hundred dollars, to be paid monthly out of the Treasury.

SEC. 22. The Superior Court shall have original jurisdiction of escheats; and all acts, or parts of acts, inconsistent with this section, are hereby repealed.

The three judges were subsequently duly elected, and the court was organized, Judge Bowden becoming the presiding judge.

Another act is entitled "An act to prevent extortion and discrimination in the transportation of freight and passengers by railroad corporations, and, in aid of that purpose, to establish a Board of Railroad Commissioners, and define its powers and duties."

The following are the chief provisions of this important act:

SECTION 1. *Be it enacted by the General Assembly of the Commonwealth of Kentucky*, If any railroad corporation shall willfully charge, collect, or receive more than a just and reasonable rate of toll or compensation for the transportation of passengers or freight in this State, or for the use of any railroad-car upon its track, or upon any track of which it has control or the right to use in this State, it shall be guilty of extortion, and, upon conviction, shall be punished as prescribed by this act.

SEC. 2. If any railroad corporation shall willfully charge, collect, or receive from any person or persons, for the transportation of any freight upon its railroad, a higher or greater rate of toll or compensation than it shall at the same time charge, collect, or receive from any other person or persons for the transportation of the like quantity of freight of the same class, being transported from the same point, in the same direction, over equal distances of the same railroad, or if it shall charge, collect, or receive from any person or persons, for the use and transportation of any railroad car or cars upon its railroad, a higher or greater sum than it shall at the same time charge, collect, or receive from any other person or persons for the use or transportation of a car or cars of the same class for a like purpose, from the same point, in the same direction, and an equal distance; all such discriminating rates, charges, or collections, whether made directly or by means of any rebate, or other shift or evasion, shall be considered and taken as *prima facie* evidence of discrimination, which is hereby prohibited and declared unlawful, and shall be punished as prescribed by this act. When one or more car-loads of freight shall be transported at the same time for different persons, and for each shipper a car-load or more, such shipments shall be considered and taken as the same quantity of freight within the meaning of this act; and when less than a car-load of freight, and over five thousand pounds, are transported at the same time for different shippers, and for each shipper over five thousand pounds, such shipments shall be considered and taken as the same quantity of freight; and when over five hundred pounds, and less than five thousand pounds, are transported at the same time for different

shippers, and for each shipper said quantity of freight, such shipments shall be considered and taken as the same quantity of freight.

SEC. 3. Nothing contained in this act shall be construed to prohibit railroad corporations from issuing commutation, excursion, or thousand-mile tickets, as are now issued, nor as controlling the rates of freight which come from and go beyond the boundaries of the State, nor as excluding other evidence of extortion or unlawful discrimination.

SEC. 4. Any railroad corporation that shall be guilty of extortion or unlawful discrimination shall, upon conviction, be fined, for the first offense, in any sum not less than one hundred dollars, nor more than one thousand dollars; and, upon a second conviction, in any sum not less than five hundred dollars, nor more than two thousand dollars; and, upon a third conviction, in any sum not less than two thousand dollars, nor more than five thousand dollars. The circuit court, or court of similar jurisdiction, of any county into or through which the line of railroad may run owned by the corporation alleged to be guilty as aforesaid, shall have jurisdiction of the offense, which shall be prosecuted by indictment or by action in the name of the Commonwealth, upon information filed by the Board of Railroad Commissioners; and, in all prosecutions and actions against railroad corporations under this act, a preponderance of the evidence shall govern and control the jury in making their verdict. And such railroad corporation shall also be liable in damages to the party aggrieved to three times the amount of the damages sustained, together with costs of suit and a reasonable attorney's fee, to be fixed by the court.

SEC. 5. The Governor, during the present session of the General Assembly, shall, by and with the advice and consent of the Senate, appoint three competent persons as commissioners, who shall constitute a Board of Railroad Commissioners, who shall hold their offices until the next meeting of the General Assembly, and until their successors are appointed and qualified. At the next meeting of the General Assembly, and every two years thereafter, the Governor, by and with the advice and consent of the Senate, shall appoint three competent persons as such commissioners, who shall hold their offices for the term of two years from the first Monday in the year of their appointment, and until their successors are appointed and qualified. For the purposes of this act, the State shall be divided into three districts, to be called the Eastern, the Middle, and the Western Districts, and the Governor shall appoint one commissioner from each district, who shall now be, and shall continue to be during his term of office, a resident of the district from which he is appointed.

SEC. 6. No person shall be appointed as such commissioner who is under twenty-five years of age, or who is directly or indirectly interested in any stock, bond, or other property of, or is in the employment of any railroad company; and no person appointed as such commissioner shall, during the term of his office, become interested in any stock, bond, or other property of any railroad company, or be employed by any railroad company. The Governor shall have power to fill vacancies in the office of any such commissioner until the meeting of the Senate.

SEC. 8. Each of said commissioners shall receive for his services the sum of not exceeding two thousand dollars per annum, payable quarterly; they shall be furnished with an office, furniture, and stationery at the expense of the State. The total sum to be expended by said commissioners for office-rent, furniture, and stationery shall not exceed eight hundred dollars per annum. The office of said commissioners shall be kept at Frankfort.

SEC. 9. Every railroad company shall, on or before the first day of September in each year, make and transmit to the commissioners, at their office in Frankfort, under oath of the proper officers of the corporation, a full and true statement of the affairs

of said corporation as the same existed on the first day of the preceding July, specifying:

1. The amount of capital stock paid up, and the names of the owners thereof, and the amounts owned by each, and the residence of each stockholder as far as known.

2. The amount of its assets and liabilities.

3. The names and place of residence of its general officers.

4. The amount of cash paid to the company on account of the original capital stock.

5. The amount of funded debt.

6. The amount of floating debt.

7. The estimated value of the road-bed, including iron and bridges.

8. The estimated value of rolling-stock.

9. The estimated value of stations, buildings, and fixtures.

10. The estimated value of other property.

11. The length of single main track.

12. The length of double main track.

13. The length of branches, stating length of single and of double track.

14. The aggregate length of siding and other tracks not above enumerated.

15. The number of miles run by passenger trains during the year preceding the making of the report.

16. The number of miles run by freight trains during the same period.

17. The number of tons of through freight carried, and the number of tons of local freight during the same time.

18. The monthly earnings for the transportation of passengers during the same time.

19. The monthly earnings for the transportation of freight during the same time.

20. The monthly earnings from all other sources respectively.

21. The amount of expenses incurred in running of passenger trains during the same time.

22. The expense incurred in running freight trains and in running mixed trains during the same time.

23. All other expenses incurred in the management of the road, including the salaries of officers, which shall be reported separately.

24. The amount expended for repairs of road and maintenance of way, including repairs and renewals of bridges and renewals of iron.

25. The amount expended for improvements, and whether the same are estimated as a part of the expenses of operating or repairing the road, and if either, which?

26. The amount expended for motive power and cars.

27. The amount expended for station-houses, buildings, and fixtures.

28. All other expenses for maintenance of way.

29. All other expenses for other purposes.

30. The rate of fare for passengers for each month for the same time, through and way passengers separately.

31. The tariff of freights, showing each change of tariff during the same time, and a copy of each published rate for passengers and freight issued to its agents during the same time, and whether the published rates were those actually received; if not, what were received.

32. The number of tons of freight carried one mile.

33. The amount received per ton per mile.

34. The average distance each ton was hauled, and the average cost of hauling a ton of freight one mile.

35. What freight and transportation companies run on its road, and on what terms, and whether such transportation companies use the cars of the railroad company, or cars furnished by themselves.

36. Whether the freight or cars of such transportation companies are given any preference in speed or order of transportation; and if so, in what particular?

SEC. 10. The said commissioners may propound any additional interrogatories, which shall be answered by

such companies in the same manner as those specified in the foregoing section.

Sec. 11. Said commissioners shall, on or before the first day of December in each year, and oftener if required by the Governor to do so, make a report to the Governor of their doings for the preceding year, containing such facts as will disclose the practical workings of the system of railroad transportation in this State, and such suggestions in relation thereto as to them may seem appropriate.

Sec. 12. Said commissioners shall examine into the condition, management, and all other matters concerning the business of railroads in this State, so far as the same pertain to the relation of such railroads to the public; and whether such railroad corporations, their officers, and employes, comply with the laws of this State. And whenever it shall come to their knowledge, or they shall have reason to believe that the laws affecting railroad corporations in their business relations to the public have been violated, they shall prosecute, or cause to be prosecuted, the corporations or persons guilty of such violation.

Sec. 13. Said commissioners shall have power to examine, under oath, the directors, officers, agents, and employes of any railroad corporation concerning the management of its affairs, and to obtain information pursuant to this act; and shall have power to issue subpoenas for the attendance of witnesses, and to administer oaths. In case any person shall willfully refuse or fail to obey such subpoena, it shall be the duty of the circuit court, or any court of similar jurisdiction of the county, upon application of said commissioners, to issue an attachment for such witnessess and compel them to attend before the commissioner, and give testimony upon such matters as may be lawfully required of them, and may punish for contempt as in other cases.

Sec. 15. Every corporation, and every officer or agent that shall willfully neglect or refuse to make any report required in this act at the time herein required, or who shall intentionally hinder and obstruct said commissioners in the discharge of the duties hereby imposed upon them, shall be fined in the sum of not less than fifty nor more than one hundred dollars, to be recovered upon an indictment, or by an action in the name of the Commonwealth, to be instituted by said commissioners.

Sec. 17. This act shall not apply to any street railroad.

Sec. 18. The term railroad corporation, as used in this act, shall be construed to include any person, association, or company operating a railroad, whether incorporated or not. And any association, company, or corporation extorted upon, or discriminated against, shall be included in the term person, as used in this act.

Sec. 19. Said commissioners shall hear and determine complaints under the first and second sections of this act. Such complaints shall be made to said commissioners in writing, and they shall give the company complained of not less than ten days' notice of the time and place of hearing the same. They shall hear the evidence of the parties, and award judgment as authorized by this act. Unless the same be satisfied, the chairman shall, within ten days, file a copy of said award in the office of the clerk of the circuit court of the county which, under the Code of Practice, would have jurisdiction of such controversy, on which execution shall issue as on other judgments: *Provided*, That any party dissatisfied with said award may, within ten days, file a traverse thereof with the clerk of said court, who shall docket the same for trial at the next term. If the matter in controversy shall exceed twenty dollars, said court, on demand of either party, shall impanel a jury to try the same. If it does not exceed that sum, the court shall hear and summarily decide the same without the intervention of a jury.

D. Howard Smith, W. B. Machen, and W. M. Beckner, were appointed commissioners

under this act, and the board was organized in May.

Acts were also passed repealing the capitation tax of one dollar on each male colored person above the age of twenty-one years; providing for the assessment and collection of a tax upon distilled spirits; providing for taking the sense of the people at the next general election for representatives, as to the propriety of calling a convention to revise the Constitution.

A joint committee from the Senate and House was created during the session to visit the convicts leased to contractors and worked without the walls of the Penitentiary, to investigate their treatment and management, and to ascertain whether or not they were clothed and dieted, and given medical attention, guarded, housed, and worked as required by law.

They made a report of which the following is the concluding portion: "We unhesitatingly recommend an immediate repeal of the law establishing the leasing system; that the contracts with the lessees, violated in every particular, be immediately annulled, and the convicts withdrawn."

STATISTICS.—The Auditor's report shows: That 8,772 sheep, valued at \$21,080, were killed by dogs in 1881. That there were 461,226 hogs over six months old, a decrease of 222,851 as compared with 1880. That there were 308,492 white voters in 1881, and 51,776 negro voters; the former being an increase of 1,638, and the latter a decrease of 4,869, since 1880. That the average valuation of property assessed to each male over twenty-one years of age was \$940.50 in 1880, and \$741.25 in 1881, being a decrease of \$199.25. That there were 412,028 white school-children between six and twenty years of age, and 47,924 colored in 1880, but only 406,095 white and 44,930 colored in 1881. That Christian County raises the most corn, and Madison next, while Bourbon, Boyle, Fayette, Jackson, Johnson, Mercer, and Oldham raised none either in 1880 or 1881.

The assessed value of railroad property in 1882 was \$34,171,857; miles assessed, 1,675.

One hundred and two insurance companies were doing business in the State at the beginning of 1881. Of this number ninety-two were fire and ten life insurance companies.

The paid-up capital of the fire companies, including \$200,000 deposit of each of the foreign companies, was \$47,707,200, being an increase, as compared with the previous year, of \$6,399,990. The risks written in the State during the year 1881 amounted to \$128,208,661. Total premiums received by the companies, \$1,558,957.94. Total losses paid, \$654,528.50, showing net receipts of companies of \$904,529.44. The business of fire insurance shows a large increase during the year.

The ten life companies held at the beginning of the year on lives of citizens of the State, 11,152 policies, insuring \$28,766,383. At the end of the year there were in force 11,820

policies, insuring \$30,231,199. The premiums received by the companies amounted to \$811,397.11, and losses and claims paid to \$441,622.18.

The taxes paid to the State amounted to \$14,172.89, and the expenses of the Insurance Bureau were \$9,761.82, leaving a surplus of \$4,555.98 placed to the credit of the State revenue.

The amount of whisky produced annually in Kentucky since 1862 is as follows:

YEAR.	Gallons.	YEAR.	Gallons.
1863.....	857,789	1874.....	6,982,709
1864.....	472,092	1875.....	9,399,338
1865.....	832,272	1876.....	6,245,717
1866.....	513,720	1877.....	7,889,151
1867.....	514,400	1878.....	6,371,965
1868.....	403,568	1879.....	8,111,731
1869.....	7,018,306	1880.....	15,011,279

1872.....	5,203,071		
1873.....	5,244,668	Total.....	150,280,258

The State Commissioner of Agriculture gives the following statement of crops for 1882:

	Acreage.	Bushels.
Wheat.....	1,436,705	17,156,646
Oats.....	305,974	5,498,740
Rye.....	251,667	3,118,669
Hay (tons).....		664,336
Grass (acres).....		2,773,043
Corn.....	2,875,041	60,913,238

The valuable deposits of coking coals, which have added such wealth to Pennsylvania and West Virginia, have been traced and identified in the valleys of the Cumberland, the Kentucky, and the Big Sandy, of a thickness of seven or eight feet.

The report of the Superintendent of Public Instruction shows that in the white department, at the close of the year ending June 30, 1880, there were 6,177 school districts, an increase over the previous year of 109 districts. In these there were 6,136 schools taught, an increase over the previous year of 101 schools.

The number of children enrolled in census reports for that year was 478,554, an increase over the previous year of 1,684. The highest number attending school was 245,358. There was a difference of 66,526 between the census of children as reported to the superintendent, and the census as taken by assessors and reported to the auditor, the former being that much in excess of the latter. The total average per capita for that year from all sources was \$2.08+.

In the same department for the year ending June 30, 1881, the number of school districts was 6,244, a gain of sixty-nine districts. The number of districts in which schools were taught was 6,189, a gain of fifty-three. The number of children enrolled that year was 483,404, a gain over the previous year of 4,850. The highest attendance reported was 238,440, showing a decrease of 6,918. The difference between the number of children reported to the superintendent and that reported to the auditor for the year was 79,957. The total

average per capita for that year was \$2.24+, an increase of 0.16+.

In the colored department for the year ending June 30, 1881, the number of school districts was 804, an increase over the previous year of thirty-one districts. The number of schools taught was 718, an increase of twenty-one over the previous year. The number of children enrolled was 70,234, an increase of 3,670 over the previous year. The average attendance is not given. The per capita for these years was 58 cents, an increase over the previous year of 10 cents.

**POLITICAL AND TEMPERANCE CONVENTIONS.**  
—The Democratic State Convention met in Frankfort on the 11th of January, and nominated for Clerk of the Court of Appeals, Captain Thomas J. Henry, of Morgan County. The following is the platform adopted:

1. The Democracy of Kentucky, in State Convention assembled, reassert their devotion to the principles of the party, national and State, as enunciated in the platforms promulgated by the last National Convention held at Cincinnati, and the State Convention at Louisville, and relying on the intelligence, justice, and patriotism of the people, fearlessly appeal for the continuance of their support.

2. That the recent interference of the Federal Administration in the local politics of the States, and the efforts, by the dispensation of its patronage, to manipulate and control State elections, are deserving of the severest denunciation. We declare such practices to be in the highest degree degrading to the civil service, obstructive to reform, and dangerous to the liberties of the people.

The nominee had been a Confederate officer, and his nomination intensified a feeling which had been some time growing among the Democrats of the State who were supporters of the Union during the war that the organization of that party was in the hands of Confederates, and was used to ostracize Unionists. Colonel R. T. Jacob was placed in nomination by the dissatisfied element, and was supported by the Republicans. Captain Henry encountered further opposition from an indiscretion committed early in the canvass.

A Temperance Convention of the ministers of Kentucky was held in Lexington on the 15th of February and the following days, which adopted the following resolutions:

*Resolved*, That while we give our vigorous support to all just means and efforts to suppress intemperance, even when these means and these efforts are imperfect, yet we believe that the only righteous and logical and only thoroughly effectual end to be aimed at is the prohibition by law, State and Federal, of the manufacture and sale of intoxicating liquors for the purpose of drinking; and that we will in all our efforts always keep this final aim in view.

*Resolved*, That we regard as a most efficient means of success, in the war against the great evil we are combating, the abundant dissemination of approved temperance literature, and the delivering of lectures, in order thus to enlighten and direct the public mind and awaken and stimulate the conscience of the people.

*Resolved*, That it is the opinion of this convention that the liquor-traffic in its results is subversive of the great purposes of the Church, and should not be tolerated by the churches in their members.

A meeting of Prohibitionists was also held later in the year, in Louisville, which adopted the following resolutions:

*Resolved*, That we deem it expedient that a State Convention be called for the purpose of nominating a State ticket representing the principles of the Prohibition party, and that we recommend said mass-convention to be held in the city of Louisville on February 19, 1883, at 12 m.

*Resolved*, That this Conference earnestly and cordially invite the people of Kentucky favoring the prohibition of the liquor-traffic, irrespective of all political sentiments and affiliations, to attend this convention, and that each county be urged to send a delegation.

**ELECTION RETURNS.**—The election on the 7th of August resulted in the choice of Captain Henry, the vote being as follows: Henry, 115,681; Jacob, 75,464; Alexander Lush, 4,392. The act providing for an additional tax for the common schools was ratified by the following vote: for, 114,324; against, 97,636. For Judge of the Court of Appeals in the Third Appellate District, Joseph H. Lewis received 26,715 votes and W. E. Russell 19,709. For Judges of the Superior Court the following were elected: First District, J. H. Bowden, by a vote of 43,721, against 218; Second District, A. E. Richards, by 48,411 votes; Third District, Richard Reid, by 52,222 votes. In November, Republican Congressmen were elected in the Ninth and Tenth Districts, an Independent Democrat in the First, and Democrats in the other eight. The following are the returns by districts:

FIRST DISTRICT.	
Oscar Turner, Independent Democrat.....	3,705
J. R. Grace, Democrat.....	7,627
H. H. Houston, Republican.....	5,903
SECOND DISTRICT.	
J. F. Clay, Democrat.....	5,747
Others.....	2,380
THIRD DISTRICT.	
J. G. Halsell, Democrat.....	13,546
W. G. Hunter, Republican.....	13,356
FOURTH DISTRICT.	
T. A. Robertson, Democrat.....	5,873
W. H. Parrish, —.....	1,964
FIFTH DISTRICT.

E. L. Ewell, Republican..... 10,885

## NINTH DISTRICT.

W. W. Culbertson, Republican..... 11,217  
J. Smith Hartt, Democrat..... 9,948

## TENTH DISTRICT.

John D. White, Republican..... 14,240  
G. M. Adams, Democrat..... 12,890

## ELEVENTH DISTRICT.

Frank Wolford, Democrat..... 11,999  
D. R. Carr, Republican..... 9,984

**MISCELLANEOUS.**—A crime committed in Boyd County created great local excitement, and attempts were made to lynch the supposed culprits, Neal and Craft. The local authorities became incompetent to protect the prisoners, and Judge Brown called upon the Governor for troops to protect the court and prisoners during the hearing of an application for a change of venue, to take place before him at Catlettsburg on the 31st of October. Troops were furnished, commanded by Major John R. Allen. The place of trial was changed to Carter County, and the prisoners were directed by the judge to be taken by the troops to Lexington, for safe keeping until the trial. The troops were threatened while embarking on a steamer with the prisoners, by a mob from Ashland, and, while passing down the river, were attacked at that point by members of the mob from a ferry-boat, who fired upon them, wounding several. The troops returned the fire, killing some on the ferry-boat and on the wharves. After this the prisoners were taken to Lexington without opposition.

On Saturday, August 19th, the one hundredth anniversary of the battle of Blue Licks was celebrated on the battle-field with appropriate and numerous attended ceremonies.

## L

**LABOR, MOVEMENTS AND AGITATIONS OF.** The partial failure of the crops in the United States in 1881 was followed in the spring of 1882 by an increase in the price of all kinds of provisions. This bore heavily upon the working-men of all trades, whose wages had been adjusted to the lower market rates of good seasons; at the same time employers were not disposed to grant any advance in wages, for they were all feeling the burden of a depression resultant upon a diminished demand for their goods, and were anticipating further declines in the markets. The situation created great discontent among the working-men, which found expression in combined de-

mands for increased wages, and, when these were refused, in strikes. Numerous establishments in the different manufacturing centers were individually affected by these strikes for a longer or shorter time. In many instances the strikes were met by combinations of employers and lock-outs. In a few instances these deadlocks occurred on so extensive a scale that they prostrated a whole line of business, as in the strike of the iron-workers of the West, or, like that strike, and the strike of the freight-handlers of the railroads terminating in New York city, affected very large districts of the country.

**THE KNIGHTS OF LABOR.**—A new element of

strength has been given to movements of this kind in recent years by the appearance as a directing and supporting force of the society called the Knights of Labor, which has become one of the most important and effective organizations of working-men in the United States. It has grown up out of a secret protective union of garment-cutters, that was formed in Philadelphia in 1869, at the instigation of Mr. Uriah S. Stevens. The principles of the organization were extended in 1878 to the other trades of the city; and two years afterward the strength of the local assemblies of Philadelphia having increased to fifteen thousand members, a district assembly, composed of delegates from the local unions, was organized. An extension of the organization to other cities and States was begun at about this time; and in 1878, several hundred local assemblies having been formed, a general assembly was constituted as the legislative body for the entire order. At a meeting of the delegates from fifteen districts, held at Reading, Pa., a "national resistance fund" was also established at this meeting, to be made up of contributions of five cents each month, from each member of the order, and to be kept for the assistance of "brothers in need against the aggressions of employers." The objects of the order are declared in the preamble of its constitution to be the unification of labor, with the object of putting a check upon the power of aggregated wealth and upon unjust accumulation, and of obtaining the adoption of a system which will secure to the laborer the fruits of his toil. It therefore seeks "to bring within the fields of organization every department of productive industry, making knowledge a stand-point for action, and industrial moral worth, not wealth, the true standard of individual and national greatness; to secure to the toilers a proper share of the wealth they create, more of the leisure that rightfully belongs to them, more society advantages, more of the benefits, privileges, and emoluments of the world; in a word, all those rights and privileges necessary to make them capable of enjoying, appreciating, perpetuating, and defending the blessings of good government." It proposes the establishment of bureaus of labor statistics of the various governments, for the purpose of ascertaining the real condition of the producing masses; the establishment of co-operative institutions, productive and distributive; the reservation of public lands for actual settlers; the abrogation of all laws that do not bear equally upon capital and labor; the removal of technicalities, delays, and discriminations in the administration of justice, and the adoption of measures providing for the health and safety of persons engaged in various industrial occupations; weekly payment of their workmen by corporations in lawful money; the establishment of a first lien to mechanics and laborers on their work for the full amount of their wages; the abolition of

the contract system in public work; the substitution of arbitration for strikes; prohibition of the employment of children under fourteen years of age in workshops, mines, and factories; the abolition of the contract system in prisons and reformatory institutions; to both sexes equal pay for equal work; the reduction of the hours of labor to eight per day; and the issue by governments of "a purely national circulating medium, direct to the people without the intervention of any system of banking corporations." The general assembly in 1879 advised all the assemblies of the order to use their political power at legislative elections, but left it within the discretion of each local assembly to decide with which party it should act; but it also provided that no decisive action of this kind should be taken by any assembly unless at least three fourths of the members in attendance were united in support of it, and that no member should be compelled to vote with the majority. In 1880 women were made eligible to membership. In 1881 the general assembly voted to make the name and objects of the organization public. The membership of the order at that time was enumerated at 40,000 persons. In April, 1882, it had increased to 140,000, the increase having taken place chiefly in the smaller industrial cities and in the mining districts. Omitting 20,000 new accessions at Pittsburg, whose names have not yet been officially enrolled, the members of the order were at that time distributed by States as follow:

Pennsylvania.....	60,000	California.....	2,400
New York.....	9,000	Michigan.....	1,500
Illinois.....	8,000	Iowa.....	900
Indiana.....	6,500	Tennessee.....	800
Ohio.....	5,800	Wisconsin.....	800
Missouri.....	4,500	Kansas.....	800
Massachusetts.....	4,200	Minnesota.....	700
New Jersey.....	3,800	Colorado.....	700
Kentucky.....	3,000	Alabama.....	400
Maryland.....	2,800	Rhode Island.....	350
West Virginia.....	2,600	Indian Territory.....	150
Total.....			119,700

These members were represented in 44 district assemblies, with 1,830 local assemblies, in good working order. The order is represented by four weekly newspapers, advocating its principles and explaining its objects.

**STRIKE OF THE WESTERN IRON-WORKERS.**—A strike of the workmen in the iron-trade, which was intended to embrace all the mills west of the Alleghany Mountains, was begun on the 1st of June. It originated in a demand of the men for a new scale of wages, the operation of which would be to cause an advance in wages in all branches of the business of from 15 to 25 per cent, and was sustained by the Amalgamated Association of Iron and Steel Workers. The demand was made upon the Cleveland Rolling-Mill Company, Ohio, May 9th, and was met with a refusal, followed by the closing of the mill and the throwing of 4,500 men out of employment. Two weeks afterward the scale was submitted to the manufacturers of Wheeling, West Virginia, and vi-

city, and was refused by them. The rates of compensation for puddling iron had been fixed since 1875 by a scale based on the selling price of bar-iron, under which it was agreed that the wages of the puddlers should rise and fall with that price. The demand for an advance was now made at a time when the market rate for iron had been lowered, and this fact was alleged by the manufacturers as their reason for declining to accede to it. The workmen responded that the plea of the manufacturers was hardly fair, for, while they paid for puddling bar-iron, they did not sell the product as bar-iron, and at the price of that article, but put it upon the market in other shapes and at higher prices than ruled for bar-iron; and in consideration of this fact they thought they were entitled to a readjustment of their wages. At about the same time these questions were opened, the report of the American Iron and Steel Association on the condition of the American iron-trade at the end of May appeared. It showed that under various influences of short crops and speculative excitement the demand for most iron and steel products had sensibly slackened, and prices had very generally sympathized with the decline. Steel rails especially had undergone a remarkable fall in price. The situation at the time was pronounced far from encouraging, and in some respects discouraging. It was also alleged that the price of iron-ore had increased largely out of proportion to the price of manufactured iron; and a calculation was published, showing that while the cost in 1879 of producing a ton of iron from the pig to the finished bar was \$33, it would, under the scale demanded by the strikers, reach \$52.

A convention of manufacturers, at which every iron firm west of the Alleghany Mountains, except those in St. Louis and a few in Cincinnati, was represented, met at Pittsburg on the 30th of May, to consider what answer to return to the demands of the Amalgamated Association. The manufacturers of St. Louis sent assurances that they intended to resist every demand for an advance; those of Cincinnati did not regard themselves as affected by the strike, for they had already for some time been paying, by special agreement, the price for puddling now demanded by the Amalgamated Association. With the exception of these manufacturers, who were already operating under special agreements with their workmen, the meeting resolved to return a decided negative to the demand for a new scale.

The strike went into operation on the first day of June. The Amalgamated Association, by which it was directed, is a body formed by the union of the former separate organizations of iron and steel workers, and was estimated to include at this time about 75,000 members, or, practically, all the skilled iron-workers in the country, and was claimed to have a fund of \$500,000 in its treasury at Philadelphia. The extent of the interests affected by the strike

was shown in the following estimate of the number of establishments and the men employed in them, which was made by an officer of the Amalgamated Association:

NAMES OF PLACES.	Men.	Establishments.
Pittsburg District.....	20,000	80
West Virginia.....	8,228	6
Ohio.....	10,266	40
Indiana.....	1,740	9
Illinois.....	2,468	6
Missouri.....	855	6
Kentucky.....	2,170	8
Michigan.....	925	2
Nebraska.....	100	1
Wisconsin.....	500	1
Shenango Valley, Pennsylvania.....	8,500	7
Total.....	45,752	116

Not all of these men, however, it was added, were out on strike. Six establishments had signed the new scale, six or eight were already paying the price demanded, or were employing non-union men, and all the Western steel-works, some of which were included in the list, continued in operation. The manufacturers took advantage of the stoppage to repair their works; and some thought it was well that it had occurred; for they were apprehensive of embarrassment, if their orders should continue to diminish, while production was kept up at the full rate. It was even considered advantageous that a few mills should continue running, for they would supply the existing demand, and, by preventing a "shortness" in the market, would remove the temptation from the closed mills to yield to the demands of the strikers, for the sake of securing the business that might offer. On the 3d of June the workmen in the mills in Cincinnati decided to join in the strike, on the ground that the committee who had made the agreement with the proprietors, under which they were continuing their operations, had exceeded their constitutional powers. This course was not approved by the officers of the Amalgamated Association, and was receded from under their advice.

The Cleveland Rolling-Mill, which had not employed avowed union men, filled the ranks of its workmen with new men, and kept on. The strikers demanded that its managers should sign an agreement to be governed by the rules of the union. The company refused to do so, saying that their policy had been, and would continue to be, so to conduct the affairs of the concern as to insure to its workmen the highest wages its business would warrant, and that they trusted that "the pleasant relations now existing will not be disturbed by permitting outsiders to influence and mislead you." A committee, representing the strikers, subsequently visited the president of the company, to say that they had been deceived into going into the strike, and desired to return to work. The president declined to receive the men as a committee, for the company was determined not to recognize the union in any manner, and

had decided to make the return of any of the men to work conditional upon their signing an agreement not to be governed by it. The members of the committee were therefore directed to apply at the mills, if they wished employment.

At the beginning of August, or after the strike had been two months in operation, the position of the workmen had obviously been weakened, while the proprietors had not materially lost strength. A meeting of the Amalgamated Association was held at Chicago, the sessions of which were continued through several days, at which resolutions were passed guaranteeing the manufacturers that no advance on the scale prices for rolling and puddling would be asked for five years. The strike continued, however, till the 19th of September, when the district meetings of the Amalgamated Association at Pittsburg, Wheeling, and Youngstown resolved to return to work without conditions, and the president of the association officially declared it at an end.

**STRIKE OF FREIGHT-HANDLERS IN NEW YORK CITY.**—The freight-handlers of the railroads terminating in the city of New York struck in June, on a demand for an increase of their wages from seventeen cents to twenty cents an hour, or of three cents an hour or thirty cents a day. The agents of the railroad companies asked for time to consult with their superior officers before answering the demand, but the men insisted, and ceased work at once. The strike began with the Hudson River Railroad, but quickly extended to all the railroads having termini or docks in New York, and to the terminal stations in Jersey City. As a considerable advance had been recently made in the schedule of freight rates to the West, public opinion, as was indicated by expressions made in various ways, did not regard the demand of the workmen as unreasonable. The agents of the railroads explained that it had been precipitated upon them without notice, whereas, if due warning had been given them, and time for consultation, concessions might have been made which would satisfy the freight-handlers. The business at the railroad-stations and docks was almost wholly interrupted for a few days; freight accumulated in large quantities, and shippers and cartmen were subjected to great inconvenience in getting their goods received. New hands were employed to take the place of the strikers, engaged chiefly from among the recent immigrants from abroad; but they were unskilled at the business, and were not able to do effective service. The striking workmen paraded the streets in considerable bodies, visiting the railroad-stations and docks, for the purpose of persuading such new laborers as might be engaged to desist from work, and of preventing others from giving their services. These demonstrations became so formidable, especially in Jersey City, that forces of special policemen were enrolled. The Governor of New Jersey issued a proclamation, notifying

the civil authorities that it was their duty to use the power vested in them for the protection of persons and property, and promising the aid of the military power of the State if it should be needed. One of the railroads of New Jersey being in the hands of a receiver appointed by the court, the Chancellor of the State gave notice that any interference with its operation and management would be regarded as an obstruction offered to the execution of the order of the court, and treated as a contempt.

The interruption in transportation and inconvenience to shippers having continued several weeks, an action was brought in the Supreme Court of New York, July 17th, against the New York Central and Hudson River, and the New York, Lake Erie, and Western Railroad Companies, for a writ of mandamus to compel them to perform their duties as common carriers in delivering, receiving, and forwarding with all reasonable dispatch the freight put in their care or offered to them. The application was enforced by the affidavits of merchants regarding the losses they alleged they had suffered by the failure of the companies to forward their goods, and of the striking freight-handlers concerning their position as toward the companies. The institutors of the proceedings held that among the duties of the companies was that of operating their roads while they could be operated to carry the goods which might be offered them on the condition of the payment of the proper charges. When a railroad company, it was claimed, "sitting in the gates of commerce, closes its doors against the receipt of goods offered for transportation, or opens them tardily to oppress trade instead of supporting it, then it is answerable to the public whose franchises and trusts it is abusing. . . . The people in this case have sought nothing from the corporations except that they go on in the performance of their duties to their maximum power, and now pray that relief may be granted under the great prerogative right of writ of mandamus. When a railroad ceases to perform its function as a common carrier, or does it in a careless manner, causing public inconvenience and distress, it violates the provisions of its charter, and it is the duty of the Attorney-General to compel it to a discharge of its duties, and, if it still persists in its neglect, its franchise may be revoked." The matter of the strike, it was added, was merely put forward as an excuse. The position of the people (or promoters of the suit) was this: "These defendants may employ such help as they please so long as it is competent help, but they have no right to refuse the performance of their public duties because they can not get competent help at the price they are willing to pay for it. The relations of supply to demand in this country are such that capital can not fail to obtain adequate assistance anywhere." The respondent companies pleaded through

their attorney that the character of the application, as disclosed in the affidavits of the freight-handlers, was simply that the respondent companies should not be permitted to select their own employés at such reasonable compensation as might be agreed upon, but "should be compelled at the pressure of a judicial mandate to employ a certain class of men at a rate of compensation arbitrarily dictated by themselves. . . . On what principle of justice, freedom, or sound policy can a court of justice lend itself to the work of coercing one class of persons to enter into contracts with another class on terms dictated by the latter?" Moreover, the court had no right to exercise its discretion except upon the ground that the demand was reasonable and just. Now, it nowhere appeared in the petition and affidavits that the compensation the freight-handlers were already receiving was not a fair and proper one, or whether their demand was reasonable and just, or exorbitant and unjust. "Is it discreet or practicable for the court to undertake to regulate the employment of men by carriers, whether individuals or corporations?" The respondents also endeavored to show that action by mandamus was not proper, but that the right course lay in suits by aggrieved parties for damages.

The court in chambers decided, through a single justice, July 28th, refusing the application for writs of mandamus. It held that the court had not the power to prescribe a scale of wages; that while the writ of mandamus could issue to compel the exercise and discharge of those duties which belonged to the State or Government and were conferred upon the respondent by the State (such as to maintain and operate the road regularly, to build bridges across streams so as not to interfere with navigation, to take freight to the place of delivery, if on its line, etc.), it could not issue a mandamus to a common carrier to exercise his rights as such; for the right to become a common carrier did not emanate from the Government, but was universal. The refusal of a common carrier to transport freight was a private wrong redressible through suit by the person aggrieved, and not such a public wrong as would authorize a suit by and on the part of the State. The neglect or refusal of a railroad corporation to receive and transport freight tendered to it by citizens of the State was of this character, and remediable in this way. Furthermore, "the writ of mandamus, when it is issued, must clearly and distinctly state the act or duties which are by it commanded to be performed, so that the party to whom it is addressed may distinctly understand what he is to do. If he fails or neglects to perform, an attachment will issue against him to the end that he may be adjudged in contempt of the process of the court. It is not in the power of the court to look into the future and determine the kinds or quantities of freight that will hereafter be presented for transportation,

and by an order specify how and in what manner the same shall be carried, or what kinds shall take preference." The court, therefore, quashed the writ. Before this decision was given, the railroad companies had secured full forces of men at their stations, most of their old laborers having returned, and the strike had failed. The decision of the court in chambers was reversed in January, 1883, by the same court in general term.

**STRIKE OF COAL-MINERS.**—A strike was begun in March in the bituminous-coal mines of Western Pennsylvania and Ohio. The proprietors employed foreigners and colored men to take the places of their disaffected workmen. The Miners' Association then directed a general strike, but afterward modified its order so as to limit its bearing to the pits of operators who were filling contracts for mines whose men were on strike, and to those which were supplying coal-yards in Pittsburg. A policy of passive resistance against the employment of colored miners was persisted in, and concerted efforts were made to induce men of this class working as substitutes for men on strike to desist. This strike was encouraged by the Knights of Labor, and continued through most of the summer.

**LAW, CONSTITUTIONAL.** During the session beginning in October, 1882, several cases involving important questions of constitutional law were decided by the Supreme Court of the United States.

**THE KU-KLUX LAW.**—In the case of the United States against Harris the court set aside as unconstitutional what has been known as the "Ku-klux law." This law was passed by Congress in 1871, and now appears as section 5,519 of the Revised Statutes of the United States. It is as follows:

If two or more persons in any State or Territory conspire or go in disguise upon the highway or on the premises of another, for the purpose of depriving either directly or indirectly any person or class of persons of the equal protection of the laws or of equal privileges or immunities under the laws, or for the purpose of preventing or hindering the constituted authorities of any State or Territory from giving or securing to all persons within such State or Territory the equal protection of the laws, each of said persons shall be punished by a fine of not less than \$500 nor more than \$5,000, or by imprisonment, with or without hard labor, not less than six months nor more than six years, or by both such fine and imprisonment.

Under this law one R. G. Harris and nineteen others were indicted and arraigned in the United States Circuit Court for the Western District of Tennessee for conspiring to commit violence upon certain negroes who had been arrested for a criminal offense, and were in the custody of the sheriff. The defense raised the objection that the act of Congress under which the prisoners were indicted was unconstitutional. In order to determine this question the court considered four clauses of the Federal Constitution, namely, section 2 of Article IV of the original Constitution, and the thirteenth, fourteenth, and fifteenth amend-

ments. Taking these up in inverse order, Justice Woods, who delivered the opinion, said that the fifteenth amendment simply secures to all citizens of the United States the right to vote, and protects that right against all hostile legislation on account of race, color, or previous condition of servitude. This gave to Congress no power to pass the law embodied in section 5,519 of the Revised Statutes. Nor was such power found in the fourteenth amendment, which declares that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws." This amendment, as the Court held in *Virginia against Rives*, 100 United States Reports, 313, has reference to State action exclusively, and not to any action of private persons. After citing this case and the United States against *Cruikshank*, 92 United States Reports, 542, Justice Woods said:

These authorities show exclusively that the legislation under consideration finds no warrant for its enactment in the fourteenth amendment.

The language of the amendment does not leave this subject in doubt. When the State has been guilty of no violation of its provisions; when it has not made or enforced any law abridging the privileges or immunities of citizens of the United States; when no one of its departments has deprived any person of life, liberty, or property without due process of law, or denied to any person within its jurisdiction the equal protection of the laws; when, on the contrary, the laws of the State, as enacted by its legislative, and construed by its judicial, and administered by its executive departments, recognize and protect the rights of all persons, the amendment imposes no duty and confers no power upon Congress.

Section 5,519 of the Revised Statutes is not limited to take effect only in case the State shall abridge the privileges or immunities of citizens of the United States, or deprive any person of life, liberty, or property without due process of law, or deny to any person the equal protection of the laws. It applies, no matter how well the State may have performed its duty. Under it private persons are liable to punishment for conspiring to deprive any one of the equal protection of the laws enacted by the State.

In the indictment in this case, for instance, which would be a good indictment under the law if the law itself were valid, there is no intimation that the State of Tennessee has passed any law or done any act forbidden by the fourteenth amendment. On the contrary, the gravamen of the charge against the accused is that they conspired to deprive certain citizens of the United States and of the State of Tennessee of the equal protection accorded them by the laws of Tennessee.

As, therefore, the section of the law under consideration is directed exclusively against the action of private persons, without reference to the laws of the States or their administration by the officers of the State, we are clear in the opinion that it is not warranted by any clause in the fourteenth amendment to the Constitution.

Coming to the thirteenth amendment, the Court said that it is clear that this amendment, besides abolishing forever slavery in the United States, gives power to Congress to protect all persons within the jurisdiction of the

United States from being in any way subjected to slavery or involuntary servitude, except as a punishment for crime, and in the enjoyment of that freedom which it was the object of the amendment to secure. "Congress has, by virtue of this amendment, exacted that all persons within the jurisdiction of the United States shall have the same right in every State and Territory to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, penalties, taxes, licenses, and exactions of every kind, and no other." The opinion then proceeds as follows:

But the question with which we have to deal is, Does the thirteenth amendment warrant the enactment of section 5,519 of the Revised Statutes? We are of opinion that it does not. Our conclusion is based on the fact that the provisions of that section are broader than the thirteenth amendment would justify. Under that section it would be an offense for two or more white persons to conspire, etc., for the purpose of depriving another white person of the equal protection of the laws. It would be an offense for two or more colored persons, enfranchised slaves, to conspire with the same purpose against a white citizen or against another colored citizen who had never been a slave. Even if the amendment is held to be directed against the action of private individuals, as well as against the action of the States and United States, the law under consideration covers cases both within and without the provisions of the amendment. It covers any conspiracy between two free white men against another free white man to deprive the latter of any right accorded him by the laws of the State or of the United States. A law under which two or more free white private citizens could be punished for conspiring or going in disguise for the purpose of depriving another free white citizen of a right accorded by the law of the State to all classes of persons, as, for instance, the right to make a contract, bring a suit, or give evidence, clearly can not be authorized by the amendment which simply prohibits slavery and involuntary servitude.

Those provisions of the law, which are broader than is warranted by the article of the Constitution by which they are supposed to be authorized, can not be sustained.

There is another view which strengthens this conclusion. If Congress has constitutional authority under the thirteenth amendment to punish a conspiracy between two persons to do an unlawful act, it can punish the act itself, whether done by one or more persons.

A private person can not make constitutions or laws, nor can he with authority construe them, nor can he administer or execute them. The only way, therefore, in which one private person can deprive another of the equal protection of the laws is by the commission of some offense against the laws which protect the rights of persons, as by theft, burglary, arson, libel, assault, or murder. If, therefore, we hold that section 5,519 is warranted by the thirteenth amendment, we should, by virtue of that amendment, accord to Congress the power to punish every crime by which the right of any person to life, property, or reputation is invaded. Thus, under a provision of the Constitution which simply abolished slavery and involuntary servitude, we should, with few exceptions, invest Congress with power over the whole catalogue of crimes. A construction of the amendment which leads to such a result is clearly unsound.

The Court concluded by saying that there is

only one other clause in the Federal Constitution which can in any degree be supposed to sustain the law under consideration, namely, section 2 of Article IV, which declares that "the citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States." But this section, as the Court held, like the fourteenth amendment, is directed against State action. Its object is to place the citizens of each State upon the same footing with citizens of other States and inhibit discriminative legislation against them by other States. "It was never supposed," said Justice Woods, "that this clause conferred on Congress the power to enact a law which would punish a private citizen for an invasion of the rights of his fellow-citizen, conferred by the State of which they were both residents on all its citizens alike."

**CONSTITUTIONALITY OF THE CIVIL RIGHTS ACT.**—The above decision raises the question whether the Civil Rights Act, passed by Congress in 1875, to secure to colored people equal rights with white persons in theatres, hotels, and public conveyances, is not also unconstitutional. The first section of this act declares that "all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land and water, theatres, and other places of public amusement; subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude." The act then gives to any aggrieved person an action for damages, and also subjects the offender to fine and imprisonment. According to the above decision of the Supreme Court, in the *Harris* case, the fourteenth amendment prohibits States, but not individuals, from denying equal rights to colored citizens, and that Congress has no power to protect those rights against individual invasion or violation. From this it would seem to follow that Congress has no constitutional authority to prohibit the keepers of hotels and the managers of theatres and other places of public amusement from making any unjust discrimination against colored persons. On the same principle, it would have no power under the fourteenth amendment to legislate in furtherance of the equal rights of colored persons in public conveyances. And it was so held by the United States Court for the District of Kentucky, in August, 1882. In that case (reported in 13 Federal Reporter, 337) Mrs. Smoot, a colored woman, was denied admission to a first-class passenger-car on the railroad from Lexington to Covington. She brought an action for damages against the company under the act of Congress of March, 1875. But Judge Barr held that the fourteenth amendment prohibits only States and not individuals from denying equal rights to colored citizens, and that

that amendment gives to Congress no power to declare that railroad corporations shall not make any discrimination against colored passengers.

There is, however, another aspect of this question. The commercial clause of the Constitution gives to Congress power to regulate foreign and interstate commerce. This provision was not considered in the *Smoot* case, for the reason that the defendant road was entirely within the State of Kentucky. But there is little room for doubt that the power of Congress to regulate foreign and interstate commerce extends in such case to the protection of colored passengers.

The decision of the United States Supreme Court, in the case of *Hall* against *De Cuir*, rendered in 1877, and reported in 95 United States Reports, 485, bears on this point. In that case it appeared that the Legislature of Louisiana had passed a law prohibiting any discrimination against colored passengers in public conveyances. Mrs. De Cuir, a colored woman, took passage from New Orleans to Hermitage, La., on a boat plying between the former city and Vicksburg, Miss. She was refused admission to the cabin set apart for white persons, and sued for damages under the State law. The Supreme Court of the United States held that the Louisiana statute, so far as it applied to foreign or interstate transportation, was an invasion of the powers vested by the Constitution in Congress. "We think," said Chief-Justice Waite, "that this statute, to the extent that it requires those engaged in the transportation of passengers among the States to carry colored passengers in Louisiana in the same cabin with the whites, is unconstitutional and void. If the public good requires such legislation, it must come from Congress, and not the States."

**A STATE LAW AGAINST MISCEGENATION.**—In *Pace* against the State of Alabama, decided January 29, 1883, the Supreme Court held that a State law against miscegenation is not a violation of the fourteenth amendment. Section 4,184 of the Code of Alabama imposes a specified penalty upon any man and woman who live together in adultery. Section 4,189 prescribes a more severe penalty when the offense is committed by a white person and a negro, and the penalty is extended to the intermarriage of whites and blacks. The plaintiff in error, a colored man who had been indicted for living with a white woman, contended, through his counsel, that by the above legislation a discrimination was made against colored persons, in violation of the fourteenth amendment. The Court unanimously held the law to be constitutional. Justice Field, who delivered the opinion, said: "The defect in the argument of counsel consists in his assumption that any discrimination is made by the laws of Alabama in the punishment provided for the offense for which the plaintiff in error was indicted, when committed by a person of the

African race, and when committed by a white person. The two sections of the code are entirely consistent. The one prescribes, generally, a punishment for an offense committed between persons of different sexes; the other prescribes a punishment for an offense which can only be committed when the two sexes are of different races. There is in neither section any discrimination against either sex. Section 4,184 equally includes the offense when the persons of the two sexes are both white, and when they are both black. Section 4,189 applies the same punishment to both offenders, the white and the black. Indeed, the offense against which this latter section is aimed can not be committed without involving the persons of both races in the same punishment. Whatever discrimination is made in the punishment prescribed in the two sections, is directed against the offense designated, and not against the person of any particular color or race. The punishment of each offending person, whether white or black, is the same."

**SUITS AGAINST THE UNITED STATES.**—In the case of the United States against Lee, decided December 4, 1882, the Court held by a majority of only one, that while the United States can not be sued without its own consent, as prescribed by Congress, this principle is limited to suits against the United States directly and by name, and does not extend to actions brought against officers or agents of the Government for the recovery of property held for the United States by such officers or agents. The question arose out of proceedings relating to the Arlington estate. This tract of land, embracing about eleven hundred acres, was originally the proper of George Washington Parke Custis, who devised it to his daughter, the wife of General Robert E. Lee, and after her death, to the grandson of the testator, G. W. P. C. Lee. In 1864 it was sold for non-payment of taxes under acts of Congress of 1862 and 1863, which provided that no person but the owner in person should be allowed to pay the overdue taxes. The owner not appearing in person at the sale, the property was bid in by the tax commissioners for the United States. It has since been used as a national cemetery for and other Government purposes, and was at the time of the proceedings in this controversy in the possession of Kaufman and Strong, as officers of the United States. Suit for its recovery was brought some time ago against Kaufman and Strong, in one of the State courts of Virginia, by General G. W. P. C. Lee, claiming to be seized of the fee under the will of his grandfather. The suit was removed to the United States Circuit Court, where Attorney-General Devens appeared in behalf of the United States, and opposed the objection that the action, being one against the Government without its consent, could not be maintained. The case was then taken to the United States Supreme Court. It was conceded by that court that the United States can not be

sued directly and by name by one of its citizens without its own consent. But in this case the suit was not nominally and directly against the United States, but against its officers in possession of property claimed by the United States. On the question, whether suit could be maintained against such officers, the court was divided. Five judges, Miller, Field, Harlan, Matthews, and Blatchford, held that the action could be sustained. Chief-Justice Waite, and Justices Bradley, Woods, and Gray, maintained the contrary. Two elaborate opinions were rendered, that of the court by Justice Miller, and that of the minority by Justice Gray.

Justice Miller pointed out that the doctrine that the United States can not be sued by an individual without its consent is derived, not from the Constitution, but from the laws and practices of our English ancestors. But the most important reasons advanced in support of the principle in England do not apply to our form of government. For instance, it is an ancient principle in England that the King could not be sued except where his consent had been given on petition of right. "There is in this country, however," says Justice Miller, "no such thing as the petition of right, as there is no such thing as a kingly head to the nation, or to any of the States which compose it. There is vested in no officer or body the authority to consent that the State shall be sued except in the law-making power, which may give such consent on the terms it may choose. Congress has created a court [United States Court of Claims] in which it has authorized suits to be brought against the United States, but has limited such suits to those arising on contract, with a few unimportant exceptions. What were the reasons which forbid that the King should be sued in his own court, and how do those reasons apply to the political body corporate which we call the United States of America? As regards the King, one reason given by the old judges was the absurdity of the King's sending a writ to himself to command the King to appear in the King's court. No such reason exists in our Government, as process runs in the name of the President, and may be served on the Attorney-General, as was done in the case of Chisholm against the State of Georgia (2 Dallas Reports, 419). Nor can it be said that the dignity of the Government is degraded by appearing as a defendant in the courts of its own creation, because it is constantly appearing as a party in such courts, and submitting its rights as against the citizens to their judgment. Mr. Justice Gray, of the Supreme Court of Massachusetts, in an able and learned opinion which exhausts the sources of information on this subject, says: 'The broader reason is, that it would be inconsistent with the very idea of supreme executive power, and would endanger the performance of the public duties of the sovereign, to subject him to repeated suits as a matter of right, at the

will of any citizen, and to submit to the judicial tribunals the control and disposition of his public property, his instruments and means of carrying on his government in war and in peace, and the money in his treasury.' (Briggs against *The Light-Boats*, 11 Allen's Reports, 162.) As we have no person in this Government who exercises supreme executive power, or performs the public duties of a sovereign, it is difficult to see on what solid foundation of principle the exemption from liability to suit rests. It seems most probable that it has been adopted in our courts as a part of the general doctrine of publicists, that the supreme power in every State, wherever it may reside, shall not be compelled, by process of courts of its own creation, to defend itself from assaults in those courts."

The Court said that but little weight could be given to the English decisions on the question whether a citizen might sue an officer of the Government for the recovery of property, for the reasons, first, that the petition of right afforded a judicial remedy in England, and hence there was no necessity for suing the officers or servants of the King; and, second, owing to the vast difference in the essential character of the two governments with respect to the source and the depositaries of power. After citing American authorities, Justice Miller proceeded:

Looking at the question upon principle, and apart from the authority of adjudged cases, we think it still clearer that this branch of the defense can not be maintained. It seems to be opposed to all the principles upon which the rights of the citizen, when brought in collision with the acts of the Government, must be determined. In such case there is no safety for the citizen, except in the protection of the judicial tribunals, for rights which have been invaded by the officers of the Government, professing to act in its name. There remains to him but the alternative of resistance, which may amount to crime. The position assumed here is that, however clear his rights, no remedy can be afforded to him when it is seen that his opponent is an officer of the United States, claiming to act under its authority; for as Chief-Justice Marshall says, to examine whether this authority is rightfully assumed is the exercise of jurisdiction, and must lead to the decision of the merits of the question. The objection of the plaintiffs in error necessarily forbids any inquiry into the truth of the assumption that the parties setting up such authority are lawfully possessed of it, for the argument is that the formal suggestion of the existence of such authority forbids any inquiry into the truth of the suggestion. . . . The defense stands here solely upon the absolute immunity from judicial inquiry of every one who asserts authority from the executive branch of the Government, however clear it may be made that the Executive possesses no such power. Not only that no such power is given, but that it is absolutely prohibited, both to the Executive and the legislative, to deprive any one of life, liberty, or property without due process of law, or to take private property without just compensation. . . .

No man in this country is so high that he is above the law. No officer of the law may set that law at defiance with impunity. All the officers of the Government, from the highest to the lowest, are creatures of the law, and are bound to obey it. It is the only supreme power in our system of government, and every man who by accepting office participates in its functions is only the more strongly bound to submit

to that supremacy, and to observe the limitations which it imposes upon the exercise of the authority which it gives.

Courts of justice are established, not only to decide upon the controverted rights of the citizens as against each other, but also upon rights in controversy between them and the Government, and the docket of this court is crowded with controversies of the latter class. Shall it be said, in the face of all this, and of the acknowledged right of the judiciary to decide in proper cases, statutes which have been passed by both branches of Congress, and approved by the President, to be unconstitutional, that the courts can not give remedy when the citizen has been deprived of his property by force, his estate seized and converted to the use of the Government without any lawful authority, without any process of law, and without any compensation, because the President has ordered it and his officers are in possession? If such be the law of this country, it sanctions a tyranny which has no existence in the monarchies of Europe, nor in any other government which has a just claim to well-regulated liberty and the protection of personal rights. It can not be, then, that when in a suit between two citizens for the ownership of real estate, one of them has established his right to the possession of the property according to all the forms of judicial procedure, and by the verdict of a jury and the judgment of the court, the wrongful possessor can say successfully to the court: "Stop, here; I hold by order of the President, and the progress of justice must be stayed"; that, though the nature of the controversy is one peculiarly appropriate to the judicial function, though the United States is no party to the suit, though one of the three great branches of the Government to which by the Constitution this duty has been assigned, has declared its judgment after a fair trial, the unsuccessful party can interpose an absolute veto upon that judgment by the production of an order of the Secretary of War, which that officer had no more authority to make than the humblest private citizen.

By the four dissenting justices it was maintained, in an elaborate opinion written by Justice Gray, that "the sovereign is not liable to be sued in any judicial tribunal without its consent. The sovereign can not hold property except by agents. To maintain an action for the recovery of possession of property held by the sovereign through its agents, not claiming any title or right in themselves, but only as the representatives of the sovereign and in its behalf, is to maintain an action to recover possession of the property against the sovereign; and to evade such possession of the agents, by execution or other judicial process, is to invade the possession of the sovereign and to violate the fundamental maxim that the sovereign can not be sued. That maxim is not limited to a monarchy, but is of equal force in a republic. In the one, as in the other, it is essential to the common defense and general welfare that the sovereign should not, without its consent, be dispossessed by judicial process of forts, arsenals, military posts, and ships of war necessary to guard the national existence against insurrection and invasion; of custom-houses and revenue-cutters, employed in the collection of the revenue; or of light-houses and light-ships, established for the security of commerce with foreign nations and among the different parts of the country. These principles appear to us to be axioms of public law, which would need no reference to authorities in their support,

were it not for the exceeding importance and interest of the case, the great ability with which it has been argued, and the difference of opinion that has been manifested as to the extent and application of the precedents." Justice Gray then proceeded to cite and apply numerous English and American decisions in support of the views of the minority of the court.

**SUITS AGAINST A STATE.**—On March 5, 1883, the Court rendered an important opinion, holding that one State can not be sued in the Federal courts by another State acting as the assignee of one of its citizens. The question was raised in two similar suits brought by New York and New Hampshire against Louisiana. The essential facts were substantially the same in both cases. It appeared that each of the plaintiff States had passed a law providing that any of its citizens holding bonds or other obligations of another State might transfer them to his own State, and have it bring suit against the defendant State. Under these laws alleged "repudiated" bonds of Louisiana were assigned to New York and New Hampshire by citizens of those States respectively, and suits were accordingly brought. The Constitution expressly authorizes suits to be brought by one State against another in the Federal courts. But the eleventh amendment declares that "the judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign State." In an elaborate opinion on the question raised, Chief-Justice Waite expressed in substance the following views:

Under the operation of this amendment the actual owners of bonds and coupons held by New Hampshire and New York are precluded from prosecuting these suits in their own names. The real question, therefore, is whether they can sue in the name of their respective States after getting the consent of the State, or, to put it in another way, whether a State can allow the use of its name in such a suit for the benefit of one of its citizens. The language of the amendment is in effect that the judicial power of the United States shall not extend to any suit commenced or prosecuted by citizens of one State against another State. No one can look at the pleadings and testimony in these cases without being satisfied beyond all doubt that they were in legal effect commenced, and are now prosecuted solely by the owners of the bonds and coupons. The State and the Attorney-General are only nominal actors in the proceeding. The bond-owner, whoever he may be, is the promoter and manager of the suit. He pays the expenses, is the only one authorized to conclude a compromise, and if any money is ever collected it must be paid to him without even passing through the form of getting into the Treasury of the State. The State is nothing more nor less than a mere collecting agent of the owners of the bonds and coupons, and, while the suits are in the names of the States, they are under the control of individual citizens, and are prosecuted and carried on altogether by and for them.

It is contended, however, that notwithstanding the prohibition of the amendment the States may prosecute the suits, because as the "sovereign and trustee of its citizens" a State is "clothed with the right and faculty of making an imperative demand upon another independent State for the payment of debts which it

owes to the citizens of the former." There is no doubt but one nation may, if it see fit, demand of another nation the payment of a debt owing by the latter to a citizen of the former; but the States are not nations either as between themselves or toward foreign nations. They are sovereign within their spheres, but their sovereignty stops short of nationality. Their political status at home and abroad is that of States in the United States. But it is said that even if a State, as sovereign trustee for its citizens, did surrender to the national Government its power of prosecuting the claims of its citizens against another State by force, it got in lieu the constitutional right of suit in the national courts. There is no principle of international law which makes it the duty of one nation to assume the collection of the claims of its citizens against another nation, if the citizens themselves have ample means of redress without the intervention of their government. Under the Constitution, as it was originally construed, a citizen of one State could sue another State in the courts of the United States for himself and obtain the same relief that his State could get for him if it should sue. Certainly, when he can sue for himself, there is no necessity for power in his State to sue in his behalf, and we can not believe it was intended by the framers of the Constitution to allow both remedies in such a case. Therefore, the special remedies granted to the citizen himself must be deemed to have been the only remedy the citizen of one State could have under the Constitution against another State, for the redress of his grievances, except such as the delinquent State saw fit itself to grant. In other words, the giving of the direct remedy to the citizen himself was equivalent to taking away any indirect remedy he might otherwise have claimed through the intervention of his State upon any principle of the law of nations. It follows that, when the amendment took away the special remedy, there was no other left. Nothing was added to the Constitution by what was thus done. No power taken away by the grant of the special remedy was restored by the amendment. The effect of the amendment was simply to revoke the new right that had been given, and leave the limitations to stand as they were. The evident purpose of the amendment was to prohibit all suits against a State by or for citizens of other States or aliens, without the consent of the State to be sued; and in our opinion one State can not create a controversy with another State, within the meaning of that term as used in the judicial clauses of the Constitution, by assuming the prosecution of debts owing by the other States to its citizens. Such being the case, we are satisfied that we are prohibited both by the letter and the spirit of the Constitution from entertaining these suits, and the bill in each of them is consequently dismissed.

**A CONSTITUTIONAL AMENDMENT PROPOSED.**—On January 19, 1883, William R. Moore, of Tennessee, introduced into the House of Representatives the following joint resolution, proposing a sixteenth amendment to the Constitution of the United States:

*Resolved by the Senate and House of Representatives (two thirds of each House concurring therein), That the following amendment to the Constitution be and is hereby proposed to the States, to become valid when ratified by the Legislatures of three fourths of the several States, as provided in the Constitution:*

#### ARTICLE XVI.

SECTION 1. That Article XI of the present Constitution be and the same is hereby rescinded.

SEC. 2. That Congress shall have power to provide, by appropriate legislation, for the legal enforcement of the obligation of contracts entered into by any of the States of this Union.

The repeal of the eleventh amendment would enable any citizen of one State to sue another State in the Federal courts. The alleged pur-

pose of Mr. Moore's proposed amendment was, among other things, to give a remedy to the holders of repudiated State bonds and obligations. The concurrent resolution was not voted upon.

**TAXATION OF IMMIGRANTS.**—The right of a State to levy a tax on immigrants, for the declared purpose of raising money for the execution of its inspection laws, was denied by the Supreme Court, in an opinion announced February 5, 1883. The Court decided, in 1876, that the statute of New York, taxing immigrants for the purpose of raising money to defray the expense of the Emigration Board of that State, was a violation of that clause of the Constitution which vests in Congress the power to regulate foreign commerce. Early in 1882 another statute, for the same purpose, was passed by the Legislature of New York. It imposed "a duty" of one dollar on every alien passenger brought to the port of New York. In order to avoid the constitutional objection to the former statute, it was entitled "An act to raise money for the execution of the inspection laws of the State of New York," and provided that the tax levied should be paid by the steamers bringing the immigrants to the Chamberlain of the city of New York; and then directed that the Chamberlain should hand over to the Commissioners of Emigration whatever money might be necessary for the execution of the inspection laws of the State, and the balance of the tax collected to the Treasurer of the United States. A few days before the enactment of this law the Legislature had passed another "Act for the inspection of alien emigrants, and their effects, by the Commissioners of Emigration," which prescribed regulations for the inspection of immigrants arriving at the port of New York. It was claimed that this legislation, including the imposition of the head-tax, was a lawful exercise of the power of the State under Article I, section 10, clause 2 of the Federal Constitution, which declares that "no State shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be actually necessary for executing its inspection laws." The *Compagnie Générale Transatlantique* refused to pay the tax, and contested the constitutionality of the legislation imposing it. In an opinion, written by Justice Miller, the Supreme Court said that neither at the time of the formation of the Constitution, nor since, has any rightful inspection law included anything but personal property as a subject of its operation; nor has it ever been held by any competent judicial authority that the words "imports" and "exports" are used in that instrument as applicable to free human beings. It knew of nothing which could be exported from one country, or imported into another, that is not in some sense property—property in regard to which some one is owner, and of which the owner is either the importer or the exporter. This can

not apply to a free man. Of him it is never said that he imports himself, or his wife, or his children. Free human beings are not imports or exports within the meaning of the Constitution. Furthermore, said the Court, it appears that the object of these New York enactments goes far beyond any correct view of the purpose of an inspection law. The commissioners are to inspect all persons arriving from any foreign country, to ascertain who among them are "habitual criminals or pauper lunatics, idiots, or imbeciles, or orphan persons, without means or capacity to support themselves, and subject to become a public charge." It may be safely said that these are matters incapable of being satisfactorily ascertained by inspection. What is an "inspection"? Something which can be done by looking at, or weighing, or measuring the thing to be inspected, or by applying to it at once some crucial test. When testimony or evidence is to be taken and examined, it is not "inspection" in any sense whatever. Another section provides for the custody, the support, and the treatment for diseases of these persons, and the retransport of criminals. Are these "inspection laws"? Is the ascertainment of the guilt of a criminal to be made by "inspection"? In fact, these statutes differ from those heretofore held void, only in that they are called in their caption "inspection laws," and in that provision is made for the payment of any surplus, after the support of paupers, criminals, and diseased persons, into the Treasury of the United States—a surplus which, in this enlarged view of what are the expenses of an inspection law, it is safe to say will never exist. A State can not make a law designed to raise money to support paupers, to detect or prevent crime, to guard against disease, and cure the sick, an "inspection" law within the constitutional meaning of that word, by calling it so in the title.

**TOBACCO INSPECTION.**—In the case of *Henry A. Turner*, plaintiff in error, against the State of Maryland, the Court, on February 5, 1883, gave an elaborate opinion on the question of the constitutionality of certain provisions of the laws of Maryland relating to tobacco inspection. The provisions in question, being section 41 of chapter 346 of the Laws of Maryland of 1864, as amended and re-enacted by chapter 291 of the Laws of 1870, are as follows:

After the passage of this act it shall not be lawful to carry out of this State, in hogsheds, any tobacco raised in this State, except in hogsheds which shall have been inspected, passed, and marked, agreeably to the provisions of this act, unless such tobacco shall have been inspected and passed before this act goes into operation, and any person violating the provisions of this section shall forfeit and pay the sum of \$300, which may be recovered in any court of law of this State, and which shall go to the credit of the tobacco fund; provided that nothing herein contained shall be construed to prohibit any grower of tobacco or any purchaser thereof, who may pack the same in the county or neighborhood where grown, from ex-

porting or carrying out of this State any such tobacco without having the same opened for inspection; but such tobacco, so exported or carried out of this State without inspection, shall in all cases be marked with the name in full of the owner thereof and the residence of such owner, and shall be liable to the same charge of outage and storage as in other cases, and any such person who shall carry or send out of this State any such tobacco without having it so marked, shall be subject to the penalty prescribed by this section.

In an elaborate opinion written by Justice Blatchford, the Court, affirming the judgment of the Maryland Court of Appeals, held: first, that this section, in its provisions as to charges for outage and storage, is not in violation of clause 2 of section 10 of Article I of the Constitution of the United States as respects any impost or duty imposed by it on exports, or in violation of the clause of section 8 of Article I, which gives power to Congress "to regulate commerce with foreign nations and among the several States"; second, that the charge for outage under the proviso of said section 41, as amended and re-enacted, is an "inspection duty" within the meaning of the Constitution; third, that dispensing with an opening for an inspection of the hogsheds mentioned in the proviso does not, in view of the other provisions of the tobacco inspection laws of Maryland, deprive those statutes of the character of inspection laws; fourth, that it is not foreign to the character of an inspection law to require every hogshed of tobacco to be brought to a State tobacco warehouse; fifth, that the section of the law in controversy is not a regulation of commerce, or unconstitutional as discriminating between the State buyer and manufacturer of leaf-tobacco and the purchaser who buys for the purpose of transporting the tobacco to another State or to a foreign country, or a discrimination between different classes of exporters of tobacco; sixth, that the charge for outage in this case appears to be a charge for services properly rendered.

**THE RAILROAD-TAX CASE.**—No more important constitutional question was raised during the year than that passed upon by the United States Circuit Court in California, and afterward argued before the Supreme Court of the United States, in the "railroad-tax case." The suit was begun by the county of San Mateo against the Southern Pacific Railroad Company for the recovery of State and county taxes. The company set up the defense that, in the assessment of its property, according to which the taxes claimed had been levied, an unlawful and unjust discrimination was made between its property and the property of individuals. The Constitution of California provides that all property in the State, with certain exceptions, shall be taxed in proportion to its value; but, in the ascertainment of its value as a basis for taxation, a distinction is made between the property of persons and that of railroad corporations. In the assessment of individual property, the amount of mortgages on it is deducted from its value; in the case of

corporate property this deduction is not allowed. The practical effect of this law was thus illustrated by Justice Field: "Suppose a private person owns a farm which is valued at \$100,000, and is encumbered with a mortgage amounting to \$80,000; he is, in that case, assessed at \$20,000; if the rate of taxation be two per cent, he would pay \$400 taxes. If a railroad company owns an adjoining tract worth \$100,000, which is also encumbered by a mortgage for \$80,000, it would be assessed for \$100,000, and required to pay \$2,000 taxes, or five times as much as the private person." The railroad company contended, among other things, that the provision of the Constitution of California which authorized this discrimination against corporations was in violation of the fourteenth amendment to the Federal Constitution, which declares that no State shall deny to any person within its jurisdiction the equal protection of the laws. The plaintiff maintained, first, that the fourteenth amendment was intended only to secure civil rights to colored citizens; and, second, that a corporation is not a person within the meaning of that amendment. On the questions thus raised two elaborate opinions were rendered by Circuit-Justice Field, of the United States Supreme Court, and Circuit-Judge Sawyer, who agreed that equal protection of the law is guaranteed by the fourteenth amendment to corporations as well as persons, and that the amendment is aimed against unjust discrimination in taxation as well as in the matter of personal rights. Justice Field admitted that the power of taxation possessed by the State may be exercised upon any subject within its jurisdiction, and to any extent not prohibited by the Constitution of the United States expressly or by clear implication. Hence, where complaint is made in a Federal court of a tax levied by the States, the question always is, whether there is any inhibition, express or implied, in the Federal Constitution upon the imposition of the tax. Considering this question in the light of the fourteenth amendment, he said:

The fourteenth amendment of the Constitution, in declaring that no State shall deny to any person within its jurisdiction the equal protection of the laws, imposes a limitation upon the exercise of all the powers of the State which can touch the individual or his property, including among them that of taxation. Whatever the State may do, it can not deprive any one within its jurisdiction of the equal protection of the laws. And by equal protection of the laws is meant equal security under them to every one on similar terms, in his life, his liberty, his property, and in the pursuit of happiness. It not only implies the right of each to resort, on the same terms with others, to the courts of the country for the security of his person and property, the prevention and redress of wrongs, and the enforcement of contracts, but also his exemption from any greater burdens or charges than such as are equally imposed upon all others under like circumstances.

Unequal exactions in every form, or under any pretense, are absolutely forbidden; and, of course, unequal taxation, for it is in that form that oppressive burdens are usually laid. It is not possible to con-

ceive of equal protection under any system of laws where arbitrary and unequal taxation is permissible; where different persons may be taxed on their property of the same kind, similarly situated, at different rates; where, for instance, one may be taxed at 1 per cent on the value of his property, another at 2 or 5 per cent, or where one may be thus taxed according to his color, because he is white, or black, or brown, or yellow, or according to any other rule than that of a fixed rate proportionate to the value of his property.

The Court then proceeded to consider the question whether a corporation can be considered a person within the meaning of the fourteenth amendment so as to be entitled with respect to its property to the equal protection of the laws. It was conceded that the amendment had its origin in a purpose to secure colored persons whom it made citizens in the full enjoyment of their freedom and civil rights.

But (said Justice Field) the generality of the language used extends the protection of its provisions to persons of every race and condition against discriminating and hostile State action of any kind. Its effect, in preserving free institutions and preventing harsh and oppressive State legislation, can hardly be overstated. When burdens are placed upon particular classes or individuals, while the majority of the people are exempted, little heed may be paid to the complaints of those affected. Oppression thus becomes possible and lasting. But a burdensome law, operating equally upon all, will soon create a movement for its repeal. With the amendment enforced, a bad or an oppressive State law will not long be left on any statute-book.

The argument that a limitation must be given to the scope of this amendment, because of the circumstances of its origin, is without force. Its authors, seeing how possible it was for the States to oppress, without relief from the Federal Government, placed in the Constitution an interdict upon their action, which makes lasting oppression of any kind by them under the form of law impossible.

The amendment prohibiting slavery and involuntary servitude, except as a punishment for crime, had its origin in the previous existence of African slavery. But the generality of its language makes its prohibition apply to slavery of white men as well as that of black men; and also to serfage, vassalage, villanage, peonage, and every other form of compulsory labor to minister to the pleasure, caprice, vanity, or power of others.

Quoting from the opinion of Chief-Justice Marshall, in the Dartmouth College case, in which the latter laid down the principle that "the case being within the words of the rule, must be within its operation likewise, unless there be something in the literal construction so obviously absurd or mischievous, or repugnant to the general spirit of the instrument, as to justify those who expound the Constitution in making it an exception," Justice Field proceeded as follows:

Following that authority, we can not adopt the narrow view for which counsel contend, and limit the application of the prohibition of the fourteenth amendment to legislation touching members of the enfranchised race. It has a much broader operation. It does not, indeed, place any limit upon the subjects in reference to which the States may legislate. It does not interfere with their police power. Upon every matter upon which, previously to its adoption, they could act, they may still act. They can legislate now, as they always could, to promote the health, good

order, and peace of the community, to develop their resources, increase their industries, and advance their prosperity; but it does require that in all such legislation, hostile and partial discrimination against any class or person shall be avoided; that the States shall impose no greater burdens upon any one than upon others of the community under like circumstances, nor deprive any one of rights which others similarly situated are allowed to enjoy. It forbids the State to lay its hand more heavily upon one than upon another under like conditions. It stands in the Constitution as a perpetual shield against all unequal and partial legislation by the States, and the injustice which follows from it, whether directed against the most humble or the most powerful; against the despised laborer from China, or the envied master of millions. . . . Private corporations are, it is true, artificial persons, but with the sole exception of a [municipal] corporation, with which we are not concerned, they consist of aggregations of individuals united for some legitimate business. . . . It would be a most singular result, if a constitutional provision intended for the protection of every person against partial and discriminating legislation by the States, should cease to exert such protection the moment the person becomes a member of a corporation. We cannot accept such a conclusion. On the contrary, we think that it is well established by numerous adjudications of the Supreme Court of the United States, and of the several States, that whenever a provision of the Constitution, or of a law, guarantees to persons the enjoyment of property, or affords to them means for its protection, or prohibits legislation injuriously affecting it, the benefits of the provision extend to corporations, and that the courts will always look beyond the name of the artificial being to the individuals whom it represents.

After citing the fifth amendment to the Constitution, which declares among other things that "no person shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation," Justice Field said:

From the nature of the prohibitions in this amendment, it would seem, with the exception of the last one, as though they could apply only to natural persons. No others can be witnesses; no others can be twice put in jeopardy of life or limb, or compelled to be witnesses against themselves; and, therefore, it might be said with much force that the word person there used in connection with the prohibition against the deprivation of life, liberty, and property without due process of law, is in like manner limited to a natural person. But such has not been the construction of the courts. A similar provision is found in nearly all of the State Constitutions; and everywhere and at all times, and in all courts, it has been held, either by tacit assent or express adjudication, to extend, so far as their property is concerned, to corporations. And this has been because the property of a corporation is in fact the property of the corporators. To deprive the corporation of its property, or to burden it, is in fact to deprive the corporators of their property or to lessen its value. Their interest, undivided though it be, and constituting only a right during the continuance of the corporation to participate in its dividends, and on its dissolution to receive a proportionate share of its assets, has an appreciable value, and is property in a commercial sense; and whatever affects the property of the corporation necessarily affects the commercial value of their interest. If, for example, to take the illustration given by counsel, a corporation created for banking purposes acquires land, notes, stocks, bonds, and money, no stockholder can claim that he owns any particular item of this property, but he owns an interest in the whole of it,

which the courts will protect against unlawful seizure or appropriation by others, and on the dissolution of the company he will receive a proportionate share of its assets. Now, if a statute of the State takes the entire property, who suffers loss by the legislation? Whose property is taken? Certainly the corporation is deprived of its property; but, at the same time, in every just sense of the constitutional guarantee, the corporators are also deprived of their property.

Decisions of State courts, in harmony with the views we have expressed, exist in great numbers. But it is unnecessary to cite them. It is sufficient to add that in all text-writers, in all codes, and in all Revised Statutes, it is laid down that the term person includes, or may include, corporations, which amounts to what we have already said, that whenever it is necessary for the protection of contract or property rights, the courts will look through the ideal entity and name of the corporation to the persons who compose it and protect them, though the process be in its name. All the guarantees and safeguards of the Constitution for the protection of property possessed by individuals may, therefore, be invoked for the protection of the property of corporations. And as no discriminating and partial legislation, imposing unequal burdens upon the property of individuals, would be valid under the fourteenth amendment, so no legislation imposing such unequal burdens upon the property of corporations can be maintained. The taxation, therefore, of the property of the defendant upon an assessment of its value, without a deduction of the mortgage thereon, is to that extent invalid.

An appeal from this decision was taken to the Supreme Court of the United States, where the case was argued toward the close of the year. The importance and far-reaching consequences of its expected opinion can hardly be overestimated, for it will affect not merely the railroad companies of California, but all corporations, other than municipal, throughout the United States.

(For the opinion of the United States Supreme Court on other important constitutional questions, see *POLITICAL ASSESSMENTS AND POWERS OF CONGRESS OVER WITNESSES*; for the interpretation given by the courts to the anti-Chinese law, see *IMMIGRATION*; for the opinions in the Virginia and Louisiana bond cases, see *OBLIGATIONS OF CONTRACTS*.)

**LITERATURE, AMERICAN, IN 1882.**—The productiveness of American literature during the year has been very remarkable. It has exceeded all previous years, in the several departments of human knowledge. As in the past year also, American literary effort has manifested itself in translations of foreign books, and the editing and making additions to English publications for the home market. At the same time it must be confessed that the number of really great and important works of the year has not been as large in proportion as might have been expected.

According to "The Publishers' Weekly," which is regarded as the organ of the American book-trade, the following list gives the approximate numbers of books of various classes issued in 1882 (being 481 more than in 1881, and 1,396 more than in 1880):

CLASS.	No. of works.
Fiction.....	767
Theology and religion.....	826
Juvenile books.....	278

CLASS.	No. of Works.
Law.....	261
Education : language.....	221
Medical science : hygiene.....	188
Description, travel, etc.....	185
Biography, memoirs, etc.....	184
Poetry and the drama.....	182
Literary history and miscellany.....	165
History.....	118
Social and political science.....	112
Physical and mathematical science.....	106
Fine arts : illustrated works.....	91
Useful arts.....	87
Books of reference.....	86
Humor and satire.....	85
Sports, amusements, etc.....	28
Mental and moral philosophy.....	21
Music-books (chiefly singing-books).....	21
Domestic and rural economy.....	20
Total.....	3,472

IN THEOLOGY AND RELIGION there has been about the usual activity on the part of American authors; but it must be admitted that no works of surpassing merit or importance have appeared. American theological scholars and teachers of religion (perhaps even more than others of their countrymen) are forced to compete, not only with each other, but with the entire British press; and the year 1882 has been, like previous years, noted for numerous republications of English works in this department. So long as there is no international copyright law, this must be the regular result. In the way of sermons and lectures American writers have published freely. Among these may be named here, Rev. Alexander Crummell's "The Greatness of Christ, and other Sermons" (New York, T. Whittaker); "Three Hundred Outlines of Sermons on the New Testament," by eminent English and American clergymen (New York, A. C. Armstrong & Son); "Sermons preached in Plymouth Church," by Henry W. Beecher (New York, Fords, Howard & Hulbert), these last marked by all the peculiarities of the somewhat notorious author. To these add Dr. Phelps's "Men and Books, or Studies in Homiletics" (Scribner's Sons), and a new and enlarged edition of Professor Hoppin's "Homiletics" (New York, Dodd, Mead & Co.). The Bedell Lecture for 1881, by Bishop Williams, of Connecticut, entitled "The World's Testimony to Jesus Christ, or The Power of Christianity in developing Modern Civilization," (New York, Putnam's Sons), is one of the most thoughtful and valuable volumes of the year. A number of excellent volumes of sermons and expository works have been reprinted, such as Principal Fairbairn's "Studies in the Life of Christ" (New York, D. Appleton & Co.); W. Robertson Smith's "The Prophets of Israel and their Place in History, to the Close of the Eighth Century, B. C.," a companion volume to his "Old Testament in the Jewish Church" (same publishers); the late Dean Stanley's "Westminster Sermons" (New York, Scribner's Sons); "The Pulpit Commentary," edited by Canon Spence, with the aid of Canon Farrar, Principal Tulloch, and others (New York, A. D. F. Randolph & Co.); Rev. Andrew Jukes's "Types of Genesis" (T. Whittaker);

and "The Second Death and the Restitution of All Things" (same publisher); the late Canon Mozley's valuable "Lectures and other Theological Papers" (New York, E. P. Dutton & Co.); Professor Mahaffy's "The Decay of Modern Preaching" (New York, Macmillan & Co.). Mr. W. R. Hart's "Eternal Purpose, a Study of the Scripture Doctrine of Immortality" (Philadelphia, Lippincott & Co.) has reached a second edition, and is well worth reading. Dr. C. P. Tiele's "History of the Egyptian Religion" (Boston, Houghton, Mifflin & Co.), is a masterly work of its kind, and will repay study. Professor Green's "Moses and the Prophets" (New York, R. Carter & Brothers) is a searching and able review of Robertson Smith's "Old Testament in the Jewish Church" and "Prophets of Israel," and also of Kuenen's "Prophets and Prophecy in Israel." "Christ's Christianity," by Mr. A. H. Walker, is a lawyer's attempt to analyze and arrange, according to subjects, the precepts and doctrines recorded in Matthew, Mark, Luke, and John, as taught by Jesus Christ; it is well worth consulting. So also is Dr. Thomas Hill's "Geometry and Faith," third edition, enlarged (Boston, Lee & Shepard). Mr. O. Van Norden's "The Outermost Rim and Beyond" (New York, A. D. F. Randolph) is a very suggestive contribution toward reverential thought on divine things. The first volume of the "Schaff-Hertzog Encyclopædia of Religious Knowledge" (New York, Funk & Wagnalls) has made its appearance and promises well. Dr. Hurst's "Bibliotheca Theologica" (New York, Scribner's Sons) is a very timely contribution in aid of students and general readers. The second volume of Westcott and Hort's New Testament has been reproduced by Harper & Brothers, and is a necessary adjunct to the volume issued last year. It contains a full account of the principles of criticism, etc., in accordance with which the learned editors arranged the Greek text of the New Testament.

PHILOSOPHY offers a few works this year. Professor Bowne's "Metaphysics" (New York, Harper & Brothers) is very able and noteworthy. Dr. E. J. Hamilton has produced a full and complete treatise on "The Human Mind" (New York, R. Carter & Brothers). Dr. McCosh's "Criteria of Diverse Kinds of Truth, as opposed to Agnosticism," No. I of "Philosophic Series" (New York, Scribner's Sons), is a treatise on applied logic, and, with the numbers to follow, will prove to be timely and useful in the present condition of philosophical thought and study. President N. Porter's collection of papers, chiefly philosophical, under the title "Science and Sentiment," is both interesting and valuable. President Mahan's "Mental Philosophy" (Chicago, Griggs & Co.) is a complete system of mental science, for the use of schools and colleges. A translation of Rudolf Schmid's "The Theories of Darwin" (Chicago, Jansen, McClurg & Co.) presents clearly and forcibly the relation of his the-

ories to philosophy, religion, and morality. It is one of the ablest works of the year. Among republications of foreign contributions to philosophy are, H. Martensen's "Social Ethics" (New York, Scribner & Welford); H. Heine's "Philosophy and Religion in Germany" (Boston, Houghton, Mifflin & Co.); G. S. Morris's "Kant's Critique of Pure Reason" (Chicago, Griggs & Co.), and Professor Watson's "Schelling's Transcendental Idealism" (same publishers). Herbert Spencer continues his labors in "The Principles of Sociology" (Cereemonial and Political Institutions), Vol. II (D. Appleton & Co.).

IN SCIENCE, chiefly physical or natural science, the main supply has been from abroad. "The Concepts and Theories of Modern Physics," by Judge Stallo (New York, D. Appleton & Co.), is a work of superior merit. Professor Le Conte's "Elements of Geology" (same publishers) has appeared in a revised and enlarged edition. "The Stars and the Earth," by Dr. T. Hill (Boston, Lee & Shepard), presents some striking thoughts upon space, time, and eternity. Dr. A. Wilson's "Chapters in Evolution" (New York, Putnam's Sons) is interesting and valuable. So also (same publishers) is Dr. G. M. Beard's "The Psychology of the Salem Witchcraft Excitement, 1692." Specially interesting republications, of a scientific character, are, Sir John Lubbock's "The Origin of Civilization and the Primitive Condition of Man" (fourth edition, with illustrations); "Ants, Bees, and Wasps" (same author); Tyndall's "Essays on the Floating Matter of the Air, in Relation to Putrefaction and Infection," and Professor Huxley's "Science and Culture, and other Essays" (D. Appleton & Co.); A. G. Locke's work on "Gold, its Occurrence and Extraction" (New York, E. & F. N. Spon) is regarded as important and valuable, as is also Spon's "Encyclopædia of the Industrial Arts." Further advance in the applications and uses of electricity has led to the preparing a number of works on this subject. One of the best is "The Modern Applications of Electricity," by E. Hospitalier, translated and enlarged by J. Maier (D. Appleton & Co.). In this connection may be noted Mr. Donnelly's curious and instructive volume, "Ragnarok, the Age of Fire and Gravel" (same publishers); it is well worth reading and examining. "The Popular Science Monthly" (D. Appleton & Co.) maintains its place, and increases in favor with intelligent readers and students.

IN MEDICAL SCIENCE the year's production has been quite as creditable as usual. A considerable portion of the works published is in continuations, or new and revised editions. A few only need here be specified. Dr. William H. Van Buren's "Lectures on Diseases of the Rectum" appear in a second enlarged edition (New York, D. Appleton & Co.). "A Guide to Materia Medica and Therapeutics," by Dr. Robert Farquharson (Philadelphia, H.

C. Lea's Son & Co.), ranks high with the profession, as does also "A Practical Treatise on Operative Dentistry" (Philadelphia, P. Blakiston, Son & Co.). The subject of "Legal Medicine," by Dr. Charles Meynott (New York, W. Wood & Co.), is discussed with care and ability. Dr. Richard Quain's "Dictionary of Medicine, including General Pathology, General Therapeutics, Hygiene, and the Diseases peculiar to Women and Children" (D. Appleton & Co.), is a large volume of nearly 2,000 pages, fully illustrated. Dr. Quain's co-workers are among the most eminent physicians and surgeons in England, and the work is one of superior merit and value. Dr. Courty's "Practical Treatise on the Diseases of the Uterus, Ovaries, and Fallopian Tubes" is translated from the French. It is a work of standard excellence, and has reached a third edition (Philadelphia, P. Blakiston, Son & Co.). The work of Dr. T. Billroth (of Vienna), on "General Surgical Pathology and Therapeutics" (D. Appleton & Co.), has been translated from the fourth German edition, by Dr. C. E. Hackley, of New York. It has further been revised from the eighth edition of the original, and is one of the most valuable books of the year. Strecker's "Short Text-Book of Organic Chemistry" (D. Appleton & Co.), and Dr. Luys's "The Brain and its Functions" (same publishers), deserve mention. In the way of periodicals may be named here, "The New York Medical Journal" (monthly in 1882, announced as weekly in 1883), published by D. Appleton and Co.; also, "The Medical and Surgical Reporter" (weekly), and "The Quarterly Compendium of Medical Science" (Philadelphia, D. G. Brinton, M.D.). Dr. Satterthwaite's "Manual of Histology" (New York, W. Wood & Co.), Dr. Bartholow's "Medical Electricity," and "Treatise on Hypodermic Medication" (Philadelphia, J. B. Lippincott & Co.), deserve mention, as also Dr. Clapp's "Is Consumption Contagious? and can it be Transmitted by Food and Drink?"

Works on Law and Government number very largely this year. As heretofore, codes, digests, statutes, etc., are added to the literature of 1882 in this department, and increase its value at home as well as abroad. The 104th volume of the United States Supreme Court, seven volumes of Circuit Court reports, and one volume of New York District Court reports, show the importance of the Federal tribunals. Twenty or more States and Territories have published one or more volumes of the decisions of their highest courts, besides numerous volumes relating to the work of inferior courts. "American Decisions" and "American Reports" are steadily increasing in number of volumes. "Digests" and "Indexes" are also freely furnished, and are becoming a necessity amid the bewildering increase from year to year of law publications. Pomeroy's "Equity Jurisprudence" (San Francisco, A. L. Bancroft & Co.) has reached a

second volume, and sustains its high reputation. Dr. F. Wharton's "Commentary on the Law of Contracts" (Philadelphia, Kay & Brothers) is a very thorough treatise in two volumes. "The Principles of the Law," by A. J. Willard, is a careful examination of the law of personal rights, to discover the principles of the law, as ascertained from the practical rules of the law, and harmonized with the nature of social relations (D. Appleton & Co.). "The Marriage and Divorce Laws of the United States," by Charles Noble (New York, Baker, Voorhis & Co.), treats of a most perplexing topic in these days. Add to this Woolsey's "Essay on Divorce and Divorce Legislation, with Special Reference to the United States" (New York, Scribner's Sons). "Trial of Title to Land," by A. G. Sedgwick and F. J. Wait, "A Treatise on the Law and Practice of Voluntary Assignments," by A. M. Burrill (same publishers), and Justice Shea's little volume, "The Nature and Form of the American Government founded in the Christian Religion" (Boston, Houghton, Mifflin & Co.), deserve honorable mention, without disparagement, however, to other works which our limits do not admit of naming. The "Albany Law Journal" has reached its twenty-sixth year. A "Journal of Banking Law" has been commenced, and hereafter "The Southern Law Review" will be merged in "The American Law Review" (St. Louis, Missouri).

Though BIOGRAPHY, MEMOIRS, etc., fall short considerably, in number, of the previous year's production, yet in quality and interest they are quite equal. To the series of "American Men of Letters" there have been added Scudder's "Noah Webster," Sanborn's "H. D. Thoreau," Frothingham's "George Ripley," and Lownsbury's "J. Fenimore Cooper" (Boston, Houghton, Mifflin & Co.); and the "American Statesmen Series" now numbers five volumes, viz., Morse's "John Quincy Adams," Lodge's "Alexander Hamilton," Von Holst's "John C. Calhoun," Sumner's "Andrew Jackson," and Adams's "John Randolph" (same publishers). "The Life and Letters of Francis Lieber" (Boston, J. R. Osgood & Co.) form an interesting and instructive volume, as also F. H. Underwood's "Henry Wadsworth Longfellow" and "James Russell Lowell" (same publishers). Mrs. S. C. Bull gives a very readable memoir of her husband, "Ole Bull," the famous violinist (Houghton, Mifflin & Co.), and the poet Whittier furnishes a pleasant biographical introduction to the "Letters of L. Maria Child" (same publishers). "The Life and Letters of Elizabeth Prentiss" (New York, A. D. F. Randolph & Co.) make an attractive volume, well worth reading; so also Mr. Blaine's "Eulogy on James Abram Garfield" (Boston, J. R. Osgood & Co.) is an eloquent presentation of the lamented martyr-President. With this last should be joined H. C. Pedder's "Garfield's Place in History" (New York, Putnam's

Sons). In the way of reprints, the series "English Men of Letters" has had added to it Morrison's "Macaulay," Jebb's "Bentley," Ward's "Dickens," Gosse's "Gray," Traill's "Sterne," and Stephen's "Swift" (New York, Harper & Brothers), all of them well done and sustaining the reputation already gained by the series. To these add the "Philosophical Classics and Foreign Classics for English Readers" (Philadelphia, J. B. Lippincott & Co.); new volumes, viz., Hasell's "Tasso," Wallace's "Kant," Sime's "Schiller," Collins's "La Fontaine and other French Fabulists," Alex. Bain's "James Mill" and "John Stuart Mill" are valuable additions to the biographies of the year (New York, H. Holt & Co.). To these may be joined Thomas Mozley's rather rambling but instructive "Reminiscences, chiefly of Oriol College and the Oxford Movement" (Boston, Houghton, Mifflin & Co.), and the Hon. J. Bigelow's "Molinos, the Quietist" (Scribner's Sons), a very striking monograph, well worth the student's examination.

In HISTORY, the chief American work comes from the venerable George Bancroft. His "History of the Formation of the Constitution of the United States" is an elaborate production, properly in continuance of his life-work on American history (New York, D. Appleton & Co.). There has also appeared Volume I of an entirely new edition of his "History of the United States," partly rewritten and thoroughly revised: it is to be published in six volumes (same publishers). "The History of the Negro Race in America," by George W. Williams (New York, Putnam's Sons), is an interesting and valuable addition to historical literature. Admiral Preble's "History of the Flag of the United States," copiously illustrated (Boston, J. R. Osgood & Co.), has reached a third edition. Mr. H. H. Bancroft has published Volume I of the "History of Central America" (San Francisco, A. L. Bancroft & Co.), being a continuation of his former valuable work on "The Pacific States." J. A. Doyle's "English Colonies in America: Maryland, Virginia, and the Carolinas" (New York, H. Holt & Co.), is a work of merit; so, also, are Reed's "Vicksburg Campaign" (Cincinnati, R. Clarke & Co.), Sterne's "Constitutional History of the United States" (Cassell & Co.), and Volumes V-X of "The Campaigns of the Civil War" (New York, Scribner's Sons), by Palfrey, Doubleday, Cox, etc. Dr. Stillé's "Studies in Mediæval History" (Philadelphia, J. B. Lippincott & Co.) is highly spoken of by competent judges. Among valuable English works in history reproduced are W. E. H. Lecky's "History of England in the Eighteenth Century," Volumes III and IV (D. Appleton & Co.), G. Rawlinson's "Sixth and Seventh Oriental Monarchies" and "History of Ancient Egypt" (New York, Dodd, Mead & Co.), John Richard Green's "Making of England" (Harper & Brothers), Walpole's "History of the Kingdom of Ireland" (same publishers), and Rev. M. Creighton's "History of the Papacy

during the Reformation" (Boston, Houghton, Mifflin & Co.).

In EDUCATION, LANGUAGE, etc., the steady production keeps pace with the demand. New text-books in the classics and modern languages, as well as new and revised editions of existing books, are noticeable as usual, to an extent quite beyond our limits to specify. Professor A. H. Welsh's "Development of English Literature and Language" (Chicago, S. C. Griggs & Co.) is a very valuable contribution to the subject of which it treats. Mr. B. Tuckerman's "History of English Prose Fiction" (New York, Putnam's Sons) is also valuable; and Miss Washburne's "Studies in Early English Literature" (same publishers) is pleasing and instructive. Mr. Appleton Morgan has replied to his critics, in a small volume, "Some Shakespearean Commentators" (Cincinnati, R. Clarke & Co.), but the *oxæta quæstio* remains as unsettled as ever. Longley's "American Phonographic Dictionary" (same publishers) and "Manual of Phonography" are highly commended; so also is G. H. Thornton's "Modern Stenographer" (New York, D. Appleton & Co.). Of works from abroad which are valuable additions to our stock of literature, may be named here, Professor Hodgson's "Errors in the Use of English" (D. Appleton & Co.); H. Morley's "English Literature in the Reign of Victoria" (Putnam's Sons); Principal Shairp's "Aspects of Poetry" (Boston, Houghton, Mifflin & Co.); Rev. E. M. Wherry's "Comprehensive Commentary on the Quran" (same publishers); Carl Abel's "Linguistic Essays" (same publishers). The making of English Dictionaries continues, and seems likely to continue *ad Græcos calendas*. Professor Skeat's "Etymological Dictionary of the English Language" (Macmillan & Co., and, in concise form, Harper & Brothers) is a noteworthy effort to attain greater accuracy and precision in the matter of etymology. Mr. H. Wedgwood, however, sharply questions the professor's success in many cases, in his "Contested Etymologies in the Dictionary of Rev. W. W. Skeat" (Boston, J. R. Osgood & Co.). A further great effort is being made, in publishing Dr. Ogilvie's "Imperial Dictionary of the English Language," revised and augmented by C. Annandale. It is to be in four octavo volumes, with more than 3,000 illustrations, published by "The Century Company," New York, at the close of 1882. To these should be added Poole's "Index to Periodical Literature" (Boston, J. R. Osgood & Co.), which is indispensable to literary men, and the carefully prepared "Bibliotheca Americana," or catalogue of books relating to American topics, etc. (Cincinnati, R. Clarke & Co.).

POLITICAL ECONOMY and SOCIAL SCIENCE, from the practical character of the times, call for full consideration, and are largely inquired into both here and in England. Herbert Spencer contributes a second volume of his elaborate treatise on the "Principles of Sociology" (D.

Appleton & Co.). Two more volumes have been added to the excellent collection entitled "Appletons' Home Books," and Mr. F. B. Hawley's "Capital and Population" (same publishers) is a timely study of the economic effects of their relations to each other. "The Social Law of Labor," by W. B. Weedon (Boston, Roberts Brothers), is a very creditable discussion of this important topic. Professor D. B. King's "The Irish Question" is an earnest contribution to the settlement of a question that puzzles the wisest heads (Scribner's Sons). In a second series of the "Library of Political Education" (New York, Putnam's Sons) are furnished a "History of Political Economy in Europe," by J. A. Blanqui; "Money and the Mechanism of Exchange," by Professor Jevons, and "On Liberty," by J. S. Mill. To these add Dr. O'Dea's "Suicide, Studies on its Philosophy, Causes, and Prevention," and Mr. W. H. Mallock's "Social Equality, a Study in a Missing Science" (same publishers), the latter characterized by the well-known peculiarities of style and speculation of the author. As connected with the subject should be added Mrs. Wittemayer's "History of the Woman's Temperance Crusade," and Mrs. Stanton's and Miss Anthony's second volume of the "History of Woman's Suffrage."

As regards POETRY, the DRAMA, etc., the year presents hardly anything of much note. The poet Longfellow passed away during 1882, leaving his "In the Harbor" and "Ultima Thule" as the latest of his gifts to song. Mr. De Kay is author of "The Vision of Esther," being a sequel to his "Vision of Nimrod" (D. Appleton & Co.). "Christine" is a poem by T. B. Read, and is worthy of his reputation (Philadelphia, J. B. Lippincott & Co.). "Monte Rosa," by J. H. Nichols (Boston, Houghton, Mifflin & Co.), is really what he terms it, "The Epic of an Alp." Mr. A. B. Alcott's "Poems and Sonnets" (Boston, A. Williams & Co.) are admired by readers of this kind of poetry, as are also Miss Mary Clemmer's "Poems of Life and Nature" (Boston, J. R. Osgood & Co.), and Miss M. E. Sangster's "Poems of the Household" (same publishers). Mr. G. H. Calvert's "Life, Death, and other Poems" (Boston, Lee & Shepard) have been received with much favor. Across the water, Tennyson, Browning, and Swinburne have each done something, though not specially distinguished. In the way of new editions, collections of poems, etc., a good deal has been accomplished. Longfellow's poetical works are now furnished in complete form (Houghton, Mifflin & Co.); so also the complete poems of T. B. Aldrich and J. G. Saxe (same publishers). Mr. C. A. Dana has thoroughly revised and considerably enlarged "The Household Book of Poetry" (D. Appleton & Co.). Miss C. F. Bates has compiled a choice volume entitled "The Cambridge Book of Poetry and Song" (Boston, T. Y. Crowell). The indefatigable Martin Farquhar Tupper has supplied his admirers with "Three

Five-Act Plays and Twelve Dramatic Scenes." It would be tedious to put on record the number and description of new editions of Shakespeare, Milton, Scott, and others—"names which were not born to die."

Works on ART, the FINE ARTS, MUSIC, etc., are not very numerous, though on the whole creditable and useful. "The History of Wood Engraving in America," by W. J. Linton (Boston, Estes & Lauriat), treats of a subject of special interest at this date. As complementary to this has appeared Mr. G. E. Woodberry's "History of Wood Engraving," which deals with the subject at large (New York, Harper & Brothers). Amory's "Domestic and Artistic Life of John Singleton Copley" (Boston, Houghton, Mifflin & Co.) is spirited and useful. Commander Gorringe has supplied an interesting volume on "Egyptian Obelisks" (New York, Putnam's Sons). J. W. Mollett's "Illustrated Dictionary of Words used in Art and Archeology" (Houghton, Mifflin & Co.) is very full and valuable. To these may be added E. Fromentin's "Old Masters of Belgium and Holland," translated by Mrs. M. C. Robbins (J. R. Osgood & Co.); H. Bacon's "Parisian Art and Artists" (same publishers); C. Yriarte's "Florence, its History, the Medici, its Scholars, Architecture, Painting, Sculpture," etc. (New York, Scribner & Welford); A. Challengel's "History of Fashion in France," giving an account (with colored plates) of the dress of women from the Gallo-Roman period to the present time (same publishers); M. H. Bloxam's "Principles of Gothic Architecture" (same publishers); F. von Reber's "History of Ancient Art" (New York, Harper & Brothers); G. W. Sheldon's "Hours with Art and Artists" (D. Appleton & Co.); "Our Native Land," or glances at American scenery and places, etc. (same publishers); Loomis's "Index Guide to Travel and Art Study in Europe" (New York, C. Scribner's Sons); and Miss Knowlton's "Hints for Pupils in Drawing and Painting" (Houghton, Mifflin & Co.).

In the way of TRAVEL and ADVENTURE the books of 1882 compare favorably with those of the preceding year. G. F. Godfrey's "Sketch of Bangor" (Boston, J. R. Osgood & Co.) is interesting and instructive; as also are Baillie-Grohman's "Camps in the Rockies" (Scribner's Sons), and W. Nash's "Two Years in Oregon" (D. Appleton & Co.). W. E. Griffis tells in a very capital way the story of "Corea, the Hermit Nation" (Scribner's Sons); and the Rev. Titus Coan presents an interesting autobiographic sketch of mission life and labors in his "Life in Hawaii" (New York, A. D. F. Randolph); Miss C. A. Baker's "A Summer in the Azores," with a glimpse of Madeira (Lee & Shepard), is very pleasant reading; and Lieutenant Danenhower has given an instructive "Narrative of the Jeanette" (J. R. Osgood & Co.). Coming from writers across the ocean are a goodly number

of capital books in this department; as, H. Lansdell's "Through Siberia" (Houghton, Mifflin & Co.); E. O'Donovan's "The Merv Oasis" (Putnam's Sons); E. de Amicis's "Moroce, its People and its Places"; E. Stack's "Six Months in Persia" (same publishers); the Chevalier de Hesse-Wartegg's "Tunis, the Land and the People" (New York, Dodd, Mead & Co.); Dr. W. M. Thomson's "Central Palestine and Phœnicia" (Harper & Brothers).

**JUVENILES.**—Of books prepared specially for young people, the number this year is considerably less than in 1881. A few only need here be named. "Boys in the Mountains and on the Plains," by W. H. Rideing (New York, D. Appleton & Co.), is a capital book of adventures, and abounds in instruction. "Building the Nation," by O. C. Coffin (New York, Harper & Brothers), is equally interesting and useful; "Boy Travelers in the Far West," by J. W. Knox (same publishers), is another volume in continuation of previous labors in this field. To this add "Our Young Folks in Africa," by J. D. McCabe (Philadelphia, J. B. Lippincott & Co.). "The Young Moose-Hunters" (Boston, Estes & Lauriat) is a stirring book of boys' adventures in Maine; and "Six Girls" (same publishers) is a charming book for girls. "Drake, the Sea-King of Devon," by G. M. Towle (Boston, Lee & Shepard), is a further volume of the "Young Folks' Heroes of History," by the same author. W. Black's "Four Macnicals"; T. W. Knox's "Young Nimrods around the World"; J. Otis's "Mr. Stubbs's Brother" (Harper & Brothers), are well worth reading. Add to these "The Princess and Curdie," a new juvenile by George MacDonald (J. B. Lippincott & Co.); Miss Yonge's "Little Duke," "Prince and Page," "Golden Deeds," "Lances of Linwood," 4 volumes (Boston, D. Lothrop & Co.); "Little Bullets," by A. L. O. E. (New York, R. Carter & Brothers); new edition of Hans Andersen's "Fairy Tales" (New York, Scribner & Welford).

In **FICCIÓN**, the production of the year has been unusually large and various, not only from native writers, but also from republications of English novels and tales, and translations from German and French authors. "A Modern Instance," by W. D. Howells (Boston, J. R. Osgood & Co.), is regarded as very effective. Miss C. Reid's "Heart of Steel" (New York, D. Appleton & Co.) is much praised for skill and spirit. Bret Harte, in his "Flip and Found at Blazing Star" (Houghton, Mifflin & Co.), continues to please numerous readers; and Judge Tourgee, in "John Eax" (New York, Fords, Howard & Hulbert), presents, as he claims, "the South without the shadow." In "Mr. Isaacs" (Macmillan & Co.), the writer, J. Marion Crawford, gives a very interesting tale of modern India. "The Marquis of Carabas," by Harriet P. Spofford (Boston, Roberts Brothers), is very well done; as are also Miss Woolson's "Anne" (Harper & Brothers);

Miss E. S. Phelps's "Doctor Zay" (Houghton, Mifflin & Co.); Miss Warner's "Nobody" (New York, R. Carter & Brothers); and Miss S. May's "Janet, a Poor Heiress" (Boston, Lee & Shepard).—Among books of this kind from English writers may be named here F. Anstey's "Vice Versa; or, A Lesson to Fathers" (D. Appleton & Co.); George MacDonald's "Weighed and Wanting" (Boston, D. Lothrop & Co.); Miss C. Yonge's "Unknown to History" (Macmillan & Co.); J. S. Shorthouse's "John Inglesant" (same publishers); James Payn's "Kit, a Memory" (Harper & Brothers); W. C. Russell's "The Lady Maud," and "My Watch Below" (same publishers); Miss G. M. Craik's "Fortune's Marriage" and Mrs. Oliphant's "Lady Jane" (same publishers); Ouida's "In Maremma, a Tale of Italian Life" (Philadelphia, J. B. Lippincott & Co.); R. Buchanan's "God and the Man" (Harper & Brothers); "A Little Pilgrim," reprinted from "Macmillan's Magazine" (Boston, Roberts Brothers).—A goodly number of translations have been made during the year. Of these brief mention may be made. Björnson's "Novels and Tales," in four volumes, have been rendered into English by Professor R. B. Anderson (Boston, Houghton, Mifflin & Co.), and are highly esteemed. "Plish and Plum" is from the German of Busch, by C. T. Brooks (Boston, Roberts Brothers). "A Noble Name, or Dönningshausen," is from the German of Von Glümer, by Mrs. Wister (Philadelphia, J. B. Lippincott & Co.). "The Romance of a Mummy" is from the French of T. Gautier, by Miss A. M. Wright (same publishers). "Abbé Constantine" is from the French of M. Halévy (New York, Putnam's Sons). Also Franzos's "The Jews of Barnow," from the German, by M. W. Macdowall (D. Appleton & Co.); E. Pouillon's "Cisette," from the French, by C. W. Woolsey (New York, G. P. Putnam's Sons); and "The New Arabian Nights," translated and edited by W. F. Kirby (Philadelphia, J. B. Lippincott & Co.).

**LITERATURE, BRITISH, IN 1882.**—Literary productiveness in Great Britain this year shows somewhat of a falling off from that of 1881. This is attributed to the extraordinary activity which prevails in the departments of journalism and periodical literature, and which necessarily makes inroads upon the time and attention of readers of books. "There is no standing out against the statistics, as we find them" (says the editor of the London "Publishers' Circular"), "but considering the variety and extent of the rival demands upon attention, the real wonder is that the effect is not more marked. As matters are, it is not improbable that the real value of the literary works of 1882, whether viewed from an intellectual or from a material stand-point, is superior to that of its forerunners." From the same source is obtained the following analytical table, which gives the numbers of books issued in 1882 (being 282 less than in 1881):

CLASS.	No. of works.
Juvenile works and tales.....	987
Theology, sermons, etc.....	689
Miscellaneous (year-books, serials in volumes, etc.)....	625
Educational.....	525
History, biography, etc.....	452
Novels, tales, and other fiction.....	430
Arts, sciences, etc.....	344
Voyages, travels, etc.....	244
Political and social science.....	189
Poetry and the drama.....	181
Medicine, surgery, etc.....	177
Belles-lettres, essays, etc.....	106
Law and jurisprudence.....	75

Total..... 5,124

NOTE.—Of these, 3,978 are new books, and 1,146 are new editions.

IN THEOLOGY and RELIGIOUS LITERATURE in general, there is not much of special value or importance to be noted. Exegetical works number about as usual. The "Speaker's Commentary," under the able editorship of Canon Cook, has reached its completion, and contains much of the ablest talent and profound learning in the Established Church. Rev. W. F. Deane's "The Book of Wisdom; the Greek Text, the Latin Vulgate, and the Authorized Version," with introduction, commentary, etc., is a work of much value (Oxford, University Press). A number of other works in this department, some covering the whole Bible, others devoted to separate books of the Old and New Testaments, have been published; as, "The Bible Commentary for English Readers," edited by Bishop Ellicott, with the aid of a number of scholars and divines, three volumes on the New Testament, two volumes on the Old (Cassell, Petter, Galpin & Co.); Rev. M. F. Sadler's "St. Matthew's Gospel," with notes (George Bell & Sons); a new and rather striking work entitled "The Apostolic Liturgy and the Epistle to the Hebrews, being a Commentary on the Epistle and its Relation to the Holy Eucharist, with Appendices on the Liturgy of the Primitive Church," by John Edward Field (Rivingtons). New and revised editions of standard works devoted to exegesis of Holy Scripture have been issued; as, Adam Clarke's Commentary on the Bible, six volumes; Archbishop Trench's "Notes on the Miracles and on the Parables, Studies in the Gospels," etc.; Davidson's "Introduction to the New Testament" (Longmans & Co.). Much attention has been given to CHURCH HISTORY. Rev. J. H. Blunt has published the second volume of his elaborate work, "The Reformation of the Church of England, its History, Principles, and Results," 1547-1662 (Rivingtons). The first volume was published in 1870, covering from 1514-1547. Rev. M. Creighton's "History of the Papacy during the Period of the Reformation, 1378-1464" (Longmans & Co.) is a valuable contribution. Canon Farrar's "Early Days of Christianity" (Cassell & Co.) has all the charms of style and liveliness of narration of his previous works. "Ecclesia Anglicana," by Rev. A. C. Jennings (Rivingtons), is a concise history of the Church of Christ in England from the earliest to the present times, and is a work of passable merit.

"Notes on the Canons of the First Four General Councils," (H. Frowde, Oxford, Clarendon Press), by Dr. Bright, is a very valuable little volume. In RELIGIOUS BIOGRAPHY may be noted Dr. Cutts's "Constantine the Great, the Union of the State and the Church" (Society for Promoting Christian Knowledge); Mr. M. Rule's "Life and Times of St. Anselm, Archbishop of Canterbury and Primate of the Britains" (Kegan Paul, Trench & Co.); Rev. S. Kettlewell's "Thomas à Kempis, and the Brothers of Common Life"; and the third and concluding volume of the "Life of Bishop Wilberforce, by his Son" (John Murray). The mooted subject of eternal punishment received much attention this year from Canon Farrar, Rev. F. N. Oxenham, and Rev. A. Jukes (new editions). As to RELIGIONS of the world (non-Christian), it suffices to name Kuenen's "National Religions and Universal Religions"; Hibbert Lectures, 1882 (Williams & Norgate); A. Barth's "Religions of India" (Trübner & Co.); and "The Faiths of the World" (Blackwood & Sons), being the St. Giles's Lectures, by Caird, Flint, Milligan, etc., and giving a concise history of the great religious systems of the world.

IN BIOGRAPHY and HISTORY combined, there has been about the usual activity. The elaborate work of C. Yriarte, entitled "Florence: its History; the Medici, the Humanists, Letters, Arts," has been translated by Mr. C. B. Pitman (Sampson Low, Marston & Co.); it is splendidly illustrated, and quite equals the "Venice" by the same author. Professor Max Duncker's "History of Antiquity," translated by Evelyn Abbott, has been completed in the sixth and concluding volume (Bentley & Son). Sir A. Alison's "Some Account of my Life and Writings" (Blackwood & Sons) is lively and valuable. "Memoir of Augustus De Morgan," by his wife (Longmans & Co.), is well worth reading; as are also "The Friendships of Mary Russell Mitford, as recorded in Letters from her Literary Correspondents," edited by Rev. A. G. L'Estrange (Hurst & Blackett); volume iii of the "Foreign Secretaries of the Nineteenth Century" (W. H. Allen & Co.); "Memories of Old Friends, being Extracts from the Journals and Letters of Caroline Fox, of Penjerick," edited by Horace N. Pym (Smith, Elder & Co.); the "Autobiography of Prince Metternich," edited by his son (Bentley & Son); "Raphael, his Life, Work, and Times," from the French of Eugene Muntz (Chapman & Hall); "Recollections of Dante Gabriel Rossetti," by T. H. Caine (Stock); "The Salon of Madame Necker," by Vicomte d'Haussonville, from the French, by H. M. Trollope (Chapman & Hall).

IN the way of TRAVEL and ADVENTURE English men and women show themselves as active and persevering as ever. A few volumes only can here be named; as, Laurence Oliphant's "The Lands of Khemi" (Blackwood & Sons); "Magyarland," a lady's charming nar-

rative of travels through the snowy Carpathians and Great Alfold of the Magyar (Sampson Low, Marston & Co.); Mr. Felkin's and Mr. Wilson's "Uganda and the Egyptian Soodan" (same publishers); E. O'Donovan's "The Merv Oasis," being travels and adventures east of the Caspian during the years 1879-'81, including five months among the Tekkes of Merv (Smith, Elder & Co.); W. G. Dixon's "The Land of the Morning, an Account of Japan and its People, based on a Four Years' Residence in that Country, including Travels into the Remotest Parts of the Interior" (Edinburgh, Gemmell); Rev. Henry Lansdell's "Through Siberia," being a journey of 8,000 miles from the Urals to the Pacific, on the rivers Obi, Amur, and Ussuri, and by the hire of 1,000 horses (Sampson Low, Marston & Co.); Mrs. Macintosh's "Damascus and its People; Sketches of Modern Life in Syria" (Seeley); Lady Brassey's "Tahiti," with illustrations (Sampson Low, Marston & Co.); E. C. Baber's "Travels and Researches in Western China" (Murray); G. A. Sala's "America Revisited, from the Bay of New York to the Gulf of Mexico, and from Lake Michigan to the Pacific," including the author's experience among the Mormons of Salt Lake City (Vizetelly & Co.); C. L. Norris-Newman's "With the Boers in the Transvaal and Orange Free State in 1880-'81" (W. H. Allen & Co.); A. Gallenga's "Summer Tour in Russia" (Chapman & Hall).

As usual, SCIENCE receives a large share of attention. "Water and its Teachings in Chemistry, Physics, and Physiography," by C. L. Morgan, is a very suggestive and useful handbook (E. Stanford). "The Sun, its Planets and Satellites," by Rev. E. Ledger, is the Gresham Lectures for 1881-'82, upon the Solar System (same publisher). "Notes on Evolution and Christianity," by J. F. Yorke, is well worth consulting, though hardly satisfactory (Kegan Paul, Trench & Co.). "Modern Physical Fatalism, and the Doctrine of Evolution," by Professor T. R. Birks, is very thorough, including an examination of Herbert Spencer's "First Principles"; new edition, with replies to strictures by Spencer and Pritchard (Macmillan & Co.). "Myth and Science," by Tito Vignoli, is interesting and valuable. It is one of the "International Scientific Series," republished by D. Appleton & Co. (Kegan Paul, Trench & Co.). "Permanence and Evolution," by J. E. B. Bouvier-Pusey, and "The Creed of Science, Religious, Moral, and Social," by W. Graham (same publishers), are clearly and thoroughly wrought out. Mr. Pusey's inquiry into the supposed mutability of animal types is very valuable.

Works on ART, in the general sense of the term, are considerably less in number this year than in 1881. "The Graphic Arts, a Treatise on the Varieties of Drawing, Painting, and Engraving, in Comparison with each other and with Nature," by P. G. Hamerton (Seeley, Jackson & Halliday), is very carefully prepared,

and ranks as one of the very best books of its kind. "Raphael, his Life and Works; with Particular Reference to Recently Discovered Records," by J. A. Crowe and G. B. Cavalcasse (John Murray), is an exhaustive study of extant drawings and pictures. The very valuable "Dictionary of Music and Musicians, A. D. 1450-'82," edited by Dr. George Grove, has been completed by the publication of vol. iii (Macmillan & Co.). "A New History of the English Stage," by P. Fitzgerald (Tinsley & Brothers), from the Restoration onward, deals specially with the patent theatres, and is much praised by the critics. Sir Charles Wilson's "Picturesque Palestine, Sinai, and Egypt," vol. iii, is a magnificent work of art (J. S. Virtue & Co.). "Hopes and Fears for Art," by W. Morris (Ellis & White) is a series of five lectures, admirably setting forth the theme chosen by the writer.

Contributions to POETRY have been few and of small consequence this year. Mr. Swinburne has published a volume, "Tristram of Lyonesse, and other Poems" (Chatto & Windus), which fully sustains his reputation. Tennyson and Mr. and Mrs. Browning have each done something, but not much, for the honor of the Muses in 1882. Edwin Arnold's "The Light of Asia, or the Great Renunciation" (Trübner & Co.), is an enthusiastic laudation of the life and teaching of Gautama, Prince of India, and founder of Buddhism. The poem has been much praised and also severely criticised. Mr. A. Lang, translator of "The Odyssey" of Homer, has published a volume entitled "Helen of Troy" (George Bell & Sons), which is very creditable to his scholarship and poetic skill; and Mr. A. Austin has produced some charming lyrical poems, entitled "Soliloquies in Song" (Macmillan & Co.). In this connection may be named Francis Bacon's "The Promus and Formularies and Elegancies," being private notes, *circa* 1594, hitherto unpublished; illustrated and elucidated by Mrs. Henry Pott, with preface by E. A. Abbott (Longmans). It is the latest effort in favor of the claim made in behalf of Bacon that he wrote the plays, or the chief plays, which thus far have been attributed to William Shakespeare's genius and ability. So far as appears, the present volume is not likely to do much toward a settlement of the several questions at issue.

In HISTORY, besides those already named under Church History and Biography, a few contributions may be specified. Mr. E. A. Freeman, in his "Reign of William Rufus and the Accession of Henry I" (Oxford, Clarendon Press), has made a valuable addition to the department of history, in which he is justly esteemed a master; and Mr. J. R. Green, in "The Making of England," has shown the same admirable skill and ability as in his well-known "History of the English People" (Macmillan & Co.). "The Indian Empire; its History, People, and Products" (Trübner & Co.),

by Dr. W. W. Hunter, is regarded as a full and exhaustive account of that important portion of the British Empire. Mr. C. A. Fyffe (the first volume of whose work was noticed last year) has continued his labors on "The History of Modern Europe" with much success. It promises, when completed, to become a standard history of the period to which it is devoted. Messrs. Gairdner's and Spedding's "Studies in English History" (Edinburgh, Douglas), are full of suggestive and interesting matter. The year has also been noted for numerous republications and new editions of histories and biographies; such as, Dr. Lingard's "History of England," Guizot's "History of France," eight vols., Thiers's "History of the French Revolution, 1789-1801," five vols.; "The Life and Speeches of the Right Hon. John Bright," Bishop Wordsworth's "Greece, Pictorial, Descriptive, and Historical," Sir G. W. Cox's "Mythology of the Aryan Nations," "The Life of Richard Cobden" (Chapman & Hall), Sir E. Creasy's "The Fifteen Decisive Battles of the World," and "History of the Ottoman Turks, from the Beginning of their Empire to the Close of 1878" (R. Bentley & Son). To these add, for general use, the enlarged, corrected, and revised edition of Haydn's "Dictionary of Dates, relating to all Ages and Nations" (Ward, Lock & Co.).

JUVENILE WORKS and TALES are very numerous this year, many of them of superior quality, and many also of only moderate value. In number they are almost, if not quite, double those published in 1881. On the other hand, that kind of *fiction*, usually designated as *novels*, is less in quantity than last year; but, whether it excels in quality or not, is not quite clear. A few only of these can here be named. Mr. T. Hardy's "Two on a Tower" (Sampson Low, Marston & Co.) is unique and slightly fantastical. W. Besant's "The Revolt of Man" (W. Blackwood & Sons) is undoubtedly clever and amusing in these days of disputed sovereignty between man and woman. Mrs. M. O. W. Oliphant's "In Trust, the Story of a Lady and her Lover" (Longmans & Co.), fully meets the expectations of her admirers. Mr. Buchanan's "God and the Man" (Chatto & Windus) is, as might be expected from the title, rather startling, but the writer works out his theme with power and skill beyond what is usually met with in novels. Mr. Shorthouse's "John Inglesant" (Macmillan & Co.) has met with very general favor, and is regarded as one of the ablest books of the year. So, also, Georg Ebers's new novels, "Only a Word," and "The Burgomaster's Wife" (same publishers), translated by Clara Bell, are held to be equal to his former work, "The Egyptian Princess."

The sciences of LAW and MEDICINE have received their usual share of attention. The former need not be dwelt upon here, as books of this kind are generally of local character and importance. A number of valuable publications in *medicine*, *surgery*, etc., appeared,

and new and enlarged editions of standard works have been published. Dr. Tidy's "Legal Medicine, including Evidence," Part I (Smith, Elder & Co.), is new, and treats of an important topic. Dr. H. A. Reeves's "Human Morphology, a Treatise on Practical and Applied Anatomy," volume i (same publisher), is much esteemed, as is also Dr. Aitken's "Outlines of the Science and Practice of Medicine" (C. Griffin). Dr. J. D. Macdonald, of the British Navy, has furnished an excellent work entitled "Outlines of Naval Hygiene" (Smith, Elder & Co.). Dr. Gamgee's "Vivisection and Human Surgery" (J. A. Churchill) has reached a second edition; and Dr. W. Turner's "Introduction to Human Anatomy" (A. & C. Black) appears in a new edition. The great "Dictionary of Medicine," by various eminent writers, edited by Dr. Quain, maintains its position in the esteem of medical men. Watts's well-known and valuable "Dictionary of Chemistry, and the Allied Branches of other Sciences" (Longmans & Co.), has a supplement furnished, containing important discoveries in 1879-'80; the work is complete in nine volumes.

In conclusion, it may be stated that, as was predicted last year, the American fashion of cheap issues of books, in various departments of literature and science, has made its way in England to a large extent. "Sixpenny" literature is markedly on the increase, and not only novels and tales are issued in this form, but works of value and high character. Its ultimate effect, however, whether for good or ill, remains to be seen, and, if any are alarmed at the prospect, they may take comfort in the belief that the conservative character of the British way of looking at things will keep publishers from going too far, or risking too much, in this direction.

LITERATURE, CONTINENTAL, IN 1882. The record for the year evinces about the same activity in the several branches of literature as in previous years. A brief *résumé*, without going into details, will make this plain. We begin, as heretofore, in alphabetical order of countries.

BELGIUM.—Works referring to the history of the country rank first both in number and importance. M. Poulet's "Histoire Politique Nationale" traces the origin and history of the institutions of the Netherlands before the French Revolution. Volume I comes as far as the fourteenth century. M. Namèche's "Cours d'Histoire Nationale" has reached its ninth volume, which gives the history of the beginning of the reign of Charles V. Local histories are numerous—too numerous to give even the titles. They show much activity and research on the part of the writers, and are creditable to the people who encourage and support such studies. The "Bibliotheca Belgica," of Vanderhagen, is making steady progress. A national "Bibliography" (1880-'80) has been commenced, valuable documents have been printed, and the very instructive "Report of

the Parliamentary Committee on Primary Education and Schools" has been published by order of the Government. Other subjects have received due attention; such as political economy, popular rights, social questions, the fine arts, etc. Several monographs on this latter are regarded as very valuable, and the Royal Academy continues to publish works of ancient writers of the country. M. F. Van den Branden is still at work on his elaborate "History of the Antwerp School of Painting." Decker's "History of the Malcontents in the Netherlands, Sixteenth Century," though crowned by the Academy, is pronounced by critics to be weak and prejudiced. Poetry has been fruitful this year. Collections have been made by Pol de Mont, Beernaert, Callant, and others. A drama in blank verse, "Gudrun," by Albrecht Rodenbach (a young writer who died two years ago), is the most noted poetical publication of 1882. Novels and tales of various degrees of merit have also appeared.

DENMARK.—Though much interest is taken in the older literature of the country, there is no falling off in work by living writers. Schaudorph's "Poems" and "Novelettes" are noteworthy as indicative of the progress of enlarged and liberal ideas in literature; and Gjellerup's "Pupil of the Germans" goes still further in setting forth the advance of "free thought" and democratic doctrines among the young. Jacobsen's "Romances and Tales" are highly spoken of, and H. Drachmann is noted as the foremost living poet and dramatist of Denmark. His productions are received with enthusiasm. O. W. Smith's "History of Russian Literature, from the Time of Peter the Great," is a work of more than usual merit. Danish historians have been as active as ever. Madvig (so well known in America by his profound work on Latin philology) has published the second volume of his "Constitution and Administration of the Roman State," a very valuable addition to works on this subject. Other works which may be named are: "The Political History, 1635-'45," by Fredericia; Erslev's "Queen Margaret and the Calmar Union"; "Unpublished Documents of Danish History"; Nielsen's "History of Copenhagen"; Lund's "History of Denmark and Norway at the Close of the Sixteenth Century"; and Bache's "History of the North." Brandes's biography of "Ferdinand Lassalle" is highly commended, as also are Brun's "Life of Bishop Gruntvig," and Colin's elaborate narrative of Hans C. Andersen as a poet and a man. Philology has not been neglected. Kalhar's "Dictionary of the Old Danish Language (1300-1700)" is specially to be noted, and Madvig's new edition of Livy's works. Something, not much, has been done in philosophy and physical science. Outlines of psychology, a treatise on Jacob Boehme, a volume on the yellow fever, etc., may be named here.

FRANCE.—Literature in France, during 1882,

does not present its best appearance. Between political excitement and unrest, and the prevalence of so-called "naturalistic" productions of the school of Zola, genuine literature and scientific pursuits have had a rather hard time. Poetry languishes; history only creeps along; criticism is often weak; science produces almost nothing. Were we to attempt a presentation and analysis of the publications of Zola and his numerous followers, the result would be such as to affright the reader. As an offset may be named Daudet's clean and attractive stories, Halévy's "L'Abbé Constantine," Gréville's "Rose Rozier," and other stories, Theuriet's, Erckmann-Chatrian's, Malot's, Verne's, and La Forest's novels and tales. These have done much toward counteracting the pernicious influence of the "naturalistic" writings.

In poetry, Victor Hugo has produced the only noteworthy contribution of the year. Octogenarian though he is, yet his "Torquemada" is full of the fire of genius. In grandeur of conception and skill in the management of his subject, as well as in nobly expressed sentiments on questions of ever-living interest, this will rank among the master works of Victor Hugo. A few other volumes of poetry have appeared from the pens of Bruyère, Tournefort, Latille, Hervé, De Biran, Ratisbonne, etc., but they are considered of little moment to national literature.

History furnishes a few works which may be noted. M. Wallon has published the sixth and concluding volume of his "History of the Revolutionary Tribunal." M. Barre-Duparcq's "History of Philip II" is a work of merit, and M. Lebon has treated the subject of England and the French Revolution in a clear, unprejudiced, and scholarly way. Biographies and memoirs form a branch of literature in which French writers excel. Quite a large number of books of this kind have appeared, such as "Letters of B. Constant to Madame Récamier," D'Haussonville's "Salon de Madame Necker," Vatel's "Madame du Barry," M. Camp's "Souvenirs Littéraires," E. Daudet's life of his brother, A. Daudet, D'Ideville's "Maréchal Bugeaud," the "Confessions of St. Beuve," which last are pronounced to be scandalous, and issued in violation of a distinct pledge to keep them secret. Essays and criticisms by Scherer, St. Victor, Brunetière, Montégut, Stopfer, Lafou, etc., evidence the existence of life and spirit in this branch of literature. Note here also M. Houssaye's "L'Art Français depuis dix Ans," a series of *salon* articles. Some volumes relative to contemporary politics have been published, as Louis Blanc's "Discours Politique," F. Maurice's "View of the Foreign Policy of the French Republic," and Bertrand's "Manual of Administration of Affairs."

Philosophy and science present little of interest. Bouillier's "La Vraie Conscience" defends idealistic psychology against attacks of physiologists; Janry's "Breviaire de l'Histoire du

Materialisme"; Liard's manual of the philosophy of Descartes; and "Revue Scientifique," edited by P. Bert, are worthy of mention. Gubernatis's "Mythologie des Plantes" is interesting and valuable; as is also Marmier's "Légendes des Plantes et des Oiseaux," besides being instructive for general readers.

GERMANY.—Imaginative literature, or works of fiction, have declined still further during this year, and the complaint is largely made that "realism" is invading and injuring all departments of education and literary culture. The effect on poetry and poetic production has been very marked; only a few volumes, and these of no great moment, having appeared. E. von Wildenbruch has enriched dramatic literature with three new works, "The Mennonites," "Fathers and Sons," and "Harald," which are highly praised for superior skill in construction, and noble and effective sentiment, etc. Wagner's "Parsifal" is a musical drama of the middle ages type. It is regarded by the writer's adherents as announcing a new epoch of salvation and religion, destined to take the place of a worn-out Christianity. Other plays of the year are hardly worth mentioning. P. Heyse, the Goethe of German story-tellers, has collected his Provençal tales under the title "Troubadour Novellen," and published a new gem of a story, "Das Glück von Rothenburg." Steub, Keller, Von Saar, Fontane, and Puttitz have also sent forth collections of stories, more or less meritorious. Ebers, the author of "Uarda" (which was a great success), has tried his hand at a romance relating to scenes and events on the Rhine, and Spielhagen has published "Angela," the scene of which is laid on the shores of the Rhine. The critics speak severely of these books, as inferior in ability, skill, etc. Historical and social novels are quite numerous and successful. F. Gregorovius, in his "Athenais" (i. e., the Empress Eudocia), has furnished admirable vindication of that noble lady against certain vile slanders upon her reputation.

In history, the venerable L. von Ranke's "Weltgeschichte" makes steady progress, the second volume having been published on his eighty-sixth birthday. E. Schebech has endeavored to clear the famous Wallenstein from the charge of being a traitor, and it is said with some fair success. Gindely's extensive "History of the Thirty Years' War" has reached its fourth volume, and Stacke's "Deutsche Geschichte" is completed, and also highly esteemed. Monographs in history are numerous, as Dümichen's "History of Ancient Egypt," Justi's "History of Ancient Persia," Stade's "History of Israel," Kugler's "History of the Crusades," Stern's "History of the English Revolution," Philippon's "Age of Louis XIV.," Hassel's "History of Prussian Policy from 1807-'75," etc. The "Historische Taschenbuch," founded by Von Raumer, fifty years ago, is continued with spirit and success. H. Breslau has in it an interesting paper on the famous "Casket Letters"

of Mary Queen of Scots. He considers the more important letters to be forgeries. W. Scherer's "History of German Literature" has reached its sixth part, which brings the history down to Lessing's time; and K. Goedeke's "Introduction to the History of German Poetry" has been finished with the seventh part of the third volume. The Lessing centenary has called forth a deluge of new publications and republications, such as the biographies of Lessing by Danzel and Guhrauer, and K. Fischer's Lessing Lectures. Goethe's and Schiller's works have also occupied much attention of German *savants*, and numerous publications are the result, such as Vischer's "Old and New," comments on Goethe's "Faust," explanations of "Wahrheit und Dichtung," the poet's "Letters," and J. Braun's "Goethe und Schiller im Urtheile ihrer Zeitgenossen." Books of travel have been quite abundant, and on the whole good, as Rodenberg's "Belgium and the Belgians," Bodenstedt's "From the Atlantic to the Pacific," Knortz's "Pictures of Transatlantic Society," Gregorovius's "Corfu," Kaden's "Sketches and Pictures of Italy," etc.

German philosophy is striving to hold its own and make advances. Lotze's death is regarded as a great loss in this department, and several important works of his are left unfinished. Caspari, a pupil of Lotze's, has published a capital historical and critical monograph, "Hermann Lotze," and other pupils have been editing notes and lectures on ethics and the history of philosophy. Von Hartmann has added to his works "The Religious Conscience of Mankind in the Sequence of its Evolution," containing a history of religions from the earliest forms to what the writer considers the future after Christianity is dissolved and gone forever. F. Schulze attempts to furnish a methodical "Philosophy of the Natural Sciences," there being an evident necessity among men of science for some consistent philosophy to meet the wants of their position and principles. The unsolved and, so far as can be seen yet, the insoluble, problems of mind and matter surround men on all sides.

The present year witnesses the publication of the 2,000th volume of the Tauchnitz Library, and the forming an association of German authors in favor of spelling reform. The Government also has given permission to publish the confidential correspondence of Bismarck and Manteuffel, 1851-'54.

GREECE.—There has been about the usual activity in literature, but nothing of special moment has resulted. Some respectable poetry, two or three plays, a few tales or novels, and some creditable work in historical research, are evidences of a fair share of life and interest in literature. An interesting volume has appeared on "Public Law of Greece under Turkish Rule"; also, a small book on the "Taxation of Crete during the First Years of Turkish Domination." Considerable good work has been done in philology, archæology, topography, church

history, etc., for the description of which our present limits do not furnish space.

HOLLAND.—As regards Dutch literature there is not much more to be said than was supplied by Greece in 1882. Novels appear to have been numerous as well as lively, some of the very best having been written by women. Hoffdyk's "History of the Dutch" is highly commended by competent judges, as are also Pierson's "Philosophical Investigations, i. e., Critical Prolegomena of Æsthetics." Fruin's "Contributions to Dutch History and Antiquities" is a work of much merit. Besides these there are other valuable contributions to history by Dutch scholars. The Leyden school in theology is as busy as ever in its advanced rationalism, but with no special progress. Kern's "History of Buddhism in India," Volume I, is a work of real value, and so recognized by critics.

ITALY.—Some efforts of authors and publishers to popularize science and spread literary culture in Italy do not seem to meet with much success. Various manuals have been issued and new periodicals started, but the mass of the people are hardly educated enough to appreciate these at their true value. Creditable additions have been made to literary biographies, as Cantù's "Alessandro Manzoni," Favaro's monograph on "Galileo and the University of Padua," Carducci's "Letters of Guerrazzi," etc. Novelists are said to be on the increase, both male and female: of the former are G. Rovetta, author of "Mater Dolorosa," Ciampoli's "Tales of the Abruzzi," Castelnovo's "Sorrisi e Lagrime," Barille's "Il Ritratto del Diavolo," etc. Of female writers of fiction Matilde Serao, in her "Leggende Napolitane," takes high rank, as do also Cesira Siciliani and "Emma" (*nom de plume*). History and philology hold their place as in past years. The third volume of Villari's "Machiavelli" has appeared; also, the "Letters of Cavour," documentary "History of the Reformation," "History of the Italian Kingdoms established by Napoleon," critical study on the "Life and Times of Dante," etc. In poetry, Carducci's "Nuove Odi Barbare" is much praised; G. D'Annunzio sends forth "Canto Nuovo," and G. Manzoni is highly commended for his volume, "Poesie." Carcano's translation of Shakespeare, in twelve volumes, has been completed.

NORWAY.—Political topics occupy a large share of the attention of people in Norway, and literature proper suffers in consequence. Ibsen's new drama, "A National Enemy," is highly approved, and gives more satisfaction than his last year's "Ghosts, or Apparitions." Jonas Lie maintains his popularity in his latest sailor-story, "Go ahead." A. Kielland advances in public favor in his "Skipper Worde," and other tales; and K. Janson sends forth an excellent historical romance, "Our Grandparents." Several reprints of older authors, some works on natural history, an edition of the mathematical works of N. H. Abel, under the

care of S. Lie, the great mathematician of the day, are worthy of note.

POLAND.—Brief notice is all that Poland requires this year. Considerable discussion of early Polish history, and the publication of a number of books on the subject, are to be noted. Korzon's "Internal History of Poland in the days of Stanislaus Poniatowski" (the last king) is a very creditable production, and the Academy of Sciences at Cracow has published several volumes of documents and valuable historical material. Kraszewski is the chief writer of historical romances and stories. Something, not much, has been done in lyric and narrative poetry, and in the drama. A "History of Universal Literature, with Illustrations," has been begun, and promises well as to the subsequent volumes.

RUSSIA.—In this vast empire, which is in so unsettled and unsatisfactory a state, the censorship of the press bears heavily on literature, and consequently the year has in its record little that is remarkable or important. Tourguenief, Tolstoi, Boborykin, Vallnief, and some others, have contributed novels and stories, and Stehedrin, in his "Letters to my Aunt," has produced a capital satire on the servility, hypocrisy, and the like, in Russian society. In native poetry little has been accomplished, while on the other hand numerous translations of German and English poems have appeared. Several volumes of merit on modern Russian literature have taken the form of biography, such as biographies of Lermontoff, of Pushkin, of Schevtchenko, etc. In history, the Historical Society contributes a number of volumes of documents and material. Kobeko's "Cesarevitch Paul Petrovitch" (Paul I), the strange and wild despot, Troussévitch's "History of the Diplomatic and Commercial Relations of Russia with China," Drygalshi's "Russian Army in War and Peace," and Volume XI of the late Metropolitan Makari's "History of the Russian Church," are deserving of mention here. As is natural, social, political, religious, and national questions excite much interest, and accordingly (as far as the censorship rules permitted) several clever books have been published on these topics, such as Woronzoff's "Fate of Capital in Russia," Youzoff's "Sociological Studies," Tchitcherine's "Property and the State," Daneffski's "Systems of Political Equilibrium and Legitimation, and the Origin of Nationality," Buslaiev's "Development of Religious Beliefs in Russia," etc. A number of good books of travel have also appeared.

SPAIN.—There has been little activity in letters and science in Spain this year. A few works on historical topics, publications of the several academies, a goodly number of novels and tales, some efforts in poetry and the drama, with books on social, statistical, and economical questions, are about all that the literary record can show. Translations from standard English and American writers have been made, and three different works on "bull-fighting,"

its laws and regulations, and the like, have appeared.

SWEDEN.—In general development and progress Sweden holds her own in 1882. The past year has been unusually active in production of historical and descriptive works of merit; as, "Voyage of the Vega," published simultaneously in eleven languages; "Illustrated History of Sweden," in six volumes (each by a separate author); two volumes describing the Swedish people in their home-life, their culture and customs; a National Cyclopædia, in six volumes; a work on Swedish medals and statuettes; the third volume of the "Collection of Swedish Laws," etc. The Finnish poet and novelist, Topelius, continues to be as popular as ever. His well-known "Surgeon's Stories" are in course of publication in a new edition, six volumes, and in several languages.

LONGFELLOW, HENRY WADSWORTH, was born in Portland, Me., February 27, 1807. His father, the Hon. Stephen Longfellow, was a distinguished member of the Maine bar, and also a member of Congress. On his mother's side he was descended from John Alden, one of the Mayflower Puritans, and one whom he has so pleasantly embalmed in his poem, "Miles Standish's Courtship." Of his early years there is only scant record, hardly more than that he was a quiet, gentle boy, who went to school with other boys at the Portland Academy, where Mr. Cushman was head-master. Here he made rapid progress, and, in 1821 (being only fourteen years old), he entered Bowdoin College. In his class were several youths who became afterward well known to the public, such as Nathaniel Hawthorne, G. B. Cheever, J. S. C. Abbott, J. W. Bradley, etc. Longfellow was graduated in 1825, second in his class, and so highly were his talents and acquirements valued and esteemed that, six months after his graduation, when only nineteen, he was appointed Professor of Modern Languages and Literature in his Alma Mater, a chair of which he was the first occupant. With rare good sense, while accepting the appointment, he felt it necessary to fit himself more exactly and fully for his post by travel and study abroad. Accordingly, he spent three and a half years in Europe, in studying French, German, and Italian; and the college wisely waited for his return.

Mr. Longfellow entered upon his duties at Bowdoin College in 1829, and became a very popular professor, noted for his genial, kindly spirit, and for the life and animation he infused into his department. He engaged to some extent in literary pursuits, in prose as well as poetry, and thenceforward devoted himself largely to that noble and honorable career of authorship which ended only with his life.

In 1835 Professor Longfellow was invited to fill the chair of Modern Languages and Literature in Harvard College, from which the eminent historian and scholar, George Ticknor, had just retired. Previously to entering upon

its duties, he resolved to spend another year in Europe in further study and research. While in Rotterdam he met with his first great trouble in life, viz., the death of his wife, to whom he had pledged his faith and love in 1831. Although Longfellow married again, in 1843, this severe domestic affliction probably had its effect in deepening the religious cast of his thoughts, and leading him to brood over topics which later formed the staple of his most touching and enduring verses. On his return home he gave to the public "Outre-Mer," and, two years afterward, "Hyperion," both of them of the nature of prose-poems, and much prized for their simple beauty of style and purity of sentiment.

It was with true poetic instinct that Longfellow, on coming to Harvard to reside, in 1836, secured for his future home that old-fashioned square house, with a broad piazza looking out upon its garden, and its front windows commanding a view of the quiet Charles River, situated a little back from the elm-shaded avenue which leads to Mount Auburn. This was the "Craigie Mansion," occupied at the time by a widow lady of the name of Craigie, who admitted the youthful professor within her walls. On her death, some seven years later, the poet purchased the property, and continued to reside there with his family until his own summons came to leave this world, and pass away to his final account. The house was already famous as being Washington's headquarters after the battle of Bunker Hill. It has, ever since Longfellow's occupancy, been famous in a different sense, as a place of pilgrimage for devout admirers of the genial, much-loved poet.

From this date (1836) onward, for nearly twenty years, Longfellow not only gave careful attention to the duties of his professorship, but also engaged in writing for reviews and magazines, as well as composing and publishing several of his best-known poems, as "Voices of the Night," "Ballads," "The Spanish Student," "The Belfry of Bruges," "Evangeline," "The Golden Legend." He also published "Kavanagh," a New England tale, and edited "The Poets and Poetry of Europe," with biographical notes and translations. The remaining incidents of the poet's life and career are few and easily stated. He resigned his chair in Harvard in 1854, and, in the retirement of his charming home, prepared his later poems and contributions to American literature. He made a third visit to Europe in 1842, and a last visit in 1869, when the university honored itself by conferring upon him the degree of D. C. L. His wife met with a tragic end in 1861. She was sealing a letter in her own room, when her light summer dress caught fire from the lighted taper, and she was burned so severely that she died soon after in great agony. Two sons and two daughters (unmarried) were the inmates of the poet's residence, and survive their honored father.

Longfellow died when he had reached the ripe old age of seventy-five, March 24, 1882. His funeral, attended by numbers of the most distinguished of his countrymen, was simple and without any display, and his mortal remains were placed in the family vault at Mount Auburn. Public services were held in the chapel of Harvard College, when words of mingled grief, resignation, and eulogy were uttered by those who knew and appreciated his worth. It may be mentioned here that steps have been taken in England to erect a suitable memorial of Longfellow in Westminster Abbey—Tennyson, as every way fitting, taking an active part in the proposed honoring of our American poet.

It is perhaps too soon as yet to attempt to fix his precise place and rank among American poets. If he be not the very first, he is certainly in the front rank of modern masters of song. He possessed the true poetic genius and insight; and though he is not the singer of violent, fierce passion, or of the profounder depths of tragedy—that is, not a Homer, or a Dante, or a Milton, or a Shakespeare—he is still a master in all those emotions and passions which stir the hearts of mankind in general. He is one whom myriads of readers learn to love as well as admire, and who continue steadfast in their love all their life long. He is, in the best sense of the words, the people's poet, and Longfellow himself coveted no higher fame than this. There is one feature in his poems to be noted, and that is his perfect skill as an artist. He always made most careful preparation before beginning to write any of his longer poems, and he spared no toil to secure the most complete accuracy, in every, even the minutest, particular. His large and varied reading, his thorough culture, his keen appreciation of the beauty and power of art, his own genial, loving, kindly nature, his true gentlemanly instincts and perceptions, all these not only aided the poet but guided him to a large extent in his work. From first to last, Longfellow was the same; and it is worthy of note that his mental and poetical vigor was vouchsafed to him to the very close of life, as may easily be seen by a perusal of "*Morituri Salutamus*" and "*Ultima Thule*."

The works of Henry W. Longfellow may properly here be enumerated. They are published both separately and in collected forms by Messrs. Houghton, Mifflin & Co., of Boston, in various sizes and at various prices, from the diamond 18mo (poems) to the illustrated 8vo. The best library edition is the one known as the Cambridge edition, the poetical works being in four crown 8vo volumes, the prose works in two volumes. Most of his "*Earlier Poems*," written before he was nineteen, are included in his collected works; the others in the order of time are as follow:

1. *Voices of the Night*, 1839.
2. *Ballads and other Poems*, 1841.
3. *Poems on Slavery*, 1842.

4. *The Spanish Student*, 1843.
5. *The Belfry of Bruges and other Poems*, 1845.
6. *Evangeline. A Tale of Acadie*, 1847.
7. *The Seaside and the Fireside*, 1847.
8. *The Song of Hiawatha*, 1855.
9. *The Courtship of Miles Standish*, 1858.
10. *Birds of Passage, Flights First to Fifth*.
11. *Tales of a Wayside Inn*, 1863.
12. *Flower-de-Luce, and other Poems*, 1866.
13. *CHRISTUS: A Mystery. In Three Parts. I. The Divine Tragedy. II. The Golden Legend. III. The New England Tragedies*, 1872, '51, '68.
14. *Aftermath*, 1874.
15. *The Hanging of the Crane*, 1874.
16. *Morituri Salutamus*, 1875.
17. *The Masque of Pandora*, 1876.
18. *Keramos, and other Poems*, 1878.
19. *Ultima Thule*, 1880.
20. *In the Harbor, Part II of Ultima Thule*, 1881.
21. *Translations, at various periods, 1833-1880*.
22. *The Waif. A Collection of Poems. Edited by H. W. Longfellow*, 1846.
23. *The Estray. A Collection of Poems. Edited by the same*, 1846.
24. *The Divina Commedia of Dante. Translated from the Italian, 3 vols., 1867-'70*.
25. *Poems of Places, 31 vols., 18mo. Edited by the same*, 1872.

- PROSE WORKS.—1. *Outre-Mer. A Pilgrimage beyond the Sea*, 1835.
2. *Hyperion. A Romance*, 1839.
  3. *Driftwood. From the French*, 1833.
  4. *Kavanagh. A Tale*, 1849.

**LOOM, POSITIVE-MOTION.** A simple contrivance has been introduced by James Lyall, an American inventor, by which a positive and even motion is given to the shuttle in weaving. Many attempts have been made to remedy the defects of the flying shuttle, and bring the shuttle-movement to the same degree of mechanical efficiency as the other parts of the modern loom. Compressed air, magnets, clutch-sticks to pull the shuttle through, and revolving rollers to catch it and expel it from a shuttle-box, have been tried, to give it a positive and controllable motion. The solution of this problem may take rank with the flying shuttle, invented by John Kay in 1835, which it would supplant, with Dr. Arkwright's power-loom, and with Jacquard's process for weaving designs, as a great improvement in the weaving art. The inconveniences of the intermittent action of the shuttle, driven, as heretofore, by picking-sticks, are such as to make the loom, with its perfect mechanism in other respects, an uncertain instrument, and cause frequent stoppages of work and destruction of materials. The friction of the shuttle on the warp weakens the threads constantly, and makes the fabric less durable than it would otherwise be. Some of the threads break under the strain. The frequent eccentric behavior of the shuttle is more serious, and causes all degrees of damage, from occasional broken threads and defective selvage, to the destruction of the piece of cloth or breaking of the machine. The leather on the picking-staff becomes irregularly worn, and the shuttle takes a wrong direction, or the blows are too weak, causing it to stop short in its course, or too strong, causing it to recoil from the

opposite pick and bringing about the same result.

The device of Lyall is simply a carriage on which the shuttle is drawn back and forth, with rollers between the carriage and the shuttle, which allow the lower shed of warp to pass between. The carriage is propelled on rollers by a band over a raceway. The friction-rollers on the carriage are placed outside of those on the shuttle, so that the shuttle is held in place and given the motion of the carriage by the purchase derived from the inclosing rollers. The shuttle is held down upon the carriage by a track above, upon which run rollers placed on the top of the shuttle, the upper shed of warp being held against the track so that the rollers can pass over.

**LOUISIANA. STATE OFFICERS.**—Governor, Samuel Douglas McEnery; \* Secretary of State, William A. Strong; Treasurer, E. A. Burke; Auditor, Allen Jumel; Superintendent of Public Education, Edwin H. Fay; Attorney-General, James C. Egan. United States Senators (Forty-seventh Congress), W. P. Kellogg and B. F. Jonas; Members of the Forty-seventh Congress: First District, Randall L. Gibson; Second District, E. John Ellis; Third District, Chester B. Darrall; Fourth District, Newton C. Blanchard; Fifth District, E. W. Robertson; Sixth District, J. Floyd King.

Members of the Forty-eighth Congress elect: Carlton Hunt, William P. Kellogg, E. John Ellis, Newton C. Blanchard, Andrew Herron,† J. Floyd King.

**THE OVERFLOWS.**—The unprecedented flood in the beginning of the year laid waste hundreds of square miles of land, sweeping away cattle and fences, destroying houses or making them uninhabitable, tearing up and washing away railroads, devastating plantations, and reducing several thousand people, white and black, to absolute destitution. Fortunately, the loss of life was inconsiderable. It is estimated that 585,000 acres of land—208,000 of which were in Louisiana—were overflowed. The damage to the sugar districts was not so great as to cotton-lands. The pecuniary loss by the overflow in Louisiana amounted to upward of \$2,000,000. When it occurred there was no money in the State Treasury which could be used for the relief of the sufferers; and had not the Congress of the United States been in session and with laudable promptitude and unanimity made provision for the immediate relief of the distress, thousands must have perished from exposure and starvation, the liberal contributions of the people of New Orleans and other places being quite insufficient to meet the emergency. The United States Government furnished 1,966,000 rations, costing \$218,630, which were distributed among 180,000 of the most necessitous, made

liberal appropriations of money, and also sent a number of tents for the shelter of those who were made houseless. The flood extended over thirteen parishes, to a greater or less extent. Notwithstanding this calamity, the people have cause for thanksgiving in the good state of the public health during the year, owing, it is believed, to the wise and efficient measures adopted and rigidly carried out by the Board of Health. By this system of quarantine not only has the health of Louisiana been protected, but that of the inhabitants of the entire valley of the Mississippi. It is claimed that the absence of yellow fever, caused by the vigilance of the authorities, goes a long way to prove that the disease is imported and not indigenous, and that the city of New Orleans is not the hot-bed of pestilence, from which it is communicated to other places, as many have hitherto supposed.

**FINANCES.**—The unsettled condition of the finances of the State for several years past has seriously impeded her growth and prosperity, causing a universal distrust, which has not merely affected the credit and honor of the Commonwealth, but has also, to a great extent, affected injuriously individual credit, prevented investment of foreign capital, and excluded immigration. The bonded debt of the State, as reported by the State Treasurer and Auditor in May, 1882, consists of:

Seven per cent consols, unstamped.....	\$11,822,900
Four per cent constitutional bonds.....	198,750
Bonds stamped two per cent, three per cent, and four per cent.....	265,200
Total bonded debt.....	\$11,786,850

In 1879 the Constitutional Convention enacted what is known as the "Debt Ordinance," which was subsequently ratified by the people. This ordinance offered to the public creditor who held a 7 per cent bond 2 per cent interest for five years, 3 per cent for fifteen years, and 4 per cent from that time to the maturity of the bonds, giving the bondholders, however, the option of scaling their bonds 25 cents on the dollar, and receiving 4 per cent interest. The creditors declined to accept these terms, as is shown by the fact that only \$186,150 have been funded into 4 per cents, and only \$237,000 have been stamped as accepting the 2 per cent offered. In the mean time, the interest fund has been collected from the taxpayers and amounts to upward of \$1,000,000 lying in the hands of the fiscal agent, and tied up by injunctions issued by the Federal courts. The bondholders have made the following proposition to the Governor:

*To his Excellency Samuel D. McEnery, Governor of the State of Louisiana.*

**RESPECTED SIR:** The undersigned holders of bonds of the State of Louisiana known as consolidated bonds, bearing 7 per cent, who have declined to accept the propositions contained in the debt ordinance, and being deeply interested in the welfare of the State, beg leave most respectfully to suggest to your Excellency, and to request that at the approaching meeting of the General Assembly it may please your Excellency to

\* Elected Lieutenant-Governor; became Governor on the death of Louis A. Wiltz.

† Died at Baton Rouge, November 27th. Vacancy to be filled in February, 1883.

recommend proper and further legislation for the final adjustment of the bonded debt of the State on the following basis, viz.:

1. That provision be made for paying the interest thereon for the first five years since January 1, 1880, at the rate of 2 per cent per annum in lieu of 7 per cent, as therein provided, the payment of which not to prejudice or novate the original constitutional contract of 1874, unless the amendment to the Constitution necessary to effect the proposed reduction of interest be adopted by the people of the State.

2. The State of Louisiana will thereafter agree to pay 4 per cent interest per annum, in lieu of 7 per cent, with ample legislation to secure the prompt and regular payment of said 4 per cent.

At the request of the Governor, the Auditor and the Treasurer, to whom he referred the above proposition, gave an opinion, of which the following is an extract:

If the holders of unstamped 7 per cent consols should avail themselves of the provisions of the debt ordinance and scale their bonds at seventy-five cents, as authorized therein, and the holders of consols stamped for reduced interest should retain their present form of bond, the yearly interest requirements of the State for the existing debt would, for five years, be as follows:

\$11,822,900 consols, less 25 per cent, \$8,492,175, at 4 per cent.....	\$389,637
\$263,200 consols, stamped, 2 per cent.....	5,904
\$198,750 constitutional bonds at 4 per cent.....	7,940

Total yearly interest.....\$352,981

The interest account under the constitutional provisions would require for twenty years, or until the period at which the Constitution provides for the payment of 4 per cent on unscaled bonds:

\$8,492,175 at 4 per cent, twenty years.....	\$6,793,740
\$198,750 at 4 per cent, twenty years.....	158,800
\$263,200 at 2 per cent for five years, 3 per cent for fifteen years.....	145,860

Total interest as per debt ordinance.....\$7,098,400

Under the proposition now submitted by the owners and representatives of bonds, the interest requirements would be as follows, viz.:

\$11,588,100 at 2 per cent for five years, \$231,762 per year.....	\$1,158,810
\$11,588,100 at 4 per cent for fifteen years, \$463,524 per year.....	6,952,860
\$198,750 at 4 per cent for twenty years, \$7,950 per year.....	159,000

Total interest, twenty years.....\$8,270,670

#### SUMMARY.

Bondholders' proposition.....	\$2,270,670
Debt ordinance.....	7,098,400
Difference in twenty years.....	\$1,172,270
Less surplus from interest fund to general expenses for five years.....	566,095
Total difference in interest.....	\$606,175

Or an average difference against the State of \$30,308.75 per year from January 1, 1880, to January 1, 1900, after which time the Constitution provides for the payment of 4 per cent on the face of consolidated bonds stamped for reduced interest.

We unhesitatingly advise the adoption of the proposition as looking to a final settlement of this vexatious question, and as presenting a means of partially relieving the State from existing financial embarrassments. The adoption of an amendment as proposed will place the bonds of the State at par, and all sections of the State will experience the advantage flowing from the values thus added to the resources of our citizens.

In addition to these considerations, this measure of justice will unite the people of our State upon a ques-

tion which must disturb our politics and impede our material advancement as long as it remains unsettled.

We have the honor to be, very respectfully,

ALLEN JUMEL, Auditor.  
E. A. BURKE, Treasurer.

The necessary steps have been taken by the Legislature to give effect to the proposed adjustment of the difficulty, and it is hoped that this, with the passage of a suitable revenue bill, will restore the credit of the State and enable her to repair the damage inflicted by years of reckless extravagance and misrule. The receipts at the Treasury for the year 1882, from all sources, amounted to \$2,353,621.66, derived as follows: General fund, \$803,569.43; school fund, \$205,455.20; interest tax fund, \$819,022.92; levee construction and repair fund, \$5,232.24; general engineer fund, \$141,753.78; interest and redemption of \$5 bonds, \$44,764.68; redemption of school certificates, \$7,487.32; poll-tax fund, \$5,209.72; Charity Hospital fund, \$47,672.47; levee and drainage fund, \$36,034.56; free-school fund, \$13,567.42; district levee fund, \$119,870.34; militia fund, \$150; judicial expense fund, \$102,387.83; agricultural and immigration fund, \$990; balance on hand January 1, 1882, \$453.75. The disbursements for the same period amounted to \$1,617,164.17. The assessment roll of 1881 shows that the real property in the State was assessed at \$130,701,901, and personal property at \$50,758,060, thus making the former pay 72 per cent and the latter only 28 per cent of the total State tax, while it is well known that the value of personal is quite equal to that of real property, and should bear an equal share of the burden of taxation. The taxation is limited by the Constitution to six mills. Very large amounts are due the State for "back taxes," of which it is expected 50 per cent at least will soon be collected and paid into the Treasury. When this is done, and the flagrant inequalities of assessments are fully corrected, the resources of the State will be ample to meet all her just and legal obligations.

The total number of registered voters in the State is 172,005, of whom 158,485 are natives, 13,276 of foreign birth, 85,451 whites, 88,024 colored, 69,006 whites who can write and 16,913 who are illiterate, 11,403 colored who can write and 76,087 who are illiterate.

STATE INSTITUTIONS.—The Louisiana State University and Agricultural and Mechanical College, since the election of Colonel William Preston Johnston, son of the late General Albert Sidney Johnston, as president, has been thoroughly organized and placed upon a new basis. It is now located at Baton Rouge, on a high bluff overlooking the river, commanding an extensive view. The main building, five stories in height, is 270 by 90 feet, with two wings, two stories high, 158 by 60 feet. These contain 79 rooms, embracing mess-hall, library of 17,000 volumes, hospital, chapel, museum, cadets' sleeping-rooms, class-rooms, etc. The

grounds are capacious and tastefully laid out. The faculty consist of ten professors, who instruct in English, mathematics, chemistry, Latin and Greek, the modern languages, mechanics, agriculture, and military tactics. Attached to the institution is a machine-shop where 70 cadets are now learning carpentry, forging, and turning. Under the supervision of President Johnston and the university surgeon, Dr. Dupree, a station for the production of vaccine lymph was instituted and the product was distributed *gratis* within the State. The sales outside of the State paid all the expenses. The government and discipline of the cadets are well administered, and all the institution needs is a liberal appropriation by the State to make its success certain. It has 150 students in attendance, with promise of a large increase. It grants four degrees, namely, Bachelor of Arts, Bachelor of Science, Graduate in Agriculture, and Graduate in Mechanics. The University of Louisiana, situated in the center of the city of New Orleans, on Baronne, Common, and Dryades Streets, is composed of four faculties, viz., one of Law, one of Medicine, one of the Natural Sciences, and one of Letters. The academical department, though of comparatively recent establishment, is advancing rapidly in efficiency and usefulness. The buildings are handsome and commodious, and have been made more capacious by the purchase and addition to them of the building known as the "Mechanics' Institute." During the session 1881-'82 there were in the different departments of the university 494 students—in the academical department (including the High-School) 250; in the medical department, 217; and in the law department, 27. The university is under the control of a board of administrators, of which the Governor of the State, the Chief-Justice of the Supreme Court, and the Mayor of New Orleans, are *ex-officio* members. The other members are appointed by the Governor, with the consent of the Senate. This board, owing to the imperfect preparation of students seeking entrance, has been forced to choose between establishing a high-school in the university, and lowering the standard of scholarship in the academical department. They have wisely chosen the former, and thus far it has been very successful. The State Library, of 26,000 volumes, is arranged in the wing of the university devoted to the law department. The State appropriates \$10,000 annually for the support of the institution. The faculty of the academical department consists of eleven professors and instructors. The university for the education of people of color, which was opened in January, 1881, with a fair prospect for usefulness and a large number of students, was closed in June of that year, and has not been reopened, because the trustees were unwilling to sacrifice the warrants of the State—its only assets—at the ruinous discount at which they could be sold. It is now hoped

that under an improved financial system all these embarrassments will be removed, and adequate provision made for the support of the institutions of the State.

**COMMON SCHOOLS.**—The report of the Superintendent of Public Education gives an encouraging account of the progress of education in the State. The total attendance was close to 70,000 pupils, which is a large increase over former years. Accurate figures can not be given, as several parishes have failed to report. The sum apportioned was \$123,500.

The city of New Orleans has a school system of her own, with a board of directors and superintendent. The total enrollment of pupils for the session of nine months is estimated at about 25,000, of which number about one fifth are colored. The number of schools in the city is fifty-four. One high-school for boys; one high-school for girls; twenty-seven grammar-schools, with eight years of instruction; eight grammar-schools, with a seven-years' course; three primary schools, with a four-years' course; and one special primary, with a Kindergarten system. Of this number thirteen, of mixed grammar and primary grades, are exclusively for colored pupils. The total means for the support of the schools—assuming, as is supposed, that they will be equal in amount to that of the previous year—are \$210,000, of which amount upward of nine tenths are derived from the city appropriations, the remaining tenth from the poll-tax and from the current school fund of the State. For several years the city government has appropriated \$200,000 per annum; but the expenses of the schools have largely exceeded the income, and the Board of Directors are unable to make income and expense balance, by reducing salaries and discharging some of the teachers, because the law requires an unbroken session of nine or ten months, and the payment of all salaries in twelve monthly installments, and forbids the discharge of any teacher once elected, except upon "written charges of degeneracy, neglect of duty, incompetency, or malfeasance, of which he or she shall be found guilty by a majority of the members of the board at a regular meeting." The improvement of the colored pupils in these schools is represented as very marked and encouraging. The separation of the whites and blacks has ceased to create any friction, and is now acquiesced in as the best arrangement for both.

THE STATE ASYLUM FOR THE INSANE, situated at Jackson, La., contained, at the last report, two hundred and fifty-two patients, forty-seven of whom were colored. About 60 per cent are able to work, and are engaged in gardening, in making bricks, and other manual labor. Were it not for this the institution could not be carried on with the means appropriated to it, which are paid in warrants, and have been hitherto sold at a discount of 50 per cent. The death-rate is only 4 per cent per annum. The capacity of the institution is quite

insufficient to accommodate the insane of the State. Those who can not obtain admittance are detained in the country jails. The annual appropriation for the asylum is \$50,000, which, if paid in par funds, would be an ample provision.

**THE CONSTITUTION OF 1879.**—The Governor, in his last message, expresses much discontent with the practical working of the Constitution adopted in 1879. He says: "The instrument is voluminous, and contains many provisions, borrowed from other States, not applicable to our system of laws or to our condition. The appointing power of the Executive is too great, and it is not well distributed. With an immense patronage, he has no power, and his efforts to execute the law result in recommendations and remonstrances. The system of removing officers for delinquencies, incompetency, and corruption, without the power of suspension, is too complicated. The result is, that a judicial contest is equivalent to the prosecuted officer serving out his term, and enjoying the emoluments of his office. The judiciary system is unsatisfactory, and has been the cause of much complaint. The restrictions on the Legislature are unwise, and exclude from its control many subjects which should demand its attention. The limitation on taxation is unfortunate, and the financial system under it is confused and embarrassed. The General Assembly can be liberal in its appropriations, but it is limited in the taxation to meet them. The Constitution declares gambling to be a vice, yet it encourages that vice in its worst forms, not only inciting to breaches of faith and embezzlement in the effort to get rich in the turn of a wheel, but demoralizing society, corrupting politics, and impeding legislation. The Constitution was intended to expedite judicial inquiries, and to cheapen litigation, but it has crowded the dockets of the courts, and increased the costs to such an extent that many are afraid to venture within the halls of justice. The instrument is difficult to interpret, and impracticable in its execution. A new Constitution would be a blessing, and I hope to see the State under an organic law suitable to our wants, and in harmony with our laws."

**THE CITY OF NEW ORLEANS—DEBT, ETC.**—The long-voiced question of the heavy debt of the city of New Orleans has been, it is hoped, finally and satisfactorily adjusted by the Legislature, and the grievous load of judicial taxation which, for more than two years, has crushed the tax-payers of the city, averted. Acts have been passed authorizing the municipal authorities to levy annually, commencing in 1883, a tax not to exceed five mills, in addition to the ten-mill tax authorized by the Constitution of 1879, and the tax of five mills required by the premium bond act, to pay the annual interest on all outstanding bonds of the city, other than premium bonds, the surplus, if any, to be used as a sinking

fund; and authorizing the renewal, extending the payment for forty years, of all outstanding bonds, except premium bonds, providing for the payment of interest thereon at six per cent, and reserving to the city the right to call in and pay the bonds at par after the year 1895. Provision is also made for the issue of certificates of indebtedness dated January 1, 1883, payable with six per cent interest per annum, in ten years or sooner at the option of the city, for the sum of all matured coupons outstanding on January 1, 1883. It is further provided that all legal proceedings instituted to delay or obstruct the operation of these acts shall be tried summarily and by preference over all other causes, and determined immediately, whether the courts be in vacation or not. The creditors have thus the option to accept the terms of either of these acts. This settlement faithfully carried out will benefit every material interest of the city, enhance the value of property, and restore public confidence in the good faith of the people. With the cheap transportation of her great river and her now completed railway communication with the Pacific coast, New Orleans will command the bulk of the trade of the valley of the Mississippi, and regain the Mexican, Central and South American trade. There is now a through railroad connection between New Orleans and San Francisco. The New Orleans Pacific Railroad extends in a northwestward direction from New Orleans to Shreveport on Red River, a distance of 325 miles, through the richest part of Louisiana. At Shreveport, junction is made with the main line of the Texas Pacific Railroad. The first ninety miles of the line out of New Orleans follow the general course of the Mississippi River, running through the largest sugar and rice plantations in the State. At Bruslé, a branch eight miles long connects the road with Baton Rouge, the capital of the State. From Bruslé the road turns more westward to the Atchafalaya River, which it reaches at Churchville, 130 miles from New Orleans; thence in a northwesterly direction, striking the rich valley of the Red River—the great cotton-producing section—it reaches Alexandria, 200 miles from New Orleans. From Alexandria it follows the course of the river, passing near Natchitoches, traversing the largest timber region of the State, and reaches Shreveport by way of Mansfield. Along the whole line from New Orleans to Alexandria, immense cypress thickets are easily accessible, and thence to Shreveport it passes through forests of the finest "long-leaf" pine. During the summer shipments of wheat *via* the Southern Pacific Railroad reached New Orleans, as an experiment to prove whether the overland shipments can be made as cheaply as by the long ocean-voyage from San Francisco, and whether, although there may be theoretically a limit at which actual cost of transportation may check railroad business, practically, minimum freights may not be more remunerative

than empty cars, sent to carry back the sugar, molasses, and rice of the Southwest.

The annual settlement of the United States Mint at New Orleans for the fiscal year ending June 30, 1882, showed that the varied and delicate operations of that establishment had been skillfully conducted. The bullion operated on amounted to nearly \$18,000,000, with a wastage of less than \$3,000, being far within the limit allowed by law. The coin and bullion in the immediate possession of the Superintendent on the day of settlement amounted to

\$5,047,585. The coinage for the fiscal year was, gold, \$101,700, and standard silver dollars, \$4,958,000. The coinage at the mint is far less than the demand for distribution, so that frequent transfers of silver by the Assistant Treasurer have to be made to meet the demand when the crops begin to move and the active business season commences.

The following is a statement of receipts and disbursements by the Assistant Treasurer of the United States at New Orleans, during the fiscal years ending June 30, 1880, 1881, and 1882:

#### RECEIPTS.

ACCOUNT.	1880.	1881.	1882.
Customs.....	\$2,382,996 21	\$3,127,801 74	\$3,562,551 95
Internal revenue.....	1,182,576 40	927,021 96	1,065,186 97
Sales of lands.....	17,169 86	45,792 56	752,766 96
Post-Office department.....	786,751 48	629,288 10	1,001,788 24
Transfers.....	3,215,752 42	13,084,692 30	13,319,896 44
Disbursing officers.....	3,762,023 54	5,687,166 83	5,992,568 91
Miscellaneous.....	1,279,350 79	165,681 16	862,607 41
Totals.....	\$12,576,620 70	\$23,617,489 65	\$26,556,511 88

#### DISBURSEMENTS.

ACCOUNT.	1880.	1881.	1882.
Treasury drafts.....	\$2,765,056 72	\$3,199,070 87	\$3,215,867 22
Post-Office warrants.....	705,227 69	681,623 94	866,472 69
Disbursing officers' checks.....	4,716,687 65	4,853,161 17	6,298,436 00
Transfers.....	5,414,700 00	14,117,864 59	13,494,042 57
Miscellaneous.....	7,689 00	7,272 00	323,569 06
Totals.....	\$13,609,311 06	\$22,388,992 07	\$24,197,877 54

The domestic exports from the port of New Orleans to foreign countries, during the fiscal year 1881-'82, amounted to \$68,190,431, a falling off of \$35,196,019 as compared with the preceding year. The imports of foreign products and manufactures at New Orleans for the same period amounted to \$11,993,852, a falling off of \$419,418 as compared with the year before. The ocean tonnage shows a decline corresponding to the reduced amount of the exports and imports. This year 897 vessels, with a tonnage of 998,079, entered, and 953 vessels, tonnage 1,038,859, cleared; and last year 1,255 vessels, tonnage 1,422,726, entered, and 1,257 vessels, tonnage 1,402,496, cleared.

The commercial year, which closed August 31st, was far from prosperous. There was a large decrease in the leading lines of trade. The season was unfavorable for agriculture, especially in the staple crops—cotton and sugar. Good prices, however, were maintained, and, despite the many drawbacks, the number of commercial failures was not large. Local finances improved greatly. State and city securities appreciated. The banks did a profitable business and are in a sound condition, and more money has been invested in improvements than in any year since the close of the war. The tendency to invest in manufactures is marked. The completion of the two through trunk lines west of the Mississippi, and the active prosecution of the work on two lines east of the river, indicate confi-

dence in the future prosperity of the State. The Southern Pacific is doing a large business, and the New Orleans Pacific is bringing large additions to trade with Northern Texas.

THE TULANE DONATIONS.—During the winter of last year it was announced that Mr. Paul Tulane, of Princeton N. J., but for many years a citizen of New Orleans, had conveyed a large estate to trustees to be used for the education of the white youth of the city of New Orleans. There was some delay in perfecting the arrangements, but now the deeds have been recorded, and the charter incorporating the trustees duly issued. The gift embraces all the real estate owned by Mr. Tulane in the city of New Orleans, worth at assessors' valuation \$288,700, yielding an annual income of \$38,000. In his letter to the trustees he declares the purpose of the donation to be—

For the promotion and encouragement of intellectual, moral, and industrial education among the white young persons in the city of New Orleans, State of Louisiana, and for the advancement of learning and letters, the arts and sciences therein, my intention being that the benefits shall be applied and expended in the city of New Orleans.

By the term education, I mean to foster such a course of intellectual development as shall be useful and of solid worth, and not be merely ornamental or superficial. I mean you should adopt the course which, as wise and good men, would commend itself to you, as being conducive to immediate practical benefit, rather than theoretical possible advantage. I wish you to establish or foster institutions of a higher grade of learning, where the young persons to be benefited shall, upon due examination, be found competent and qualified for admission, both by age and pre-

vious training, to receive the benefits of a more advanced degree of educational culture.

Intellectual advancement should be unfettered by sectarianism, but the profound reverence I entertain for the holy Scriptures leads me to express here the hope that the educational development intended by this gift should never antagonize, but be in harmony with, the great fundamental principles of Christian truth contained in them.

As to the details of the administration of the property and the application of its revenues, he gives *carte blanche* to the trustees. He makes the following suggestions:

The plan and details of any organization, corporate or otherwise, must of necessity be left to your own judgment, but I desire to communicate to you my wishes in such manner as to enable you more fully to enter into the motives which impel me, thereby enabling you completely to enter into my thoughts and purposes. Of course, whatever I may determine to donate to you, should you conclude to organize, will be (while leaving you the absolute owners of the property), with the object of enabling you, in your discretion, to use the revenues for the purposes already by me mentioned. I suggest and recommend:

1. That in your organization, whatever form it may assume, that my friend General Randall Lee Gibson be your chairman, or President, and that Judge Charles E. Fenner and James McConnell, Esq., be vice-presidents, or vice-chairmen.

2. That you provide for the filling of any vacancies in your number, by death, resignation, or otherwise, by election.

3. That while my desire is that you shall continue my purpose for more than fifty years, nevertheless, I would consider it no violation of these wishes should you, when organized, determine after fifty years no longer to perform the duties incident to the ownership of this property, which I may donate, and the income of which I have expressed the desire that you administer as aforesaid: in that event, I suggest that you distribute the property, or the proceeds from the sale thereof, among such educational or literary institutions, or for such educational purposes as you may determine, in the city of New Orleans, as are contemplated in this donation.

4. In order that there shall be no doubt in regard to my intentions, I will say it is not my desire to bind you to distribute the incomes or benefits of the fund or property to any particular school, college, or institution of learning, or to create any claim on the part of any school, college, or institution of learning to any distributive share, nor do I design to subject you collectively or individually to any responsibility to those intended to be benefited, or to any individual responsibility of any sort, for the management of the property and fund which may be by me donated.

Steps are being taken by General Gibson and his associates, as rapidly as the nature of the case will permit, to perfect the organization of the contemplated institution of learning.

SUGAR is pre-eminently the staple product of Louisiana. No other State, except Texas, cultivates the cane to any extent; and as yet, in Texas, the production is far behind that of Louisiana. Notwithstanding the damage done by the inundation, the total crop of this year is estimated to be 227,000 hogsheads, worth \$25,000,000; molasses, 14,000,000 gallons, worth \$5,000,000. The number of sugar-houses in operation is upward of 1,200. There are in New Orleans five sugar-refining establishments, in which the low grades of Louisi-

ana sugars and a large quantity of foreign products are worked into bright sugars and sirups. The productive capacity of these refineries is 360,000 pounds of sugar daily, besides sirups and soft sugars. The adulteration of sugar, with glucose and other deleterious substances, had become so common that the interference of the Legislature was invoked, and an act passed this year making it a misdemeanor, punishable with heavy fine and imprisonment, "to sell, ship, or offer for sale, by sample, hogsh-head, or barrel, any sugar or molasses, adulterated with glucose or other foreign substance, without branding or stamping it as such in clear and legible letters."

The rice-crop of this year has been very abundant, the acreage larger and the grain heavier and better filled than last year.

JUTE.—The cultivation of jute as one of the staple crops of Louisiana, and, indeed, of all the Gulf States, is destined in the not distant future to be a very important and extensive industry, especially on the lowland plantations and in the extensive sea-marshes. It has been long known that jute can be successfully grown to any extent in the Gulf States; but the absence of machinery to separate the fiber from the wood, and thus prepare it for market, at a cost to allow competition with that imported from India, has prevented its production on any extended scale. It has now been demonstrated by Mr. C. Menelas, of New Orleans, that Mr. Albee Smith, of St. Louis, has invented a machine by which the difficulty may be overcome, and jute prepared for market at a cost of from two to two and a half cents per pound, the ruling price of imported jute being four and a half cents. It is estimated that on the rich bottom-lands from one to two tons of fiber per acre can be raised. The United States are now paying \$10,000,000 annually for imported jute and jute goods. The demand is increasing every year, and if it can be proved, as is stated, that this material can be supplied at home at half the cost of the imported article, it is not unreasonable to expect that it will soon become a staple product of the South. The inventor of the machine states that, with a small mill, with one man to feed and a boy to remove refuse matter, 15,000 pounds of green jute can be produced in one day. After the fiber has been separated, it is placed in vats for rotting, and in from ten to fifteen days it is ready for market. It is said that jute, planted in belts in and around cotton-fields, is a perfect protection against all caterpillars and other insect-enemies of cotton. It certainly has no such enemies of its own, and it is not injuriously affected by drought.

Careful soundings, taken by order of the Mississippi River Investigating Committee, both between the Eads jetties and outside the jetties seaward, indicate that the channel is throughout of the depth and width required by the Government. The advocates of what is called the "outlet-system" have denied this, and are

still quite active in opposing the work of river improvement now in progress, for which Congress made so liberal appropriations at its last session.

The Burnside will case, in which it was sought to set aside the order of court appointing Oliver Beirne, of West Virginia, testamentary executor and residuary legatee of the late John Burnside, the millionaire planter of Louisiana, has been decided in favor of Beirne.

The New Orleans Cotton Exchange have erected a fine building at the corner of Gravier and Carondelet Streets. The corner-stone was laid by Governor McEnery on January 23, 1882.

The two hundredth anniversary of the discovery of the mouths of the Mississippi River, by La Salle (April 10, 1682), was celebrated with appropriate ceremonies.

The following is the estimated amount and value of the products of the State for 1882:

Sugar, 227,000 hogsheads .....	\$25,000,000
Molasses, 14,000,000 gallons .....	5,000,000
Cotton, 480,000 bales .....	20,000,000
Rice, 61,100,000 pounds .....	3,250,000
Cotton-seed products .....	2,000,000
Grain .....	10,000,000
Miscellaneous .....	2,000,000

Total value.....\$67,250,000

**LUNG-PLAGUE OF CATTLE.** Contagious pleuro-pneumonia, or lung-plague of cattle, continues to be a source of solicitude, and has been made the subject of extended official investigation. It has been shown to be thus far confined in the United States to a narrow section along the middle Atlantic coast, and, as it spreads only by infection, it is deemed entirely practicable to stamp it out of existence and prevent its reappearance if the proper measures are taken before it has been carried into the South and West.

The origin of this distemper, like that of all contagious diseases, is concealed in remote obscurity. There are indications of its existence in ancient times, and authentic records of its prevalence in Europe nearly two hundred years ago. It has a permanent existence in the unfenced mountain regions of Central and Eastern Europe, and was first carried thence into domestic herds by the commissary operations of great wars. The conflicts attending and following the French Revolution first brought it into the channels of commerce so as to attract attention in consequence of the active trade and interchange of cattle which they stimulated. There were periodical ravages in Northern France and other parts of Central Europe from 1820 to 1840. It made its first appearance in Holland about 1830. Ten years later there was considerable importation of Dutch cattle into Great Britain and Ireland for the purpose of improving stock, and this infection made its appearance at Dublin in 1841, and in the vicinity of London in 1842. Since that time there has been more or less trouble with it wherever there was a market for imported stock, while those centers of the cattle-trade which rely on domestic breeds and sell the

native product instead of buying foreign, have been free from it. In England, vigorous repressive measures have been employed to destroy the infection, but it has had a continuous prevalence in Ireland in consequence of the constant interchange of cattle that is going on there. The plague was carried into Northern Europe—Denmark, Sweden, and Norway—about 1847-'48, and was taken to South Africa from Holland in 1854, and to Australia from England in 1858. In these southern countries its ravages have been especially severe, and it has been found very difficult to deal with it, as a warm climate is favorable to its spread.

The lung-plague was first brought into the United States by means of a single cow bought from the captain of an English vessel by a milkman of Brooklyn, N. Y., in 1848, and the disease, as it now exists in this country, is traceable to that one case. An entirely separate infection was introduced into Massachusetts by an importation of Dutch cattle in 1859, but was dealt with so vigorously that in six years it was utterly exterminated. The infected cattle first introduced consisted of four cows imported for a stock-farm, and, owing to insufficient understanding of the case and inadequate precautions, it was permitted to spread, through the sale of calves. It was carried into several localities in Massachusetts and sent into New Hampshire. The introduction of diseased cattle into the latter State was stopped by proclamation and a vigorous slaughtering of herds in which the plague appeared, and, in the spring of 1860, the Legislature of Massachusetts adopted measures for the extirpation of the contagion, which were entirely successful. Commissioners were appointed, with authority to slaughter and pay for all herds in which the disease was known or suspected to exist. Besides the animals which died and those disposed of by the selectmen of infected towns, during a temporary suspension of the commission in 1863, 1,164 cattle were condemned to slaughter by the commissioners. The cost to the State was \$77,511.07, including \$10,000 spent by the towns during the suspension of the commission. The total loss to the farmers of the State from the disease was estimated at \$250,000. Since then New England has been free from the plague with the exception of occasional cases carried into Connecticut from New York.

From the Brooklyn case of 1848 the infection was carried into stables in the vicinity, and thence to the cities of New York, Jersey City, and Newark, and its existence has been continuous to this day. Its prevalence among cows fed from the refuse of distilleries led to the swill-milk excitement of some years ago, and it has been clearly shown that the diseased condition of some of those cattle was not due to their stabling or feeding, but to the contagion of the lung-plague. Its spread was promoted by the practice of pasturing cattle promiscuously in open spaces made up of vacant

lots in the outskirts of large cities. At an early day the infection was carried from Brooklyn through the dairy herds of New York, Jersey City, Newark, Elizabeth, New Brunswick, and Trenton to Germantown and Philadelphia. It extended later to Baltimore, and thence to Georgetown and Alexandria. Its ravages have been confined chiefly to the seaboard, from Long Island to Virginia, and its extension has everywhere been due to the same cause, of the mingling of cattle in uninclosed lands near the cities. The spread has been toward the south, in consequence of a similarity of conditions surrounding cities in that direction which are within easy reach of each other. The disease has frequently been carried into Connecticut, along the line of the New Haven Railroad, but has been uniformly stamped out, through the vigilance of the cattle commissioners of that State. It has never spread north from New York beyond the immediately outlying districts of Westchester and Putnam Counties. This immunity, both in that direction and to the west, is attributed to the absence of cities with open, outlying spaces, and the general use of separate inclosed pasture-grounds. Moreover, the current of the cattle-traffic is almost wholly from the West, eastward over the lines of communication to New York.

Investigation shows that this disease, among American cattle, is due wholly to importation and of spread by infection, and, as it is confined thus far to comparatively narrow limits, it might be wholly extirpated, and hereafter kept out by the adoption of proper measures. It is not generated by any of the vicissitudes of weather or climate, by the privations or discomforts of travel, by impure air or by feeding on the refuse of distilleries, or glucose and starch factories, but it is aggravated and its ravages facilitated by some of these causes. The fact that it has never been known to exist except when traceable to contagion is a guarantee that it can be permanently eradicated, but the dangers and difficulties are increasing year by year. In the first place, the cattle-traffic is rapidly increasing. The importation of special breeds is on the increase, and there is a liability, if due precaution is not taken, that diseased specimens may be carried into regions hitherto free from the plague. Should it once get a foothold in the South, where the climate would be favorable to its spread, and especially in the vast unfenced pasturages of the Southwest, it might speedily get beyond control. The increase of the importation of foreign cattle, for breeding purposes, was from 5,684 in number, and \$415,133.92 in value, in 1873, to 21,268 in number, and \$1,245,607 in value, in 1881. Efforts to introduce thoroughbred cattle in stock-raising regions, and to improve the quality of the great herds of the West and Southwest, suggest a danger of the introduction of this plague, and the need of a systematic policy for its extermination and future prevention. A trade in Eastern calves,

sent West from the dairy-farms of New York and Pennsylvania, which has lately sprung up, is also suggestive of danger, and the increased facilities of transportation of cattle creates a growing need of precautions.

The virus of the lung-plague is very persistent and active in a close atmosphere, and is greatly mitigated, if not destroyed, by exposure to the open air. It will sometimes develop after a considerable period of quiescence in close places, and is capable of being carried long distances in clothing or other material. It has been communicated by food upon which infected animals have breathed. Mortality from this disease, as well as facility of transmission, varies with climate, increasing with an increase of temperature, whether due to latitude or the season of the year. In France it has been shown that about 20 per cent of the cattle exposed to the infection resisted it altogether, and 50 per cent escaped death; but in South Africa it is no uncommon thing to lose the whole herd if it is once exposed. Losses in England vary from 50 to 60 per cent. In the United States, mortality increases with the heat of the climate. The period of incubation of the germs after being taken into the system and before the earliest symptoms of the disease are manifested, varies greatly. It is generally stated as from six to sixty days, but it has been known to extend to ninety or one hundred days, and even longer. This prolonged incubation is an additional source of danger, for an animal that has been exposed may be transported a long distance, carrying the infection with it, before the disease shows itself. The symptoms themselves vary in different countries, climates, and seasons, and even different breeds of cattle. Sometimes the disease shows itself abruptly and with great violence, and again it develops slowly and insidiously. It usually begins with a cough, at first slight, and noticed only at intervals. It may be heard only when the animal rises or drinks cold water. It is usually weak, short, and husky, but may be painful, and accompanied by arching of the back. As the disease advances, the animal grows dull and sluggish, is apt to be found lying alone, apart from the herd, eats and ruminates tardily and breathes more quickly; the hair, especially about the neck and shoulders, becomes erect and dry, the muzzle has intervals of dryness, the milk diminishes, the eyes lose their prominence and luster, the eyelids and ears droop, the limbs and the roots of the horns become alternately hot and cold. By this time the diseased condition of the lungs may be ascertained by percussion and auscultation; the breathing being accompanied by harsh, rasping sounds and more or less exudation of mucus. As seen in America in winter, the violence generally attributed to the disease does not appear. The victims fall off rapidly in condition, show a high fever for a time, and the diseased portion of the lung becomes encysted as a dead mass.

In the extreme heat of summer and in hot climates, the breathing becomes short, rapid, and labored, and often each expiration is accompanied by a grunt. The nostrils become retracted, and the animal stands most of the time with feet apart, head extended, eyes prominent and glassy, back slightly raised, and is incapable of most of the normal functions of life. Where the disease takes the violent form, there is not only great mortality, but a rapid culmination, while the milder cases are slower and more prolonged.

The result of study extending over a considerable period is the belief that the lung-plague is due to bacteria, which, being taken into the lungs by the breath, make their way through the delicate lining of the air-cells and multiply, destroying the integrity of the tissues and causing inflammation and exudation. Inoculation has been tried, with results of disputed value. Inoculation is generally made at the tip of the tail, where the connective tissue is scanty and the lymphatic system poorly developed. It causes a harmless swelling, and is believed to diminish at least the liability of the animal to the infection. It is also considered effective in reducing the liability to a fatal termination in case the lungs are attacked. The risks connected with inoculation are due to the fact that the real virus of the disease is used, and that the effect is the actual development of the disease, though localized and confined in its effects. A somewhat insidious danger arises from the fact that the infection is sometimes carried for a considerable period, and communicated by means of the encysted masses in the lungs of animals that have recovered. These sometimes continue for a year or more. Cases have been known of infection from inoculated cattle, and it is believed that a general resort to that preventive would simply spread the disease.

The subject of this lung-plague of cattle in the United States has been investigated by a commission of the Treasury Department, whose report was submitted to Congress in February of this year. They found no evidence of its existence in New England, or west of the Alleghany Mountains. At the time the examination was made "not a shadow of suspicion of lung-plague could be thrown upon our Western herds." After recounting the evidence on this point, the commission said: "We claim, therefore, with the utmost confidence, that up to the end of the year 1881 the lung-plague of cattle has been confined to the vicinity of the Eastern seaboard, extending from Putnam County, New York, to Fairfax or Prince William County, Virginia. Connecticut is sound, and North Carolina is sound, so that at present the infection is confined to the States of New York, New Jersey, Delaware, Pennsylvania, Maryland, and Virginia, and the District of Columbia." The commission took the ground, however, that within the area described the plague is in no way disappearing, but they found the

practice prevalent of killing animals and disposing of them for beef when the symptoms of the disease showed themselves. They also discovered that efforts to conceal its existence were common among the owners of dairy herds. Many cases of the plague were found in and about New York city, Newark, N. J., Philadelphia, Baltimore, in the District of Columbia, and in Virginia adjacent to the District. In all these cases there has probably been more or less interchange among the herds. In the opinion of the members of the commission there can be no guarantee of health for cattle going from any of these cities, until a better system of precautions is established. They favor a prohibition of any movement of cattle from one of the infected States without a quarantine of ninety days, such as is required in the importation of foreign cattle. They would also have the carrying of cattle through infected States in either direction, from one uninfected State to another, confined to through trains, which do not stop to take up cattle or unmanufactured cattle-products, such as hides, horns, hoofs, etc. They would also have bonded markets established in the infected States for all cattle intended for export or store purposes. By care in inspection and in transmission from bonded markets to vessels, or places of sale, the commission deem it possible to prevent absolutely any spread of the infection through the cattle-traffic. They favor a strict quarantine of imported foreign cattle, and more efficient provision for sanitation of vessels and railroad trains used in the conveyance of livestock.

Aside from precautions intended to prevent the transmission and spread of the lung-plague, the commission made practical suggestions for stamping it out of existence in the States where it now prevails. In order to do this, they maintain that Federal action is necessary, in addition to such effort as separate States may be induced to make, because harmonious action and a single control are essential to success. Moreover, national authority alone is competent to interfere in the regulation of traffic from one State to another, and with foreign countries. Restrictions upon local markets would be necessary, even to the extent of closing them, but it is contended that this would be within the purview of Federal authority, in dealing with an infection which concerns commerce in its interstate and foreign aspects. The commission would place all abattoirs and fat-cattle markets under supervision, mainly for the purpose of preventing any cattle entering them to be taken away again alive. They would also have all movement of cattle from city to city, or town to town, in the infected States, permitted only under license. And, most important of all, there should be authority to enter premises to ascertain the presence of the contagion, and to slaughter whole herds among which it is discovered, with fair compensation to the owners.

This point is regarded as of great importance, as the most effectual and economical means of utterly stamping out the plague. Power is also demanded for prohibiting pasturage or exposure in unfenced lots where different herds are likely to mingle together, or stray animals to enter among others. Finally, it is recommended that the task of stamping out the lung-plague be confided to national agents, with power to take all necessary measures and means to carry them out, including payment for slaughtered herds. In summing up their conclusions and recommendations, the commissioners say:

For the extinction of the lung-plague in infected districts, we consider it necessary that the authority—Federal or State—intrusted with the work should be clothed with the following power:

a. To abolish or regulate markets for store-cattle in the infected districts.

b. To require the slaughter at the fat-markets, in infected districts, of all cattle entering these markets. Fat cattle, for slaughter elsewhere, can be obtained at the bonded market.

c. To prohibit all movement of cattle in infected districts, except under special license.

d. To inspect all cattle in suspected districts.

e. To slaughter all infected cattle, and in exceptional cases those that have been exposed to infection.

f. To have the condemned animals appraised, and the owners liberally indemnified.

g. To prohibit all exposure of cattle on highways, or on unfenced or insecurely-fenced places in infected districts, or of suspected cattle on a lot adjoining one occupied by healthy cattle, or bordering on a highway.

h. To prohibit all pasturage of more than one herd on one pasture in infected districts, unless under special license.

i. To disinfect all premises, fodder, and other articles that have been presumably exposed to inspection.

j. To institute and enforce such minor rules as shall be demanded by the peculiar conditions of particular districts.

k. To provide and enforce suitable penalties for infringement of orders.

In order to carry out these suggestions, we recommend a liberal appropriation by Congress, to be disbursed by some designated Federal officer. In case the work be delegated to the different States, we advise that a liberal appropriation be made from the Federal exchequer, sufficient to cover the greater part of the outlay; and that this be paid over to the Executive of the infected State, on the approval of the plan and execution of the work in the particular States by a veterinary sanitary organization designated for the purpose by the Federal Government.

This report of the Cattle Commission, which consisted of James Law, E. F. Thayer, and J. H. Sanders, was submitted to the Senate on the 13th of February, 1882, and referred to the Committee on Agriculture; but no action, based on its recommendations, has yet been taken by Congress.

**LUTHERANS.** The Evangelical Lutheran Church in North America comprises four distinct general bodies, between which considerable differences of views respecting doctrine and ritual prevail, and twelve independent synods. Its statistical reports are very imperfect. The "Church Almanac" of the Lutheran Bookstore, Philadelphia (General Council), gives statistics of the several general bodies and synods, of which the following are summaries:

	Ministers.	Congregations.	Communicants.
General Council, ten synods.....	665	1,247	205,475
General Synod, South, six synods	111	287	18,225
General Synod, North, twenty-three synods.....	843	1,801	126,875
Synodical Conference, six synods	1,119	1,881	288,117
Twelve independent synods.....	609	1,323	129,324
Total.....	3,317	5,989	767,986

The Synodical Conference is composed of five ordinary synods and the Joint Synod of Missouri, a union of twelve smaller synods containing 774 ministers, 1,012 congregations, and 172,079 souls. The Joint Synod of Ohio, consisting of six smaller synods, with 195 ministers, 300 congregations, and 50,494 communicants, which separated from the Synodical Conference in 1881, is now counted among the independent synods.

"Der Lutherische Kalender" (Brobst, Diehl & Co., Allentown, Pa.) gives:

	Ministers.	Congregations.	Communicants.
General Council.....	658	1,279	205,002
General Synod, South.....	141	289	18,363
General Synod, North.....	847	1,855	128,229
Synodical Conference.....	1,117	1,881	288,117
Independent synods.....	666	1,346	146,077
Total for the whole Church..	3,429	6,180	785,787

According to the computations of the "Kalender," the Church gained during the year, net, 180 pastors, 265 congregations, and 47,485 communicants.

Of eighteen theological seminaries and departments, four are classified as affiliated with the General Council, four with the General Synod, North, four with the Synodical Conference, and one each with six single synods. The literary institutions consist of seventeen colleges, thirteen classical schools, and nine seminaries for young women. The periodicals include eighteen weekly, eleven semi-monthly, thirty-eight monthly, two bi-monthly, three quarterly, and six annual publications, in the English, German, Swedish, and Norwegian languages.

The General Synod, South, was formed during the civil war by the united action of the synods in the Southern States which had separated from the General Synod, North, in consequence of the urgency of the political crisis. It holds fellowship with both the General Council and the Northern General Synod. In its organization, however, it is now like the General Synod, North, having adopted the constitution of that body, with a few modifications, at its formation. Its doctrinal basis is analogous to that of the General Synod; the services of the Church books of the two bodies are the same as to their principal parts; its ecclesiastical usages, church government and life, are of a similar type; and it practices pulpit and altar fellowship with the General Synod, and, as a matter of privilege in exceptional cases, with other evangelical Protestant de-

nominations. The subject of reunion with the Northern General Synod had a prominent place in the deliberations of the meeting of the Synod in 1882, but was finally postponed on the ground that such union was not desirable. It was urged against the plan that the Synod was now on terms of fellowship with both the Northern General Synod and the General Council, and that to unite with either of those bodies would separate it from the other, and put it in an antagonistic position as toward it; would be, in effect, more a measure of division than of union.

The General Synod, South, met in its thirteenth convention at Charlotte, N. C., May 25th. The Rev. J. J. Scherer, of Marion, Va., was chosen president. Resolutions were adopted setting forth the kindly feelings of love entertained by the Synod toward the Lutheran bodies North, and expressing willingness to co-operate with other Lutheran bodies upon an unequivocal Lutheran basis. A committee was appointed to consider measures for church work among the freedmen. The committee on a common service-book for all English-speaking Lutherans, made a report agreeing with the conditions fixed by the General Council, and was continued. Steps were taken to inquire into the expediency of reviving the old Lutheran vesper service as an evening service; and the committee appointed to prepare a Sunday-school book was instructed to mold its service on the ancient matin and vesper service. Reports were made concerning the missions at Richmond, Va., and Atlanta, Ga. An interesting feature of the meeting of the Synod was the reception of the delegates from the North Carolina Synod, which, after a separation of several years, had determined to resume its connection with the General Synod. On the other hand, the Mississippi Synod had withdrawn from the body, but it was hoped that the separation would not be final.

The fifteenth convention of the General Council met in Lancaster, Ohio, November 9th. Representatives were present from nine synods, or from all the bodies connected with the General Council, except the Holston Synod. The Rev. A. Spaeth, D. D., was re-elected president of the body. In the proceedings of this assembly, discussions of doctrines, as means of ascertaining, establishing, and communicating religious truth, are considered equally important with the transaction of the practical and administrative business which usually engage the attention of ecclesiastical judicatories; and a summary of theses on some subject of doctrine or government is usually prepared in advance of the meeting, to be discussed by it. The topic selected for discussion at the present meeting was the "Relation of Synods to Congregations, and of Congregations to Synods."

The theses set forth that all power in the Church belongs primarily and exclusively to the Lord Jesus

Christ, and that the Church has no right or authority to ordain or teach except what is "taught by the very letter of God's Word, or derived by just and necessary inference from it, and her liberty conceives those things only which are left free by the letter and spirit of God's Word." The primary bodies, the theses continue, through which the power of the Church is nominally exercised, are the congregations. "The congregation, in the normal state, is neither the people without the pastor, nor the pastor without the people. In congregations exists the right of representation. In addition to the pastor, who, by their voluntary election, is already *ex-officio* their representative, the people have the right to choose representatives from their own number to act for them, under such constitutional limitations as the congregation approves. The representatives of congregations thus convened in synod, and acting in accordance with those conditions of mutual congregational compact which are called a constitution, are, for the ends, and with the limitations defined in it, representatively the congregations themselves. A free, scriptural general council, or synod, chosen by the Church, is, within the metes and bounds fixed by the Church which chooses it, representatively that Church itself." The congregations representatively constituting the various district synods may, through those synods, elect delegates to represent them in a more general body, which may bind them, so far as the terms of their mutual agreement make its acts binding. If, however, "the final decision of any general body thus constituted shall seem to any synod within it in conflict with the faith, involving violation of the rights of conscience, it is the duty of that synod to take such steps as shall be needed to prevent a compromise on its part with error. To this end it may withdraw itself from relations which make it responsible for departure from the faith of the Gospel, or for an equivocal attitude toward it. Such steps should not be taken on any but well-defined grounds of conscience, not on mere suspicion, nor until prayerful, earnest, and repeated efforts to correct the wrong have proved useless, and no remedy remains but withdrawal.

"The obligation under which congregations consent to place themselves, to conform to the decisions of synods, does not rest on any assumption that synods are infallible, but on the supposition that the decisions have been so guarded by wise constitutional provisions as to create a higher moral probability of their being true and rightful than the decisions in conflict with them, which may be made by single congregations or individuals. All final decisions should be guarded with the utmost care, so that they shall in no case claim without just grounds to be the judgment of those congregations in whose name and by whose authority they are made—in the absence of which just grounds they are null and void."

In the formation of a general body, the synods may know and deal with each other only as synods. In such case the official record is to be accepted as evidence of the doctrinal position of each synod, and of the principles for which alone the other synods become responsible by connection with it. The leading objects for which synods should be organized are defined to be the maintenance and diffusion of sound doctrine; the decision of controversies in regard to articles of faith; the proper regulation of the human externals of worship; the maintenance of pure discipline; and the devising and executing of wise and scriptural counsels and plans for carrying on the work of the Church, in every department of beneficent labor for the souls and bodies of men, at home and abroad; all in subordination to God's Word and the standards and authority of the Church.

The report of the Committee on Home Missions related what had been accomplished in the missions in Germany, Canada, Michigan, Texas, and in the State of New York, and stated that nine laborers had been sent to sixteen different fields during the past year, and sixteen young men were securing aid in preparation for mission work. Stress was laid, in the discussion of the subject, on the division of the missions in the United States between the German and Scandinavian immigrants, and on the importance of using the English language as the language of the country. The council approved a plan for the home-mission work which contemplated the appointment of three committees, one for the English, one for the German, and one for the Swedish languages, to be equally responsible to the General Council and to have co-ordinate powers; constituted the (Swedish) Augustana Synod's Central Committee on Missions, the Swedish Committee of the General Council, and provided that the English and German committees should consist of twelve persons each, ten of whom should be elected by the General Council and two by the committee. The object of the committees was declared to be to plant and sustain Lutheran churches, but it was forbidden to establish or have control of missions within the territory of a synod in regular connection with the General Council, except in co-operation with and through the agency of the Executive Committee of Missions of such synod, or with its consent. A report on the sources of supply of men for German mission work showed that most of the missionaries had received their preparation for the ministry at German institutions. Of these students, sixteen still remained here under the care of the committee in preparation for the ministry. The Rev. Mr. Paulson's Institution, in Kropp, Schleswig, was recommended as a suitable institution, it being in doctrinal position and in its aim most in accordance with the wants of the General Synod to look to for students. The committee was, however, authorized to select suitable men at its discretion for immediate employment. The committee was further instructed to consider whether it is necessary to establish any additional institution or department in any existing institution in the United States to meet the special wants of the Church. A special committee was appointed to open correspondence with the committee appointed by the General Lutheran Conference in Germany for the purpose of securing the transfer of the emigrants who are members of Lutheran churches into regular connection with the churches in America. A committee to secure sites for churches and schools along the line of the Northern Pacific Railroad was continued.

The East Tennessee Synod, an independent body, has been reorganized on a basis which declares that the congregation alone has the right to call or depose pastors; refuses fellowship with "the sects"; prohibits membership

in oath-bound secret societies; and holds that the Lutheran Church only teaches the pure Word of God.

LYNCH, PATRICK WILSON, born March 10, 1817, at Cheraw, S. C.; died February 26, 1882, at Charleston, S. C. Bishop Lynch studied theology first at the Catholic Seminary at Charleston, acquiring at the same time a knowledge of the classics, science, and mathematics. Subsequently he went to Rome and diligently pursued his education in the historic college of the Propaganda, having access also to the library of the Vatican. In 1840 he was ordained priest, and zealously devoted his time and talents to the advancement of Catholicism in Charleston. Soon he became Professor of Theology and rector of the seminary of that city, his great scholarship and ecclesiastical attainments enabling him to fill the position with distinguished ability. In 1850 he was made Vicar-General of the diocese, much to the delight of his people, whose love and confidence he had won. Eight years after, he was consecrated Bishop of Charleston. Immediately after his consecration, he began the work of acquiring funds for building a cathedral: his plan of procedure was so perfect, and he inspired such enthusiasm in behalf of his work, that in a very short time he collected a sufficient sum to begin the building, which in time was finished, and valued as one of the most ornamental buildings of Charleston. His labors for his church did not end with the completion of the cathedral; he founded an Ursuline Convent, an orphan asylum, and several schools. In the late war some of these buildings were destroyed, among them the beautiful cathedral. The Bishop identified himself very conspicuously with the cause of the Confederacy; he made a special visit to Rome to try and induce the Pope to recognize the Southern States, and worked unceasingly with his associates in that direction. Pardoned by the President at the end of the war, he returned to Charleston and began his work with renewed energy. The best years of his life were devoted to the arduous task of liquidating an enormous debt contracted by the diocese before he was made bishop; his efforts were so successful that at the time of his death only a small sum comparatively remained of the indebtedness. Only the people of his diocese knew the hardships and distresses through which he passed during the accomplishment of this work.

For the same object, he delivered a lecture, in 1870, in New York city, on the "Vatican Council," and again in 1873 on "Bismarck and the Church." His fame as a learned and accomplished orator had preceded him, and vast audiences crowded to hear him. These were only two of the many lectures he delivered for the same object, not alone in New York but in most of the large cities of the United States. As a controversialist Bishop Lynch was eminent, as he proved on numerous occasions, in his able arguments with opponents of his church.

Notably among these are those directed against Bismarck and Gladstone. One of his most distinguished sermons was preached on the occasion of the laying of the corner-stone of the new church of St. Francis Xavier, in New York. As a writer of scientific articles Bishop Lynch was also distinguished. "The Liquefac-

tion of the Blood of St. Januarius," and the "Transit of Venus," are two of his most celebrated. He participated in the Vatican Council of 1869-'70, and ably supported the dogma of infallibility. A short time before his death, the Pope had assigned him a chair in the college at Rome.

## M

MACDONALD, Sir JOHN ALEXANDER, Prime Minister of the Dominion of Canada, was born in 1815, educated in Kingston at the grammar-school, and was called to the bar in 1835. He entered political life as a member of the Parliament of Upper Canada. He was elected in the Conservative interest in 1844 by the Kingston constituency, which he has continued to represent to the present time. His introduction to office was as a member of the Executive Council and Receiver-General, to which post he was appointed in May, 1847. In December of the same year he took the office of Commissioner of Crown Lands. In March, 1850, the Cabinet of which he was a member gave way to the Reform Ministry under Lafontaine, Baldwin, and Hincks, which remained in power till September, 1854. At that time the difficulty with regard to the reservation of lands for the Protestant clergy and other questions caused a defeat of the ministry, and a coalition was formed to conduct the public business. Macdonald joined the Government as Attorney-General. He retained this office until May, 1862. A part of this time he was the head of the Government. In January, 1862, upon the reorganization of the militia, he took the position of Minister of Militia. The Government sustained a defeat on their militia bill of that year, and all resigned. In May, 1864, Macdonald resumed office as Attorney-General in the ministry of Sir E. P. Tache, which was not, however, in command of a stable majority. At this time the question of federation was under discussion. The proposition had adherents in both parties. Upon a report in its favor by a committee of the Legislative Assembly, a conference of the leading men of both parties was held, which led to a coalition for the purpose of carrying the proposition through. On the death of Sir E. P. Tache, in 1865, Mr. Macdonald again became Minister of Militia, which office, with that of Attorney-General, he retained until 1868. In that year, upon the consummation of the federation, he became Minister of Justice and Attorney-General in the Dominion Government, and in 1869 assumed the premiership. The ministry of which he was the head resigned November 5, 1873. In October, 1878, he was called upon to form another Cabinet. In 1866 he served as one of the delegates appointed to confer with the Imperial Government with reference to the terms of confederation, and

was chosen president of the meetings by the delegates in London. He was knighted in 1867, and was honored with a doctor's degree by Oxford University in the same year. Sir John A. Macdonald is the undisputed leader of the Conservative party in Canada, which under his guidance introduced the protective policy, and has almost silenced the formidable opposition of the Liberals. His abilities in debate, in affairs, in political tactics, and in the inception of policy, are so conspicuous that he occupies a most commanding position among parliamentary leaders.

MADAGASCAR, a large island off the eastern coast of Africa. The area is 591,964 square kilometres, or about 227,600 square miles. The population is estimated at from 3,500,000 souls to double that number. The inhabitants call themselves Christians, the Presbyterian Church having been established as the state religion of the Hovas. The capital, Tananarivoo, situated in the interior of the island, contains from 70,000 to 80,000 inhabitants. The chief commercial town is Tamatav, a town of about 3,000 inhabitants, on the eastern coast. The foreign commerce is conducted principally in English ships coming from Mauritius. One of the principal articles of import is rum. American traders have a large share in the foreign commerce. The exports are principally cattle, hides, resins, India-rubber, gums, tallow, oil-bearing seeds, rice, etc. The trade with Mauritius in 1873 consisted of £155,000 of exports and £145,000 of imports. The commerce with other countries was estimated at £100,000. Ships and pirogues also visit Madagascar from the small French colonies adjacent.

The inhabitants belong to two distinct races. The aborigines, known by their mahogany color, have been overrun at a comparatively recent epoch by a Malaysian race, whose type is found in its purity among the Hovas. The new-comers were at first divided into twelve independent tribes, but at the beginning of the present century they merged, and adopted monarchical institutions and such features of civilization as an army, police, taxes, and customs duties. They have constantly opposed the industrial development of the vast natural wealth of Madagascar, declaring fevers and bad roads to be blessings because they protect them from the Europeans. The Hovas have a nobility of various degrees and privileges. Children take the rank of their mother. There

*Sir Alexander Macdonald*  
*Prime Minister of the Dominion of Canada*

are two classes of slaves, those of the King and those of private individuals. The royal slaves are of two races—negroes from the continent, and the dark Malagassy natives. The latter perform lighter services, and are permitted to marry free women. The black slaves serve in the army, and sometimes attain military rank or fill important civil posts, but they are not allowed to marry out of their class. Private

slaves are either Hovas, debtors, or criminals, Malagassy natives, or Africans. The yoke of slavery is very easy, no master exacting anything which he would not do himself. The Hovas are more energetic than the other tribes, and less addicted to drunkenness. They are a little below the medium height, broad-shouldered, olive-complexioned, have smooth, coarse, thick hair, aquiline noses, eyes slightly inclined, and high cheek-bones. The national costume, consisting of a large square piece of cloth, usually white, draped over the figure, is gradually giving place to European vestments. Polygamy is permitted but rarely practiced. The people marry and divorce themselves with but little trouble or ceremony. The Malagassy religion is gross fetichism and belief in sorcery.

Coal and iron abound in Madagascar. There are ninety-six species of woods, among them iron-wood, veck-wood, and rose-wood. Cotton and rice yield one crop a year. Sugar-cane, coffee, tobacco, and spice-trees thrive wonderfully. Cattle are abundant and cheap, the

usual price for a head of horned cattle being five dollars, for a sheep two shillings. The climate of the interior is wholesome for Europeans, but the fevers of the coast are deadly.

English missionaries—Presbyterians, Methodists, and Quakers—have long been active in their efforts to evangelize the people. The Hovas rulers have promoted their efforts, and officially adopted Christianity of the Protestant form for political reasons, desiring to escape the territorial claims of France to the island, and raise up allies for their cause. The French Jesuits who preceded the English are for the same reason discouraged. The British Government have sometimes encouraged these political objects of the missionary societies.

The French counted Madagascar among their possessions when they established colonies in these seas, and under Richelieu the monopoly of its trade was given to a company. In 1810 the chief of the Hovas subjugated all the tribes of the island, and assumed the title of King Radama I. He entertained relations with the British Government; but these were interrupted for a long time after the accession of Queen Ranavolo I to the throne in 1828. She was succeeded by her son, Radama II, with whom Lambert concluded a treaty in the name of France. In 1865 she concluded treaties of amity and commerce with England and the United States. Ranavolo II, the present Queen, succeeded to the throne in 1868. She concluded another treaty with France in that year. The tribes on the western side of the island, with the aid and encouragement of the French, threw off the yoke imposed upon them by Radama I. These Sakalava tribes stand under a French protectorate, by virtue of treaties. Queen Ranavolo recently conceived the design of re-establishing the Malagassy kingdom in all parts of the island. A dispute arose with the commander of the French naval squadron, who laid an embargo upon a ship belonging to the Malagassy Government in the port of Tamatava and pulled down the Malagassy flags displayed on the west coast. A special embassy was dispatched in July to Europe to appeal to the different governments, and endeavor to bring the French to grant the position taken by the Malagassy authorities. The embassy found the public in Great Britain strongly prejudiced in their favor, but the British Government was not disposed to seek a new cause of difference with France and officially resist the French pretensions. The French Government assumed the same arrogant tone as its agents, Commander Le Timbre and Consul Baudrais. It pretended to jurisdiction over the whole island, threatening to recall the acts recognizing the independence of the Hovas, unless they respected the territory of the Sakalavas, over whom the French Government exercises a protectorate. The envoys were finally dismissed brusquely and virtually driven out of Paris. They visited Germany, and subsequently came to the United States, offering

exceptional commercial privileges in return for moral support against the French encroachments.

**MAINE. STATE GOVERNMENT.**—The following were the State officers during the year: Governor, Harris M. Plaisted, Fusion; Secretary of State, Joseph O. Smith; Treasurer, S. A. Holbrook; Attorney-General, Henry B. Cleave; Adjutant-General, George S. Beal; Superintendent of Common Schools, N. A. Luce; Insurance Commissioner, Joseph B. Perks; Railroad Commissioners, A. W. Wildes, John F. Anderson, and C. J. Talbot; State Librarian, Josiah S. Hobbs. Supreme Court: Chief-Justice, John Appleton.

**FINANCES.**—The following financial statement covers the receipts of 1881 and receipts and expenditures of 1882:

The cash in Treasury January 1, 1881, was..... \$160,888 64  
The receipts during the year were..... 1,417,526 88

Total..... \$1,577,865 47  
The expenditures during the year were..... 1,485,460 21  
The cash in Treasury December 31, 1881, was..... 142,405 26

Total..... \$1,577,865 47

The receipts for the year 1881 were from the following sources:

State taxes..... \$1,104,145 77  
County taxes..... 9,404 50  
Taxes on savings-banks..... 177,887 66  
Tax on railroad, telegraph, and insurance companies..... 73,192 88  
Sale of bonds issued by the State College of Agriculture and Mechanic Arts..... 80,000 00  
Interest on deposits and taxes..... 1,967 97  
Miscellaneous sources..... 15,928 60  
\$1,417,526 88

Cash on hand January 1, 1882, was..... \$142,405 26  
The receipts during the year were..... 1,482,130 20

Total..... \$1,574,585 46  
The expenditures during the year were..... 1,069,880 94  
The cash in Treasury December 31, 1882, was..... 474,704 52

Total..... \$1,574,585 46

The receipts for the year 1882 were from the following sources:

State taxes..... \$1,055,289 62  
County taxes..... 11,501 06  
Tax on savings-banks..... 206,469 43  
Tax on railroad, telegraph, express, and insurance companies..... 188,601 89  
Interest on deposits and taxes..... 10,532 81  
Miscellaneous sources..... 9,785 89

Total..... \$1,482,130 20

The expenditures for 1882 were as follow:

Public debt..... \$52,000 00  
Interest on public debt..... 826,912 00  
Sinking fund..... 50,479 95  
Educational purposes..... 370,005 43  
Agricultural purposes..... 8,776 50  
State College of Agriculture and Mechanic Arts..... 1,000 00  
Penal and reformatory institutions..... 24,815 40  
Sundry other institutions..... 11,400 00  
Insane and other State paupers..... 44,299 87  
Military purposes..... 15,235 66  
Pensions..... 19,582 70  
Railroad and telegraph taxes paid to towns and cities..... 14,727 09  
Indian tribes..... 18,785 85  
County taxes paid..... 9,884 49  
Miscellaneous and current expenses of the State government, including salaries of all State officers, judges, and county attorneys..... 107,487 10

Total..... \$1,069,880 94

Balance, net indebtedness of State.....	4,850,150 62	3,888,672 88
Total.....	\$6,938,952 96	\$6,941,284 48

**STATE DEBT.**—The total bonded debt of the State, less the sinking fund:

January 1, 1881..... \$4,576,048  
" 1882..... 4,365,588  
" 1883..... 4,178,715

The State continues to make provision, to a limited extent, to alleviate the pressing necessities of the deserving soldiers and seamen of the late war, who incurred disability in the service, and of their widows, orphans, and dependent parents. The appropriation for 1882 was \$22,000; the amount expended was \$20,550.10; the number of applicants was 757; the number allowed was 611.

The first savings-bank in Maine was the Saco and Biddeford Savings Institution, organized May 27, 1827. There are now in active operation fifty-five, all but six of which have been chartered since 1865.

In 1860 the deposits were..... \$1,466,457 56  
" 1870 " "..... 6,579,888 78  
" 1880 " "..... 28,277,675 82  
" 1881 " "..... 26,474,555 97  
" 1882 " "..... 29,508,889 71

On the ground that the earnings of savings-banks must necessarily grow smaller as the old securities mature and new investments are made, the Bank Examiner calls attention to the fact that the State tax of one per cent on the deposits has become disproportionate to their income, and recommends that a reasonable reduction be made.

## AGGREGATE STATEMENT OF SAVINGS-BANKS, NOVEMBER 1, 1882.

	Liabilities.
Deposits.....	\$29,508,889 71
Reserved fund.....	958,888 19
Special reserved fund.....	117,556 51
Profits and interest.....	776,698 74
Other liabilities.....	73,598 09
Total.....	\$31,430,686 24
<b>Resources.</b>	
Cash on hand and on deposit.....	\$872,799 58
United States bonds.....	5,641,157 89
State of Maine bonds.....	58,875 00
Other public funds.....	9,407,881 87
Railroad bonds.....	2,690,589 98
Bank-stock.....	1,408,307 83
Other investments.....	1,050,964 21
Real estate owned.....	1,149,282 10
Loans on mortgages of real estate.....	5,180,472 56
Other loans.....	8,964,905 83
Total.....	\$31,430,686 24

The number of depositors in these banks during the year increased 7,512, the total number being 95,487, of whom 76,602 were depositors of sums not exceeding \$500 each. The average amount to the credit of each depositor was \$308.87.

**STATE INSTITUTIONS.**—On December 1, 1881, there were in the Insane Hospital 450 patients (240 men and 210 women); admitted during the following year, 194 (114 men and 80 women); in all, 644; discharged, 183 (103 men and 80 women); remaining December 1, 1882, 461 (251 men and 210 women). The hospital has been in operation forty-two years, during which 5,953 patients have been admitted and 5,492 discharged. Of the latter 2,272 recovered, 1,089 improved, 979 did not improve, and 1,154 died. The daily average number of patients for the year 1881-'82 was 449.

The number of prisoners in the State-Prison November 30, 1882, was 147, a falling off of 37 since the corresponding date of 1881. There is a marked increase in the number of life-sentences. In 1870 the number was 10, or 6 per cent of the whole number of convicts; in 1876 it was 18, or 10 per cent; now the number is 36, or 25 per cent. The net cost to the State for the past two years above earnings has been about \$90 per annum to each convict. The manufacture of shoes, being a losing business, has been abandoned, and that of carriages increased.

During the eight years that the Industrial School for Girls has been in operation, 148 girls have been admitted to the institution. Of this number, 81 are now in good homes provided for them, 8 have been returned to friends, 2 sent to the Orphan's Home at Bath, 3 have escaped, 6 have been dismissed and 4 have deceased, leaving 44 now in attendance. The average attendance for the years 1881 and 1882 was 39 and 40 respectively.

The commission appointed to investigate the State Reform School found the buildings and other property in good condition, the boys well fed and comfortably clad, but the discipline harsh, the punishments extremely severe in some instances, and the mingling of bad and depraved boys with the better class of boys in the institution an evil of large proportions. Very little complaint is made of the care bestowed upon the sick.

The whole number of boys who have been received into the institution since it was opened is 1,711; 1,084 were committed for larceny, 190 for truancy, and 104 for being common runaways.

Number of boys in school December 1, 1881.....	118
"    " committed the past year.....	24
"    " previously out on leave, returned.....	4
"    " previously escaped, returned.....	2
Whole number in school during the year.....	143
"    " discharged.....	6
"    " allowed to go on trial.....	22
"    " indentured.....	1
"    " died.....	2
"    " illegally committed.....	2
Number of boys remaining, December 1, 1882.....	110

The total receipts from December 1, 1881, to December 1, 1882, were \$21,742.60; expenditures, \$21,716.40.

**EDUCATION.**—The number of scholars in the State in 1881 was 213,927; in 1880, 214,656; a decrease of 729. The whole number attending school in 1881 was 150,067; in 1880, 149,829; an increase of 240. The decrease in the number of children of school age has been constant since 1870, with the exception of one year, and in eleven years amounts to the aggregate of 14,240. While there has been a decrease in school population, there has been a steady gain in attendance upon the schools. The number of school districts in the State is 3,966; 39 towns have abolished the district system. There are 4,308 school-houses, 3,039 of which are reported in good condition. During the year 57 school-houses were erected, at an aggregate cost of \$95,347. The estimated value of all the school property in Maine is \$3,026,395. The number of male teachers employed in summer schools is 305; male teachers in winter schools, 2,257. Number of female teachers employed in summer schools, 4,638; in winter schools, 2,431. Total number of teachers in summer schools, 4,988; in winter schools, 4,688. Of these teachers, 457 are graduates of normal schools, and 4,713 of them have had previous experience. The average wages of male teachers per month, excluding board, is \$28.23; of female teachers, \$14.52. The number of towns electing supervisors was 274, an increase over 1880 of 22; number electing school committees, 223, a decrease of 19. The total school resources for the year were \$1,047,229. Of this amount, \$706,521 came from town treasuries; \$316,439 from the State, and \$24,269 from local funds. The amount expended for common schools—current expenses—was \$965,697, leaving an unexpended balance of \$81,532.

The average number of scholars per teacher in the summer schools throughout the State was 24, and 26 in the winter. This includes both graded and ungraded schools.

There are 101 towns in the State where free high-schools are maintained, an increase of 15 over 1880. The total cost of these schools was \$69,469, of which the State paid \$16,910.

The State Agricultural College has an endowment from the national Government of \$232,500, yielding an annual revenue of about \$7,500. It has received from the State \$187,218. It has buildings, grounds, library, apparatus, farming-tools, stock, etc., valued at \$145,000. It has required from the State, in addition to the income from the national endowment, less than \$3,500 a year for the purposes of instruction and for all current expenses, and has graduated 180 students and given instruction to 201 other students in special or partial courses varying from a single term to three and a half years. The present freshmen class numbers 18, a number estimated at less than one half what it would have been if free tuition had been maintained.

Machiasport Railroad.....							

The following new railroad corporations were organized during the year:

**Kennebunk and Kennebunkport Railroad.** The road to extend from a point near the draw-bridge which divides Kennebunk and Kennebunkport village, to a point in the line of the Boston and Maine Railroad, near the depot of said road in Kennebunk. Length, about four and a half miles; gauge, four feet eight and a half inches.

**Monson Railroad Company.** Extending from the depot of the Bangor and Piscataquis Railroad, called Monson station, in the town of Abbott, to the village of Monson in the town of Monson, through the towns of Abbott and Monson. Length of road, about six miles; gauge, two feet.

**Green Mountain Railway.** Between some point in the town of Eden, or Mount Desert, and the summit of Green Mountain in Eden, afore-

said. Length, about one mile; gauge, four feet eight and a half inches.

The Bridgton and Saco River Railroad Company was organized in 1881, but its line was not located till 1882. At the close of the year it had nearly completed the whole line from Bridgton Center to the Portland and Ogdensburg Railroad in the town of Hiram, a distance of fifteen and a half miles. Gauge, two feet.

STATISTICS.—The number of establishments devoted to the lumbering industry are 848, employing 9,839 men, and the total value of all products in 1880 was \$7,933,868. Maine holds the rank of seventh State in the Union in the value of her lumber products, the States of Michigan, Pennsylvania, Wisconsin, New York, Ohio, and Indiana, in the order named, taking the lead.

Maine stands at the head of the great fishing industry of the country. In 1880 the number of persons employed in the industry was 12,662; the number of vessels engaged was 606; the capital invested was \$3,454,302; the value of fishing products in marketable condition was \$3,739,224. The value of the same products in 1870 was only \$979,610.

It is estimated that the number of the inhabitants of Maine who are largely dependent upon the fishing industry for a livelihood will not fall short of 48,000 men, women, and children, which is equal to about  $\frac{7}{8}$  per cent of the population, and when to the result of this labor are added the expense of transportation and profits of handling, and the product is in the hands of the consumer, it represents an industry of nearly \$7,000,000.

The gathering and storing of ice is comparatively a new industry in Maine, but is a profitable one, and gives employment to many. The ice harvest on the Kennebec River and vicinity, in the year 1880, amounted to 1,000,000 tons, an increase of 750,000 tons over 1870.

The following table, giving the tonnage of vessels launched, exhibits the ship-building of the State for four years:

DISTRICTS.	1879.	1880.	1881.	1882.
Passamaquoddy....	82-81	.....	182-90	88-73
Frenchman's Bay....	283-35	28-89	81-30	246-32

A summary for 1882 follows:

VESSELS.	No.	Tons.
Barkentines.....	12	5,897-02
Schooners.....	124	39,331-52
Sloops.....	7	120-91
Steamers.....	11	4,383-22
Ships.....	14	24,602-94
Total.....	168	75,084-91

The total catch of the Maine fishing-fleet during the year 1882, a total fleet of 289 vessels with a crew of 2,785 men, 71 being on the Grand and Western Banks and 218 on the New England shore and George's Bank, was 73,806 on the former grounds, and 221,911 on the latter, being a total of 195,717 quintals. The total catch of mackerel for the New England fleet was 349,674, of which 119,547 is credited to Maine vessels. The following statement represents the fisheries according to their value: Herring-fishery (including the sardine industry), \$1,043,753; mackerel-fishery, \$659,304; cod-fishery, \$656,753; lobster-fishery, \$412,076; hake-fishery, \$278,336; haddock-fishery, \$225,393. The entire lobster catch of Maine for the year is found to be 14,234,182 pounds, of which 4,739,808 pounds were sold fresh, and 9,494,284 pounds were put up by the 23 canneries located in different parts of the State. The fishing industry of all kinds of Maine includes 600 vessels, of 17,632-65 tonnage, with 8,110 fishermen and 5,920 boats. There are 2,961 curers, packers, and factory hands, and a total of 11,171 persons engaged. There were 202,048,499 pounds of fish taken, of a total value of \$3,614,178. The total capital invested is \$3,375,994.

In 1882 the sales of liquor at the various authorized agencies in the State amounted to \$58,817.42. The sales in the principal cities and towns were as follow: Auburn, \$2,398.80; Bangor, \$8,036.10; Bath, \$2,730.83; Brunswick, \$1,574.85; Bethel, \$3,044.94; Farmington, \$1,462.26; Gardiner, \$1,199.40; Hallowell, \$1,001.68; Hartland, \$1,294.27; Lewiston, \$3,834.05; Machias, \$2,962.17; Portland, \$19,500.86; Rockland, \$2,005.14; Waterville, \$1,638.77.

PARTY CONVENTIONS.—The Republican State Convention met in Portland on the 13th of June, and nominated the following ticket: For Governor, Frederick Robie, of Gorham. For Representatives to Congress, Thomas B. Reed, of Portland; Nelson Dingley, Jr., of Lewiston; Charles A. Boutelle, of Bangor; Seth L. Milliken, of Belfast.

The platform adopted contained the following resolutions:

1. The right of every qualified voter to cast his ballot and have it honestly counted is a fundamental principle of republican government which must be maintained by law impartially enforced. The majority thus determined must rule and the minority must submit.

2. Free schools must be maintained and universal education secured as the basis of national security and prosperity.

3. American industries and labor should be protected against the unjust competition of the product of cheap foreign labor by a protective tariff.

4. American shipping and ship-building should be encouraged by the modification of our navigation laws so as to discriminate in favor of, and not against, our shipping interests, and by such other assistance as the Government may properly render a great national interest. We protest against the persistent efforts of the friends of free trade, or misnamed "revenue reform," to grant American registry to foreign-built

ships, as certain to destroy our ship-building industry.

5. The only full legal-tender money authorized by the Constitution to be coined or issued in time of peace is gold and silver. The dollar of the one should be coined so as to possess the same intrinsic value as the dollar of the other, and all paper currency should be redeemable in the one or the other. We deprecate the efforts made to overthrow the present banking system of the nation, securing as it does to the people a currency convenient, uniform, elastic in volume, of equal value in all the States, and absolutely safe from loss in the hands of the holder. . . .

7. We are unalterably opposed to the abolition or reduction of the internal revenue tax on liquors, and demand that all possible reduction of taxation shall be made on necessities and not upon luxuries. . . .

9. We refer with confidence and pride to the general record of the Republican party, in support of the policy of prohibiting the traffic in intoxicating liquors, the wisdom and efficiency of which legislation, in promoting the moral and material interests of Maine, have been demonstrated through the practical annihilation of that traffic in a large portion of the State; and we favor such legislation, and such enforcement of the law, as will secure to every portion of our territory freedom from that traffic. We further recommend the submission to the people of a constitutional prohibitory amendment.

The Republican candidate for Governor, Colonel Frederick Robie, is a graduate of Bowdoin College, in the class of 1841. He afterward graduated at the Jefferson Medical College, in Philadelphia, and was engaged in the active practice of his profession until the outbreak of the war, in 1861. In that year he was appointed paymaster by President Lincoln, served until the close of the war, and was brevetted lieutenant-colonel for meritorious service. He was elected to the State House of Representatives from Gorham seven times, was Speaker in 1872, and again in 1876, was a member of the Council under Governor Washburn, and was chairman of the Council during Governor Davis's and Governor Plaisted's administrations. Through his influence the Normal School at Gorham was established, and he contributed liberally toward the fund necessary for the erection of the building. In 1878 he was one of the commissioners to the Paris Exposition, and during his absence was made one of the constitutional candidates for Governor, by an agreement among the leaders of the Republican party, and was voted for as one of the candidates for Governor by the Republican members of the Legislature of 1879.

The Fusion (Democratic and Greenback) State Convention met in Lewiston on the 27th of June, and renominated Governor Harris M. Plaisted. For Congressmen, Joseph Dane, Daniel H. Thing, George W. Ladd, and Thompson H. Murch, were nominated.

The resolutions condemn the purchase of votes, assessments of Government officers; demand civil-service reform to the extent of abolishing the spoils system; accuse the Republican party of undermining the foundations of all political morality; destroying the sanctity of the ballot, debauching the people, and paving the way to centralization and empire; demand taxation for revenue only; condemn the appointment of tariff commissioners, on the ground that they are prejudiced in favor of the present iniquitous pro-

tection tariff; condemn the policy which has shut our markets against return freights, and made the international carrying-trade impossible in competition with the ships and products of lower-taxed countries; demand of Congress the establishment and maintenance, at all times, of a currency of general credit, always convertible into and in value equal to specie, adapted to the wants of commerce and the business of the country, and suited to existing circumstances; protest against the substitution of the greenbacks by the bills of banking corporations; demand the abolition of imprisonment for debt; declare in favor of exempting wages from the trustee process; demand that the ten-hour law be made applicable to all classes of labor; condemn the Executive Council for rejecting nominations made by the Governor, on the ground that such action was unconstitutional, illegal, and subversive of the popular will; indorse Governor Plaisted for the dignity with which he has surrounded his high office, and for his devotion to the Constitution, and express pride and pleasure in his renomination. A concluding resolution authorizes the State Committee to call conventions to fill any vacancies in the congressional ticket, and, when an apportionment shall have been made, to appoint district committees.

The straight Greenbackers nominated Solon Chase for Governor. W. T. Eustis was nominated for Governor by the Prohibitionists, and Warren H. Vinton by the Independent Republicans.

**ELECTION RETURNS.**—The election in September resulted in the choice of the Republican candidates. The vote was as follows:

For Governor: Total vote cast, 138,567, of which Frederick Robie received 72,724; Harris M. Plaisted, 63,852; Solon Chase, 1,802; W. T. Eustis, 395; Warren H. Vinton, 270; scattering, 24. Robie's plurality, 8,872. For Congressmen: Thomas B. Reed, 72,925; Nelson Dingley, Jr., 73,017; Charles A. Boutelle, 72,386; Seth L. Milliken, 72,495; Joseph Dane, 63,554; Daniel H. Thing, 63,722; George W. Ladd, 63,381; Thompson H. Murch, 63,568; W. F. Eaton, 1,280; B. K. Kallach, 1,276; Eben O. Gerry, 1,250; Benjamin D. Averil, 1,273; James M. Stone, 556; Henry Tallman, 283; Joseph E. Ladd, 232; Nathan G. Axtell, 284; Charles E. Nash, 257; Daniel Stickney, 184; scattering, 36.

The Legislature chosen at this election is constituted as follows:

	Senate.	House.
Republicans.....	28	109
Fusionists.....	8	48

**MANUFACTURES OF THE UNITED STATES.** The table below shows the statistics of manufactures in the United States as returned by the tenth census for the year ended May 31, 1880. It includes every establishment of mechanical or manufacturing industry which was returned at the census as having had during the census year a product of \$500 or more in value. It does not include manufacture of fishery products, quartz-milling, petroleum-refining, the manufacture of gas, manufacturing by steam-railroad companies, nor the operations of the various navy-yards of the United States:

STATES AND TERRITORIES.	Number of establishments.	Capital.	AVERAGE NUMBER OF HANDS EMPLOYED.			Total amount paid in wages during the year.	Value of materials.	Value of products.

The United States.....	253,852	\$2,790,272,606	2,025,335	531,689	181,921	\$947,958,795	\$3,396,828,549	\$5,369,579,191

A comparison of the above totals for the United States with those returned by the census of 1870 shows the following:

	1870.	1880.
Number of establishments.....	252,148	253,852
Capital.....	\$2,118,208,769	\$2,790,272,606
Average number of hands employed:		
Males above 16 years.....	1,615,598	2,025,335
Females above 15 years.....	823,770	631,639
Children and youths.....	114,628	181,921
Total amount paid in wages during the year.....	\$775,584,343	\$947,958,795
Value of materials.....	\$2,488,427,242	\$3,396,828,549
Value of products.....	\$4,282,325,442	\$5,369,579,191

Gas, which is excluded from the returns of 1880, is included in those for 1870. The number of gas-works returned in 1870 was 390; capital invested, \$71,773,694; value of products, \$32,048,851. In all comparisons between values reported in 1870 and in 1880, it should be borne in mind that the values of 1870 were expressed in a currency which was at a great discount in gold. The average premium on gold during the twelve months—June 1, 1869,

to May 31, 1870—which constituted the census year, was almost exactly one fourth (25·3) per cent. A premium on gold of one fourth is equal to a discount on currency of one fifth. For purposes of comparison, therefore, the values of 1870 should be reduced in that ratio. It is a noteworthy fact that in the face of a large increase in the number of hands employed in manufactures, of the amount of material consumed, and of the value of products, the number of establishments shows hardly an appreciable gain from 1870 to 1880, notwithstanding an increase of 30 per cent in population. This is attributed by the census authorities to the well-known tendency to the concentration of labor and capital in large shops and factories. "The establishments of 1870," says the report, "showed eight as the average number of hands, and \$8,400 as the average amount of capital; those of 1880 showed 10·7 as the average number of hands, and \$10,992 as the average amount of capital. A good example of the effect of this cause is found in the coopers' trade, where, with a reduction in the

number of establishments from 4,961 to 8,898 (22 per cent nearly), the hands employed increased 11 per cent. But this increase in the average number of hands does not alone explain the decrease in the number of establishments. We have also to take into account the introduction of machinery into the furniture and cabinet-making industry, replacing much of the former work of the local carpenter in rural districts and small towns. We have then to consider the immense extension of the contract system of erecting buildings, the effect of which is to disconnect an increasing proportion of the working carpenters of every city or large town from actual shops and constitute them a

movable, readily disposable force, to be hired now by this contractor and now by that, according as jobs arise. We have, last, to consider the rapid substitution of brick and stone for wood in building, evidenced by the fact that the number of persons employed in the manufacture of brick in the United States has increased more than 50 per cent in ten years."

The following table gives the statistics of the leading manufacturing and mechanical industries in the United States. Returns of fishery products, gas-manufacture, petroleum-refining, mining, quarrying, and manufactures of establishments operated by steam-railroad companies are omitted.

INDUSTRIES.	No. of establishments.	Capital.	AVERAGE NUMBER OF HANDS EMPLOYED.					Total amount paid in wages during the year.	Value of materials.	Value of products.

The census statistics of cotton manufactures include first specific cotton goods and second the products of special mills. The former comprise those establishments which manufacture cotton into a fabric known and sold under that name. The classification includes spinning-spindles making yarn for mixed goods, and spindles appurtenant to looms on which cotton is woven into cotton cloth. It excludes nearly but not quite all hosiery-mills, and all mills known as woolen-mills, even though cotton may be the component material of chief value in the fabrics made in them. The returns of specific cotton manufactures for the United States, and also for New England, the chief seat of the industry, are:

CLASSES.	United States.	New England.
Number of establishments.....	756	499
Capital invested.....	\$208,280,346	\$156,754,690
Number of spindles.....	10,653,435	8,632,087
Number of looms.....	225,759	184,701
Operatives:		
Men.....	59,685	45,521
Women.....	84,539	62,554
Boys under fifteen.....	15,107	10,051
Girls under sixteen.....	18,213	7,653
Total.....	172,544	125,781
Cotton consumed, bales.....	1,570,844	1,129,438
Cotton consumed, pounds.....	750,343,951	541,373,880
Cost of cotton.....	\$36,945,725	\$63,169,434
Goods made, pounds.....	607,264,241	432,744,610
Goods made, yards.....	2,273,278,025	1,513,478,967
Wages paid operatives.....	\$42,040,510	\$32,170,861
Value of materials.....	102,206,348	74,290,026
Value of products.....	192,090,110	143,868,080

In New York, New Jersey, Pennsylvania, Delaware, and Maryland there were 139 mills, with 1,391,164 spindles and 27,318 looms, and an invested capital of \$31,014,759. The mills in these States consumed in the census year 228,729 bales of cotton, and made products valued at \$29,389,286. In the Southern States there were 161 mills, with 542,048 spindles and 11,898 looms. They had 16,317 hands employed, used 182,349 bales of cotton, and turned out goods valued at \$16,356,598.

The statistics of special manufactures include the products of special mills working raw cot-

ton, waste, or cotton yarn into hose, webbing, tapes, fancy fabrics or mixed goods, or other fabrics which are not sold as specific manufactures of either cotton or wool. Some mills work both fibers, but are more properly to be considered as manufactories of cotton than of wool.

The number of special mills returned in the United States was 249. They had 60,242 spindles and 4,025 looms; employed 12,928 operatives, who received \$3,573,909 in wages; consumed 40,597 bales of cotton; and made products valued at \$18,860,273, with an invested capital of \$11,224,448. Including both of the above-named branches of this industry, the aggregate statistics of cotton manufacture are: number of establishments, 1,005; capital invested, \$219,504,794; hands employed, 185,472; wages paid during the year, \$45,614,419; value of materials, \$113,765,537; value of products, \$210,950,383.

Mr. Edward Atkinson, the special agent, concludes his report on specific cotton manufactures in these words: "When it is remembered that a larger portion of the population of the globe is now clothed in cotton fabrics made by hand, and that even those who use machine-made fabrics are served as yet with less than half as much cloth as the people of this country average in each year, the future field for industry and commerce in this department may be imagined, but can not be proved by statistics, or by any deductions from census data."

The statistics of manufactures from wool in the United States during the year ended May 31, 1880, are given in the following table. With hosiery and knit goods are here included woolen, cotton, and mixed hosiery, and woolen, cotton, and mixed knit goods.

Of the 1,990 establishments manufacturing woolen goods, reported below, 570 were only carding-mills; 233 others used not over 5,000 pounds of wool each, and 158 used from 5,000 to 10,000 pounds of wool each:

CLASSES.	All classes of manufactures from wool.	Woolen goods.*	Carpets other than rag.	Felt goods.	Worsted goods.	Wool hats.	Hosiery and knit goods.

(For detailed statistics of silk manufactures,

and also of iron and steel, see article on UNITED STATES, in "Annual Cyclopædia" for 1881.)

The manufactures of twenty principal cities were reported as follows by the census of 1880:

\* Under "woolen goods" are included blankets, cloths, cassimeres, do-skins, heavers, overcoatings, diagonals, flannels, jeans, kerseys, linseys, repellents, satinetts, tweeds, shawls, woolen yarn, etc., and woolen rolls.

CITIES.	No. of establishments.	Capital.	AVERAGE NUMBER OF HANDS EMPLOYED.			Total amount paid in wages during the year.	Materials.	Products.
			Males above sixteen years.	Females above fifteen years.	Children and youths.

During the course of the year, a prominent journal questioned the accuracy of the above statistics, and, in support of its criticisms, pointed out that the average annual product (gross) per hand employed was only \$1,752 in Philadelphia, while it was \$2,054 in New York, \$3,106 in Chicago, \$3,751 in Brooklyn, and \$5,574 in Jersey City. In a letter to the Superintendent of the Census, dated December 3, 1882, and published as census bulletin No. 305, ex-Superintendent Francis A. Walker explains that there are industries of gigantic dimensions in which the value of the materials used reaches 80, 90, and even 94 per cent of the value of the product, and that it is the prosecution of these industries in three of the cities above named which accounts for the seemingly disproportionate returns thence made of the value of manufactured products. Thus, in Jersey City, nearly 70 per cent of the entire value of products reported consists of the value of packed meats and of refined sugar and molasses, the cost of the raw materials being 92 per cent. Deducting the value of raw materials, the result is an average annual product per hand employed, of but \$960. Of the total reported product of Brooklyn, more than a third is furnished by a single industry—sugar-refining—of which Brooklyn is the chief seat in this country. Of the \$59,711,168 worth of refined sugar and molasses returned, the cost of the raw sugar and molasses was \$56,423,868. Deduct the value of materials used in the manufactures of Brooklyn, and the average annual product per hand employed sinks to \$991. Of the productions of Chicago, over one third in value—\$85,324,371—is furnished by the meat-packing industry, the stock-yards and slaughter-houses of that city being without a parallel in the world. Of this enormous aggregate, seven eighths is made up of the value of cattle and hogs slaughtered. Deduct the value of materials consumed in the manufactures of Chicago, and the result is an annual average product per hand of but \$861. By a like deduction of the value of materials in the

case of New York, an average annual product per hand of only \$794 is obtained. The same bulletin contains the following instructive table, prepared by General Walker. The first column shows the rank of the city named, upon the list of twenty cities, in the respect of the aggregate number of persons employed in manufacturing establishments; the second, in the respect of the aggregate amount of wages paid in manufactures; the third, in the respect of the aggregate gross product of all branches of manufactures; the fourth, in the respect of the average annual product per hand employed, after deduction of the value of materials:

CITIES.	HANDS EMPLOYED AND WAGES.		PRODUCT.	
	No. of hands.	Amount of wages.	Aggregate gross product.	Average net product.
New York.....	1	1	1	14
Philadelphia.....	2	2	2	18
Chicago.....	3	3	3	7
Brooklyn.....	7	5	4	2
Boston.....	4	4	5	11
St. Louis.....	8	8	6	4
Cincinnati.....	6	6	7	16
Baltimore.....	5	9	8	20
Pittsburg.....	9	7	9	5
San Francisco.....	11	10	10	1
Newark.....	10	11	11	12
Jersey City.....	18	18	12	3
Cleveland.....	12	13	13	15
Buffalo.....	15	14	14	9
Providence.....	13	12	15	8
Milwaukee.....	14	15	16	19
Louisville.....	16	17	17	13
Detroit.....	17	16	18	17
New Orleans.....	19	20	19	10
Washington.....	20	19	20	6

"A most striking feature of this table," says Mr. Walker, "is the tendency on the part of the greatest manufacturing cities, as a class, to show a smaller average annual product per hand employed (column 4) than the less important manufacturing cities as a class. The reason is perfectly evident. Where manufacturing capital is accumulated in vast amounts; where production is carried on upon the largest scale, with the most approved appliances, and with most direct access to the greatest markets,

there is found, other things equal, the power of producing at the lowest cost.

"Let us see how this is borne out by the foregoing table:

"First, take individual instances. New York, which is first in gross aggregate production, as it is also first in the number of hands employed and aggregate amount of wages paid, falls to fourteenth in respect to average annual product per hand employed. Philadelphia, which is second in the three respects first indicated, falls to eighteenth. Chicago, which ranks third in each of the three respects first indicated, falls to seventh in the last respect, moving in the same direction, though not so far as either New York or Philadelphia, probably because of the higher rate of interest and the greater risk to capital in a newer city. Boston, which is fifth in aggregate gross product, becomes eleventh in average annual product per hand employed; Baltimore falls from eighth to twentieth; Cincinnati, from seventh to sixteenth, etc.

"On the other hand, San Francisco, the single large city of its coast, with markets all its own, is only tenth in aggregate gross product, but becomes first in what we may call individual product, i. e., average annual product per hand employed; Washington, which can hardly be called a manufacturing city, doing little more than to supply its own market, rises from twentieth (column 3) to sixth (column 4); New Orleans, with manufactures aggregating only about eighteen millions, rises from nineteenth to tenth; Jersey City, whose manufactures, exclusive of meat-packing and sugar-refining, scarcely exceed eighteen millions, rises from twelfth to third, etc.

"There are some apparent exceptions to this rule, such as Brooklyn, St. Louis, Pittsburg, and Providence, which, while large and prosperous manufacturing cities, move, though but slightly, in the direction of a higher relative rank in column 4 than in column 3; yet, if we name the cities which change more than one point in either direction, it will at once appear that the great weight of manufacturing power is on the side of those which stand relatively higher in respect to aggregate gross production than on the side of those which reverse the relation.

"1. Those cities which stand higher in column 3 than in column 4, by more than one point, are New York, Philadelphia, Chicago, Boston, Cincinnati, Baltimore, Cleveland, and Milwaukee.

"2. Those cities which stand higher in column 4 than in column 3, by more than one point, are Brooklyn, St. Louis, Pittsburg, San Francisco, Jersey City, Buffalo, Providence, Louisville, New Orleans, Washington.

"The aggregate manufacturing production of the first class of cities is considerably more than twice that of the second.

"Were we to limit our enumeration to those cities which change more than two points, we

should lose from the former list only Cleveland, while we should lose from the latter list the two cities which constitute by far its most important members, Brooklyn and St. Louis. The former class would then show an aggregate manufacturing product of nearly four times the latter."

MARSH, GEORGE PERKINS, LL. D., an American diplomatist and author, born in Woodstock, Vt., March 15, 1801; died suddenly in Vallambrosa, Italy, July 24, 1832. Having received a proper preparatory training, young Marsh entered Dartmouth College, and graduated with honor in 1820. He then studied law at Burlington, Vt., was admitted to the bar, and speedily obtained large practice. He was also active in political affairs, and in 1835 was elected a member of the Legislature of his native State. In 1842 he became a member of Congress, and remained such for seven years. In 1849 President Taylor appointed him United States Minister to Turkey, a position which he filled to the entire satisfaction of the Government, and the best interests of the country and people to which he was accredited. While in Turkey he was charged (in 1852) with a special and important mission to Greece. Returning home, in December, 1853, he served as Commissioner of Railroads for Vermont. In March, 1861, Mr. Marsh was appointed by President Lincoln Envoy Extraordinary and Minister Plenipotentiary to Italy, a post which he well and worthily occupied for the remaining twenty-one years of his life, ever watchful of the interests of his own country, and honored and esteemed by the Government and people of Italy.

In addition to his public duties, Mr. Marsh also served the cause of good letters by preparing and publishing a number of useful works; viz.: "A Compendious Grammar of the Old Northern or Icelandic Language," compiled and translated from the grammar of Rask (1838); "The Camel, his Organization, Habits, and Uses, considered with Reference to his Introduction into the United States" (1856); "Lectures on the English Language" (1861); "Origin and History of the English Language, and of the Early Literature it embodies" (1862); "Man and Nature" (1864), subsequently revised and improved, and published under the title "The Earth as modified by Human Action" (1874). The degree of LL. D. was conferred upon him by his *Alma Mater* in 1860. He also published at different times a number of lectures, speeches, and addresses, which evidence his zeal and activity in good works.

MARYLAND. State officers: Governor, William T. Hamilton; Treasurer, Barnes Compton; Comptroller, Thomas J. Keating; Attorney-General, C. J. M. Gwinn; Warden of the Penitentiary, J. W. Horn; State Superintendent of Public Schools, M. A. Newell; President of the Chesapeake and Ohio Canal, Lewis Cass Smith (elected in August to succeed Arthur P. Gorman, resigned); State Tax Com-

missioner, L. Woolford. United States Senators, Arthur P. Gorman and J. B. Groome.

Members of the Forty-seventh Congress: First District, G. W. Covington, Democrat; Second District, J. F. C. Talbott, Democrat; Third District, F. S. Hoblitzell, Democrat; Fourth District, R. M. McLane, Democrat; Fifth District, A. G. Chapman, Democrat; Sixth District, M. G. Urner, Republican.

Members-elect of the Forty-eighth Congress: First District, G. W. Covington, Democrat; Second District, J. F. C. Talbott, Democrat; Third District, F. S. Hoblitzell, Democrat; Fourth District, J. V. L. Findlay, Democrat; Fifth District, Hart B. Holton, Republican; Sixth District, Louis E. McComas, Republican.

FINANCES.—The receipts into the Treasury during the fiscal year ending September 30th were \$1,924,481.47, being \$72,159.61 less than those of 1881. The State debt is \$11,269,031.78, of which \$401,529.18 have been, in fact, paid in advance and deposited in the sinking funds, leaving the outstanding debt \$10,867,502.60. The interest of the State in works of internal improvement is held for, and when sold is applied to, the payment of this debt. The value of these works, in the opinion of the Comptroller of the Treasury, is at any time fully adequate to pay the entire debt. The declared policy of the Legislature of Maryland is to reserve her securities, and to fund her debt, as it falls due, at a lower rate of interest. Under the "Defense Redemption Loan" act of this year, the defense loan of 1868, amounting to \$3,000,000, bearing 6 per cent interest, falling due in January, 1884, will be converted early in the next year at par into the new loan at 3'65 per cent interest. The total revenues of the State for the fiscal year were \$1,924,481.47, which, together with the balance in the Treasury, September 30, 1881, of \$752,198.29, make a total amounting to \$2,676,679.76. While the actual value of property of every description throughout the State has increased largely since the assessment of 1877, there has been a decrease in the assessed value of property upon which the direct tax is levied, owing, says the Comptroller, to "the notorious fact that everybody whose taxable wealth decreases demands an abatement from the tax court, and everybody whose wealth increases avoids a reassessment. . . . Not until every person holding property," continues the Comptroller, "shall be required to go once a year to the assessor to be taxed according to his actual worth, will taxation be equalized and its burdens be imposed so as to fall lightly on the many rather than heavily on the few." The State levy for 1882, at the rate of 18½ cents on the \$100, was \$871,546.59, of which only \$490,923.79 were paid into the Treasury, leaving \$380,622.80 uncollected. The amount due by collectors of previous years, exclusive of interest, is \$545,964.83, which, with the sum uncollected from this year's tax levy, makes an aggregate of \$926,587.63, demonstrating the necessity for the

adoption of an improved plan for the collection of the taxes of the State. The receipts of taxes from incorporated institutions were \$63,336.41, leaving due and unpaid \$108,125.83, steps for the enforcement of the payment of which have been taken. The receipts from licenses and taxes of foreign insurance companies were \$49,442.24. The gross receipts of the tobacco-warehouses were \$72,070.53, and the net earnings were \$3,667.10—a sum insufficient to pay the salaries (\$1,800 each) of the tobacco inspectors. The receipts on account of the oyster fund were \$57,751.05, the expenses chargeable to which were \$39,070.59. The total capital and credits of the State on September 30, 1882, amounted to \$31,475,338.85, of which \$4,960,293.27 are classed as "productive," and \$26,515,045.58 as "unproductive," that is, in arrears or worthless. The total disbursements for the year were \$2,038,173.13, leaving a balance in the Treasury at the close of the fiscal year of \$638,506.63. The State holds the following bonds and stocks, on which interest or dividends are promptly paid:

Stock of the Baltimore and Ohio Railroad Company.....	\$968,615 70
Stock in Washington branch, Baltimore and Ohio Railroad Company.....	550,000 00
Stock in Farmers' National Bank of Annapolis.....	46,470 00
Stock in Annapolis Water Company.....	30,000 00
Bonds of Baltimore and Ohio Railroad Company.....	366,000 00
Bonds of Northern Central Railroad (mortgage).....	1,500,000 00
Bonds to credit of sinking funds.....	401,529 18
Cash to credit of sinking funds.....	495 46
	<b>\$3,863,110 34</b>

The dividends and interest on these securities amounted this year to \$230,978.85.

STATE LEGISLATURE.—The General Assembly of Maryland met in the beginning of January. The chief subjects of proposed legislation were a law for the registration of voters, and laws to secure "a free ballot and a fair count"; an improved system of taxation; laws for the more effective protection of the oyster-beds of the Chesapeake against spoliation; a revision of the statutes relating to the inspection of tobacco, and several matters relating to the city of Baltimore, including propositions for the reorganization of the Board of Police Commissioners, an extension of the city limits, and a reduction of the passenger fare on the city railroads. Great interest was felt in the proposed revision of the tobacco-inspection laws. Tobacco-growing is one of Maryland's most important industries, and one which might be largely increased, say the planters, were the inspection laws less oppressive than they have been hitherto. Their chief objection has been to what is called the "compulsory clause" of the inspection law, by which, under a penalty of \$500 for each infraction, the planter was compelled to pack his tobacco in packages of prescribed dimensions, containing not less than 600 pounds, and ship for inspection to one of the State warehouses in Baltimore. The regulation as to the size of the package was peculiarly objectionable to the small planter. While an acre of land will produce as a rule an aver-

age of one hoghead, it will produce several grades of tobacco, and the planter who only cultivates one or two acres was compelled to mix the various grades, thus injuring the sale of the best, without getting any higher price for the inferior grades. The Legislature has repealed this compulsory clause. The planter may now send his tobacco where he pleases, but the inducement of free storage is offered him to come to the State warehouses, which are managed by five inspectors appointed every two years by the Governor, who are required to give bond in the sum of \$30,000, and are prohibited from having any interest in the buying or selling any tobacco except of their own growth. The bill reducing the fare on the city railroads of Baltimore to five cents, and requiring the car-companies to pay 9 per cent of their gross earnings as a park-tax, was also passed. Among other facts elicited in the discussion of this measure was the following statement of the condition of these car companies:

Revenue of the city passenger railroad companies, \$651,651 10  
Loss of revenue by reduction of fares to five cents. 116,948 27

Estimated expenses, based on average for five years ..... \$584,707 83  
..... 364,790 15

Park-tax.....\$64,164 84  
Other taxes..... 20,000 00  
..... 84,164 84

Net revenue for dividend..... \$85,753 84

This net revenue for dividend exceeds by \$5,000, 8 per cent on the nominal capital stock, which is \$1,000,000, of which only half is paid in, making it really a dividend of 16 per cent on the actual investment. Efforts were made to curtail the appointing power of the Governor, and to defeat many of his appointments, which were only partially successful. Measures were passed for the more perfect registration of voters, for securing fair elections, and an excellent bill punishing owners of gambling-tables with fine and imprisonment; and a bill authorizing the city of Baltimore to contract a loan of \$5,000,000 for the purpose of constructing a sewerage system, was also passed. The Legislature adjourned by constitutional limitation on April 3d. Owing to the illness of the Governor at the time of adjournment, and to the subsequent illness of Mr. Keilholtz, Speaker of the House of Delegates, considerable delay and difficulty arose as to signing a large number of bills passed before the close of the session. The question as to the legality of these acts signed more than ten days after the adjournment has been raised, and will be tested in the Court of Appeals.

The protection of the oyster-beds of the Chesapeake Bay against the depredations of home and foreign dredgers is regarded as a necessity, or the oyster-fisheries will soon become a thing of the past. While there is reason to believe that the evils complained of are not as great as they are represented, it is true that the average yield for several years past

has been gradually decreasing. It seems to be universally admitted that the existing laws for the protection of the oyster-fisheries are inadequate, and that the means employed to enforce them are wholly inefficient. Arbitrary and invisible lines are drawn between shore-points, on one side of which is the forbidden ground for dredgers. Occasionally a poaching dredger passes the line and is caught by the oyster-police, but most of the trespassers escape. In the exceptional case of a capture, the captain and crew are sent to the county town. The latter, who have been obliged to obey their captain's orders, are put in jail, the skipper gives bail and goes free, the owners of the vessel pay the fine, and thus the captain, who is presumed to know the forbidden from the free waters, receives no punishment, although he is the really guilty party. The greatest injury to the oyster-beds is done by the men from Delaware Bay, New York, and Long Island Sound, who come into the Chesapeake in the spawning-season and catch oysters for the purpose of transplanting them. They do not pretend to cull the oysters, but sail away as soon as they have scooped up a load, each one of their stolen oysters representing a dead loss of as many as its spat would have produced. These thefts have been perpetrated annually for several years, and in April and May of this year were more extensive than in any previous year. Governor Hamilton has appointed a commission, consisting of Professor Brooks and Messrs. Waddell and Legg, all competent men, to report to the next General Assembly suitable measures for the adequate protection of the oyster-beds.

In March the miners of the Cumberland coal region, at the instigation of the Knights of Labor, struck for higher wages and other regulations as to time and quantity of work. They demanded sixty cents per ton, and that no miner should be required to dig more than five tons per day. The coal companies refused to comply with these terms, alleging that they could not pay the price demanded and mine coal at any profit. After many months of suffering—from March to the end of August—the miners were compelled to yield and asked to be allowed to go back to work at the price fixed by the companies. Some were re-employed, but many failed to get work, as the companies had filled their places. The companies refused to accede to the regulation giving only five tons per day to each man, on the apparently just ground that it requires them to employ a greater number of men than is necessary. In one or two cases the strikers refused to work unless the entire old force were re-employed.

The following are the total shipments for the year, as made by each company:

COMPANIES.	Tons, Cwt.
American Coal Company.....	88,860 16
Blaen Avon Coal Company.....	7,012 18
Borden Mining Company.....	87,984 01
Buffalo Valley Pennsylvania Company.....	2,282 11
Consolidation Coal Company.....	97,911 03

COMPANIES.	Tons. Cwt.
Cumberland and Elk Lick Coal Company.....	3,969 17
Despard Coal Company.....	1,501 11
Gaston Coal Company.....	4,001 15
George's Creek Coal and Iron Company.....	14,654 10
Individuals.....	17,550 07
Keystone Coal Company.....	404 19
Maryland Coal Company.....	38,287 06
National Coal Company.....	8,805 09
New Central Coal Company.....	33,604 19
Piedmont Coal and Iron Company.....	3,673 01
West Virginia Central and Pittsburg Railway Company.....	12,213 02
	316,643 07

The long-disputed boundary question between the States of Maryland and Virginia was considered in February, at Richmond, Va., by a joint committee of the Legislatures of those two States, appointed to confer and report on a plan of settlement of the boundary-lines. The conclusions of the report are as follow :

1. That the following headlands of the Potomac River should be the points between which straight lines should be drawn as and for the true boundary-lines between the States of Virginia and Maryland, under the award of J. T. Black and Charles J. Jenkins, arbitrators appointed by the said States to fix the said boundary-lines, to wit: Commencing at Smith's Point, drawing thence a straight line to Cubit's Point, drawing thence a straight line to Cubit's Island, thence westerly to Judith's Point, a point on Judith's Sound, thence westerly to Sandy Point, thence to Ragged Point, thence to Church's Point, thence to White Point, thence to the Upper Machodoc Point, and from Upper Machodoc to Persimmon Point, thence to Machais Point, thence to Matomkin Point, thence to the land on the south shore abreast of Maryland Point to a point on the Potomac Creek opposite Marlboro' Point, thence to Brentz Point, thence to Clifton Point, thence to Cockpit Point, thence to Freestone Point, thence to High Point, thence to Hollowing Point, thence to Whitestone Point, thence to Pevy Point, thence to Sheridan, thence along the south shore to Alexandria, thence to Hunter's Point, thence to Graveny Point, following the south shore and the meanderings of the river to the line of West Virginia and Virginia.

2. That oyster-dredging should be prohibited in the Potomac River west from a line drawn from Point Lookout, in Maryland, to the headland of Smith's Point, in Virginia.

3. That oyster-dredging should be prohibited in Pocomoke Sound.

4. That common rights of fishing and oystering shall be enjoyed by the citizens of both States in that part of Pocomoke Sound north and east of a straight line commencing at Watkins Point, and running thence in a southeasterly direction to buoy R, No. 4, as it is now located upon coast-chart No. 23, of the United States Coast Survey (sheet No. 3, Chesapeake Bay), filed as a part of said award of said Black and Jenkins, making off from a shoal from Messongo Creek, thence with a straight line to the northern boundary of said creek. The rights in any creek or inlet granted hereby by either State and the riparian rights upon the shores of said sound to be respectively protected in the same manner as is provided for in the Potomac River by the compact of 1785. This title to be no longer binding if dredging is authorized by either State.

5. That there shall be concurrent jurisdiction between the States of Maryland and Virginia, by which the violators of the oyster laws may be punished in either State; that a concurrent law be passed restricting the taking of oysters for any lawful purpose in the Potomac River and that part of Pocomoke Sound covered by the concurrent act, from the 1st of October to the 1st of May, and that they be taken for planting or bedding, and may be planted or bedded in the

waters of either State up to and including May 15th, and during all of September, and strictly prohibiting their being taken for sale or planting from May 15th to September 1st: *Provided, however,* That they may be taken to be eaten within the county where taken at any time. And whereas the said committee have recommended that an act be passed to ratify and carry out the said agreement entered into by them with each other, subject to the action of their respective Legislatures, as is witnessed by their signatures, subscribed to this preamble as follows:

William May, H. Atkinson, Jr., on part of Senate of Virginia; E. S. Phillips, N. H. Champlin, on part of House of Delegates of Virginia; John Thomas Bond, F. M. Lancaster, John H. Cooper, on part of Senate of Maryland; John H. Handy, Isaac T. Costen, Sidney E. Mudd, on part of Delegates of Maryland.

STATE INSTITUTIONS.—The Board of Managers of the Maryland Hospital for the Insane, in their last report (November 1, 1882), give a very favorable account of the management of the institution, and of the health of the patients; but they make the same complaint as is made in many other States, of the inadequacy of the hospital for the accommodation of the patients already under treatment, and of the still larger number to whom admission is refused from want of room. The income of the hospital during the year was \$89,431.86, of which the State contributed \$16,250, and the city of Baltimore \$24,161.82; and the expenses were \$89,269.80. The number of patients admitted during the year was 164, of whom 95 were males and 69 females. The whole number treated during that time was 556, of whom 301 were males and 255 were females.

The Asylums for the Deaf and Dumb and the Blind are reported to be in a flourishing condition; but, though they are doing a great deal of good, all who need the training which they afford are not to be found within their walls. The work done in these institutions is purely educational, and they should not be confounded with reformatories or houses of refuge.

EDUCATION.—The annual report of the State Board of Education, submitted to the Governor by Professor M. A. Newell, secretary, states that there are 2,058 public schools in the State, of which 1,937 are in the counties, and 121 in the city of Baltimore. This is an increase of 19 as compared with last year. The total attendance of pupils is reported as 159,945, of whom 111,668 are in the county schools, and 48,277 in Baltimore—an increase of 1,036 over the attendance of 1881. These schools have 3,197 teachers, who receive in salaries \$1,196,558.70, or an average of \$374 each. The total expenses of the schools for the year were \$1,651,908.67. Professor Newell reports that there are several schools in the State in which the teachers are paid less than \$300 per annum, a sum for which the services of competent instructors can not be secured. It is suggested that were the county school boards to limit the number of schools as prescribed by law, namely, one school to each district of four

miles square, they could afford to pay sufficient salaries to employ good teachers and have commodious school-houses, and that a smaller number of good schools would do better work than the larger number of ill-equipped and ill-officed schools now existing. The total receipts of the public-school tax for the fiscal year 1882 were \$479,885.85, which, together with a balance on hand at the beginning of the year of \$260,613.24, made a total available sum of \$740,499.09. The total disbursements of this fund for the year were \$535,855.34, leaving an available balance for school year, commencing October 1, 1882, of \$204,643.75. Schools for the colored people are established in each election district, and are kept open as many months in the year as the schools for the whites. The State Normal Schools, one for white and one for colored teachers, are doing a good work. The number of pupils is larger than it was last year. The other means authorized by law for the improvement of teachers—Teachers' Institutes, District, County, and State Teachers' Associations—have been fully employed during the year with the promise of the best results to the entire State. Higher education is provided by the St. John's, the Western Maryland, Agricultural, Washington, Frederick, and Baltimore Female Colleges, which receive a partial but uncertain support from the State, and consequently are not as flourishing as the friends of education would desire. Three years ago the Agricultural College received \$6,000 per annum from the State, in addition to the proceeds of the land scrip; now it receives no State aid. The effort of its managers now is to make it a purely agricultural and mechanical college, but with its present reduced means its force is materially reduced. Many of the farmers of the State, who might be supposed to be most interested in its success, opposed the continuance of the legislative appropriation for the college, and have expressed great dissatisfaction with its management. In this state of affairs Professor William H. Parker, president of the institution since 1875, tendered his resignation in October, which was accepted by the Board of Trustees. The Maryland Institute for the Promotion of the Mechanic Arts is taking the lead in the advancement of a branch of popular education—drawing—which is much needed and much neglected. The number of students in attendance in the day-school and the night-school is about four hundred. They are instructed thoroughly in every branch of drawing and painting. The McDonough School of Farming and General Education has been eminently prosperous during the year. Each year the value of the school seems to be more widely recognized, as shown by the constantly growing pressure for admission. The new building in course of erection last year has been completed and is now occupied. The wing for use as a boarding-house, which forms part of the original plan, has not been commenced for want

of the necessary means. The trustees have expended nearly \$100,000, which has not only exhausted the accretions set aside for the new buildings, but has created a deficiency of \$29,000, caused by the completion of the buildings under contract, and the erection of an additional wing embraced in the original plan. Until this deficiency has been supplied from the surplus income, the board have determined to be content with the present accommodations, which furnish all that is necessary for educational purposes. The board will not, therefore, for the present, adopt the recommendations of Professor William Allen, the principal, as to the enlargement of the number of students, believing that the advantage arising from an increase of numbers would not justify an increase of the indebtedness already incurred. The present value of the trust is reported to be \$923,375.32, as set forth in the following balance-sheet made up to December 31, 1882:

Dr.			Cr.
City stocks.....	\$705,000 00	Nat'l Mechanics' Bank.....	\$29,000 00
Real estate, farm.....	127,000 00	McDonough trust fund.....	923,375 32
Real estate, New Orleans.....	8,490 87		
New school-buildings.....	99,480 64		
Live-stock on farm.....	7,675 00		
Furniture.....	8,500 00		
Library and instruments.....	1,000 00		
Farm implements.....	2,000 00		
Cash.....	2,728 81		
Total.....	\$952,375 32	Total.....	\$952,375 32

THE JOHNS HOPKINS UNIVERSITY.—Considerable dissatisfaction has been expressed as to the manner in which the trustees of the university have administered the important trust confided to them, especially as to their failure, as was alleged, to locate the institution at Clifton, the founder's country residence, in conformity with Mr. Hopkins's desire. Eight of the trustees, constituting a large majority of the board, have published the following statement in explanation of their conduct:

The Johns Hopkins University was incorporated by certificate, at the request of Johns Hopkins, on August 24, 1867, under the provisions of the act of 1867, chapter 379. That certificate declared that the university thus formed should be located in Baltimore County. The trustees of the university named in the certificate were selected by Mr. Hopkins. There was no organization of the board until June 13, 1870. On that day the trustees met at Mr. Hopkins's request, and by his desire selected Mr. Galloway Cheston, one of their number, as president of the board.

On July 9, 1870, Mr. Hopkins made his will. Among other dispositions of his property he made the following: "I give and bequeath unto the Johns Hopkins University, a corporation formed at my instance under the laws of Maryland, by certificate duly recorded among the records of Baltimore County, my country-place, known as 'Clifton,' containing about three hundred and thirty acres, and all the shares of the capital stock of the Baltimore and Ohio Railroad Company whereof I shall die possessed, except the stock known as preferred stock of said company." He made in his will no other allusion to "Clifton." Those of the undersigned who were familiar with him know that he thought "Clifton" was well adapted for the site of the university, and that he

expected that the university would be located within its limits. He abstained, however, from expressing any opinion upon the subject in his will. He left those whom he had selected as trustees for the management of the university entirely unfettered so far as its plan of education was concerned; and he imposed upon them no condition as to its site, except such as might be implied from the certificate of incorporation, which declared that it should be located in Baltimore County.

On October 31, 1871, he made a codicil to this will. He revoked by that codicil the disposition which he had previously made of the rest and residue of his estate, and gave such rest and residue in equal parts to the Johns Hopkins University and to the Johns Hopkins Hospital, adding to the grant the following significant words: "The share of each corporation in the said rest, residue, and remainder of my real and personal estate to be held, used, and applied by such corporation in, for, and to its corporate purposes in accordance with the provisions of its existing certificate or charter of incorporation, or with the provisions of such act or acts of Assembly amending its certificate or charter of incorporation as the trustees thereof may procure to be passed and accepted."

Can any one doubt who reads this clause that the desire of Mr. Hopkins that the university bearing his name should be successful had outgrown all other wishes? He foresaw that the certificate of incorporation under which the university had been formed might, for some reason, prove inadequate for its intended purpose. Therefore, to prevent, as far as was possible, any failure from lack of sufficient powers in the prosecution of his main design, he expressly authorized the trustees of the university to ask for and obtain any alteration of their certificate charter which they, in their discretion, might think necessary or proper.

Mr. Hopkins died on December 24, 1873. When the trustees took possession of Clifton they found that the place did not possess those conditions of health which it was indispensable that the site of a university should enjoy. It was possible to remove in some degree the causes of malarial disease, which existed within its limits. It was not possible to remedy those dangers which proceeded from the section of country lying between the eastern boundary of the place and Herring Run. Those sources of mischief will exist until they are eradicated by thorough drainage or by the ultimate extension of the city over part of that area.

These and other considerations determined the trustees to apply in 1876 to the General Assembly of Maryland in pursuance of the power expressly given to them by the codicil, to which reference has been made, for such amendment of their certificate charter as would enable them to establish branches of the university and its principal office in the city of Baltimore. They were authorized by the act of 1876, chapter 84, to establish such branches, to purchase and hold all property in said city needed for the particular purposes, and to maintain the principal office of the university in said city.

The trustees having purchased such property in the city of Baltimore as might be needed for their immediate or future uses or which it was desirable to control, proceeded to alter buildings acquired and to build to such extent as was necessary to conduct the business of the university.

The undersigned regret that four of the trustees named by Mr. Hopkins, including Mr. Galloway Cheston, are dead, and that one thus originally selected has resigned. In their present number, however, are five of those to whom he originally committed the trust implied by the creation of the university. Among the five are the three persons whom he selected as executors of his will, one of whom he personally designated as president of "The Johns Hopkins Hospital." The undersigned constitute a large majority of the whole board.

Any differences which have arisen among the undersigned in connection with the management of the institution have been those only which are incident to the administration of all corporate affairs. They venture, however, to say, collectively, that their trusts have been executed with a thorough understanding of their legal and personal obligations, and with the single desire to promote the great objects which Johns Hopkins had in view when he executed the will and codicil to which they have referred.

GEO. W. DOBBIN. GEO. WM. BROWN.  
CHAS. J. M. GWINN. JAS. CAREY THOMAS.  
FRANCIS WHITE. J. H. PLEASANTS.  
FRANCIS T. KING. JOS. P. ELLIOTT.

The Johns Hopkins University was the recipient of a very valuable Christmas present from several prominent German citizens of Baltimore, being the collection of books and pamphlets which the late Swiss statesman and publicist, Jean Gaspard Bluntschli, had made during his literary life in Switzerland and Germany. The gift was largely due to Professor C. T. Raddatz, of the Baltimore City College, who, when he heard that the library was to be sold, suggested the purchase and gift of it to the Johns Hopkins University, as the Germans of San Francisco had purchased the library of Francis Lieber and presented it to the University of California.

One of the most memorable events of the year was the munificent act of Mr. Enoch Pratt in founding a free public circulating library in the city of Baltimore, which by the conditions of the gift shall be forever the property of the public, to be enjoyed by intelligent men and women from generation to generation. He gave to the city a building valued at \$225,000, and he offers for the maintenance of the library a fund of \$833,333.33, which at 6 per cent will produce annually the sum of \$50,000, provided the city appropriates a similar sum annually for the support of the institution. The purpose of the gift is as laudable as the gift itself is liberal. To stimulate the taste of the people to read good books, tends directly to make them better and more useful citizens. The Peabody Institute, at its twenty-fourth annual meeting, expressed its appreciation of Mr. Pratt's liberality by the following resolution, which was unanimously adopted:

The board desires to express its gratification at the munificent donation of Mr. Enoch Pratt for establishing a free circulating library in our city. Meeting, as it does, a want long felt and supplementing so effectively the library department of this institution, it is eminently proper that the board should unite in the public voice of approval and gratitude now echoing from all sections of the community.

INDUSTRIES.—The canning of fruits and vegetables has become a very large and profitable industry in Maryland, especially in Harford, Cecil, and Kent Counties. Carefully prepared statistics show that in one county—Harford—there are 400 canning establishments, using 130,000 boxes of tin, and employing 20,000 persons during the season. During the past year there were packed over 1,000,000 three-pound cans of tomatoes and 500,000 cans of

corn, using the production of 10,000 acres of tomatoes and 5,000 acres of corn, the out-door labor on which amounted to \$200,000, and in the canning establishments to \$900,000, besides \$135,000 paid for cans. In Cecil and Kent Counties the canned-peach trade is rapidly growing. The parties interested in this trade are strenuously opposed to any increase in the duty on tin, and have appointed a committee to go to Washington to confer with the Committee of Ways and Means on the subject. There are more than 120 establishments for preserving fruits, vegetables, oysters, etc., which consume 20,000,000 tin cans per annum, and, together with the dredging of the Chesapeake, in which 1,000 schooners and 3,500 smaller craft are employed in securing and bringing to market 2,000,000 bushels of oysters, \$30,000,000 of capital and 34,000 hands are employed. In the manufacture of "fertilizers," of which upward of 300,000 tons are made annually—half the consumption of the United States—2,500 hands are employed in 27 factories. The cotton-mills in the vicinity of Baltimore drive 125,000 spindles, and employ 4,000 hands in the manufacture of sail and tent cloth, netting, twine, drills, etc. Mr. John Garrett, President of the Baltimore and Ohio Railroad Company, has obtained a liberal charter from the United States Government for the construction of an ocean cable, to be operated in connection with the system of land telegraphs of the Baltimore and Ohio Company. Under the charter, no amalgamation with any existing cable-line can be made.

There has been a great falling off in the quantity of sugar imported into Baltimore during the year, as compared with 1881 and previous years. The amount received was 4,470 hogsheads, 9,054 bags, and 120 tierces, which is nearly one half of the quantity imported last year, and most of this was forwarded to New York and Philadelphia to be refined. Business men in Baltimore differ as to the proper means to be employed to revive the trade. Some favor the continuation of the Dutch standard as the means of determining the quality of the sugar, with an *ad valorem* duty. Others consent to the use of the polariscope in settling the saccharine strength of imported sugars; while many favor the adoption of a specific duty per pound on all grades, which would allow the admission of the higher or grocery grades. The heavy business once done in refining sugars in Baltimore has been transferred to New York and Philadelphia, and little hope of its restoration is felt or expressed. At one time the sugar-trade of Baltimore amounted to \$25,000,000.

The late Thomas Wilson, of Baltimore, bequeathed \$500,000 for the establishment of a "Sanitarium," where the sick children of the poor can be taken during the summer, and receive the benefits of pure air, good food, and proper medical attendance. The class of chil-

dren to be treated will be mostly under two years of age, and in most cases the mother will accompany her child; but if there be other children, under five years of age, who can not be left at home, they will be taken also. All expenses are borne by the institution. The trustees have purchased 170 acres of land on the line of the Western Maryland Railroad, nine miles from Baltimore, and 600 feet above mean tide, and are erecting the necessary buildings, in the expectation that this charity will be operative during the summer of 1883. Mr. Wilson also gave \$100,000 to the "Thomas Wilson Fuel-saving Society," the object being to aid poor sewing-women in procuring sewing-machines, or other mechanical aids, and to sell fuel to deserving poor at a low rate. During this year 200 deserving poor women have been aided in getting sewing-machines at a price somewhat less than the wholesale factory rate, they undertaking to repay the society in small monthly installments. About 1,400 tons of coal have been sold to worthy indigent persons, at half the dealers' retail price. The trustees are only permitted to use the income of the funds. The principal is kept intact.

The Johns Hopkins Hospital, the foundations of which were laid in 1875, is progressing steadily toward completion. There are now twelve buildings under roof, and it is expected the institution will be finished and ready for occupancy in 1885. The amount of the endowment was \$3,333,330, of which \$2,036,028.75 is in bonds and stocks, and \$1,375,542.07 is in real estate. The expenditure up to December 31st has been \$1,304,167.31. The trustees intend that it shall be "the model hospital of the world."

#### MASSACHUSETTS. STATE GOVERNMENT.

—The State officers during the year were the following: Governor, John D. Long; Lieutenant-Governor, Byron Weston; Secretary of State, Henry B. Peirce; Treasurer, Daniel A. Gleason; Auditor, Charles R. Ladd; Attorney-General, George Marston; Adjutant-General, A. H. Berry; Secretary of Board of Education, John W. Dickinson; Secretary of Board of Agriculture and State Librarian, John G. Russell; Insurance Commissioner, Julius L. Clarke. Judiciary, Supreme Court: Chief-Justice, Marcus Morton; Associate Justices, William C. Endicott, Otis P. Lord, Walbridge P. Field, Charles Devens, William Allen, Charles Allen.

LEGISLATURE.—The Legislature convened on the 5th of January and adjourned on the 27th of May. During the session 274 acts and 61 resolves were passed. Having sat one hundred and forty-three days, a longer period than any of its predecessors since that of 1874, when a prorogation was made on the morning of July 1st, and a term equalled by those of but ten of the fifty Legislatures of whose duration there is a record, the General Court of the year 1882 added but little to the Public Statutes, because of the recent revision of the General Laws; its

special enactments were multifarious and of widely differing character.

That the Commonwealth might free itself from business entanglements, it was determined that it should exchange the shares of the stock of the Boston and Albany Railroad Company which it holds for bonds of that corporation, to run twenty years, with interest at 5 per cent per annum, at the rate of \$160 in the face value of the bonds for each \$100 in the par value of the stock, and that it should make a similar transfer of its shares of stock of the New York and New England Railroad Company, for which it should take second-mortgage bonds of the corporation, to run twenty years, with interest at 6 per cent per annum, on the basis of \$50 in the face value of the bonds for \$100 in the par value of the stock. On the former of these measures the company by a majority of its stock has acted affirmatively. The act relative to the New York and New England Railroad Company provides that it may issue its second-mortgage bonds to the amount of \$5,000,000, of which \$1,737,500 are to go to make the exchange, and the remainder to be used in laying a second track and in providing for its outstanding unsecured liabilities.

The Old Colony Railroad Company may unite with the Boston, Clinton, Fitchburg and New Bedford Railroad Company on such terms and conditions and with such guarantees as may be mutually agreed upon by their stockholders, and with this view the former is authorized to purchase and hold the stock of the latter, the name of the united corporation, which is to have and to enjoy all the franchises, powers, privileges, property, and rights of those of which it is to be formed, to be known as the Old Colony Railway Company. After the union the corporation may increase its capital stock to \$12,000,000, the money secured by the sale of the new stock, which may be \$2,000,000 in amount, to be applied to the payment and reduction of the company's debt, and to the provision of additional equipment and improvement of its railroad and other property. The company may lease, by the agreement thereto of the stockholders of both corporations, the railroad, franchise, and property of the Fall River Railroad Company for such length of time and on such terms as may be fixed upon. The company may take land in South Boston for raising its track over the proposed extension of D Street, and at Braintree, for making and maintaining a convenient connection between its South Shore Branch and its main line.

The Eastern Railroad may increase its capital stock by issuing not more than \$5,000,000 in shares of the par value of \$100 each, which shall be designated as preferred stock, which shall annually receive, out of the net earnings of said corporation, not more than \$6 per share, and which shall be issued at par value to cancel certificates of the indebtedness of the company.

The general railroad law enacted in 1874 has been so modified that, in addition to the prerequisites required by it, a corporation intending to construct a railroad must, before a location for it is granted, satisfy the Railroad Commissioners that there is an exigency for it, and that the distance from the State-House, within which a branch road may be built, is reduced from eight miles to three miles.

Hereafter no railroad company can, in doing its freight business, make or give any undue or unreasonable preference or advantage to or in favor of any person, firm, or corporation, nor subject any person, firm, or corporation to any undue or unreasonable prejudice or disadvantage.

It is required that each car of every passenger train, including mail and baggage cars, shall be supplied with at least one set of tools, consisting of an axe, a sledge-hammer, a crow-bar, a handsaw, and a pail, all of which shall be kept, in good condition, in some convenient place, and manner approved by the Board of Railroad Commissioners.

Any party aggrieved by a decision of County Commissioners in cases where a highway or townway and a railroad cross each other may appeal therefrom to the Board of Railroad Commissioners, which shall have the same power in the premises that the County Commissioners originally had.

In pursuance of its policy of putting its railroad in the best condition for business, the State is to expend \$250,000 in adding to the double tracking of the Hoosac Tunnel and Troy and Greenfield Railroad.

Any city or town may, for the purpose of devoting a portion of the territory of such town or city to the preservation, reproduction, and culture of forest-trees for the sake of the wood and timber thereon, or for the preservation of the water-supply of such town or city, take or purchase any land within the limits of such town or city, may receive donations of money or land for the said purposes, and may make a public domain of the land so donated, the titles thereof to be vested in the Commonwealth, and to be held in perpetuity for the benefit of the town or city in which such land is situated.

At the Massachusetts Agricultural College there is to be established an agricultural experiment station for the purposes of investigating the diseases of domestic animals, of plants, and of trees; the history and habits of insects destructive to vegetation, and the means of their abatement; the manufacture and composition of both foreign and domestic fertilizers, to determine their several values and their adaptability to different crops and soils; the values of forage, grain, and root crops as food for farm-animals; the comparative worth of green and of dry crops; and the adulteration of any article of food intended for the use of men and animals.

It was resolved that the Governor and Council consider the expediency of providing separ-

rate homœopathic treatment of insane persons under the care of the Commonwealth, who shall desire such treatment; and, if they shall determine that it is desirable, they are requested to present to the next General Court some practicable plan for the establishment of a hospital for such treatment, for which any vacant premises owned by the State may be appropriated.

Hereafter savings-banks and institutions for savings may invest their deposits and the income derived therefrom in the legally authorized bonds of the States of Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin, and Iowa, and of the District of Columbia, or in the legally authorized bonds for municipal purposes of any of the cities in the aforesaid States and the State of New York, which has at the date of such investment more than fifty thousand inhabitants, and whose net indebtedness does not exceed five per cent of the valuation of the taxable property therein; and they may loan upon the note or notes of any citizen of this State, with a pledge as collateral of any of the aforesaid securities, at no more than eighty per cent of the market value thereof.

A savings-bank or institution for savings is limited in its investments in the stock of any one bank or banking association to three per cent of the amount of its deposits at the time of the purchase of such securities.

At the end of one year after the date of final settlement, the Commissioners of Savings-Banks are to take and keep all the books and papers of insolvent savings-banks and institutions for savings, including those of the receivers.

In attempted legislation on the liquor-traffic the failures were more conspicuous than the successes. Most noticeable was the rejection of a stringent prohibitory bill which the House threw out by a tie-vote of 110 to 110, all but seven of its members being accounted for either by their direct assent or dissent, or by their pairs. There were also negative measures providing for a limit to the number of licenses, for increasing the price of such licenses, and for the prohibition of the use of any part of the premises on which a license is exercised for residential purposes. The noticeable measures that became laws are as follow:

Every common victualer holding a license to sell liquors must keep his premises closed from twelve o'clock at night until five o'clock in the morning.

The granting of a license to sell liquors on premises within four hundred feet of a public school on the same street is prohibited.

The tax levy fixed upon for the year is \$2,000,000, an amount of \$500,000 in excess of that assessed and collected last year and the year before, to meet the current expenses of the Commonwealth; this increase is made because of the reduction of the tax on the deposits in savings-banks and institutions for savings from three fourths of one per cent to one half of one per cent.

The chairman of the Committee on Printing on the part of the Senate, the chairman of said committee on the part of the House of Representatives, the Secretary, Treasurer, and Auditor of the Commonwealth, the Clerk of the Senate and the Clerk of the House of Representatives, are to make a contract for the execution of all the printing for the several departments of the government of the Commonwealth for a term of five years from the first day of July, in the year 1882.

A person who, having been arrested on a criminal process, is required to furnish sureties for appearance before any court or trial justice, may in place thereof give a personal recognizance, and deposit the amount of bail ordered with the court, trial justice, or magistrate who has authority to take the recognizance.

It was enacted that the provisions of law relating to the qualification and admission to practice of attorneys-at-law shall apply to women.

To harmonize the laws governing the observance of legal holidays it was enacted that when Christmas occurs on Sunday the day following shall be a legal holiday.

Many of the measures upon which much time was spent, and which were quite as important as a large number of those that have become parts of the public statutes, were rejected, while others were referred to the next General Court.

FINANCES.—The receipts and expenses on account of revenue for the year 1882, including cash on hand, were:

Cash in the Treasury, January 1, 1882.....	\$1,351,699 39
Revenue receipts during the year.....	8,090,356 59
Total.....	\$9,441,995 93
Payments.....	7,648,062 16
Revenue cash, January 1, 1883.....	\$1,793,938 22

The comparative results for the years 1882 and 1881 are as follow:

	1882.	1881.
Ordinary expenses.....	\$1,667,925 40	\$1,648,236 03
Exceptional expenses.....	5,049,386 63	5,286,167 04
Totals.....	\$6,717,312 03	\$6,934,403 06

In these aggregates are included the corporation and national bank taxes returned by the Commonwealth to cities and towns, etc. These should be deducted, to show the actual expenses, viz., \$2,275,892.99 in 1882, and \$2,243,437.51 in 1881. With these deductions the expenses of 1882 were \$4,441,419.04, and in 1881, \$4,690,966.15, showing that the expenses of 1882 were \$249,547.11 less than in 1881. The principal expenses of the year 1882 were:

Interest on the public debt.....	\$1,647,825 28
Legislative department.....	205,822 40
Executive and other departments.....	89,864 02
State-House and Pemberton Square.....	25,660 57
Commissioners.....	79,696 16
Printing.....	41,247 59

Educational.....	\$87,822 72
Judiciary.....	192,991 72
Public buildings.....	46,601 86
Agricultural department.....	52,487 02
State and military aid, including expenses of the Commissioners.....	427,105 59
Charitable, ordinary and exceptional.....	452,723 05
Reformatory and correctional.....	319,385 73
Military, ordinary and exceptional.....	143,755 06
Gratuities.....	62,565 42
Exceptional on State House.....	16,995 26
Troy and Greenfield Railroad and Hoosac Tunnel.....	456,278 65
Total.....	\$4,317,630 95

The number of cities and towns paying State aid was 562; that of the persons to whom such aid was rendered was 6,723, of which 2,805 were invalid pensioners, 591 wives of invalid pensioners, 2,332 widows of invalid pensioners, 941 mothers and 54 fathers of invalid pensioners. The number of indigent soldiers and sailors aided was 1,889. The Surgeon-General examined 321 applicants for State aid; the total payments for which to January 1, 1883, were \$17,868.81. The estimates for the year 1883 are:

Legislative department.....	\$208,600 00
Other State departments.....	379,085 00
Charities.....	449,400 00
Reformatories and prisons.....	393,500 00
State and military aid.....	413,000 00
Interest, including January payment, 1884.....	1,720,000 00
Military department.....	159,400 00
Agricultural department.....	23,000 00
Troy and Greenfield Railroad.....	650,282 00
Other items.....	241,423 00
Total estimated expenditures.....	\$4,582,940 00

## ESTIMATED REVENUE.

Corporation taxes, net.....	\$475,000 00
Bank-stock taxes, net.....	490,644 00
Savings-bank tax.....	725,000 00
Insurance taxes and licenses, including Massachusetts Hospital Life-Insurance Company.....	225,000 00
Excise tax on life-insurance companies.....	95,000 00
Hawkers and peddlers.....	17,000 00
State-Prison income.....	100,000 00
Alms-house, Women's Prison and Reform School income.....	18,000 00
Secretary's fees and commissions.....	20,000 00
Cities and towns for support of paupers.....	85,000 00
Railroad commissioners.....	17,735 00
Fees from courts of insolvency.....	9,000 00
Liquor licenses.....	150,000 00
Confiscated liquors.....	1,000 00
Coal and mining companies' taxes.....	24,000 00
Troy and Greenfield Railroad and Hoosac Tunnel (manager's estimate).....	275,000 00
Miscellaneous.....	28,000 00
Total estimated revenue.....	\$2,700,429 00
Add cash in the Treasury.....	1,798,933 82
Total.....	\$4,499,362 82
Estimated revenue.....	4,494,362 82
Estimated expenses, as above.....	4,582,940 95
Deficit.....	\$83,578 13

The amount of State tax required was not estimated.

Including cash on hand at the beginning of the year, the following is a summary of the transaction on account of funds:

Cash on hand, January 1, 1882.....	\$3,120,313 14
Receipts during the year.....	16,462,915 13
Total.....	\$19,583,228 32
Payments on this account.....	17,143,825 40
Cash on hand, January 1, 1883.....	\$2,439,402 92

The cash balance as shown above stands to the credit of the following funds:

Troy and Greenfield Railroad Sinking Fund....	\$498,204 85
Bounty Loan Sinking Fund.....	738,958 89
Boston, Hartford and Erie Railroad Sinking Fund.....	106,692 52
Coast-Defense Loan Sinking Fund.....	5,627 99
War Loan Sinking Fund.....	18,847 70
Prison and Hospital Loan Sinking Fund.....	864,006 09
Commissioners' Public Lands Fund.....	31,368 23
Commonwealth Flats Improvement Fund.....	144,659 78
Harbor Compensation Fund.....	49,690 92
Income Harbor Compensation Fund.....	26,418 63
Massachusetts School Fund.....	218,029 26
Technical Educational Fund Commonwealth Grant.....	106,575 85
Income Technical Educational Fund Commonwealth Grant.....	8,579 25
Income Technical Educational Fund United States Grant.....	425 00
Todd Normal School Fund.....	1,850 00
Income Massachusetts School Fund.....	72,182 90
Income Todd Normal School Fund.....	266 03
Income Rogers Book Fund.....	80 00
Unclaimed dividends of insolvent insurance companies.....	6,221 72
Savings-Bank Trust Fund.....	948 25
Total.....	\$2,439,402 92

The aggregate net indebtedness of municipalities in Massachusetts in each year from 1871 to 1881, and the total property valuation, were as follow:

YEARS.	Valuation.	Debt.
1871.....	\$1,497,351,656	\$39,421,298
1872.....	1,696,599,969	45,221,745
1873.....	1,763,429,990	53,380,118
1874.....	1,831,601,165	64,904,069
1875.....	1,840,792,723	71,784,006
1876.....	1,769,359,481	72,165,156
1877.....	1,668,226,792	72,049,685
1878.....	1,568,988,210	68,864,685
1879.....	1,529,521,014	67,728,557
1880.....	1,584,756,802	68,512,927
1881.....	1,684,289,976	65,408,691

The funded debt of the State on the 1st of January, 1883, amounted to \$32,399,464, represented by \$11,904,000 in dollar bonds, and £4,234,600 in sterling of the value of \$4.84 to the pound—\$20,495,464.

The following is a classification of the debt:

Railroad loans.....	\$17,816,757 60
War loans.....	10,495,567 80
Public buildings, etc.....	4,199,855 80

Total as above.....\$32,511,680 90

The maturity of the debt is shown in the following statement:

1882.....	\$1,088,000 00	1894.....	\$9,637,148 90
1883.....	8,078,061 25	1895.....	4,855,537 25
1884.....	8,159,381 80	1896.....	1,100,000 00
1885.....	505,129 55	1897.....	520,000 00
1886.....	8,834,742 75	1900.....	3,618,729 40
1887.....	1,065,000 00		

The amount of sinking funds January 1, 1883, was \$16,914,263.05, an increase of \$2,118,988.07. Of this increase \$1,737,000 came from the exchange of the stock of the New York and New England Railroad Corporation for its bonds; \$330,322.94 from the exchange of the stock of the Boston and Albany Railroad Corporation for its bonds; \$43,757.93 from the sale of lands; \$62,040.60 from transfers of balances of accounts on the books of the Treasurer; \$9,087.91 from the income of the old State-Prison, and the balance from invest-

ments. The following statement shows the condition of the sinking funds and other resources pledged thereto by existing laws:

Troy and Greenfield Railroad Sinking Fund...	\$5,620,769 61
Bounty Loan Sinking Fund.....	5,538,056 49
Boston, Hartford and Erie Railroad Sinking Fund.....	3,059,242 87
War Loan Sinking Fund.....	1,000,000 00
Coast-Defense Sinking Fund.....	867,827 99
Prison and Hospital Loan Sinking Fund.....	853,866 09
Add market value in excess of cost.....	500,000 00
Total sinking funds.....	\$17,444,268 05
Estimated value of salable Back Bay lands.....	800,000 00
Unsettled claim against the United States, estimated.....	250,000 00
Claim against the Boston and Albany Railroad Company.....	100,000 00
Land in Boston Harbor, cost about.....	800,000 00
Total resources for payment of the debt.....	\$18,894,268 05
Total debt of the Commonwealth.....	32,511,680 90
Resources pledged for its payment.....	18,894,268 05

Total debt, less resources pledged for its payment.....\$13,617,417 85

1881....	838	161,927,122	278,538,805	287,019,164†
1882....	872	166,751,898	295,592,412	303,090,568†

The loss of property and life in the Gloucester fisheries during 1882 was greater than for the past two years combined, and largely in excess of any previous year since 1876, with one exception, as will be seen from the following table:

YEAR.	Vessels.	Tons.	Value.	Insurance.	Lives.
1876.....	27	1,095-46	\$150,000	\$116,222	212
1877.....	8	722-33	45,000	22,000	39
1878.....	13	907-57	64,794	49,067	56
1879.....	29	1,898-36	111,056	90,582	249
1880.....	7	300-44	21,000	15,972	52
1881.....	8	511-51	81,000	20,498	56
1882.....	13	948-74	79,700	54,460	115

It is reported that the aggregate losses in the fishing business from Gloucester from 1830, when the Georges fisheries began, up to April 1, 1882, have been 2,351 lives, and 428 vessels, valued at \$1,862,710.

From the fourteenth annual report of the Railroad Commissioners, it appears that the mileage of roads in the State was increased during the year ending September 30, 1882, by the building of twenty-one and a half miles. The total mileage is 2,778 of main line and branches, of which 750 miles is double track. The increase in double track is sixty-five miles. The increase in track was 108 miles. The average cost of standard-gauge roads is returned at \$59,767.18 per mile; the cost of equipment per mile operated averages \$6,211.31—making the average cost of a standard-gauge road, with equipment, \$65,978.49. The cost of narrow-gauge roads averages \$29,373.23 per mile, and \$7,013.62 per mile additional for equipment. Returns were received from sixty-seven corporations, an increase of two. The aggregate capital stock was \$122,976,262.26, an increase of \$820,648.14. The net debt of the companies—the gross debt less cash assets—amounts to \$71,918,806, an increase of \$7,062,915.24. On the other hand, the cash assets of all the railroad companies of the State have increased to the amount of \$2,843,006.23. The returns for the last six years are as follow:

YEARS.	Stock.	Net debt.
1877.....	\$118,170,201 03	\$52,914,826 15
1878.....	119,045,229 92	52,646,056 24
1879.....	118,890,398 88	55,755,418 06
1880.....	118,788,871 58	59,172,520 26
1881.....	122,155,614 12	64,850,590 76
1882.....	122,976,262 26	71,918,806 00

The total gross income for the year was \$40,846,370.20, an increase of \$3,081,974.27, or 8.1 per cent. The following shows the figures for four years:

YEARS.	Gross income.	Increase.
1879.....	\$30,812,964 54	\$1,259,955 78
1880.....	35,140,874 77	4,327,410 28
1881.....	37,764,395 88	2,624,021 06
1882.....	40,846,370 10	3,081,974 27

The total expenses—including rents paid—of all the corporations amounted to \$29,944,167.15, an increase of \$2,881,522.92. The net income was \$10,902,202.95, being an increase of \$200,451.85. The passenger earnings were \$19,567,274.71, an increase of \$2,238,779.23 over the year 1881, when they amounted to \$17,328,495.48. The freight earnings were \$19,527,094.54, an increase of \$919,287.15, or nearly 5 per cent over those of last year, which amounted to \$18,607,807.39. The local passenger earnings were \$12,679,634.51, an increase of \$1,360,702.85 over the figures of last year, which were \$11,318,931.66. The through passenger earnings were \$5,162,321.42, an increase of \$564,543.56 over the amount for last year, which was \$4,597,777.86. The express, mail, and other earnings included in total passenger earnings, as given above, amounted to \$1,725,318.78, being an increase of \$313,532.82, this item having been in 1881, \$1,411,785.96. The local freight earnings were \$9,955,675.74, an increase of \$882,388.85. Through freight was \$9,408,552.43, an increase of \$51,324.63. The income from all other sources of the freight department amounted to \$162,866.37, as against \$177,292.70, a decrease of \$14,426.33.

The total passenger mileage was 892,321,207; total freight mileage, 1,130,070,652. The increase of passenger mileage—or passengers carried one mile—for the year amounts to 103,898,446. The increase of freight mileage, or tons of freight carried one mile, amounts to 49,267,856. The total number of passengers carried was 55,868,694, showing an increase of 6,034,203 over the previous year. The whole number of tons of freight carried was 19,061,164, as against 17,971,072, showing an increase of 1,090,092 tons.

The total amount of dividends paid was \$6,271,189.86, a decrease of \$16,726.96 over last year. Of the sixty-six corporations, thirty-six paid dividends varying from 2 to 10 per cent. The following shows the amount paid in dividends by all the corporations for ten years, with the percentage to capital stock, and also the amount of interest paid:

\* Not including capital.

† Including capital and reserves.

YEARS.	Amount of dividends.	Per cent, capital stock.	Interest paid.
1872-'73.....	\$7,280,456 02	6-34	\$1,846,783 16
1873-'74.....	6,988,170 85	6-11	2,791,572 28
1874-'75.....	6,783,670 93	5-97	3,152,862 45
1875-'76.....	8,888,509 49	4-95	3,704,698 88
1876-'77.....	5,429,183 31	4-60	3,487,026 83
1877-'78.....	5,529,927 40	4-68	3,126,925 34
1878-'79.....	5,264,491 78	4-90	3,172,990 59
1879-'80.....	5,987,718 64	5-05	3,423,752 25
1880-'81.....	6,257,866 82	5-15	3,748,292 55
1881-'82.....	6,271,189 86	5-10	4,291,222 59

The average number of persons employed reaches a total of 27,403, showing an increase for the year of 1,880. The whole number employed by all corporations making returns to the board is 30,904.

The tabulated statement of accidents shows that the whole number of persons injured was 414, or one less than the previous year. Of this number, only 27 were passengers, against 42 in 1881. The number killed was 163, against 184 the previous year. The number of employes injured, not fatally, was 142; the number killed was 56. The corresponding numbers for 1880-'81 were 128 and 72.

The number of trespassers killed during the year was 75, and the number of injured and not killed was 57. Of the whole number, 109 were walking, standing, or lying on the track, and 23 were unlawfully riding on the cars. Among the number killed, 7 are reported as suicides. The number injured at highway crossings was 54, of whom 21 were killed. Of the 54, 29 were injured at crossings guarded by gates or flags, and 25 at unguarded crossings.

The amount of damages paid in ten years by the eight roads of standard gauge terminating in Boston is \$1,211,587.10, or an average of more than \$120,000 annually. This was exclusive of all damage to freight or rolling stock, and of legal expenses attending suits.

**GUBERNATORIAL RECOMMENDATIONS.**—Governor Butler, in his message to the Legislature, recommends the abolition of the poll-tax as a prerequisite to voting. He says:

I believe in such a tax as a duty of the citizen, but not as a qualification to his suffrage. Every man ought to pay, according to his ability, his just share of the burden of maintaining the government which protects himself, his family, and his property, and which affords the means of education to his children. But the penalty for non-payment should not be disfranchisement and loss of citizenship; that is too severe, and in all civilized countries is only attached to the highest crimes.

It is the duty of every man to attend and take part in every election, and by his vote to give his assent to the laws which may be passed by his chosen representative; for all governments derive their "just powers from the assent of the governed."

This duty of a freeman was enforced by our fathers in the earliest colony time. In 1660 towns in Massachusetts passed and enforced the following by-law:

"It is likewise ordered that if any man who is warned to any town meeting be not there when he is called, he shall be liable to pay 6*d*. If he come not at all, 1*8d*. Nor shall any depart without leave, upon the like penalty."

How different are the provisions of law now by which the State practically offers a bounty of from

one to two dollars to any citizen who will stay away from town meeting!

Let, therefore, a nominal poll-tax for State purposes be assessed as now on the polls of the citizens, and then, if any citizen chooses to pay it, by doing his duty as a citizen by voting, let that act be a discharge and payment of such tax.

That would be a payment "in kind" by the freeman doing his duty as our fathers required him to do it, by fining him if he did not attend town meeting, as we have already seen.

He also recommends amendments to the registration laws making registration easier, and that all ballots be inclosed in self-sealing envelopes of the same size, quality, and color, to be furnished by the State. On the right of suffrage for women he says:

For myself, I believe that that right is given them by the Constitution of the United States. By the decision of the courts, I am overruled in my action on this subject, but not in my convictions. It is an experiment in our government which never has been here practically tried. For, although women are allowed to vote for a single class of municipal officers, yet there are so many restrictions and impediments thrown around it, that no woman with a proper spirit of self-respect ought to allow herself to pass through the ordeal to attain a useless privilege of voting thus invidiously. This, I believe, is the esteem in which it is held by a majority of the most estimable women of the Commonwealth.

Women can not be permitted to vote in this Commonwealth, by our Constitution, for national or State officers (except for presidential electors) if the law were changed; but they may vote, if the law so provides, in municipal elections.

While this experiment ought to be fully made, yet it can not be so, as we have seen, without a constitutional amendment. To make that amendment would take three years. If the experiment should turn out to be an unfortunate one, it would take three years more to restore the constitutional provision.

There is one way, however, in which the experiment can most advantageously be tried, and at the same time, without any possibility of mischief, settle a question which, in my mind, will be determinative whether women should have the ballot, and that is whether the majority of women of this Commonwealth desire to vote. This is avowed on the one side, and denied on the other; but certain it is, if the great body of intelligent women of the Commonwealth desire to vote they will have the vote, for I believe that fact being known, no just man would oppose it. I suggest, therefore, that a law be passed, allowing women to vote under the same regulations as men in municipal elections, which law shall take effect when it shall be accepted by a majority of the women voting at some general election.

Objection has been made that women do not desire to vote because it would be unpleasant to go into the ward-rooms and voting-places. To obviate that objection, and to get a full and fair expression of the women upon this question, whether they will accept and exercise the right of voting, I would suggest that the women above twenty-one should be registered, the place, by number, or other sufficient description of residence, forming a part of the registry, and that every woman may deposit her vote, indorsed with her name and place of residence in her own handwriting, in the post-office, or in some proper box provided for the purpose, addressed to the proper officers of election in the cities and towns where they reside, within ten days before such general election, at which time the officers of election may open, examine, and compare the ballots with the registry lists, and assort, count, and declare the votes as in other cases.

Other recommendations are, that election-day be made a legal holiday, and that the power

to naturalize foreigners be not restricted to the Supreme and Superior Courts. He also remarks:

1. There are very many more officers and salaried agents and employés in the Commonwealth than are necessary to do its business.

2. They are paid, on an average, quite one half more than the salaries for which competent persons could be obtained to do the same work, or which are paid in other like business by employers in the State.

After reviewing the subject of education, he says:

The deductions which I make from these facts are:

1. That we have schools for special classes which draw from our general school funds, which should be for the use of all alike, by far too much.

2. That the salaries of the principals in most of the higher schools, teachers, and supervisors are very much more than they ought to be. Or, to use other words to express my meaning, higher than other like business pays, and higher than the sum for which equally good services could be, and are, obtained. As a rule, salaries do rise, but rarely or never lower; and the larger the salaries the more surely this rule works.

But this is not true of the teachers in the lower grades, of whom more than 84 per cent are women, whose salaries, in comparison, are by far too low, being, as we have seen, only 44 per cent of the salaries of men. I believe that the best teachers are wanted for the lower grade schools, and that a woman who can teach successfully such schools does the most service to the State, and ought to be correspondingly paid therefor.

Not till after the children of the whole people are furnished with opportunities to have the rudiments at least of an education, such as will best fit them for the positions they must occupy—and the statistics show that 91 + per cent of them have gone from school to their avocations in life at the age of fifteen—should the higher branches of education be given to any, and when given, equally to all, only so far as they can be afforded within the limits of proper, nay, generous taxation.

To state my views in another phrase: as a prevention of pauperism and crime, to fit our people for suffrage, use all the educational force of the State, educate the masses up to a certain necessary point. The classes above will and ought to educate themselves up to a still higher point.

Do not take the common fund and give it to the few, or have it expended in such a manner that all can not equally enjoy its advantages, and, above all, have that expenditure an economical one, and not pay low salaries to the teachers of the many, and high salaries to the teachers of the few.

Restrict the branches taught in the primary schools by law specifically to spelling, reading, writing, grammar, arithmetic, geography, history—preferably of the United States—and require that those shall be taught upon the same system, to the same grade of scholars, in every common school in the Commonwealth. When the scholar can show by an examination that he is well grounded in the elementary English branches, then let him be admitted to a school of higher grade, where line-drawing for industrial purposes shall be taught, book-keeping, algebra, geometry, the rudiments of the Latin and French languages, chemistry, physics, with natural philosophy in a rudimentary degree; and there a common-school education should stop.

**PARTY CONVENTIONS.**—Early in August the Prohibition State Convention was held in Boston, thirty-nine cities and towns being represented by one hundred and fifty-five delegates. The following nominations were made:

For Governor, Charles Almy, of New Bedford; Lieutenant-Governor, John Blackmer, of Springfield; Secretary of State, Solomon F. Root, of Douglas; Treasurer and Receiver-General, T. J. Lothrop, of Taunton; Auditor, Jonathan Buck, of Harwich; Attorney-General, Samuel M. Fairfield, of Malden.

The platform adopted is as follows:

*Resolved*, "That at no time in the history of prohibition has there been more genuine cause for rejoicing at the awakening of the public conscience respecting the enormous evils of the liquor-traffic, as indicated by the multiplicity of expedients resorted to in efforts to render the business less desreputable.

*Resolved*, That any party, however honored in the past, if it have no longer a leading issue to present and have done its work, has no longer a claim upon the suffrages of the people, and has no right to live; according to precedent it ought to be superseded.

*Resolved*, That every party ought to be judged by the soundness, the magnitude, and the moral weight of its principles, and its honest purpose to apply them faithfully to the wants of society.

*Resolved*, That we challenge the naming of any issue so grand in its moral significance, or so demonstrably practical in its relation to the deepest wants of our Commonwealth and our nation, as that which constitutes the central principle of our party platform.

*Resolved*, That the royal right of suffrage, the sacred ballot, ought not upon futile pretext any longer to be directed to channels where no issue is and no moral principle pertaining to our cause holds sway, but should, in the hands of men and women, by direct methods give expression to solemn protest against the wrong and advocacy of the right.

*Resolved*, That an intelligent review of the past fifteen years should satisfy every lover of the cause of prohibition that State officers, however excellent in reputation and professed principle (though they serve as a decoy for the votes of temperance men), can not be relied upon for securing temperance legislation in a party that handles our cause as a matter of policy.

Later in the same month the Greenback State Convention met in the same city, and nominated Benjamin F. Butler for Governor, with a full State ticket.

The Democratic State Convention met likewise in Boston on the 19th of September, and nominated the following ticket: For Governor, Benjamin F. Butler, of Lowell; Lieutenant-Governor, Samuel W. Bowerman, of Pittsfield; Secretary of State, David N. Skillings, of Winchester; Treasurer, William A. Hodges, of Quincy; Auditor, John B. Sweeney, of Lawrence; Attorney-General, George F. Verry, of Worcester.

It put forth the following platform:

The Democrats of Massachusetts, in convention assembled, believing that the time has fully come when many needed reforms of government should be boldly undertaken, invite the co-operation of all liberal and progressive citizens in the good work of initiating a new political departure, alike in the State and in the nation, that shall resolutely discard dead issues and courageously grapple with the live issues that have too long been postponed, and we offer to them, as a platform worthy of their acceptance and support, the following declaration of principles. We assert—

1. The supremacy of the nation, within constitutional limits, and the integrity of the State—an indissoluble Union of indestructible States. The Constitution and all its amendments strictly construed and loyally obeyed form the basis and safeguard alike and equally of the just authority of the Federal Govern-

ment, and of the legitimate exercise of local government in the several States of the Union—by which we form a sovereign nation of inviolate and inviolable States.

2. Equal rights, equal powers, equal burdens, equal privileges, and equal protection by law under the government for every citizen of the republic, without limitation of race, or sex, or property qualification, whether it be by a tax on property or a poll-tax on persons.

3. Impartial freedom of the ballot—North as well as South, East as well as West—and the abolition of all laws, whether on the statute-books of Massachusetts or of Mississippi, aimed at the unequal limitation of the right of suffrage and the partial withholding of the sacred and fundamental right of representation.

4. Honest and economic expenditures of the public money in State and nation, and in such ways and for such purposes only as are manifestly essential to the public welfare, demanded by public necessity and clearly sanctioned by constitutional authority. . . .

7. A thorough and immediate reform of the tariff. The Constitution of the United States sanctions taxation, whether by excise, impost, or customs, to the amount of the necessary expenditures of the Government, whether in war or peace, to which all its revenues must be limited. The national expenditures are now so great that all proper protection can be given to American interests, American industries, and American labor within those limits. Therefore, we call upon Congress so to reform the present war taxes that hundreds of millions may not be, as now, needlessly extracted from the earnings of our people, to lie in the Treasury as a temptation to wicked and reckless appropriations for extravagant public buildings and useless and wasteful river and harbor bills. That no taxes shall be levied upon the necessities of life or upon the raw material which is not found or produced in our country. That the tariff shall be so judiciously adjusted that American commerce shall be fostered, and, above all, American labor elevated and amply rewarded. We affirm that all these results can be fully realized under a tariff limited in amount to a sum necessary and adequate for revenue.

8. Reduction of extravagant State expenditures with the direct taxation necessary to sustain them—which, under the continuous rule of one party in power for more than seventeen years since the war, has steadily increased year by year, until in the year 1881, by direct taxation, the enormous sum of five millions three hundred and forty-three thousand eight hundred and eighty-four dollars and twenty-five cents (\$5,343,884.25) has been drawn from the earnings of the people of the State, in addition to a State tax of one million and five hundred thousand dollars (\$1,500,000); and in the year 1882, by the addition of a half million (\$500,000) to one of the direct State taxes, the vast sum of seven millions three hundred and forty-three thousand eight hundred and eighty-four dollars and twenty-five cents (\$7,343,884.25) is imposed upon the people of this State, or more than four dollars to each man, woman, and child in the Commonwealth. We require, therefore, amendments of the laws by which this immense burden shall be reduced; and, further, that all taxation shall be so levied that a large portion of the property of the Commonwealth shall not escape taxation for the benefit of the few and the wrong of the many; and that all taxation shall be an equal burden upon all men.

9. No sumptuary laws, infringing sacred rights of personal liberty. No double nor any unequal taxation. No partial enforcement of the laws. No class legislation. These are axioms of Democracy, dominant always in its faith and practice. In this day of giant monopolies, powerful corporations, and concentrated wealth seeking to subsidize every function of Government to their own exclusive benefit, the Democrats of Massachusetts proclaim their principles anew, in behalf of labor and all its interests, in behalf of the laboring masses and all their rights, to the end

that this Government may be and may continue to be the "people's government," as the fathers of the republic designed and intended.

The Republican State Convention assembled in Worcester on the 20th of September, 21 cities and 328 towns being represented by 1,287 delegates. Only three towns were unrepresented. The following is the ticket nominated: For Governor, Robert R. Bishop, of Newton; for Lieutenant-Governor, Oliver Ames, of Easton; for Secretary, Henry B. Peirce, of Abington; for Treasurer, Daniel A. Gleason, of Medford; for Auditor, Charles R. Ladd, of Springfield; for Attorney-General, Edgar J. Sherman, of Lawrence.

The following resolutions with others were adopted as the platform of the Republican party of the State:

We congratulate the country that a sound business and financial policy in national legislation has secured an extension of the present excellent banking system, giving to the people a currency convenient, uniform, elastic in volume, of equal value in all the States, and absolutely safe from loss in the hands of the holder.

We unqualifiedly condemn all dishonesty and fraud in the conduct of elections, and demand that in every locality in the United States a free ballot and a fair count shall be absolutely secured to every qualified voter. The work of the Republican party can not cease till that result is accomplished, and to no other party can so high a duty be safely intrusted. We, therefore, express our admiration of the resolute action of the Republicans of the national House of Representatives in the decision of election cases, despite the factious and indefensible resistance of the Democratic party in its not unusual encouragement of tissue-ballot and other frauds.

By the rapid payment of the national debt and the great reduction in annual interest charges, made by honest and able management of the finances (results unprecedented in the history of the world), and by reason of the consequent restoration of confidence and revival of business, a large surplus is accumulating in the Treasury, above all possible requirements for the defrayal of ordinary expenses, for discharge of the matured debt and interest, and for the liberal disbursements to pensioners. It is clearly the duty of Congress to act speedily to reduce taxation in all its forms, and so to lighten the burdens of the people. More revenue than is needed for the public uses the Government should not take. An overflowing Treasury offers tempting inducement and plausible excuse for inordinate expenditure. To accomplish such reduction we believe in a prompt revision of the tariff, but we insist that in that revision the principle of discrimination for the protection and encouragement of American industries and labor shall be adhered to, and such an adjustment of details made that relief shall come where most needed, and the important interests involved be not recklessly disturbed.

We urge upon the favorable consideration of Congress such measures as shall be necessary to keep coin and currency at par with gold, the standard of the commercial world, and to bring the silver dollar to an equivalency in value with the gold coinage; to increase American commerce and encourage American shipping and ship-building, and to secure a more extended market for the products of our industries; to provide, and within proper limitations, in support of the common-school system throughout the country; to inaugurate and continue a wise, just, and humane policy toward the Indians; to vindicate the rights of American citizenship in all parts of the Union.

The work of reforming the civil service which was commenced by the Republican party, and in favor of which it alone stands committed in declaration and in

any measure of practice, is becoming more generally recognized as of paramount importance and essential to the security and permanence of our institutions. While indiscriminate censure of our civil servants is flagrantly unjust, the evils inseparable from the present system are confessedly grave. Merit, not patronage, must be the basis of official tenure. As initiatory to a complete remedy, we earnestly demand such legislation concerning the subordinate offices as shall embrace the following provisions:

1. Appointments shall be made only upon open, impartial, practical tests of the fitness of applicants, giving due preference to persons disabled in the military or naval service of the country.

2. No removals shall be made without cause, or for partisan reasons, or for failure to perform partisan service.

3. Superior qualifications and real merit demonstrated in the actual performance of duty shall constitute the best title to continuance and promotion in office.

We unhesitatingly disapprove of any system of political assessments or demands for contributions under an express or implied threat of removal from office as a penalty for non-compliance, or under any other pretext whatever. The salary of the officeholder is his compensation for services, not a fund subject to draft for party uses. And we go further. Free government can be maintained only when the convictions and choice of the voter find expression in his ballot, uncontrolled by fear or purchase. We view with serious apprehension the growing tendency of the times toward corrupting expenditures of money to control nominations and elections to the public offices. The peril to our institutions is extreme. Open bribery in legislative halls is not more dangerous or culpable. Reform, prompt and thorough, is demanded by every consideration of safety.

Recalling with satisfaction the salutary enactments of the State Legislature for the reformation of the election laws, for the security of the rights of every legal voter, for humane assistance to the needy poor, for a more equitable adjustment of the burdens of taxation, for protection to the interests of the laborer, and for the advancement of the material, moral, social, and educational interests of the Commonwealth, we invite intelligent and candid consideration of all propositions in aid of temperance and good order, for equal rights of suffrage irrespective of sex, and for the encouragement of industry, frugality, contentment, and prosperity among all the people of our honored State.

**ELECTION RETURNS.**—The election in November resulted in the choice of General Butler for Governor, and of the remainder of the Republican State ticket. The vote was as follows:

**GOVERNOR.**

Benjamin F. Butler, of Lowell.....	188,946
Robert R. Bishop, of Newton.....	119,997
Charles Amy, of New Bedford.....	2,187
All others.....	198

**LIEUTENANT-GOVERNOR.**

Oliver Ames, of Easton.....	184,958
Samuel W. Bowerman, of Pittsfield.....	116,678
George Dutton, of Springfield.....	4,083
John Blackmer, of Springfield.....	2,141
All others.....	56

**SECRETARY OF STATE.**

Henry B. Peirce, of Abington.....	186,818
David N. Skillings, of Winchester.....	110,941
John P. Sweeney, of Lawrence.....	4,203
John Howe, of Worcester.....	4,147
Solomon F. Root, of Douglas.....	2,185
All others.....	19

**TREASURER.**

Daniel A. Gleason, of Medford.....	186,886
William A. Hodges, of Quincy.....	115,487
George Foster, of Lynn.....	4,157
Thomas J. Lothrop, of Taunton.....	2,158
All others.....	88

**AUDITOR.**

Charles R. Ladd, of Springfield.....	186,896
John P. Sweeney, of Lawrence.....	111,244
David N. Skillings, of Winchester.....	4,295
Augustus L. Merchant, of Leverett.....	4,108
Jonathan Buck, of Harwich.....	2,129
All others.....	82

**ATTORNEY-GENERAL.**

Edgar J. Sherman, of Lawrence.....	187,008
George F. Verry, of Worcester.....	114,458
Elmer A. Snow, of Athol.....	4,265
Samuel M. Fairfield, of Malden.....	2,098
All others.....	48

Of the eight members of the Executive Council, seven are Republicans and one (from Boston) a Democrat. Democrats were elected to Congress in the fourth, fifth, and sixth districts, an independent Republican in the ninth, and Republicans in the other eight. The vote was as follows:

**FIRST DISTRICT.**

Robert T. Davis, of Fall River.....	11,475
Nicholas Hathaway, of Fall River.....	5,581
George F. Babbitt, of Provincetown.....	229
Prelate D. Conant, of Fall River.....	62
Francis D. Cobb, of Barnstable.....	42
All others.....	9

**SECOND DISTRICT.**

John D. Long, of Hingham.....	12,915
Edgar E. Dean, of Brockton.....	10,152
John W. Willett, of Taunton.....	545
George E. Donham, of Rockland.....	888
All others.....	3

**THIRD DISTRICT.**

Ambrose A. Ranney, of Boston.....	11,968
Horatio E. Swasey, of Boston.....	8,550
Samuel B. Capen, of Boston.....	91
Patrick A. Collins, of Boston.....	74
Nicholas Furlong, of Boston.....	28
All others.....	20

**FOURTH DISTRICT.**

Patrick A. Collins, of Boston.....	12,884
Charles T. Gallagher, of Boston.....	4,546
Wendell Phillips, of Boston.....	123
T. C. Brophy, of Boston.....	70
All others.....	15

**FIFTH DISTRICT.**

Leopold Morse, of Boston.....	11,801
Selwyn Z. Bowman, of Somerville.....	8,792
Amos Cummings, of Woburn.....	82
All others.....	48

**SIXTH DISTRICT.**

Henry B. Lovering, of Lynn.....	12,840
Elisha S. Converse, of Malden.....	11,961
All others.....	9

**SEVENTH DISTRICT.**

Eben F. Stone, of Newburyport.....	10,056
Charles P. Thomson, of Gloucester.....	8,764
Eben Moody Boynton, of Newburyport.....	8,825
J. Newton Emery, of Beverly.....	50
All others.....	26

**EIGHTH DISTRICT.**

William A. Russell, of Lawrence.....	11,269
Charles S. Lilley, of Lowell.....	10,743
Charles E. Cox, of Lunenburg.....	85
All others.....	8

**NINTH DISTRICT.**

Theodore Lyman, of Brookline.....	12,076
John W. Candler, of Brookline.....	9,703
George W. Stacy, of Milford.....	206
Prescott West, of Marlboro.....	186
All others.....	10

**TENTH DISTRICT.**

William W. Rice, of Worcester.....	11,846
John Hopkins, of Millbury.....	9,404
Jason Waters, of Sutton.....	95
All others.....	2

## ELEVENTH DISTRICT.

William Whiting, of Holyoke.....	14,485
Edward J. Sawyer, of Gardner.....	7,602
Warner Johnson, of Athol.....	802
Oscar Edwards, of Northampton.....	168
All others.....	22

## TWELFTH DISTRICT.

George D. Robinson, of Chicopee.....	11,294
Benben Noble, of Westfield.....	9,839
All others.....	25

The Legislature chosen at this election will consist of 22 Republicans and 17 Democrats in the Senate (there being one vacancy), and 140 Republicans and 90 Democrats in the House (there being two vacancies).

**PROHIBITORY AMENDMENT.**—A convention of persons interested in temperance work, irrespective of party or sect, to agitate in favor of an amendment to the Constitution prohibiting the manufacture and sale of intoxicating liquors, was held in Boston on the 28th of September. The following resolutions embody its action:

In view of the fact that the liquor-traffic still continues to be the most fruitful source of crime, misery, pauperism, and taxation in the State, and license is wrong in principle and a failure in action,

*Resolved*, That the manufacture and sale of alcoholic liquors ought to be prohibited by law. That the Constitution of the State ought to be so amended as to prohibit such manufacture and sale within the Commonwealth. That we continue to demand at the hands of the Legislature the submission to the popular vote of the people at the ballot-box of an amendment to the Constitution of the State forever prohibiting the manufacture and sale of alcoholic liquors.

That we recommend to the friends of temperance throughout the State to carefully ascertain how the candidates of the various parties stand upon the question of submission of a constitutional amendment, forever prohibiting the manufacture and sale of alcoholic liquors as a beverage, to a vote of the people, and to vote only for such candidates as will favor such submission.

That we pledge ourselves to call a ministerial convention in favor of such submission to the people.

That we pledge ourselves to call conventions in the large cities and towns in aid of the same.

That we pledge ourselves to circulate petitions among the people and to present them to the General Court in aid of the same.

That the present committee, with needed additions, be made a permanent working committee in aid of the same.

**MISCELLANEOUS.**—In February a destructive fire occurred in Haverhill. The pecuniary loss was about \$2,000,000; the insurance amounted to nearly \$1,800,000; the territory burned over covered an area of from five to ten acres; about sixty buildings in the best part of the city were destroyed; 159 firms, including nearly every shoe-manufacturing concern in the city, two national banks and one savings-bank, were burned out, and between 2,000 and 2,500 persons were thrown out of employment.

On the 12th of October a celebration was held in Marshfield, in honor of the one-hundredth anniversary of the birth of Daniel Webster, which occurred in January.

**MERCHANT MARINE OF THE UNITED STATES.** The decadence of the shipping interests of the United States has attracted an unusual degree of attention during the year, and

aroused the people and Congress to efforts for the discovery of its causes and the provision of a remedy. Since the year 1855 or thereabout, there has been a progressive decline in the tonnage of American vessels engaged in foreign trade, and in the business of building and equipping sea-going ships. The carrying-trade of the country has in that time passed almost wholly into foreign hands. The aggregate tonnage of American shipping of every class in 1861—registered and enrolled, sail and steam, employed upon the ocean, the lakes and rivers, and about the harbors of the country—was 5,539,813 tons. In 1881 it had declined to 4,057,734, a decrease of 27 per cent. The decline in tonnage employed in foreign trade only, during the same period, was from 2,496,894 to 1,335,586, a decrease of 54 per cent. The loss of ground in ship-building is still more striking. In the year 1855 there were constructed of vessels of all descriptions in the United States, 583,450 tons. In 1861 the amount had fallen to 233,194 tons, and in 1880 it was only 157,409 tons. This period covers a time during which the foreign trade of the country has largely increased. The total of American imports and exports in 1855 was \$536,625,366, and over 75½ per cent of the amount was carried in American vessels. In 1860 the whole trade amounted to \$762,288,550, of which 66½ per cent was carried on by American shipping. In 1881 the total volume of imports and exports of the United States had increased to \$1,676,636,000, but of this amount only 16 per cent was carried in American vessels, and the percentage was still lower in 1882. While the marine of the United States was thus sinking into insignificance, that of other countries was making corresponding gains. The tonnage of British vessels engaged in trade rose from 935,000 in 1856 to 7,903,000 in 1880; that of Germany increased during the same period from 166,000 to 1,089,000; that of Sweden and Norway from 20,662 to 1,234,000. The gain of other countries was only less marked. The following table shows the variation in the volume of the foreign trade of the United States from 1840 down to 1882, and in the percentage carried in American vessels:

YEAR.	Total imports and exports.	Percentage carried in American vessels.
1840.....	\$289,227,465	82·9
1841.....	449,797,980	88·8
1842.....	204,858,621	82·8
1843.....	149,100,279	77·1
1844.....	219,687,081	78·6
1845.....	231,901,170	81·7
1846.....	285,180,818	81·7
1847.....	304,867,460	71·1
1848.....	309,031,059	77·4
1849.....	298,618,259	75·2
1850.....	880,037,083	72·5
1851.....	434,612,948	72·7
1852.....	417,955,217	70·5
1853.....	498,954,804	69·5
1854.....	577,290,414	70·5
1855.....	536,625,366	75·6
1856.....	641,004,850	75·2
1857.....	728,850,828	70·5

YEAR.	Total imports and exports.	Percentage carried in American vessels.
1859.....	607,257,571	73.7
1859.....	695,557,592	66.9
1860.....	762,288,550	66.5
1861.....	584,995,066	65.2
1862.....	485,710,714	50.0
1863.....	584,928,502	41.4
1864.....	669,855,085	27.5
1865.....	604,412,996	27.7
1866.....	1,010,988,552	32.2
1867.....	877,020,391	33.9
1868.....	848,527,647	35.1
1869.....	876,448,754	38.1
1870.....	991,896,889	35.6
1871.....	1,192,472,258	31.2
1872.....	1,212,828,238	28.5
1873.....	1,840,899,221	25.8
1874.....	1,312,680,640	26.7
1875.....	1,219,484,544	25.8
1876.....	1,142,904,812	38.1
1877.....	1,194,045,627	26.5
1878.....	1,210,519,899	25.9
1879.....	1,202,708,609	22.6
1880.....	1,618,770,638	17.4
1881.....	1,675,024,818	16.0
1882.....	1,567,071,700	15.5

The following statement shows the tonnage of American and foreign vessels entered at ports of the United States from foreign countries during the years 1871 to 1881 inclusive:

YEAR.	Foreign.	American.	Total.
1871.....	4,890,606	2,608,591	6,994,197
1872.....	5,185,340	2,584,646	7,769,986
1873.....	7,951,464	2,448,285	8,894,749
1874.....	7,094,718	2,914,942	10,009,655
1875.....	6,255,985	2,887,158	9,143,188
1876.....	6,788,124	2,927,780	9,715,904
1877.....	7,448,697	2,957,791	10,406,488
1878.....	8,521,090	3,009,487	11,530,527
1879.....	10,715,394	3,049,748	13,768,137
1880.....	12,111,160	3,140,169	15,251,329
1881.....	12,711,965	2,919,149	15,680,541
Total.....	87,176,965	31,437,686	118,614,651

The following shows at a glance by periods of five years the decline in American shipping, the increase in foreign commerce, and the transfer of the carrying-trade from American to foreign vessels:

YEAR.	Tonnage in foreign trade.	Value of exports and imports.	Per cent carried in American vessels.	Per cent carried in foreign vessels.
1840.....	762,898	\$281,227,465	82.9	17.1
1845.....	904,476	281,901,170	81.7	18.3
1850.....	1,489,694	390,087,098	72.5	27.5
1855.....	2,348,353	586,025,866	75.6	24.4
1860.....	2,378,396	762,288,550	66.5	33.5
1865.....	1,518,350	604,412,996	27.7	62.8
1870.....	1,448,846	991,896,889	35.6	64.4
1875.....	1,515,998	1,219,484,544	25.8	74.2
1880.....	1,814,402	1,618,770,638	17.4	82.6
1881.....	1,297,085	1,675,024,818	16.0	84.0
1882.....	1,259,492	1,567,071,700	15.5	84.5

THE COASTWISE TRADE.—During the same period American shipping engaged in the coastwise trade, which is protected from foreign competition, increased from 1,172,694 to 2,873,638 tons. A striking illustration of the almost complete transfer of the American carrying-trade to foreign hands, appears in the fact that, of the 72,276,000 bushels of

grain exported in 1881, not a single bushel was transported in an American vessel. Over 62 per cent of the entire shipment was taken in British vessels; Italy held the second place, taking over 5,000,000 bushels; Belgium was third on the list, Norway fourth, Germany fifth, and Austria sixth. In 1861 the tonnage of the United States and Great Britain of all classes was approximately equal—5,529,000 for the former and 5,895,000 for the latter. In 1881 the aggregate tonnage for the United States was 4,657,784, but of this 1,057,450 was engaged on the Northern lakes and the Western rivers, 442,000 was of canal-boats and barges, and 64,947 was of licensed vessels under twenty tons. The tonnage engaged in foreign trade was only 1,335,000. The officially registered tonnage of Great Britain, on the other hand, was 6,574,413 in 1880, while it was estimated that the aggregate tonnage of mercantile marine under the British flag was fully double that amount. Of the steam marine of the world, Great Britain was said to own in 1880 63 per cent, registering 5,247 vessels of 2,723,468 aggregate tonnage. The United States, on the other hand, had only 146,604 tons of steam-vessels engaged in foreign commerce.

BUILDING OF VESSELS.—The total of iron vessels built in the United States in six years, from 1876 to 1881 inclusive, was 127,298 tons, and this was for use almost wholly in the coasting-trade, from which foreign vessels are excluded. In Great Britain the iron vessels built during those six years had a capacity of over 2,000,000 tons. The amount constructed in 1881 alone exceeded 600,000 tons, and there were under construction on the last day of that year, 515 steamers of an aggregate capacity of 958,377 tons, and 127 sailing-vessels, of 130,440 tonnage. Meantime there has been a marked increase in the carrying-trade and ship-building of Germany.

The incidental losses of the decline of the American merchant marine are variously estimated. The amount of capital expended in the construction and repair of vessels in the United States in 1855 is stated at \$50,000,000 to \$60,000,000, while in 1881 it was less than half the amount.

FREIGHTS EARNED.—The amount paid in freight charges on exports from the United States in 1879 is said to be \$88,000,000, and on imports \$45,000,000, or \$133,000,000 in all. Of this, fully five-sixths went to the owners of foreign vessels. One writer assumes \$100,000,000 to be a safe and moderate estimate of "the loss which the business and national wealth of the country at present annually sustains by reason of the decay of our industries of ship-building, ship-repairing, and ship-using in foreign commerce," and says that this loss is "nearly equivalent to all the capital invested in all the blast-furnaces of the United States in 1880; to more than one third of the value of the present annual products of all the iron and steel industries of the country; and

to more than 50 per cent of the value of all the products of our cotton manufactures, as returned by the census of 1880." But, he adds, the direct losses are "insignificant in comparison with the indirect losses due to the loss of trade from an inability to make exchanges promptly, regularly, and cheaply with foreign countries."

**CAUSES OF THE DECLINE.**—A study of the causes of the decadence of American shipping shows that its beginning was practically contemporaneous with the introduction of steam in place of sail as a propelling power, and of iron or steel in place of wood as the chief material of construction. Wooden sailing-vessels were made more cheaply in the United States than in any other maritime country, and as a consequence the greatest skill and perfection were attained not only in their construction but in their use. About 1855, when American shipping interests were at their highest stage of prosperity, the tonnage of the country was more than 50 per cent in excess of the needs of the entire carrying-trade in its exports and imports, which shows that it was largely and profitably engaged in carrying commodities for other countries. Moreover, a large amount of tonnage was built each year for sale in foreign markets. This construction for foreign account amounted in 1855 to 65,000 tons. In 1856 it had fallen to 42,000, in 1858 to 26,000, and in 1860 to 17,000. The first steam-vessels were built in Great Britain in 1838, but the growth of this interest was slow at first. The total British steam tonnage engaged in foreign trade in 1851 was 65,921 tons. A beginning in this direction was made in the United States in 1848, when it acquired 16,000 tons of steam shipping. Its increase at first was comparatively rapid, and in 1851 it amounted to 62,390 tons. The advance continued until 1855, when American steam shipping amounted to 115,000 tons. From that time a retrograde movement set in, and the steam tonnage of the United States was less in 1862 than seven years before. The civil war which intervened accelerated the decline, and prevented attention from being devoted to the subject, which might possibly have given a different direction to events. American commerce was, in a measure, driven from the seas by Confederate cruisers and their allies, and American shipping was sold to foreigners on account of the special risks to which its use was subjected. Attention was turned away from ship-building for commercial purposes, and from the fostering of commercial interests in general, and the heavy burdens imposed upon the country in order to raise war revenues had the effect of restricting foreign intercourse and trade. Accordingly, when the war was over, the American merchant marine was well-nigh destroyed. The wooden sailing-vessels had largely disappeared, there had been no increase of steam tonnage, and the slight revival which followed the return of peace affected the coasting-trade mainly, if not wholly. In 1869 the

steam tonnage was 221,939, but in the twelve years following it dwindled to 145,604. Meantime the building of iron steam-vessels had been developing to enormous proportions in Great Britain, and that country had gradually secured the bulk of the carrying-trade of the Atlantic. Some of her mail-steamship lines to remote colonies and to distant parts of the globe, in which the British Empire had possessions or large interests, were developed by the aid of liberal compensation for mail service under special contracts. While the British marine and commercial interests had acquired such overshadowing proportions, and those of the United States had sunk into such insignificance, in the ten or fifteen years following 1855, it was soon found that continued peace and internal prosperity produced no symptoms of recovery on the part of the latter country. On the contrary, the decline continued. It speedily became evident that the primary cause of this state of things was the fact that under existing conditions iron vessels could be more cheaply built in Great Britain than in the United States. The difference has been variously stated at from \$10 to \$15 per ton for iron sailing-vessels, and \$25 to \$35 per ton for iron steam-vessels. But it was also found that many burdens were laid upon American shipping by the laws of the country which would prevent development even if ships could be economically built. There were many antiquated restrictions in the navigation acts, heavy port charges, tonnage dues and consular fees, not to mention State and municipal taxation, which placed American shipping at a disadvantage in competition with that of other countries. Americans were not permitted to buy ships abroad and have them registered in the foreign trade, the materials used in their construction were subject to heavy duties if imported, domestic materials and labor for one reason or another bore a high price, and it was no wonder that ships were neither built nor used to any extent by the United States in foreign commerce. The only chance for development was in the coasting-trade, from which foreign competition was excluded by law.

**THE REMEDY.**—The remedy for this deplorable state of things has been a subject of thought and discussion to an increasing extent for some years. Private citizens and public bodies have given it their attention, until it has been forced to the position of a pressing question. Near the beginning of this year the New York Chamber of Commerce considered the report of a special committee on the subject. Among the suggestions of that committee were the following:

1. The repeal of the existing law of Congress which requires the payment of three months' wages to all seamen discharged in foreign ports. This law was declared to be unjust, not called for by any other nation, and now not applicable, as it was originally intended to protect American seamen, the law requiring American vessels to have only American sailors having been repealed. In addition, the facilities of trans-

portation are so much greater now than in olden times. The period of three months, then deemed a reasonable time to allow for the sailor's reaching home, is not at all required at this age of steam.

2. The repeal of the law obliging all American vessels to transport wrecked sailors for a uniform price of \$10 each, regardless of cost or of distance to be traveled. The committee recommended that the rate of compensation be made 50 cents per day for the time taken in passage.

3. A more liberal law in regard to the admeasurement of vessels.

4. That the existing requirements of the laws of the United States as to life-saving apparatus and other fitting of vessels shall be made uniform with foreign vessels, and either our own reduced to their level, or all such coming to the United States be required to conform to our laws.

5. That the existing law requiring the transportation of mails for a sum not exceeding the postage received be repealed, and the Postmaster-General be authorized to apply a general law to all postal service, and compensate the service at sea "*quantum meruit*," the same as on land.

6. The exemption from all national, State, and municipal taxes of ship property engaged in foreign trade and to and from Pacific ports.

7. The limitation of a ship-owner's individual liability, under all circumstances, to the proportion of debts and liabilities that his individual share of the vessel represents to the whole.

8. The abolition of all fees charged to vessels for consular services; the payment of proper salaries to consuls, so that extortions may not be levied upon ships.

9. The establishment by the Government of bonded warehouses, from which all vessels engaged in foreign trade, or to and from Pacific ports, may withdraw all goods, stores, and supplies of a foreign production and manufacture, free of duty, the same as is permitted in Great Britain.

10. That all foreign materials, of every kind and character, entering into the construction and repair of vessels, be made duty free.

The committee also advocated government aid by means of subsidies to steamship lines. It said:

"It is found that Great Britain, with a keen perception of the incalculable advantage and benefit it is to her people to attain the supremacy of the ocean, has led up to it by a system of subsidies, and it is well known and authenticated that for many years that country has not only aided in its development, but maintained the existence of its commercial lines by a system of subsidies. Were we to follow in her footsteps, it can not be supposed that she will now retrace her path. And, therefore, any action in this line must be made with the foreknown and anticipated fact that she will then, in all probability, increase hers again to our detriment. Still we are of opinion that in Great Britain there is a tendency to oppose this system of subsidies, and your committee do not hesitate to recommend that our Government do, by some system of bounty or otherwise, afford material aid and inducement to the creation of a mercantile marine." Further considering the same subject, the committee takes occasion to say: "Whether it be practicable to build a class of vessels adapted to the carrying-trade, and convertible, by additions, into war-cruisers, the experts of the navy and ship-building interest can best determine. Your committee believe they can be constructed, and if so, no more prompt or efficient means could be adopted than for the Government to extend such aid in the construction of a series of such vessels as would bring about their immediate construction and the establishment of a number of lines to important foreign points, and thus supply the most serious defect in time of war, and afford additional markets for our productions. Your committee also

recommend a bounty to encourage the building of wooden vessels."

**INVESTIGATING COMMITTEE.**—Near the close of the first session of the Forty-seventh Congress, the Hon. Perry Belmont, of New York, proposed in the House of Representatives that a special joint committee of the two Houses make an investigation of the condition and needs of American shipping interests, and report at the beginning of the next session. The joint resolution directing the investigation was adopted, and Messrs. Warner Miller, of New York; O. D. Conger, of Michigan; and G. G. Vest, of Missouri, were appointed members of the committee on the part of the Senate, and Messrs. Horace F. Page, of California; Nelson Dingley, of Maine; S. S. Cox, of New York; J. W. Candler, of Massachusetts; Robert Mc Lane, of Maryland; and George M. Robeson, of New Jersey, on the part of the House of Representatives. The committee met in New York not long after the adjournment of Congress, chose Senator Miller as chairman, and issued a circular containing the following questions, to which replies were solicited from those having knowledge of the subject or suggestions to offer:

1. Why can not this country build iron, steel, or wooden vessels as well and as cheaply as they are built in Scotland, England, or other countries?
2. If we had such vessels without cost to us, could they be run by us in competition with those of other countries who build their own vessels and run them with their own officers and crews, without a modification or repeal of existing laws?
3. What modifications of existing laws or what new laws are required to remove discriminations against and burdens upon our shipping and ship-owning interests, such as customs dues, port dues, consular charges, pilotage, tonnage, and other dues, etc.?
4. Compare the laws of other countries with our own with a view to their effect upon our and their shipping and ship-owning interests.
5. Should our navigation laws be repealed or modified, and, if modified, wherein and for what purpose?
6. What is the cost of the component materials of iron, steel, or wooden vessels in other countries and our own?
7. What would be the effect of a rebate on any or all such materials?
8. Present any other statements connected with the cause of the decline of the American foreign carrying-trade, and what remedies can be applied by legislation.

The committee met again in New York in November, to consider the replies received to these interrogatories, and to take oral testimony on the subject-matter of their inquiry. This testimony occupied several days, and came from ship-builders, merchants, experienced ship-masters, students of the question, and others. The committee prepared a bill for submission to Congress, which was agreed to by all the members, but two separate reports were made, and certain amendments to be offered to the bill at the proper time were prepared by the minority of the committee. The bill was reported simultaneously by Mr. Conger, in the Senate, and Mr. Dingley, in the House, on the 15th of December, and referred to the Committees on Commerce of the two

Houses. The minority report was submitted the same day, signed by Senator Vest and Representatives Cox and McLane.

**REPORT OF THE COMMITTEE.**—The general report of the committee to accompany the bill followed the next day, and bore the signatures of all the members. The bill, as reported, consisted of twenty-three sections, and was entitled "An act to remove certain burdens on the American merchant marine, to encourage the American foreign carrying-trade, and to amend the laws relating to the shipment and discharge of seamen." The first section makes some change in the law with reference to the registration of vessels, but restricts its benefits to those "wholly owned by citizens and to be commanded by a citizen of the United States." The second section strikes from the statutes the tax of fifty cents per ton on vessels, "any officer of which shall not be a citizen of the United States." The only important change made by these two sections was to limit the restrictions of the old law as to citizenship to the commanding officer instead of applying it to all officers. The third section modifies the provisions as to the discharge of seamen at foreign ports on their own application by consular officers of the United States. The payment of the wages due may be exacted, but, if the seaman is discharged on account of illness or inability to perform his duties, he is entitled only to the wages due; while, if he is discharged on account of any hurt received in the service of the vessel, or disease caused by improper or insufficient treatment, the master of the vessel must provide proper care for him until he recovers, dies, or is brought back to the United States. Section 4 abolishes the old requirement of three months' extra pay when a seaman is discharged at a foreign port upon the termination of his agreement, or when the vessel becomes stranded, wrecked, or unfit for further service. If the consular officer is satisfied that the master of the vessel has designedly continued the voyage beyond the term of the agreement with the seaman, he may require payment of one month's wages, unless the master finds employment for the seaman, or provides for his passage home. Section 5 requires that, in case a vessel is sold in a foreign country, the master shall pay to a consular officer of the United States one month's wages for all discharged seamen, or provide them with other employment, or else provide for their passage home. Section 6 provides for an examination by consuls into cases of desertion of sailors, and, when they are satisfied that it was caused by unusual or cruel treatment, they may require the payment of wages due, and of one month's extra wages, unless employment on some other vessel is provided, or means furnished for returning the deserter to his own country. The seventh and eighth sections make consuls responsible to seamen for wages and charges collected in their behalf, but permit the retention of the

amount necessary to pay the expenses which they may have incurred before shipping again. Section 9 requires the masters of American vessels bound to home-ports to take destitute seamen, on the request of consuls, at a charge not exceeding \$10 each; but, in case of long voyages, or peculiarly disabled condition of the seamen, there may be an extra allowance, not exceeding 30 cents a day, made by the collector of the port at which the vessel arrives. A penalty of \$100 is provided for any refusal of a master of a ship to take a destitute seaman home on the request of a consul, but no master shall be required to take more than two such seamen for every 100 tons burden of the vessel. Section 10 abolishes consular fees for certificates, manifests, or other official service to American vessels, or their owners, officers, or seamen, and provides for payment for the service out of the Treasury of the United States. Section 11 prohibits the payment of advance wages to any seaman, or to any person on his account. This prohibition is applied to foreign as well as American vessels employing seamen in United States ports, and is intended to do away with what is known as the exaction of "blood-money." The abuse at which it strikes is that of trusting sailors for board, and other expenses, and then obtaining employment for them from the masters of vessels, and securing reimbursement from advances on account of their wages. Section 12 requires each vessel to carry a slop-chest, with supplies of clothing, blankets, etc., which shall be sold to seamen at a profit not exceeding 25 per cent upon the reasonable wholesale price. Section 13 gives to masters and owners of vessels the right to ship and pay off men without the intervention of shipping commissioners or the payment of fees. Section 14 provides for the admission in bond, for use free of duty, of articles and materials used in the repair of vessels engaged in foreign trade, and of all ships' stores, cordage, rigging, canvas for sails, and coal to be used and consumed on such vessels. Section 15 abolishes tonnage dues and the requirement of consular certificates in the case of vessels trading with the Dominion of Canada. Section 16 reduces the assessment of 40 cents a month upon seamen for hospital dues to 20 cents a month. Section 17 limits the liability of individual ship-owners to the proportion of the ship's debts that each owner's share in the vessel bore to the whole, and the aggregate liability of all the owners to the value of the vessel. Sections 18 and 19 are as follow:

**SECTION 18.** That when any vessel, whether steam or sail, shall be constructed and equipped in the United States for the foreign trade, including the trade between the Atlantic and the Pacific ports of the United States, in whole or in part, of materials of the production of the United States, the owner or owners of such vessel shall be entitled to receive and collect from the United States a drawback or sum equal in amount to the duty which would have been collected upon imported materials of like description and of equal qual-

ity with the American materials used in the construction, equipment, engines, boiler, and other appurtenances of such steam or sail vessel; provided that in ascertaining such drawback the duties on such iron or steel shall be computed on iron and steel advanced in manufacture not beyond the point of plates, angles, bars, and rods; and provided further that this section shall apply only to vessels commenced after the passage of this act.

Sec. 19. That such sums shall be paid in the same manner and from the same funds as drawbacks on customs duties and under such regulations as may be adopted from time to time by the Secretary of the Treasury, and shall be regulated and the amount thereof determined prior to the registry of such ship or vessel.

Section 20 provided for a new form of registry certificate. Section 21 allowed a drawback of duties on foreign materials used in the construction of vessels for foreign account. Section 22 exempted all vessels employed in foreign trade from state and municipal taxation; and section 23 simply repealed conflicting legislation.

The report of the full committee which accompanied this bill briefly reviewed the condition of American shipping and the difficulties with which it was beset, and justified the provisions recommended for its relief. In regard to the drawback on materials provided for in section 18, the committee gave the following illustration of its intended effect:

For the purpose of illustrating what would be the practical working of the foregoing plan, we have obtained from the Delaware River Iron Ship-building and Engine-Works a schedule of the materials actually used in constructing two first-class passenger and freight steamships for the Pacific trade of 2,181 tons each, having a speed of thirteen knots. It appears that 3,709,845 pounds of iron, mainly in the form of plates, angles, and bars, were used in the construction of the hull, engines, boilers, etc., of each steamship. The duty on iron, if imported in these forms, would average under the present tariff about 14 cent per pound, or about \$26 for each ton of the steamship. The duty on the other materials used in the hull, equipment, and furniture of the steamship would carry up the drawback allowed from the Treasury to about \$34. As the cost of each of the steamships to which we have referred was \$286,317, or \$134 per ton, the net cost to the original owner of a similar steamship under the foregoing plan, after deducting the drawback, would be about \$100 per ton, which, from all the information obtained by your committee, would be substantially the cost of a similar steamship built upon the Clyde. If the steamship were intended only for freighting, with the speed of seven or eight knots, usually found in English freighting steamers, the quantity of iron used, and consequently the drawback and cost, would be considerably reduced. In the case of iron sailing-vessels only about five eighths of the iron used in a first-class steamship for hull, engines, etc., is required for a given tonnage, and the drawback would be about \$15 per ton. The proposed drawback, therefore, will practically effect the increased cost of building an iron steamship in the United States over its cost on the Clyde. This is the unanimous judgment of ship-builders and owners, so far as your committee have heard from them. This is the judgment also of the Board of Trade of San Francisco, which proposed this plan; the Maritime Association of New York, and other commercial boards. So far as the original cost of any kind of a vessel affects the question of the restoration of the American flag to its proper position on the ocean, there is good reason to believe that the policy proposed will solve the problem. It should be borne in mind, however, that the United States Treasury re-

ceives annually about \$1,500,000 from the tax on tonnage engaged in the foreign trade. This tax is not imposed on vessels engaged in the coastwise trade or on any other industry. In 1880 this tonnage tax yielded \$1,490,544, of which \$237,863 was paid by American vessels. During the last fiscal year the amount of the tax was little less, but it is certain to increase as our foreign commerce enlarges. There would be a general concurrence in the justice of abolishing the tax were it not for the fact that England and most foreign nations impose a similar tonnage tax on all vessels entering their ports, and the further fact that five sixths of our tonnage tax is paid by foreign and only one sixth by American vessels, and on account of reciprocal commercial treaties the tax can not be abolished as to our own vessels without also working abolition as to foreign vessels. We can, however, and should use this tax or its equivalent to encourage our own merchant marine employed in the foreign trade. This was precisely what England did when she granted \$10,000,000 out of her tonnage tax to make the Clyde the most favorable location in the world for iron ship-building.

On the reasonable supposition that the tonnage tax will amount to \$10,000,000 during the next five years this alone would meet the drawback demands under the plan proposed for at least 400,000 tons of new steamships and sailing-vessels for the foreign trade during that period. This increase of tonnage would itself go far to revive our foreign carrying-trade, without taking a single dollar from the ordinary revenue. If the addition to our tonnage should be more than this, the additional appropriations required would be wisely expended. From any point of view the experiment is one which affords much promise, and in view of the general indorsement it has received from Boards of Trade and commercial men, and the national importance of the end sought to be reached, ought to be given a thorough trial. If in addition to this direct aid the United States shall imitate Great Britain in giving contracts to private ship-yards to build a portion of any steel war-steamships which it may be deemed wise to construct for our navy, there is reason and hope that favorable results would follow. As it is essential for our iron and steel ship-yards to place themselves in a position to secure contracts for building vessels for South America and perhaps other foreign countries, your committee recommend that a drawback of 90 per cent be allowed on any imported materials of a vessel constructed in the United States for foreign account.

In regard to exemption from taxation the committee said:

There is no one thing that has had more to do in rendering it difficult to sail an American vessel in competition with an English steamship than the different system of taxation of shipping, as well as other invested capital in the two countries. The English system of taxation is on incomes, ours on the value of the property. For example, a steamship valued at \$500,000 and earning 8 per cent net, or \$40,000 annually, would pay in England an income-tax of about 2 per cent, or only \$800. A similar steamship under the laws of every State but Massachusetts and New York (which have recently exempted vessels from local taxation engaged in the foreign trade), and possibly Pennsylvania, would pay a tax of about 2 per cent on the value, or \$10,000. Thus in the single item of taxation, the steamship under the English flag would have every year an advantage of \$9,200, which in so close a business as the foreign carrying-trade would of itself be enough to make it impossible to sail an American steamship in competition with an English rival. Your committee are unanimously of opinion that it is of vital importance to the revival of the American foreign carrying-trade that this difficulty should be removed either by State or Federal legislation. Your committee think that the element of local taxation enters so largely into the solution of the

problem of sailing American vessels that it is incumbent on Congress to exercise the power of regulating commerce, which it possesses under the Constitution, to the extent of prohibiting State and municipal taxation of vessels engaged in the foreign trade.

The following recommendation concerning compensation for mail service has no bearing on the provisions of the bill reported:

The law as it exists (section 3,976, Revised Statutes) compels the master of every American vessel engaged in the foreign trade to carry such United States mails as may be tendered him by the Post-Office Department, and allows him as compensation for such service a sum not exceeding 2 cents per letter carried. In no case is this an adequate compensation, and in some instances it does not pay the cost to the vessel of delivering the mails at the post-office or the port of arrival. The pay to United States vessels in the foreign trade for transporting the mails in 1880 was only 2½ cents per mile, while at the same time the steamers on our coast which contracted to carry the mails received 57½ cents per mile for mail service. The contrast between our inadequate mail pay to American vessels engaged in the foreign trade and the very liberal mail pay given by Great Britain to her steamship lines only serves to show more clearly the injustice and unwisdom of our policy. Since 1840 England has paid more than \$250,000,000 for mail service, with the deliberate purpose of establishing and maintaining steamship lines to connect the United Kingdom with all parts of the world. Even in one year she paid about \$3,000,000 to her steamship lines for mail service, which was \$1,641,300 more than she received from mail matter transported by them. As this subject is before the postal committees of both the Senate and the House, we refrain from reporting any legislation, but unanimously recommend such a modification of our laws as will give fair compensation to American vessels in the foreign trade which may carry our mails, and adequate pay for mail service to American steamship lines that are already or may be hereafter established.

In conclusion, the committee said:

It is unnecessary for your committee to dwell on the great importance of any and all legislative measures that will tend to a revival of the American foreign carrying-trade, and a restoration of the American flag to a position on the ocean commensurate with our population, wealth, and rank in the family of nations. The problem presented to Congress involves interests of exceptional importance. The great agricultural interests of the West and South are especially concerned. To-day at least 85 per cent of their products exported to other countries depend on foreign vessels, mainly English, for transportation, and, unless something is speedily done to relieve American shipping engaged in the foreign trade, our dependence on English ocean-steamers will be complete. This places our commerce at the mercy of England. In case of war between that country and another power able to put cruisers on the ocean, American farmers and the American people as a whole would suffer nearly as much as the belligerents, by having their exports and imports in British bottoms liable to capture and confiscation. . . . While some of the members of your committee do not concur in all the statements and reasoning of the foregoing report, and would recommend additional legislation, yet all concur in recommending the passage of the accompanying bill.

A minority of the committee, composed of its Democratic members, made a separate report, in which a free admission of foreign-built ships and of foreign materials for ship-building was advocated. Its main suggestions were presented in the following form:

1. Let us use, and then we will have cause to repair, and then build. Then the native inventive faculty of America will be aroused, and something will be the result, and that something can not but be better than our present forlorn condition.

2. If we are to build ships in the United States in competition with other nations—and unless we can do so, the ships we may build will never be voluntarily bought or used by our own citizens or any others—our ship-builders must have their materials for construction as cheap as the builders with whom they are to compete. Either allow the importation free of duty of all the material and stores that enter into construction and equipment of ships, or reduce the tariff. So long as the business of constructing iron steamships has to bear the burden of high prices consequent on protective duties, averaging 40 per cent, it can not compete with like industries in free-trade countries. There is no possibility of evading this conclusion. It will be seen by the majority report that our committee, in dealing with the desperate straits of our shipping interests, do recommend a rebate on articles for domestic and foreign account which enter into the making of ships.

3. If foreign competing maritime nations do not subject their ships to local taxation, the United States evidently can not afford to do so. If Congress under the Constitution has the power, it should exempt as instrumentalities to commerce all vessels engaged in foreign or interstate commerce from every form of local, State, or municipal taxation. Concede to the States the right to tax the instrumentalities of interstate or foreign commerce in any degree, and you concede to the States the right to say there shall be no interstate or foreign commerce, for the right to impose 1 per cent of taxation involves the right to impose 100 per cent, or, in other words, the right to destroy.

The report then quotes from opinions rendered by the United States Supreme Court in the case of *Weston* against the State of Missouri and the *Western Union Telegraph Company* against the State of Texas, to show that the court has decided the question unequivocally that foreign and interstate commerce are under the taxing control of the Federal Government. It continues as follows:

Therefore, the full committee, confident of this Federal power over commerce, do not hesitate to present a section of a general nature which overrides all State and Federal taxation. We thus would relieve ships and shipping from these burdens.

4. Reduce all the expenses, taxes, and other burdens on shipping. There can be no objection to the proposed changes of the laws relating to the payment of extra wages to seamen, with some exceptions, or when a vessel is sold, or the voyage improperly continued beyond the port to which the sailors shipped; when the vessel is found to be insufficiently provisioned, and when the master refuses to correct the same. When, by reason of injury to the seamen in the line of duty, or of disease contracted because of want of proper food on shipboard, is it not proper to hold the ship responsible for the expenses incidental to the sickness? The amendments of the Revised Statutes as to transportation of disabled sailors; as to the remission of consul fees; as to the importation in bond, free of duty, of ship supplies for vessels in the foreign trade; as to the reduction of the Marine Hospital tax on seamen from forty to twenty cents; as to the abrogation of the tonnage tax on vessels engaged in trade with Canada; as to the limitation of the part owner of a vessel proportionate to his share, and in case of death and disability by one of the mates of a vessel on a foreign voyage; of the employment of a foreign seaman—these are proper reforms, and in the interest of shipping revival.

5. There is no reason why we should not add to this catalogue the repeal of the United States shipping

act of 1872 (title 53, Revised Statutes). It is a heavy tax on shipping. For its repeal there is a general sentiment in the testimony, with the exception of Captain Duncan, who, with his family and employes in the Shipping Commissioner's office, has used and yet uses the thousands exacted from shipping, and this, too, without any benefit to any one except those who administer the law. The committee, however, have only gone so far on this topic as to allow the ship-master to select his own crew where he elects to do so, and this will relieve the shipping interest, in the opinion of the committee, of a great and crying evil. Under this law our consuls are authorized to act as shipping commissioners in foreign ports, and to exact a fee of two dollars for shipping each seaman. In addition to this, consuls exact their consular fee for certifying each shipment. The expense of procuring each seaman is thus three dollars, and two dollars in addition for the agent who procures the seaman, making in all five dollars. Under the British law the cost is only equivalent to two shillings, or forty-six cents. If, however, the decline of American shipping continues much longer, these reforms will be unnecessary, for there will be no sailors hired or discharged, and no necessity of invoking or discarding the co-operation of consuls, for there will be no ships of ours engaged in foreign trade.

6. Reform and revise the tariff, and the natural resources of our country and the intelligence of our people are such that, with the reduction of the burden of taxes and prices consequent on low rates of duty, we shall regain in the next twenty years more than we have lost in the last twenty, and become the first maritime nation of the world.

7. Without resorting to the artificial expedient of subsidies and bounties, let Congress assimilate in their treatment steamships and railroads on established routes, to the extent of paying steamships for carrying the mails of the United States good compensation—as good as the Government now pays railways for performing similar service.

In conclusion, the minority report says:

Whatever may be the cause of this decay, the main obstacle to its resuscitation, and without the removal of which all other legislation is futile, is the obstruction to commerce by the tariff. This adds its 40 odd per cent, not to speak of prohibition; to the other obstructions which the committee propose to remove by the bills ordered to be reported. When we reform our whole tariff system and extend our markets for our continually increasing surplus, we may revive the means by which we ourselves may exchange the products of this country with those of other countries, and thus not only save the \$140,000,000 paid to foreigners in freightage and fares, but gradually resuscitate that art, the very apprenticeship to which is almost obsolete.

The decadence of our shipping, and its causes, are all too familiar to the public mind. The selfishness which prevents its resuscitation is no less familiar. It is an old, old story. The minority of the committee would repeat it in detail, were it not known to every tyro in commerce and economy. They would rehearse if by studying the causes of the decay we could remove the effects. The simple truth is, the removal of the causes of decay will not revive shipping. Our shipping interests have been choked by other interests—choked to death. Restrictions cumber our statutes. In a country so abundant in production as ours, which seeks every market, and is unlimited in its range of enterprise, the capital policy is *mare liberum*. Give us a free sea and freedom to trade upon its bosom, permit us to buy in the best market the material to fashion vessels of the best quality and to bring the completed ship where our competitors buy their vessels, and even without the opportunity which foreign wars may give to our carrying-trade, and with the aroused inventive faculty of America consequent upon our freedom to use our energy and skill, and with the natural laws

and their conditions to aid intelligence and interchange, and we may once more find the capital, labor, and genius of our countrymen evoke from the sea, as they have from the land, its most valued treasures. Our merchant marine languishes for lack of liberty. Its revival must come from the enlargement of our freedom.

The minority of the joint select committee, while concurring with the report as to the measures reported by the committee, desire also to present two other propositions: First, for the admission free of duty of all the materials finished and perfected and ready to put together a ship; and, second, for the free admission to American registry of ships built abroad.

The amendment to the bill proposed by the minority of the committee was in the following terms:

All or any part of the materials, whether wood, steel, or iron, copper, yellow metal, bolts, spikes, sheathing, treenails, canvas for sails, whether flax or cotton; rigging and cordage, whether hemp, Manila hemp, or iron wire; anchors and cables, iron plates, castings and forgings, angle-irons, beams, masts, yards, rivets, bolts, nuts, screws, engines, boiler-plates and tubes and machinery, and all other materials and appliances which may be necessary for the construction and equipment in whole or in part of vessels, whether steam or sail vessels, to be built and furnished in the United States after the 1st day of January, 1883, may be imported in bond under such regulations as the Secretary of the Treasury may prescribe, and, upon proof that such materials have been used for such purpose, no duties shall be collected or paid thereon. That from and after the 1st day of January, 1883, any citizen or citizens of the United States may purchase the whole of any steam or sail vessel, no matter where said vessel may have been built, whether within the United States or in a foreign country, or whether said vessel shall be registered free of duty as to her hull, spars, appliances, outfit, and equipment (including boilers, engines, and machinery if a steam-vessel) as a vessel of the United States by the collector in any port of entry of the United States, to whom application for such registry may be made by said citizen or citizens, in the same manner as though said vessel had been built in the United States.

The bill came up in the House of Representatives early in January, 1883, and was the subject of an animated discussion. On the 11th of that month the free ships and free materials amendment was in substance adopted by a vote of 125 to 104, the drawback provision of the eighteenth section being also retained, but on the following day the House receded from this action and struck out the whole section as amended, and the others supplementary to its provisions. Section 14 was modified so as to permit the admission of foreign materials, without payment of duty, to be used in the construction and equipment as well as the repair and supply of vessels built for and used in foreign trade, including that between the Atlantic and the Pacific ports of the United States. Section 15 was changed so as to substitute for the existing tonnage tax a duty of six cents per ton on each entry of vessels from the ports of Canada, the West Indies and Mexico, and southward to and including Panama and Aspinwall, and twelve cents a ton on vessels from other foreign ports. The section relating to State and municipal taxation was stricken out. With a few other unimpor-

tant changes the bill was passed by a decisive majority. The vote in favor of striking out the drawback, free ships, and free materials provisions, was 159 to 54.

The bill went to the Senate and was referred to the Committee on Commerce. Strong objection was made by the regular lines of foreign steamers to the fifteenth section, which would increase their tonnage dues materially. Under existing laws these dues were thirty cents a ton per year. This bill would make them twelve cents a ton for each entry, and some of the regular steamers made ten or twelve entries in a year. On the other hand, many foreign sailing-vessels did not enter an American port more than once in a year, and their tonnage dues would be materially reduced. The Senate committee agreed to strike out this whole section, and also the thirteenth, which dispensed with the necessity of employing seamen through the intervention of the shipping commissioner. The committee then added a section repealing the provisions of the existing statutes which obliged all American vessels to carry the mails at a rate of compensation not exceeding the ocean postage, and providing for contracts with vessels of American registry for carrying the mails, under which the Government should pay "not exceeding one dollar per mile on the trip each way," contracts to be entered into, after public advertisement, with the lowest responsible bidder. The aggregate to be expended for this service was limited to \$1,500,000 per year, and the term of the contracts was to be for four years. The bill as amended was reported to the Senate, but not taken up for action until the last day of the session. The amendments striking out the thirteenth and fifteenth sections were then agreed to, and that providing for a mail subsidy was rejected, and the bill was then passed and sent to the House for concurrence in the amendments. That body was engaged in contest over an election case, in which the Democrats were filibustering to prevent action, while the Republicans would permit nothing else to be done. The result was, that no further action could be secured on this important measure, and it failed, leaving American shipping without any relief whatever from the burdens and exactions that have so nearly destroyed it.

**METALLURGY. IRON-SMELTING BY THE DIRECT PROCESS.**—The Siemens direct process for smelting iron has come into general use, with satisfactory results in effecting a saving of time and in the consumption of fuel, the principle of which was stated by Dr. Siemens in a communication to the Iron and Steel Institute in September, 1877, as follows: "In mixing comparatively rich iron-ore in powder with about 25 per cent of its weight in pounded coal, and in exposing the mixture for some hours to the heat of a common stove or of a smith's fire, metallic iron is formed, which, on being heated to the welding-point on the same

smith's hearth, may be forged into a horse-shoe of excellent quality. The admixture with the ore of some fluxing material, such as lime or clay, will, in most cases, be of advantage to rid the iron of adherent slag. The process is conducted in a rotatory furnace, as follows: The ore to be smelted is broken up into fragments not exceeding the size of peas or beans; to it is added lime or other fluxing material, in such a proportion that the gangue contained in the ore and flux combines, with only a little protoxide of iron, into basic and fluid slag. A charge of, say, 20 cwt. of ore is put into the furnace when fully heated, while it is slowly revolving. In about forty minutes this charge of ore and fluxing material will have been heated to bright redness, and at the same time from five to six cwt. of coal of uniform size are added to the charge, while the rotative velocity is increased, in order to accelerate the mixture of coal and ore. A rapid reaction is the result: the peroxide of iron, being reduced to magnetic oxide, begins to fuse, while metallic iron is precipitated by each piece of carbon, and the fluxing materials form a fluid slag with the silicious gangue of the ore. Resorting again to the slow rotative action, the mass is turned over and over, presenting continually new surfaces to the heating lining and to the flame within the rotator. During the time of this reaction, carbonic oxide, besides the hydrocarbon contained in the coal, is evolved from the mixture of ore and carbon, and heated air only is introduced from the regenerator to effect its combination within the rotating chamber. When the reduction of the ore is nearly completed, the rotator is stopped in the proper position for tapping off the fluid cinder, after which the quick speed is imparted to it, by means of which the loose masses of iron contained in it are rapidly collected into two or three metallic balls. These are taken out and shingled in the usual way of consolidating puddled balls, when the furnace is tapped again and is ready for another charge at once." Comparing, on theoretical grounds, this method of producing iron with the operation of the furnace, it appears that while in the blast-furnace the products of combustion consist chiefly of carbonic oxide, and issue at a temperature of more than 350° C., the result of combustion in the rotatory furnace is carbonic acid, the temperature of which rarely exceeds 175° C. Dr. Siemens estimated that his process was competent to produce a ton of iron balls with a consumption of 25 cwt. of coal, and a ton of cast steel with a consumption of 40 cwt. of coal. The first effort to introduce the process into the United States, which was made at Pittsburg, Pa., in 1878, was pronounced a failure. Afterward a rotator was set up at Tyronne, Pa., on a plan a little larger than that used by Dr. Siemens, from which between 80 and 85 per cent of the iron in the ore was produced, with 3,800 pounds of coal per ton of blooms. The results were considered sufficient-

ly satisfactory to warrant the construction of a larger concern at Pittsburg by the Siemens-Anderson Steel Company. The rotator plant of this establishment consists of four vessels measuring 11 feet 4 inches in diameter and 12 feet in length inside the shell, lined with Woodland fire-brick four and a half inches thick. The entire charge of ore, limestone, and reducing coal, is introduced at once. The vessel is slowly rotated at the rate of one revolution in every fifteen or eighteen minutes. In about four hours the slag begins to form; and, when it becomes perfectly liquid, it is tapped off. The flow of slag continues until the completion of the heat and the drawing of the balls. The yield of iron with fair grades of hematite ores, in December, 1881, ranged from 34.3 to 47 per cent. Several charges with Lake Superior and Tyrone ore have yielded more than 50 per cent; and Mr. George W. Maynard, of New York, who has given an account of the enterprise before the American Institute of Mining Engineers, expresses no doubt that an average yield of 50 per cent can be kept up with this mixture. The average time for forty-eight heats, "through good and bad," from the charging of the ore to the drawing and shingling of the balls, was a little more than nine hours, and it was anticipated that with more experience the time would be reduced to eight hours, or three charges in twenty-four hours, with a product of 15 tons of blooms. The cost of 38 tons of hammered steel blooms produced during the week ending December, 1881, was \$30.15 a ton; with regular working, however, 90 tons might have been produced at an estimated cost of \$25.24 a ton. The blooms have proved to be of excellent quality, and the steel made with them upon the open hearth is superior to that made with scrap-iron or scrap-steel. The cost of making open-hearth spring steel from the blooms is estimated by Mr. Maynard to be \$37.18 a ton. The results so far obtained at Tyrone and Pittsburg, though very encouraging, are far short of what Dr. Siemens has set out to accomplish. That mark has, however, been reached at the works in Landore and Worcester, England, where from one ton of small Somorrostro ore and twelve hundred-weight of hammer or roll scale, with one ton of producer coal and six hundred-weight reducer coal, has been produced one ton of iron, at a cost of £1 12s. 9d.

In the Bromfield direct process of Mr. J. Coley-Bromfield, Hone, near Brighton, England, the iron-ore and coal, or coal-dust, are reduced to a powder by means of a Marsden or a Western pulverizer. The pulverization of the ore may be facilitated by previously calcining it. For this purpose it is roasted in grated ovens above a tank filled with water. The roasted ore can pass directly from the ovens into the water in the tank, when it becomes so disintegrated and friable that the reduction can afterward be accomplished at an expense almost nominal. The crushed iron-ore

and coal-dust are then mixed, and to them is added carbonate of lime, also powdered, ready for mixing, alumina and sand, after which the materials are passed through a mixing-machine. The compound produced by the mixer is then made plastic by adding a mucilage extracted from steamed sea-weed, which cements it together, and it is then molded and compressed in a kind of brick-making machine. The compressed materials, in the form of bricks or cylinders, are then removed to a retort, when they are consolidated into coke by a process similar to that for gas-making, but with a specially constructed furnace. Carbonate of lime or calcium oxide is added to the fire-clay in the upper part of the retort, to absorb the sulphur given off from the ore during the process of distillation. As the materials have been powdered and intimately mixed so as to be brought within the close grasp of their several chemical affinities, a great saving of fuel is effected and the output of the furnace is largely increased. Mr. Bromfield expresses confidence that the adoption of his process in the old blast-furnaces will be attended by several salutary results, among which are an increase of 30 per cent in the weekly produce of iron; the invariable production of a pig wholly free from injurious impurity and yielding malleable metal of the largest fiber, no matter how much sulphur may originally have existed in both the fuel and the ore; a very large saving in the average quantity of fuel now required for the smelting of each ton of pig; and the realization of all these advantages at a cost so small as to be hardly worthy of consideration when viewed in connection with the additional net profit. Another advantage is claimed in the high commercial value of the results to be obtained by economizing and utilizing the products contained in the materials placed in the retorts, but which under the present usage are allowed to escape into waste. It is believed that these products will alone repay the cost of preparing the iron-ore for the smelting-furnaces.

APPLICATIONS OF MANGANESE BRONZE.—Great improvements are promised in the construction of steamship-propellers from the adoption of manganese bronze. A theoretically perfect propeller should have blades presenting the requisite surface of the right form to act against the water so as to utilize the whole power of the engines in the line of the vessel's keel, while no resistance should be excited from cleaving the water. These conditions can not be realized, because there is a limit to the extent to which the thickness of the blade can be reduced, and it is impossible to do away with surface-friction; but a nearer approach can be made to them with the use of the substance just named than with any other material that has been suggested for the purpose. Manganese bronze has great strength and toughness, its transverse strength being double that of the best gun-metal, and up to

the elastic limit nearly double that of cast-steel. The blades, therefore, can be made of it much thinner and lighter than of steel and gun-metal. The blades, when cast, come out of the sand true and smooth, and, as they do not have to be annealed, are wholly free from the distortion to which steel blades are liable in passing through that process, and which, inducing a variation from the theoretical form, causes in them a serious waste of power. This metal is also free from the liability to pitting and corrosion, for which allowance has to be made in all steel propellers by giving them greater thickness than is necessary for strength, and thereby increasing the resistance; and it is practically incorrodible. Other practical advantages which may arise from the use of this substance are the reduction in weight effected by its use, with a corresponding reduction in the stem-frame of the vessel in a heavy sea; and facility of restoring the shape of the blades if they are bent, and of replacing them if they are broken. The drawback lies in the cost of manganese bronze, which is about twice, for the same weights, that of steel; but the friends of the use of this metal assume that this will be more than offset by the reduced quantity of the metal that will have to be employed, and in the practical indestructibility of the manganese bronze. Steel propellers require to be renewed every few years; those of manganese bronze, it is claimed, will last the lifetime of the vessel.

Dr. G. Dudgee, of New York, has invented a process for manufacturing iron direct from the ore by the aid of crude petroleum as fuel, in a special revolving furnace. It employs two furnaces, which are placed at slightly different levels, with a total length of 120 feet, the working capacity of which is a hundred tons of ore in twenty-four hours. The ores are pulverized and then submitted to the action of an oxyhydrogen-flame produced by a blast of air with petroleum and coal-dust. The first experiments with this process were reported to be successful and encouraging; but late statements of its working have not been published.

**DEPHOSPHORIZATION IN IRON-SMELTING.**—The Gilchrist-Thomas, or basic, process for the dephosphorization of iron in working the ore depends for its efficacy upon the power of lime to absorb phosphoric acid. When it is used in connection with the Bessemer process, the Bessemer vessel is lined with magnesium lime, which has been previously subjected to an intense white heat, and so brought to a condition of density, tenacity, and hardness in which it resembles granite or flint more closely than ordinary well-burned lime, in which condition it is known as "shrunk lime." Before the metal is run into the converter, from 15 to 18 per cent of its weight of common well-burned lime is thrown into the vessel. The metal is then introduced and the charge is blown in the ordinary way to the

point at which the ordinary Bessemer operation is stopped—that is, till the disappearance of the carbon, as indicated by the drop of the flame. The dephosphorizing process requires, however, to be continued for from one hundred to three hundred seconds longer, during which the great bulk of the phosphorus is removed. Not only is the phosphorus removed by this operation, but the silicon also, of which inconvenient and even dangerous quantities are occasionally left in the Bessemer process, is entirely eliminated, while at least 60 per cent of any sulphur, also untouched in the ordinary process, which may have been present in the pig, is also expelled. The phosphorus is, in fact, made a real assistance in the perfection of the process, through the intense heat it affords by its combustion. The substantial position occupied by the basic process is well shown by the large amount of basic steel which was turned out in October, 1882. Germany held the first position, with an output of 25,170 tons by eight firms; England stood next, with an output of 7,700 tons by one firm; then followed Austria, with 7,700 tons by three firms; Belgium, with 1,687 tons by one firm; Russia, with 1,270 tons by one firm; and France, with 1,240 tons by one firm—giving a total output for the month of 46,537 tons, by fifteen firms. The process had been adopted at the end of 1882 by thirty-two European firms, which had working furnaces, or were constructing them, and thirteen other firms had taken out licenses for its use.

**IMPROVEMENTS IN STEEL-MAKING.**—A new process in rolling steel, called the "Soaking Pit Process," has been introduced by Mr. John Gjess, of Middlesbrough, by means of which the bloom may be rolled into a rail or other finished article with its own initial heat, and the necessity of submitting the ingot again to the heating-furnace is avoided. The chief difficulty heretofore met in utilizing the heat of the ingot, to work it up into the finished product, has been that the bar when newly stripped was too hot in the interior to be rolled, and when the interior was in a fit condition, the exterior was far too cold. In the new process, the ingots are placed in pits, where little or no heat being able to escape to the surface, and the ingots being surrounded by walls as hot as themselves, the surface heat of each one of them is greatly increased, and it becomes fit for the rolling-mill in about half an hour. The process was introduced in June, 1883, at the Darlington Steel and Iron Company's works, where three hundred ingots were treated in the pits every twenty-four hours, and at the West Cumberland Steel Works; and more than 30,000 tons of ingots had been successfully treated by the close of the year at each place. The economical advantages of the process are obvious. The steel manufactured by it, whether for rails or wire billets, is thought to be improved by it, for the danger of burning, to which all reheated steel is liable, and which

is detrimental to the soundness of the fabric, is wholly obviated in it.

**BESSEMER STEEL IN THE UNITED STATES.**—From the reports of the companies owning the fourteen completed Bessemer-steel works which were in operation in the United States in 1882, it appears that 1,696,450 net tons of steel ingots and 1,253,129 net tons of steel rails were produced during the year. These figures represent an increase in production of 10 per cent in ingots and of 6 per cent in rails over the production of the same mills in 1881. The rate of increase is much smaller than had been made before for several years. Thus, the increase in the production of ingots in 1881 was 28 per cent over that of 1880, while that of the latter year was 30 per cent over that of 1879. The figures representing the production of rails do not cover the total production of steel rails in the United States, as some rails were rolled in 1882 from imported steel blooms, and some open-hearth steel rails were rolled. Estimating the amount of such rails to be near 100,000 gross tons, the total American steel-rail production in 1882 would be 1,300,000 gross tons, against a total in 1881 of 1,210,285 gross tons. The fourteen steel-works whose reports are thus compiled contain 35 converters. Relative to the production of steel throughout the world, it appears from the latest published statistics that there are now in England 23 steel-works, with about 115 converters, of a productive capacity of 1,461,000 tons per annum; in Austria, 14 steel-works, with 36 converters, and a capacity of 350,000 tons; in Belgium, 4 steel-works, with 18 converters, and a capacity of 380,000 tons; in France, 7 works, with 34 converters, and a capacity of 632,000 tons; in Germany, 23 Bessemer and Thomas steel-works, with 80 converters, and a capacity of about 1,300,000 tons; in Russia, 5 steel-works, with 10 converters, and a capacity of 100,000 tons; and in Sweden, 35 converters, with a capacity of 80,000 tons. The total number of converters in the world is, therefore, about 360, with an aggregate annual productive capacity, in round numbers, of 5,800,000 tons of steel.

**PRODUCTION OF ALUMINUM.**—An improved process for producing aluminum, whereby the cost of the metal is reduced by about 80 per cent, and the time required to prepare it from nine months to a few days, has been invented by Mr. James Webster, of Hollywood, near Birmingham, England. Alumina, from which the metal is obtained by precipitation, is prepared by burning alum and pitch, as follows: A given quantity of alum and pitch, which are first finely ground, is mixed together and placed in a calcining furnace, when 38 per cent of water is driven out, and the sulphur, potash, and alumina are left, with oxide of iron. The calcined mixture is then put into vertical retorts, and steam and air are forced through, after which a residue of potash and alumina

only is left. This residue is afterward placed in a vat filled with warm water, which is heated with steam. The potash is thus leached out and the alumina left as a deposit. The potash-liquor is then run off and boiled down, while the alumina precipitate is collected in sacks and dried. It is then ready for making chloride of aluminum. The alumina deposit thus obtained contains about 84 per cent of pure alumina, while that which is obtained by the old process of precipitation has only 65 per cent. For conversion to aluminum, the chloride is treated with sodium. This process, if its success is verified, is probably destined to make it possible to employ aluminum, as an alloy, economically in many manufactures for which it is preferable to any metal now known. It is eight times more conductive to the galvanic current than iron, and by this, and the fact that it does not rust, it is valuable for telegraphic purposes. Its tensility, and lightness, and unsusceptibility to corrosion indicate a great adaptation to the purposes of ship-fittings, particularly for steamship propellers. The alloy, it is said, will bear a strain of forty-two tons to the square inch, or twelve tons more than Bessemer steel. A more particular statement of its mechanical powers was given by Mr. W. H. Barlow, F. R. S., at the last meeting of the British Association, in the relation of some experiments he had made on the subject. He found the ultimate tensile strength of the metal to be about twelve tons to the square inch. The range of its elasticity was indicated by an extension at the yielding-point of one two-hundredth the length of the piece, or about three times that of steel, and five times that of wrought-iron. The mechanical value of the substance, as indicated by its strength in relation to its weight, is about equal to that of steel of thirty-five tons per inch. These properties point to a great suitability of aluminum for cases where strength combined with lightness and a great range of elasticity are required. Mr. Webster has also discovered that aluminum may be deposited on several other metals, and may be soldered and welded.

**ZINC.**—The present methods for the reduction of zinc ores by distillation are expensive and cumbrous. In the search for more economical ways of preparing metallic zinc, attention has been directed to the feasibility of producing it by a wet process and electricity. Three methods have been proposed which depend upon the employment, severally, of hydrochloric, nitric, and sulphuric acids. In the hydrochloric-acid process the acid is placed in contact with the ore in order to produce a hydric chloride, neutral and concentrated; after which the liquid is treated with an electric current, by which the zinc is precipitated in a pure metallic state. The iron, which would otherwise be precipitated with the zinc, is previously eliminated by means of some oxidizing body. The chlorine, which is liberated when

the zinc is separated from its salt, is drawn off into a chamber where it is absorbed by chalk. This process is defective on account of the loss of metal in smelting, and the presence of chlorides of zinc as an impurity. In the nitric acid method, an oxide is produced by the electrical decomposition of the salt, and it is necessary to add some organic matter, such as glycerine, a gum, etc., for the removal of the oxygen. To obtain enough nitric acid and organic matter the process has to be conducted near where some chemical industries are carried on. In the sulphuric-acid process, also called the Le-trange process, the solution is effected by means of the sulphuric acid obtained from the ore itself in the process of roasting. No reagent being required, the method is independent of other industries, and is free from all expense of transportation. Though principally intended for blende, it is available for all the ores. It is very simple, and does not require the separation of substances containing lead, nor, if sulphuric acid is evolved in excessive quantities, the removal of the calcareous gangues. Only a moderate roasting is required when only blende is treated; but if the ore be only calamine or the oxides of zinc, it is necessary to feed the bath with a certain quantity of acid or sulphates. The sulphurous vapors produced by roasting the blende may often be used for this purpose. As acid is continuously reproduced during the process of precipitation, it will only be necessary after that is started to provide as much sulphate as will furnish the necessary acid to be absorbed by the foreign matters, the chalk, iron, etc., contained in the ore. The electrical current necessary to effect the precipitation is furnished by machines driven by steam or water power. By this process the zinc contained in the ore is extracted in its entirety, and pure. The cost of treatment is limited to the working of the electrical apparatus, and to manual labor of the most simple character.

**COPPER.**—Copper is prepared at Spenceville, Cal., from a fine-grained pyrites in a kind of chlorite slate. The ore, which has been previously broken into small lumps, is put upon a base of fire-wood around a loose brick flue, and piled up with layers of brush at intervals; salt is distributed through the pile, tank residue is placed on top to exclude the air, and the heap is then fired. The process of roasting requires six months. In the leach-vats, of which there are fifty, with a capacity for 120 tons of roasted ore, the leaching is hastened by boiling with steam. The copper is precipitated with scrap-iron.

**NICKEL.**—Nickel-ores are quite extensively distributed through the United States—more generally than is usually supposed. The chief source of supply is at Lancaster Gap, Pa., but the ores are also found in Connecticut, by the Hudson River, and in New Jersey, associated with chrome-ores, where they appear in the shape of a coating of nickel oxide or emerald

nickel; also associated with magnetic pyrites. Deposits have also been found in the mag-nesian rock at Quebec; at Silver Harbor, on Lake Superior; in Nevada; and in Douglas County, Southern Oregon. The hydrated silicate of New Caledonia, a very pure ore, has been found to be in sufficient abundance to supply nearly all the works of Europe. Professor Wharton exhibited at Philadelphia, in 1876, a number of articles that had been made by him of wrought nickel. He showed them again in 1878, in Paris, where they attracted but little notice at first, but excited great admiration when the attention of the judges was called to the quality of the metal. Experiments, prompted by this demonstration, were immediately tried on a more extensive scale, which resulted in raising the manufacture of nickel to a considerable importance. Sheets of iron and steel have been coated by welding with nickel on both sides, so as to furnish a combination adapted to the manufacture of many articles of hollow ware. Professor Wharton has succeeded in making several articles of cast-nickel, among which are the door-knobs of his house in Camden, N. J. He has proved that the metal will not tarnish, by exhibiting objects which were shown at the Paris Exhibition in 1878, and are as bright as ever, although they have not been rubbed or polished since. A French company is making a considerable variety of useful articles from the nickel of New Caledonia. Mixed with zinc, copper, or tin, in such a proportion that it shall constitute 20 per cent of the combination, this metal forms an inoxidable nickel bronze; a material of which all articles that are now made of brass or copper, and nickel-plated, may be made at practically the same cost, while they will be one fifth stronger and may be as much lighter. Added to steel, nickel increases its hardness, renders it inoxidable, and makes it more suitable for edge-tools.

**MICROSCOPICAL ANALYSIS OF IRON AND STEEL.**—Dr. H. C. Sorby, F. R. S., has recently made known the results of some interesting investigations he has been making in the microscopical structure of iron and steel. His specimens were prepared for examination by polishing very thin plates of the metal and subjecting their surfaces to the action of nitric acid till they were sufficiently etched to bring out the details of the arrangement of the particles, the development of which was due to the fact that some of the constituents were not acted upon at all, and others in varying degrees. As far as could be learned from the careful use of the microscope, various kinds of iron and steel contain at least seven well-marked constituents. They are pure iron; what are probably three well-marked compounds of iron with varying amounts of carbon or other substances which are met with in small quantities in different sorts of iron and steel; portions of included slag; well-marked crystals of graphite; and a small crystal, which may be silicon. The

structure of various kinds of cast-iron appears to be chiefly modified by the presence of crystalline plates of graphite, over which is deposited what is probably free iron, while the interspaces are filled with what are probably two distinct compounds of iron and carbon. In other cases, the structure is mainly dependent on the crystallization of the iron itself, the graphite being thrown off toward the close of the process. In white refined iron the principal constituent is probably an intensely hard refined white iron with much carbon, and one or more of the other compounds of iron and carbon. Hammered bloom consists of an irregular mixture of crystals of iron and portions of slag. When rolled into a bar those portions of slag not squeezed out are thrown out into long threads. The crystals seen in the bar are not the original crystals of the bloom, but fresh crystals formed on the cooling of the bar. The fiber seen on fracturing specimens of wrought-iron is mainly due to the elongation that occurs during the fracture, and is not a characteristic of the unaltered iron. The most characteristic feature of the change of structure produced by the cementing process is the development of a network of flat crystals of an intensely hard compound of iron and carbon, which is scarcely acted upon by dilute acid. The structure of Bessemer steel ingots is materially different from that of the varieties of steel containing more carbon, and, though of coarser grain, closely approaches the structure of some varieties of Swedish iron. This structure, upon hammering, is greatly altered, and becomes of finer grain and more uniform.

Mr. J. C. Bayles, of New York, after reviewing before the American Institute of Mining Engineers the researches of Mr. A. Martens, of Berlin, and Mr. Sorby, on this subject, and giving an account of his own method of preparing the objects for examination, expressed the belief that the method opens a vast field of knowledge not yet reached by either chemical analysis or physical test. There are many conditions the result of changes produced by mechanical treatment to which chemical analysis gives no clew, and which are detected but not explained by the tests of the physical laboratory.

**DETERIORATION OF TIN.**—At a late meeting of the American Institute of Mining Engineers Professor R. H. Richards, of Boston, exhibited a pig of block-tin which had appeared to be of a perfectly good quality, but was found after the lapse of a few months to have become brittle, and to have undergone a change in its molecular condition that involved about half of the mass. The change made itself apparent by enlargement in spots which took on a darker color and revealed a crystalline structure like that of stibite. It was believed to be due to the presence in the tin of a small percentage of mercury with which the metal was originally treated, left after an imperfect heating; and the analysis of a part of the pig showed that

about 2.62 per cent of mercury was actually present. The fact of this deterioration taking place is not new. Dr. T. Sterry Hunt called attention to the fact that it had previously been ascertained that block-tin, under certain conditions, would undergo the changes described; and he cited an instance of a piece of the metal which, supposed to be in a state of purity, afterward became so crystalline that it was almost ready to fall to pieces.

**IMPROVEMENTS IN ELECTRO-PLATING.**—Some further improvements in the electro-deposition of brass, bronze, and other metals have been patented by Mr. W. H. Walenn, of London. The first object of the inventor was to produce a coating that should be adherent and in a soft condition. For this a solution is used which is composed of thirty-two ounces avoirdupois of cyanide of potassium (70 per cent real cyanide) and one ounce of neutral tartrate of ammonium per gallon of liquid, which is charged with copper by an electrolytic process, and is made complete by the addition of cupric ammonide. The solution is used at a boiling-point, or near to it, when the coating of copper is softened, and the rate of deposition is very materially increased by the heat. The quality of the work done by this process is illustrated by the fact that thin sheet-iron plates treated by it have been given a coating so adherent that *repoussé* work could be executed upon them without interfering with the continuity of metal and without exposing the coated metal underneath. If a plate were hammered to destruction, the copper coating would be simply extended over the iron where it was cracked or broken. Mr. Walenn's invention also includes methods of preventing the too great evaporation of the solution while it is heated during deposition, for working the electro-depositing solutions in a closed vessel under a known pressure.

**PROTECTION OF IRON AND STEEL SURFACES FROM RUST.**—The Bower-Barff process for preserving iron and steel from rust is based on the fact that a film of magnetic oxide on the surface of a mass of either metal will protect the whole from further oxidation or corrosion. The resisting power of Russia sheet-iron has been found to be due to this cause. To Professor Barff is due the credit of being the first deliberately to undertake to coat iron and steel with magnetic oxide produced designedly for the purpose of protecting their surfaces from rust. To effect this, he subjected the metal to the action of superheated steam. The Bower process is based upon the use of combustible gases and air, or free oxygen. The gases are burned in a fuel gas-producer, which is similar in principle to the Siemens regenerator, with a slight excess of air over that required for perfect combustion, while the iron articles to be heated and oxidized by the products of the combustion are exposed to them in a suitable brick chamber. When the quantity of free oxygen mixed with the products of combustion is rightly adjusted, the iron articles

are oxidized to excess in about forty minutes. Magnetic oxide will then be found nearest to the iron, and sesquioxide over all. The air-inlet is next closed entirely, while the gas-valve is left open for twenty minutes, at the end of which time the outside coating of sesquioxide will be reduced, by the action of the combustible gases alone, to magnetic oxide. The Bower process is the more energetic of the two. The Barff process is the better one for wrought-iron, and perhaps for polished work of all kinds, while the Bower process is better for cast-iron, especially for that quality of it which contains much carbon. Steel—except polished steel, which is better treated in a low-temperature Barff furnace—can be equally well treated by both processes. These processes not only protect the metal from rust, but they give it a finely colored coating, which makes articles made of it ready for the market as soon as they are out of the furnace and cool. A ton of small articles can be as cheaply treated by them, save the difference in expense of handling, as a single article of a ton weight. So penetrating are they, that every crevice, even in the most intricate pattern, may be as effectively coated by them as the plainest surface. Paint will adhere to the coating as to wood or stone. As a whole, the processes are suitable to make iron available for a thousand purposes for which it is now not adapted, because of its liability to rust.

**METHODISTS. I. METHODIST EPISCOPAL CHURCH.**—The following is a general summary of the statistics of this Church as they were reported in the "Minutes" of the Annual Conferences for 1882: Number of annual conferences, 99; number of missions not included in annual conferences, 13; number of bishops, 11; number of itinerant preachers, 11,028; number of preachers on trial, 1,337; number of local preachers, 11,967; number of members in full connection, 1,572,177; number of probationers, 175,841; whole number of lay members, 1,748,021; number of churches, 18,152; probable value of the same, \$65,467,082; number of parsonages, 6,224; probable value of the same, \$9,250,288; number of Sunday-schools, 20,901, with 224,667 officers and teachers, and 1,629,358 scholars; number of baptisms during the year (57,241 of adults and 56,805 of infants), 114,046. Amount of benevolent contributions: For conference claimants, \$167,693; for the Missionary Society, \$624,186; for the Woman's Foreign Missionary Society, \$107,673; for church extension, \$110,900; for the Tract Society, \$15,320; for the Sunday-School Union, \$16,991; for the Freedmen's Aid Society, \$56,808; for the Educational Fund, \$49,039; for the American Bible Society, \$29,209.

The *General Committee of Church Extension* met in Philadelphia, Pa., November 2d. The financial report showed that the committee had received during the ten months already past of the current year, \$109,895 on general account,

and \$82,881 on loan fund account; in all, \$192,277. It had spent within the same period, \$106,085 on general account, and \$68,809 on loan fund account; in all, \$174,394. With these expenditures, it had aided with gifts or loans, or both, 388 churches. A cash balance of \$57,210 was left with the board at the time of making the report, but against this it had made grants, on conditions, of \$72,070 to 197 churches. Applications were on hand from 43 churches, asking for \$18,805. Progress was reported on a plan which had been set in operation to raise enough by subscriptions of \$250 each to build four hundred churches on the frontiers, each of which should receive aid to the amount of \$250, as follows: Amount of donations, \$32,750; of loans, \$19,100; number of churches built, 131, at a cost of \$286,955, having 34,000 sittings, 4,904 members, and 7,884 Sunday-school scholars, and giving church facilities to a population of 144,130. The subject of inviting contributions to the general funds, subject to life annuity, was considered.

The paid-up capital of the loan fund at the end of 1882 amounted to \$500,000.

The annual meeting of the *Board of Education* was held in New York city, November 14th. The receipts from collections, legacies, and other sources had been \$18,026, against \$9,256 in 1881, and \$2,079 in 1880. More than \$11,000 were to be disbursed during the year in aid of 250 students attending the institutions of the Church in the United States and foreign lands. Ten thousand dollars were appropriated for the same purpose in 1883.

The total receipts of the *Freedmen's Aid Society* for the year ending July 1, 1882, were \$118,070.60. To the 1st day of November of the same year the society had aided in the maintenance among the freedmen of 6 chartered colleges, 4 theological schools, 1 medical college, and 14 institutions not chartered, in which 95 teachers were employed, and 3,506 students were taught. Of these students, 440 were in the biblical, 15 in the law, 75 in the medical, 225 in the collegiate, and 1,470 in the normal departments. In accordance with the action of the General Conference of 1880, 14 institutions for the whites of the South have been organized, at which 1,827 pupils were taught during the year.

The *General Missionary Committee* met in the city of New York in November. The treasurer reported that the total receipts of the society for the year had been \$691,666, or \$66,002 more than the receipts for the previous year. A decrease of \$28,348 in liabilities was reported.

Appropriations were made in support of missions during the ensuing year, as follow:

For the foreign missions (in Liberia, South America, China, Germany, and Switzerland, the Scandinavian states, India, Bulgaria, and Turkey, Italy, Mexico, and Japan), \$362,379. For missions in the Territories of Arizona, Dakota, the Indian Territory, Montana, New Mexico,

Utah, etc., \$57,100; for domestic missions among the foreign, Indian, and English-speaking populations of the United States, \$248,300; total, including miscellaneous appropriations and \$32,000 for the liquidation of the debt of the society, \$777,849. The foreign missions returned in their annual reports, 269 foreign missionaries and assistants, 246 native ordained preachers, 1,025 native assistants, 1,498 other helpers, 29,095 members, 9,984 probationers, 80 day-schools with 12,913 scholars, and 303 churches.

The domestic missions employed 2,381 missionaries, with local preachers and teachers.

The *Woman's Foreign Missionary Society* received for the eighteen months ending November 1, 1882, \$195,678. It returns 42 missionaries, 350 Bible women and teachers, 6 hospitals and dispensaries, 16 boarding-schools, 140 day-schools, 3 orphanages (400 orphans), and 1 home for friendless women, in eight several mission-fields.

The committee appointed by the bishops of the Church met in November and took the preliminary steps for holding in 1884 a centennial celebration of the organization in 1784 of the Methodist Episcopal Church, in which all organizations of American Methodism should be invited to unite. A committee was appointed to correspond with other American Methodist Churches on the subject.

II. METHODIST EPISCOPAL CHURCH, SOUTH.—The "General Minutes" of the conferences of this Church for 1881 give the following statistics of the Church for the year: Number of traveling preachers, 3,704; of superannuated preachers, 307; of local preachers, 5,865; of white members, 844,367; of colored members, 993; of Indian members, 5,451; total of ministers and members, 860,687, showing an increase during the year of 12,894; number of Sunday-schools, 9,310, with 62,442 teachers and 462,321 scholars, showing an increase during the year of 21,707 scholars.

The *General Conference* of the Methodist Episcopal Church, South, met at Nashville, Tenn., May 3d. The bishops of the Church presided over the sessions of the body in alternation. The address of the bishops presented a view of the present condition of the Church during the past four years. The number of ministers active in the thirty-nine annual conferences and the mission-fields had increased by 247, and was now 3,704; the number of members had increased from 798,862 to 860,687. Thirteen thousand members had been added during the past year. The amount of church property and the accommodations for congregations had increased in proportion with the other items, and much progress had been made in the payment of debts. The sum of \$354,372 had been contributed for foreign missions against \$242,934 in the preceding four years, and \$226,850 against \$216,916 for home missions. Home-mission work had been extended through Colorado and New Mexico

toward Arizona, in Northwestern Texas, among the German settlers in Louisiana and Texas, and in the Indian Territory. The Indian mission had steadily grown, and there were now in the conference that represented it more than 5,000 members—Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles, besides several hundred white people and negroes who had obtained citizenship or the right of residence among the natives; who were served by more than thirty traveling preachers—most of them Indians—and one hundred and twenty local preachers. The Mexican Border Mission included nearly a thousand ministers and seventeen native preachers. The foreign missions, in Central Mexico, China, and Brazil, had been strengthened by the addition of new missionaries. The *Woman's Missionary Society*, four years old, had sent out five missionaries to China, Brazil, and Mexico, and was building a boarding-school at Laredo, on the Rio Grande. The number of Sunday-schools had increased during the four years by more than 2,000, and the number of pupils by 71,000. The Sunday-school literature had been improved in quality, reduced in price, and increased in circulation. The condition of the Publishing House had been materially changed for the better. While, four years before, the claims against the establishment amounted to more than \$300,000, and were drawing interest at the rate of \$60 a day, and the liabilities exceeded the assets by more than \$100,000, it now reported an excess of \$50,000 of assets over liabilities, with the whole of its remaining indebtedness in manageable shape. The negro population of the South and Southwest, which had for several years been turned away from this Church, was again becoming accessible to its influence. The Colored Methodist Episcopal Church, which had been organized ten years before, at the request of colored members, had maintained its integrity and made some progress. It needed better facilities for the education of pastors and teachers of the colored race, and the favorable consideration of the General Conference was invoked for measures to help it in this work.

The agent of the Publishing House reported that he had received a bequest from a lady in Virginia of \$2,500 to the establishment "for the use of the Church in spreading and disseminating the gospel among mankind"; and that the sum of \$266.17 had been paid him by John Whitman, of Philadelphia, as a balance due the Methodist Episcopal Church, South, in the division of the property of the Methodist Episcopal Church under the action of the General Conference of 1844, which sum he had entered under the title of "suspended assets." The Conference ordered the latter sum to be turned over to the Publishing House as a part of its capital. Fraternal communications were received from the African Methodist Episcopal Zion Church and the Colored Methodist Episcopal Church in America. Bishop Wood, of the African Methodist Episcopal Zion Church,

spoke of that body as one which held a relation to the Church, South, that it held to no other body; it occupied the same field of territory with it without rivalry. The communication from the Colored Methodist Episcopal Church contained a request for aid in the erection of school-buildings. The church had purchased sites for schools during the past year at Jackson and Byhalia, Miss. The people were willing and ready to contribute, but their financial circumstances did not permit them to give much. They also needed mission-money, particularly for the building up of missions at such places as New Orleans, La., Atlanta, Ga., and Corinth, Miss. Fraternal answers were returned to the letters of both churches. The Conference approved a recommendation for the organization of annual conferences in China and Central Mexico during the ensuing four years. A plan for church extension was adopted, and a Board of Church Extension organized, which is to have its seat at Louisville, Ky., and to obtain a charter from the State of Kentucky. A new chapter on temperance was adopted, to be inserted in the Discipline, the provisions of which are as follow:

Let all our preachers and members faithfully observe our General Rule, which forbids "drunkenness or drinking spirituous liquors, unless in cases of necessity"; in cases of drunkenness let the discipline be administered as in case of immorality; drunkenness being a crime expressly forbidden in the word of God. In cases of drinking, except in cases of necessity, let the discipline be administered as in case of imprudent or improper conduct; let all our preachers and members abstain from the manufacture or sale of intoxicating liquors to be used as a beverage, and if any shall engage in such manufacture or sale, in such case proceed as in cases of imprudent and improper conduct.

The Conference decided to elect five new bishops, and Alpheus W. Wilson, Linus Parker, Atticus G. Haygood, J. C. Granberry, and B. K. Hargrove were chosen to that office. Bishop Wilson was, at the time of his election, Missionary Secretary to the Church; Bishop Parker, editor of the "New Orleans Christian Advocate"; Dr. Haygood, President of Emory College; Bishop Granberry, a Professor in Vanderbilt University; and Bishop Hargrove had filled several responsible positions in the church. Dr. Haygood, believing that the circumstances of Emory College demanded his continued presence there, declined to be ordained bishop, and the Conference determined to elect no other person in his place. A resolution was adopted—

That the matter of changing the name of the Methodist Episcopal Church, South, to the Methodist Episcopal Church in America, be referred to the several Annual Conferences by the bishops during the ensuing four years, and that they report the result of the vote to the General Conference of 1886 for ratification.

Action was taken in favor of the celebration, in 1884, of the centenary of the formal organization of Methodism in America, which took place in 1784, by participating in a conference of Methodist bodies to be held in Baltimore, Md., during that year, and by endeavoring to

raise the sum of two million dollars, to be applied equally, save where donors shall give special direction to their gifts, to the causes of education, church extension, and foreign missions; and a committee, consisting of twelve ministers, twelve laymen, and the bishops, was appointed to take charge of the whole matter, and report to the next General Conference.

III. COLORED METHODIST EPISCOPAL CHURCH.—The statistical reports of this Church, made to the General Conference in May, gave the number of ministers as 1,749, and of members as about 125,000. The increase in the number of members during four years had been 18,917. Report was also made of 1,450 Sunday-schools, with 3,973 teachers and 42,254 scholars.

The *General Conference* of the Colored Methodist Episcopal Church in America met in Washington, D. C., in May. Attention was given to the enterprises for the benefit of the members of the Church in the Southern States; to missions, from which favorable reports were received; to the interests of the Metropolitan Church of the denomination in Washington, and the payment of the debt upon it; and to the affairs of the denominational organ, the "Christian Index," the entire control of which was assumed, and its office of publication fixed at Jackson, Tenn.

A *Convention of the Bishops* of the Colored and African Methodist Episcopal Churches was called to meet in Baltimore, Md., April 26th, to consider the subject of a union of the two bodies. All of the bishops of the African Methodist Episcopal Church were present, but only one of the four bishops of the Colored Methodist Episcopal Church. As a majority of the bishops of the latter body could not attend the Conference, the consideration of the question of union was deferred. The bishops of the African Methodist Episcopal Church, however, expressed themselves ready to meet the bishops of the other body in council at any time or place they might designate, to proceed with the negotiations.

In accordance with a resolution of the General Conference of the Methodist Episcopal Church, South, Bishop George F. Pierce, representing the bishops of that body, and the bishops of the Colored Methodist Episcopal Church met at Atlanta, Ga., in August, as a joint committee to take action for organizing an institution of learning for the Colored Methodist Episcopal Church. The committee elected a board of trustees composed of white and colored men, and representing the two churches, for the proposed institution, and decided that it should be established at Augusta, Ga. The board of trustees thus appointed met at Augusta in October, and decided that the new school should be called "Paine Institute," in honor of the late Bishop Robert Paine, of the Methodist Episcopal Church, South. An offer to serve as president of the institution was received from the Rev. Morgan Callaway, D. D., Vice-President of Emory College, Oxford, Ga., and

Professor of the English Language in that institution, and he was elected to the position.

IV. FREE METHODIST CHURCH.—This Church includes 271 itinerant ministers, 328 local preachers, and 12,642 members.

The sixth *General Conference* of the Free Methodist Church met at Burlington, Iowa, October 11th. B. T. Roberts presided. Delegates were present from fourteen annual conferences. A proposition to extend the pastoral term for three years was discussed, and defeated.

V. METHODIST EPISCOPAL CHURCH IN CANADA.—This Church has one bishop, three annual conferences (the Niagara, Ontario, and Bay of Quinte Conferences), 265 ministers, and 27,657 members.

The *General Conference* of the Methodist Episcopal Church in Canada met at Hamilton, Ont., August 23d. A plan of lay delegation having been adopted and ratified, went into effect at this Conference, and in accordance with it the lay delegates attended and took part in the proceedings. The most important subject considered was that of the union of the Methodist churches of the Dominion, upon which resolutions were adopted expressing gratification that the proposition for a general union was under consideration, and a willingness to make reasonable concessions to secure it. A committee of eighteen members was appointed, to confer with similar committees of other Methodist bodies, and negotiate for a union with any or all of them. A proposition to allot presiding elders to pastoral stations was laid on the table till the next General Conference.

VI. METHODIST CHURCH OF CANADA.—The statistical reports of this Church for 1882 show that it has 1,192 itinerant ministers, 1,338 local preachers, and 125,420 members.

The third *General Conference* of the Methodist Church of Canada met at Hamilton, Ont., in September. The Rev. Dr. S. D. Price was chosen president. The subjects of establishing a general superintendency for the whole Church, and of introducing lay delegations, were brought forward, in consequence of the pendency of negotiations for union with the other Methodist churches of the Dominion. The Methodist Episcopal Church, while it was ready to surrender the life-term principle, and other particular features of its episcopacy, insisted on the preservation in the united Church of the principle of an itinerant general superintendency. The Primitive Methodist and Bible Christian Churches were willing to accept a general superintendency, but insisted on the representation, in some form, of the laity in the annual conferences. A proposition was accordingly considered that the President of the General Conference should be *ex officio* constituted a General Superintendent, the privilege and duties of whose office should be to hold office during the four years from one regular General Conference to another; to preside

over all sessions of the General Conference during his term of office; to be chairman of all stationary committees; to travel at large in this connection as the General Conference may direct, and be relieved of all circuit duties; to attend as many annual conferences as possible, and bring before them matters of denominational interest; to rule on questions of law submitted to him; to arrange with the presidents of annual conferences for transfers of ministers; and to organize new annual conferences when directed by the General Conference to do so. A resolution was adopted, proposing an amendment to the provision in the Discipline of the Church respecting the election of the President of the General Conference, so as to provide for an itinerant general superintendency in some form. The Conference also resolved that the principle of lay representation in all church courts be so recognized as to admit lay representation into the annual conferences in some form; and that while the General Conference "is not aware of any general desire among the members of the Methodist Church of Canada for lay representation in the Annual Conference, yet it agrees, in order to promote union, to concede the principle, provided no change is made in regard to the examination of ministerial character, or the composition of the stationing committee." A committee of twenty-seven ministers and laymen was appointed to meet the committees of the other Methodist churches, with the provision that whatever basis of union might be adopted by the joint committees should be submitted to the Quarterly Boards for approval in February, when, if two thirds of the Quarterly Boards vote in the affirmative, the General Conference shall be convened to give effect to the basis of union.

PROPOSED UNION OF THE METHODIST CHURCHES IN CANADA.—Committees, appointed by the conferences of the Methodist, Methodist Episcopal, Primitive Methodist, and Bible Christian Churches of Canada, met in Toronto in September, to consider the question of a union of the bodies. Seventy-one members were present. The Discipline of the Methodist Church was taken up as the basis with reference to which propositions should be made and objections offered, and was considered in its several features. The Primitive Methodist and Bible Christian Churches insisted that the principle of lay representation in the annual conferences should be retained, but were willing to make concessions in details and as to forms. The representatives of the Methodist Episcopal Church insisted upon the retention of a general superintendency, although they were ready to give up the name of bishop and the life-term, and they proposed that the term of office of the General Superintendent should be twelve years. The representatives of the Methodist Church were not ready to assent to this proposition, although otherwise the features both of a gener-

al superintendency and of lay delegation were generally concurred in. As the General Conference of the Methodist Church was then in session, it was thought best to wait, before proceeding further, till that body had discussed the points in question. The joint committee accordingly adjourned, to meet again in November. The joint committee met again in Toronto, November 28th. Bishop Carman, of the Methodist Episcopal Church in Canada, was chosen president of the meetings. The only questions about which any difference of opinion was manifested were those of lay delegation and the itinerant general superintendency. Provision was finally made for equal representation of the laity with the ministry in the annual conferences; the lay delegates to have the right to speak and vote on all questions except the examination of ministerial character, the reception and ordination of probationers into full connection, and the granting of the superannuated or supernumerary relation. It was also agreed that ministers and laymen shall vote separately when electing their representatives to the General Conference. The following provision for the office of a General Superintendent was adopted:

1. There shall be one or more General Superintendents elected by the General Conference, to hold office for the term of eight years; but if it be decided at the meeting of the General Conference, after union, to elect two superintendents, one of them shall be elected for four years only, so that there may be a recurring election or elections every four years.

2. The General Superintendent shall preside over all sessions of the General Conference, and over all standing committees of the same.

3. The General Superintendent, when present, shall open the Annual Conference, and preside therein during the first day of its sessions, and afterward alternately with the President-elect. In association with such President he shall conduct the ordination services, and they shall jointly sign the ordination parchments; but all other duties pertaining to the presidency of the Annual Conference shall be vested in the President elected by that body, and, in the absence of the General Superintendent, he shall conduct the ordination and sign the parchments.

Other articles were adopted, defining the constitutions of the Annual and General Conferences, and providing for the choice, by ballot in the Annual Conference, from among the ministers of the Conference within the district, of a district superintendent for each district, to whom the supervision of the district shall be committed. Questions were also disposed of concerning educational interests, church funds, the stationing committee of the annual conferences, and other matters of detail.

The United Church, if the union is completed, will have 1,624 itinerant ministers, 2,036 local preachers, and 168,881 members.

VII. WESLEYAN METHODIST CHURCH.—The following is the statistical statement of the British and Affiliated Conferences, as published in connection with the "Minutes of Conference" for 1882:

COUNTRIES.	Members.	On trial.	Ministers.	On trial.	Superannu- merary.
I. In Great Britain.....	398,754	40,653	1,549	81	279
II. In Ireland and Irish mis- sions.....	24,475	776	250	18	43
III. In foreign missions.....	89,369	12,984	348	198	16
IV. French Conference.....	1,769	126	*27	1	3
Total .....	509,367	54,489	2,124	298	341

The *Chapel Committee* reported to the Conference, in July, 1882, that the total sum of £230,388 had been contributed in Great Britain for chapel-building and other trust purposes during the year, and that the erections and enlargements would afford 25,562 additional sittings. The ordinary income of the fund had increased.

The Committee of the *Thanksgiving Fund* reported that, on July 12th, the amount promised to the fund was £303,600, and estimated the amount which it might be necessary to allow for loss of subscriptions at £10,000. The Committee of the *Metropolitan Chapel-Building Fund* reported that eight new chapels had been opened during the year in the metropolitan district; and that sixty-one chapels, each providing for one thousand persons, had been opened since the fund was started. The grants and loans amounted to £27,168. The Committee for the *Extension of Methodism in Great Britain* had received and considered 143 applications and made 123 grants, amounting to £1,940. Since it was instituted, this committee had made 538 grants of £33,843, in answer to 777 applications, whereby 89,876 additional sittings in chapels had been provided. The fund for the *Relief and Extension of Methodism in Scotland* amounted to £9,748. This fund was instituted to provide chapels and manses in Scotland; and it was stated that during twenty years the entire trust property in that country had been renewed, at a cost of £100,000. The income of the Theological Institution had been £11,544.

The Committee on Sunday-Schools reported the number of Sunday-schools to be 6,489, with 122,999 officers and teachers, and 829,666 scholars, 122,999 of whom were members of the society or on trial. There were 2,257 Bands of Hope, with 227,784 members. The total receipts of the *Home Mission and Contingent Fund* for 1882 amounted to £35,034, as against £34,210 in 1881. The committee was authorized to employ, in addition to district missionaries, ministers and lay agents for general evangelistic work in different parts of the connection.

The anniversary of the *Wesleyan Missionary Society* was held in London, May 1st. Mr. Henry John Atkinson presided. The total income of the society for the year had been £141,722, besides £10,074 which had been received from the Thanksgiving Fund toward the

\* The French ministers who are employed in the Channel Islands district are not included in these returns.

extinction of the debt. The expenditures had been £146,754, showing a deficiency of £5,031, which, with a previously undischarged indebtedness of £28,235, made the total deficiency in the accounts of the society £33,266. The Missionary Committee afterward reported, however, to the Conference that the debt had been extinguished. The following is the general summary of the missions under the immediate direction of the Wesleyan Missionary Committee and the British Conference in Europe, India, China, South and West Africa, and the West Indies, which was presented with the report of the society:

Central or principal stations called circuits.....	542
Chapels and other preaching-places, in connection with the above-mentioned central or principal stations, as far as ascertained.....	2,469
Missionaries and assistant-missionaries, including supernumeraries.....	549
Other paid agents, as catechists, interpreters, day-school teachers, etc.....	2,275
Unpaid agents, as local preachers, Sabbath-school teachers, etc.....	7,568
Full and accredited church-members.....	59,345
On trial for church-membership.....	12,983
Scholars, deducting those who attend both the day and Sabbath schools.....	97,754
Printing establishments.....	8

The most favorable reports were made from the South African missions, where all the colonial churches were self-supporting, and were now developing a desire to send missionaries among the aboriginal tribes; while the native converts, where opportunity had favored them, were not far behind the colonists in the essential elements of church growth. They had a ministry of great promise; they were showing themselves capable, under the guidance of the European missionaries, of managing their own affairs, and had displayed during the recent political troubles some rare qualities of Christian citizenship. The committee hoped, after it was relieved of the care of these churches, by setting them upon their own foundations, to extend its missions into the unoccupied territory in the Transvaal, Swaziland, and Pondoland.

The one hundred and thirty-ninth *Wesleyan Methodist Conference* met at Leeds, July 18th. The Rev. Charles Garrett was chosen president. The numerical returns of membership were presented, and showed the number of members of the society to be 393,754, with 40,653 on trial; 25,205 persons had ceased to be members during the year. The report showed 32,417 members in junior society classes, and a net increase of 12,798 full members. As at the previous Conference, more candidates made application for admission than could be received, so now twenty-four candidates had to be declined. The most important business was the consideration of the report on the revision of the Book of Offices, which had engaged the attention of committees and the Conference for eight years. The previous Conference had adopted the report of the committee, so far as concerned the Order of Morning Prayer and the forms for the administration of the Lord's Supper, the

solemnization of Matrimony, and the Burial of the Dead, but had referred the form of administration of Baptism to another committee, with instructions to report to the present Conference. The discussion in the Conference turned upon the form which should be given to the preamble of the service, and bore particularly upon the doctrine of baptismal regeneration—all implication of a sanction of which it was decided to exclude. The preamble was finally adopted as follows:

DEARLY BELOVED: Forasmuch as our Lord Jesus Christ gave commandment to his Church to make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost, and whereas these persons here present do bring *this child*, and do now present *him* for holy baptism, let us, being gathered together in the name of Christ and in obedience to his command, hear for our instruction and encouragement the teaching of his Holy Word concerning this sacrament.

The new form, as reported by the committee, orders the four collects, which have heretofore been read immediately before the act of baptism, to be read after it, so that the prayers contained in them should not be interpreted as having reference to any regenerating influence attendant upon the act. Action was taken for the organization of the colonial and native churches of South Africa into a South African Conference, to which the parent conference relinquishes its missions; and the Rev. J. Walton was designated as the first president of the new conference. The subject of organizing a West Indian Conference was also considered.

VIII. PRIMITIVE METHODIST CHURCH.—The following is a summary of the statistics of this church as they were presented to the Conference in June:

Number of members.....	191,829
Number of ministers.....	1,152
Number of local preachers.....	15,273
Number of class-leaders.....	10,595
Number of connectional chapels.....	4,497
Number of rented chapels.....	1,851

The increase in the number of members from the previous year was 6,017. Reports were presented of 3,764 Sunday-schools in the United Kingdom, with 56,337 teachers, 364,592 scholars, and 62,121 members of the Connectional Band of Hope. The increase in Sunday-school scholars was 9,518. The income of the schools amounted to £50,150.

The anniversary of the Primitive Methodist Missionary Society was held May 16th. The receipts of the society had been £35,225, or £215 more than during the previous year, and an increase of 1,303 members was reported at the home and foreign stations and in the colonial districts. The society had the superintendence of 65 home-mission stations, 176 colonial, and 4 foreign stations, with 100 home missionaries, 205 colonial ministers and missionaries, and 6 foreign missionaries—in all 245 stations, with 1,227 preaching-places, and 311 missionaries. The foreign mission work is represented by stations at Aliwal North, South Africa, and Fernando Po, on the West

African coast. At the former place were 3 ministers, 11 local preachers, and 234 members of the church. The colonial work was in Australia and Canada. In the latter country were 61 stations and 97 missionaries, with 8,137 members.

The sixty-third Annual Conference of the *Primitive Methodist Connection* met at Sheffield, June 7th. The Rev. Joseph Wood was chosen president. Measures were approved for securing a more solemn and becoming observance of the ordinance of baptism, and to impress on the societies the obligations of the Church in relation to the baptized; also for securing a better attendance at Sunday-schools of the children who have been baptized in the chapels and by the ministers. A scheme for the formation of a Connectional Temperance League was referred, to be matured by a committee and considered by the next Conference. The Missionary Committee was authorized to give higher salaries to its missionaries on home stations that are regarded as especially important fields of labor, and where heavy responsibilities have to be accepted.

**IX. METHODIST NEW CONNECTION.**—The following is a summary of the statistics of this Church as they were reported to the Conference in June: Number of chapels, 512; of societies, 467; of circuit preachers, 186; of local preachers, 1,278; of members, 28,631; of probationers, 4,512; of Sunday-schools, 465, with 11,210 teachers and 80,897 scholars. The increase of members was 861, and of Sunday-school scholars, 1,429. An increase of 40 members was reported in China, and of 32 members in Ireland.

The Conference of the *Methodist New Connection* met at Batley, in June. The Rev. W. Longbottom was chosen president.

**X. UNITED METHODIST FREE CHURCHES.**—The following is a summary of the statistics of these churches, as they were reported to the Conference in July: Number of itinerant preachers, 392; of supernumeraries, 40; of local preachers, 3,385; of leaders, 4,186; of members in the society, 74,142; of probationers, 9,905; of chapels and preaching-rooms, 1,533; of Sunday-schools, 1,354, with 23,892 teachers and 199,382 scholars. The increase of members was 1,363, and of Sunday-school scholars, 3,425.

The annual meeting in behalf of the *Home and Foreign Missions* was held April 23d. The income of the society for the year had been £16,480. The society conducted twenty-four home missions, which were under the charge of twenty-two missionaries, and had in its foreign missions, in China, East Africa, and West Africa, fifty-one missionaries, with 7,772 church-members, 917 on probation, and 7,752 Sunday-school scholars.

The Annual Assembly of the *United Methodist Free Churches* met at Bristol, July 19th. The Rev. Arthur Hands was chosen president. The present being the twenty-fifth year since

the amalgamation, in 1857, between the Wesleyan Association and the Wesleyan Reformers, by which the present union of churches was formed, measures were taken to celebrate the anniversary by raising a commemorative or thanksgiving fund of £25,000 to be appropriated between the Connectional funds and local objects; and the Connectional Committee was authorized to prepare the details of a scheme for accomplishing this object, to be submitted to the next Assembly.

**MEXICO** (ESTADOS UNIDOS DE MÉXICO, OR REPÚBLICA MEXICANA). Mr. J. Y. Sargent, in an article, "Mexico and her Railways," in the London "Fortnightly Review," February 1, 1883, expresses himself about Mexico in the following terms: "Mexico occupies the southern portion of the North American Continent, narrowing southward to the Isthmus of Tehuantepec, and broadening toward the northwest and east with the breadth of the continent, through about fifteen degrees of latitude, until it reaches the boundary of the United States. This is an imaginary line, stretching from about San Diego, on the Pacific, to Matamoros, on the Gulf of Mexico. This line, running nearly 2,000 miles, divides Mexico from California, Arizona, and Texas. For the whole length of the Texan frontier it follows the Rio Grande River down to its mouth. Less than fifty years ago Mexico included California, Arizona, New Mexico, Nevada, Utah, Colorado, Southern Wyoming, and Texas; continuing, in fact, the high plateau which occupies the central part of Mexico, and which, widening northward, embraces the *mesa* of the Rocky Mountains as far north as the latitude of Salt Lake, where it is now crossed by the trunk line of the Union Pacific. This great table-land, although diversified with mountains and valleys, yet lies at an average altitude of about 5,000 feet above the level of the sea. Eastward it slopes gradually across the prairies, to the level of the Missouri and Mississippi. In Mexico proper it sinks by successive steps and steep escarpments to the lowlands that border on the Gulf of Mexico and California, and the Pacific.

"Being narrowed in the area of the Mexican States, and nearer the equator, the land presents in a smaller compass all the variety of climate and produce of the tropic, the temperate, and the colder zones. Hence the well-known division of Mexico into the *tierras calientes*, *tierras templadas*, and *tierras frias*. A glance at the map will show that the States nearest the capital are the most thickly peopled. Tlascala, Morelos, Hidalgo, Querétaro, Guanajuato, Zacatecas, and San Luis Potosí are studded with names of towns which become more sparse toward the north and north-west."

**AREA AND POPULATION.**—Mr. Lorenzo Castro's hand-book, entitled "The Republic of Mexico in 1882," contains the statistics of area and population as follows:

NAMES OF STATES.	Area in leagues.	Population.	Capitals.	Population.
Aguas Calientes.....	827	139,800	Aguas Calientes.....	35,000
Campeachy.....	3,801	120,815	Campeachy.....	26,000
Chiapas.....	2,474	205,000	San Cristobal las Casas.....	10,205
Chihuahua.....	14,300	220,000	Chihuahua.....	16,000
Coahuila de Zaragoza.....	9,500	125,400	Saltillo.....	17,000
Colima.....	552	65,827	Colima.....	81,774
Durango.....	6,391	200,000	Durango.....	28,000
Guanajuato.....	1,862	889,575	Guanajuato.....	68,000
Guerrero.....	3,564	325,000	Chilpancingo.....	8,000
Hidalgo.....	1,521	404,207	Pachuca.....	15,000
Jalisco.....	7,225	984,850	Guadalajara.....	98,875
Mexico.....	1,416	607,485	Toluca.....	11,876
Michoacan.....	3,497	618,240	Morelia.....	25,000
Morelos.....	262	150,800	Cuernavaca.....	12,000
Nuevo Leon.....	4,036	201,732	Monterey.....	40,000
Oajaca.....	4,953	733,556	Oajaca.....	26,708
Puebla.....	1,733	734,466	Puebla.....	76,817
Querétaro.....	506	154,000	Querétaro.....	48,000
San Luis Potosi.....	4,262	650,000	San Luis Potosi.....	45,000
Sinaloa.....	5,950	200,000	Cullacan.....	7,000
Sonora.....	11,655	141,000	Ures.....	5,000
Tabasco.....	1,876	104,759	San Juan Bautista.....	8,000
Tamaulipas.....	4,428	120,000	Matamoros.....	25,000
Tlascala.....	253	138,988	Tlascala.....	36,463
Vera Cruz.....	3,501	552,918	Orizaba.....	20,000
Yucatan.....	4,818	422,365	Mérida.....	56,000
Zacatecas.....	6,270	470,000	Zacatecas.....	62,000
Lower California (Territory).....	8,727	80,000	La Paz.....	4,000
Federal District of Mexico.....	50	815,916	Mexico.....	225,000

Total area of States in leagues, 119,710.

Total population, 10,025,649.

The proportion of the Mexican league to the English or American mile is fifty to nineteen.

Of this population of 10,000,000, according to the most probable estimates, 6,500,000 consist of Indians of various tribal descent, the Aztecs being only a small portion of the number, and of the remaining 3,500,000 at least 3,000,000 are half-breeds, or are mixed with Indian blood in some proportion, leaving only about 500,000 inhabitants of wholly white descent.

Mr. Sargent (above referred to) resumes as follows: "For many years before and since the intrusion of Maximilian, Mexico was a prey to revolutions. These have gradually ceased. Under the *régime* of the existing President, Gonzalez, and his predecessor, Diaz, there has been no political disturbance of any moment. The thoughts of all classes, tired of continual change, have been directed to social and material improvement; the name of a stable government is daily more and more appreciated, and public opinion is so firmly set in favor of a continuance in the present path of tranquillity and progress that there would seem to be but little fear of a recurrence of revolutions. It was the knowledge of this improved state of things that persuaded the wide-awake people of the United States that the time had come for opening up Mexico to American commerce. Enlightened Mexican statesmen like Diaz and Romero were found ready to respond, and showed a desire to encourage the introduction of American trade and American capital into the country. But public opinion had to be educated up to the mark, and time had to be allowed for the expansive force of American commerce, working, as by an inevitable law, to force its way into Mexico, when the providing of railways would be proved to be

an absolute necessity. Accordingly, events brought on the time."

STATE VALUATION.—A Government estimate, taken in 1880, gives the following figures of assessed valuation of real estate and export of precious metals:

STATES.	Real estate.	Gold and silver export.
Coahuila.....	\$2,950,693	
Guanajuato.....	30,062,994	\$4,118,632
Hidalgo.....	19,077,139	3,734,987
Jalisco.....	24,793,322	1,600,917
Mexico.....	22,598,918	348,446
Michoacan.....	20,849,385	287,626
San Luis Potosi.....	18,553,656	3,053,110
Zacatecas.....	15,615,652	4,592,098
Lower California.....	7,598,632	
Rest of Mexico.....	\$151,040,441	\$17,685,816
	187,561,447	4,217,613
Grand total.....	\$388,901,888	\$21,903,429

PUBLIC OFFICERS.—The President of the Republic is General Manuel Gonzalez, whose term of office will expire on December 1, 1884. His Cabinet is composed of the following ministers: Secretary of Foreign Affairs, Señor J. Mariscal; Interior, C. Diez Gutierrez; Justice and Instruction, vacant; Finance, F. Landero y Cos; Public Works, General C. Pacheco; War, General E. Naranjo. Supreme Court, President (and Vice-President of the Republic), Señor J. L. Vallarta, and the magistrates are: P. Ogazon, J. de Mata Vasquez, M. Alas, M. Blanco, J. M. Bantista, M. Saldana, E. Avila, P. Ortiz, J. M. Vasquez Palacios, J. F. Corona, M. Auza, and M. Rojas; with J. E. Muñoz, Attorney-General, and E. Ruiz, Procurator-General.

GOVERNORS OF STATES.—Aguas Calientes, R. Arellanos; Campeachy, A. Shields; Coahuila, E. Madero; Colima, F. Santa Cruz; Chiapas,

M. Utrilla; Chihuahua, L. Terrazas; Federal District, R. Fernandez; Durango, F. G. de Palacios; Guanajuato, M. Ledo; Guerrero, General D. Alvarez; Hidalgo, S. Craviato; Jalisco, P. Landazurri, *ad interim*; Mexico, J. Zabieta; Michoacan, P. Dorantes; Morelos, C. Quaglia; Nuevo Leon, G. Garza Garcia; Oajaca, General Porfirio Diaz; Puebla, General Mendez; Querétaro, F. G. Cosio; San Luis Potosi, P. Diaz Gutierrez; Sinaloa, M. Castro; Sonora, C. Ortiz; Tabasco, M. Foucher; Tamaulipas, A. Canales; Territory of Lower California, General J. M. Rangel; Tlascala, Grajales; Vera Cruz, A. Castillo; Yucatan, General Rosada; and Zacatecas, General Aréchegui.

The Governors of States are elected for a term of four years. The Governor of the Territory of Lower California is appointed by the Federal Government.

The army in 1882 was composed as follows:

	Officers.	Men.
Infantry (20 battalions).....	740	12,200
Cavalry (14 regiments).....	515	4,850
Artillery (6 brigades, each of 5 batteries) ..	380	1,645
Coast guards.....	22	71
Rural guards.....	150	1,692
Invalids.....	19	280
Total.....	1,629	20,738

The navy consists of four gunboats. The national and State finances, as shown by the budget estimates for the current year, exhibit the following details:

REVENUE.		Budget of 1882-'83.
Custom-house.....		\$15,000,000
Custom-house at Mexico and town dues.....		2,000,000
Stamp dues.....		4,000,000
Direct taxes.....		900,000
Mint.....		60,000
Instruction Fund.....		60,000
Post-Office and telegraphs.....		650,000
Lottery.....		800,000
New tobacco and stamp taxes.....		2,000,000
Sundry incomes.....		1,000,000
Income of the individual States.....		7,500,000
Grand total.....		\$34,600,000
EXPENDITURE.		
The Legislature.....		\$1,071,712
The Executive.....		48,832
Supreme Court.....		389,554
Foreign Affairs.....		336,280
Interior.....		3,285,118
Justice and Public Instruction.....		1,215,473
Public Works.....		7,551,683
Finance.....		4,045,877
Army and Navy.....		8,514,473
Expenditure in the different States.....		7,500,000
Grand total.....		\$34,511,507

The city expenses of 1,411 municipalities, amounting in the aggregate to about \$7,000,000, are covered by local taxes.

The foreign debt embraces the following items: English loan of October 14, 1850, \$89,252,360; agreement of indebtedness to English bondholders of December 4, 1851, \$5,900,025; ditto to Spanish, of December 6, 1853, \$1,231,775; ditto, ditto, of November 12, 1853, \$5,553,287; debt to the United States of July 4,

1868, \$2,775,123; together, \$104,712,570; ditto, internal, \$40,241,215; grand total, \$144,953,785.

THE CHIEF RAILROAD LINES.—Among the multitude of companies or individuals possessing "concessions" for railroads from the Mexican Federal Government, all may be discarded at the present moment from consideration in this inquiry except three:

1. The Mexican Central Railroad Company, whose main line is planned to reach from the city of Mexico to Paso del Norte, on the American frontier, running northward through the States of Mexico, Hidalgo, Querétaro, Guanajuato, through a corner of the State of Jalisco, and through the States of Aguas Calientes, Zacatecas, Durango, and Chihuahua, with lateral lines from the neighborhood of the cities of Leon or Lagos or Aguas Calientes to San Blas, on the Pacific coast, and to the neighborhood of Tampico, upon the Gulf of Mexico. The main line of this road follows pretty nearly the central line of the *tierra fria* northward from the capital. In Humboldt's "Views of Nature" the extraordinary facilities of part at least of this route for railroad-building were indicated many years ago by a table he compiled of "the line of leveling from the city of Mexico to Santa Fé," comprising the following altitudes of cities which are on its route: Mexico, 7,469 feet; Tula, 6,733; San Juan del Rio, 6,490; Querétaro, 6,362; Celaya, 6,017; Salamanca, 5,761; Silao, 5,911; Guanajuato (which the Mexican Central reaches by a branch road from Silao), 6,836; Leon, 6,133; Lagos, 6,376; Aguas Calientes, 6,261; Zacatecas, 8,038; Fresnillo, 7,244; Durango, 6,848; Chihuahua, 4,638, and Paso del Norte, 3,810.

2. The Mexican National Railroad Company, whose main line is planned to reach from the city of Mexico to Laredo, on the American frontier, running first westward to Toluca, then turning northward through the towns of Maravatio and Acambaro, crossing the Central road at Celaya and extending to Laredo by way of the cities of San Luis Potosi, Saltillo and Monterrey—traversing the States of Mexico, Michoacan, Guanajuato, San Luis Potosi, a corner of Zacatecas, Nuevo Leon, and Coahuila, with a central line branching off at Acambaro and running to Manzanillo on the Pacific. The elevations of the cities of Saltillo and San Luis Potosi above the sea are given by Humboldt as respectively 5,240 and 6,090 feet. That of the city of Toluca he gives in "Cosmos" as 8,825 feet.

3. The Mexican Railroad Company, whose main line reaches from the city of Mexico to the city of Vera Cruz, running through the cities of Apam, Huamantla, Maltrata, Orizaba, and Córdoba, and traversing the States of Mexico, Tlascala, Puebla, and Vera Cruz.

The Mexican Railroad has been running throughout its whole line from Vera Cruz to the capital, 263 miles, since the year 1873, with a branch line, twenty-nine miles long,

from Apizaco (eighty-six miles from the capital and 177 miles from Vera Cruz) to the city of Puebla. It is a "standard gauge" road, was built chiefly with English capital, and is controlled in London. Its president, however, is an American. Its distinctive peculiarity—in which it differs from the two other roads which have been mentioned—is that it traverses all three of the climatic belts of Mexico, while their routes are in only the *tierra fria*. At Paso del Macho, in the *tierra caliente*, forty-seven miles from Vera Cruz, the work ahead is indicated by the substitution of a Fairlie for a Baldwin locomotive on the train. From this station during the next sixty miles the road mounts through the *tierra templada*, across the terraces of Córdoba and Orizaba, up to Boca del Monte, 8,310 feet above the sea, and thence follows the table-land 156 miles to the city of Mexico. The magnificent scenery and engineering of these sixty miles have long been familiar to Americans by photographs and written narratives. It would be trite, therefore, to descant upon them. They are unrivaled, except by the engineering and scenery of the present route of the Mexican National Railroad from the capital to the city of Toluca.

The main line of the Mexican Central road is completed from the north only so far that trains are running regularly from El Paso to Chihuahua, about 225 miles, and from the south only so far that they are running regularly 286 miles, from the city of Mexico to Lagos, to which extreme point they began to run on December 15, 1882. Between Lagos and Chihuahua there is, therefore, a gap of five or six hundred miles, which must be traversed at present by "diligence." This gap is so extensive that it prohibits the line from becoming a convenient means of access to the capital at present. The Mexican "diligence," or stage-coach, is a very uncomfortable vehicle, built on the pattern of the old-fashioned "Concord coaches," and is as dirty as it is uncomfortable. The highways are very rough, and, although the relays of mules are frequent, a speed of more than forty or fifty miles a day can not reasonably be expected.

The Mexican Central road is of the "standard gauge." Its American connections are with the Atchison, Topeka, and Santa Fé Railroad system—a fact which sufficiently identifies its American control to anybody acquainted with the subdivisions of American railroad interests. Its Mexican controllers are men in close and peculiar relations with the Federal Executive.

The main line of the Mexican National road is completed from the north only so far that trains are running regularly from Laredo to Monterey, and from the south only so far that they are running from the city of Mexico through Toluca, forty-seven miles (to which point they began to run in September, 1882), to Maravatio, ninety-six miles farther, to which

point it is said that they began to run regularly during the month of February, 1883.

The gap in which resort must be had to the "diligence" in this line, therefore, is nearly as extensive at present as exists in the case of the Central road. Nor does the section completed from the city of Mexico westward and northward help at all to fill it, even if that section be reckoned to extend as far as Maravatio, 143 miles. Nor can it do so until after the Central road is crossed at Celaya. The reasons for this are evident by a glance at the map, without discussion. A traveler by "diligence" down from Monterey will of course aim to strike the Mexican Central road at Lagos and use it to the capital. As a main avenue of travel between our country and the city of Mexico the location of the southern part of the Mexican National Railroad is highly advantageous compared with the location of the Central road; while, on the contrary, for that purpose, the location of its northern part possesses some striking advantages.

The Mexican National Company owns also another strip of rail, which is laid northward out of the valley of Mexico by the side of the Central Railroad, some thirty miles to the village of El Salto, availing itself of the easy grades of exit from the valley afforded by the old "Spanish Drain." From El Salto numerous surveys have been made with a design to connect this strip with Toluca, in which event the monstrously expensive road that this company has constructed directly westward from the capital to that city (with grades some of which were stated by one of the engineers, who went over it in company with the writer in January, to be as steep as 3·8 in 100 feet) would doubtless be discontinued as the main line, and the El Salto route substituted. But these surveys were fruitless. It is now asserted, however, that a later survey has been successful in finding a way to make the connection with grades not exceeding 1·5 in 100 feet.

The Mexican National road is of the "narrow gauge." Its American connections are with the Denver and Rio Grande railroad system.

ACCESS BY SEA ON THE PACIFIC SIDE.—On the Pacific side steamers land passengers from San Francisco at San Blas, in the State of Jalisco. Thence it is possible to reach the Mexican Central Railroad at Lagos or Leon by a seven and a half days' journey by "diligence" through the cities of Tepic and Guadalajara. From Lagos to the city of Mexico by rail it is, as has been mentioned, about 286 miles. From Leon to the city of Mexico the distance is 266 miles.

As soon as the Mexican Central road pushes its lateral line from Leon or Lagos to Guadalajara it will greatly facilitate the approach from this quarter.

ACCESS BY SEA ON THE ATLANTIC SIDE.—On the Atlantic side there is a weekly "Alexandre" steamer from New York for Vera Cruz (starting from pier 3 North River on Thurs-

days), touching on the way at Havana, in Cuba, and Progreso, in the Mexican State of Yucatan, and on alternate weeks also at Campeachy, in the State of the same name, and Frontera, in the State of Tobasco. The distances by this route are as follow :

	Miles.
New York to Havana.....	1,200
Havana to Progreso.....	425
Progreso to Campeachy.....	123
Campeachy to Frontera.....	133
Frontera to Vera Cruz.....	200
Total.....	2,086

From Havana there are also British, French, and German steam lines running to Vera Cruz, to any of which a traveler may shift his passage if he desires. Or he may go from New York to Havana by the "Ward" line of steamers, which start from pier 16 East River weekly, on Saturdays, and there shift his passage to Vera Cruz either to an Alexandre boat or to one of these foreign lines.

All the Ward and Alexandre steamers from New York are commodious—those of recent build especially so—and are run with reasonable regard to the comfort of passengers. Their size in general is about 2,500 tons old measurement.

There is also an Alexandre steamer from New Orleans for Vera Cruz once in three weeks. This steamer touches, between New Orleans and Vera Cruz, at the Mexican ports of Bagdad (at the mouth of the Rio Grande, where passengers are taken from or left for Matamoros) and of Tampico and Tuxpan.

The distances from New Orleans to Vera Cruz by this route are as follow :

	Miles.
New Orleans to Bagdad.....	573
Bagdad to Tampico.....	225
Tampico to Tuxpan.....	90
Tuxpan to Vera Cruz.....	125
Total.....	1,013

There is also a "Morgan" line steamer from Morgan City, formerly called Brashear City (reached by rail in a few hours from New Orleans), for Vera Cruz twice a month, touching on the way only at Galveston, in Texas. This is an iron boat, flat-bottomed and a "side-wheeler." All the other boats above mentioned are propellers. It has lately been published that all the Morgan steam lines, including this one, have been purchased in an interest connected with the Central Pacific and Southern Pacific Railroads and with a Mexican "concession," as yet unimproved, for a railroad toward the Mexican capital, starting from the Texas frontier at a point on the Rio Grande north-west of Laredo.

In its issue of January 16, 1883, the Mexican correspondent of the London "Times" thus expresses himself about railroads in Mexico :

Railroads are naturally expected to do much for Mexico, where absence of navigable rivers and water for canals has hitherto necessitated the tedious movement of all goods by ox-team or on the back of the useful *burro*. Already charters have been granted for some 5,000 miles of road, which will cost on an average for

construction and equipment \$25,000 per mile. The United States and foreign countries are finding the money, which would augur that the Mexicans have either very little enterprise, or are doubtful of the success of such undertakings. Nearly 1,000 miles have already been built. The line from the seaport of Vera Cruz to the city of Mexico, covering with its branches 365 miles, has been opened since 1873. The tardiness of the people of Mexico to take advantage of improved transport facilities is illustrated by the fact that the increase of business since the road was opened has been about one per cent per annum, while, although possessing a monopoly and a Government subsidy, the company earned no dividend until last year, when 5 per cent was declared. If the road from the capital of the republic to its principal seaport has taken eight years to develop profitable traffic, there is poor prospect of much profit from lines running through more sparsely populated, poorer regions. Years must elapse before there is much agricultural, manufacturing, or mineral produce to be carried by Mexican railroads, or before the amplified wants of the masses will fill many freight-cars. Before railways can prosper the country, moreover, must become more peaceful and settled. It seems almost incredible that on the Vera Cruz road a car full of soldiers accompanies each train, and at every station soldiers are drawn up awaiting the arrival of each train. These precautions are adopted regularly, even when no specie is being transported. On the Mexican Central, running south from Paso del Norte, 225 miles, to Chihuahua, the traveling officials are all armed, but no military accompany the train. Government subsidizes several Mexican lines to the extent of about one third of the cost of construction, but this, although enabling the road to dispose of its bonds advantageously in foreign markets, is hampered by unfavorable regulations as to freight charges and transport of Government officials and munitions of war.

I have not visited the southern portions of the republic, the Mexican Gulf shores, where tropical produce can be raised, whence much tobacco is brought, and where malarial fevers abound. I have not seen the fertile, extending coffee plantations, still free from parasitic attacks, nor the great silver-mines, nor the larger cities. My observations have been confined to the northern portion of the country, which has obviously been the basin of a great sea, in the midst of which towered the old granitic mountains, standing out then as shallows or islands, now mapping the region into great valleys, some of them 100 miles long and five to 50 miles wide; several of the later-drained flats for miles covered with so much saline deposit as entirely to prevent vegetation. The Mexican Central Railroad, from its northern start on the borders of Texas, for upward of 150 miles passes through a poor sage-brush country, diversified by immense sand-hills and barren alkaline plains, broken with *mesas*, and flanked by a succession of gneissic mountains 1,000 feet to 2,000 high, from the fastnesses of which Indians and white desperadoes were wont to sally forth and rob and murder occasional travelers, railroad surveyors and constructors. The Candelero Pass was pointed out to me, where, twelve months ago, twenty-seven Mexicans in pursuit of a marauding band of Apaches, were inveigled into a defile and cut down to a man. On the waysides, along many a mountain-path, are crosses where prospectors and cattle-men have been shot for plunder or revenge. No wonder that the population invariably carry fire-arms, and always have them handy by night as well as by day. Toward Chihuahua there is less alkali and sand and more water, settlement, irrigation, cultivation, and stock-keeping. The town contains about 7,000 people, and consists of one and two storied adobe houses, with flat roofs, cheaply and quickly built, keeping out both heat and cold, but, unless some attention is paid to cleanliness, affording harbors for centipedes, tarantulas, and other vermin. An imposing cathedral and several churches of the same simple material were erected nearly 800 years

ago, and have since been maintained in good order and endowed by a tax of one per cent on the neighboring mines. The advent of the railroad in September has somewhat awakened Chihuahua from her quiet stagnation: it has brought visitors from all parts of the United States. The Mexican and Indian populations still appear fascinated by the locomotives, and examine them to discover the concealed animals which they believe must furnish the motive power; while still another problem exercises some simple minds—how, when the train is backed, the cars draw the engine.

On the other hand Mr. Romero, the Mexican Minister at Washington, in a speech delivered by him on February 12, 1883, on the occasion of a banquet tendered him by the merchants there, alluded to Mexican railroads in the following terms:

As for the net earnings of railroads in my country, I may state that the Vera Cruz line was inaugurated on January 1, 1873, when its net earnings amounted to \$826,000, while they reached \$2,958,729 in 1881, and nearly \$4,000,000 last year. This railroad cost twice the amount of the present cost of construction; its bonded debt is \$40,000,000, and its shares, which three years ago had not reached par, now sell at 143 per cent, in consequence of the dividends the road pays. And this result has been obtained in spite of the high rates this railroad charges, almost prohibitive as they are, for the freight per mile is 24 to 30 cents per ton. Something similar we shall witness with respect to other railroads in Mexico, provided they shall have been well planned and economically built. As wages and land are cheap in Mexico, and all material enters duty free, they can be built comparatively cheap.

**POSTAL SERVICE.**—The postal service was carried on in 1881 by 873 post-offices, 51 of which were general, 244 branch-offices, and 573 minor local ones. The number of letters forwarded, 4,406,410, besides 55,123 registered ones, 2,693,257 newspapers, and 133 packages of samples. Postage-stamps sold produced \$491,309.

**TELEGRAPHS.**—There were in operation in 1881, 10,486 kilometres, or 6,606 miles, of telegraph belonging to the Federal Government; 1,484 kilometres, or 935 miles, to individual States; 3,502 kilometres, or 2,206 miles, to private companies; 715 kilometres, or 450 miles, to railroad companies; and 875 kilometres, or 551 miles, of cables; together, 17,062 kilometres, or 10,748 miles. Number of offices, 363; number of telegrams forwarded, 744,917; net earnings, \$399,814.

**EXPORTS AND IMPORTS.**—The foreign trade movement in 1879-'80 shows the ensuing items of export:

Silver.....	\$19,823,897
Gold.....	1,180,815
Copper.....	48,692
Ores.....	483,587
Dye and cabinet woods.....	1,597,599
Other products.....	9,529,435
<b>Total.....</b>	<b>\$32,663,525</b>

**COUNTRIES WHERE SHIPPED TO.**

United States.....	\$13,416,600
United Kingdom.....	11,087,594
France.....	5,194,741
Germany.....	1,498,734
Spain.....	1,009,868
Spanish America.....	506,488

**Total.....** \$32,663,525

In 1875-'76 the imports amounted to \$28,485,000, while the exports only reached \$25,435,000, \$15,000,000 of the latter amount being silver.

The marine movement in 1874-'75 was as follows:

FLAG.	Vessels.	FLAG.	Vessels.
Mexican.....	2,227	Norwegian.....	48
American.....	332	Danish.....	38
English.....	162	Dutch.....	12
French.....	115	Other nationalities.....	26
German.....	112		
Spanish.....	64	<b>Total.....</b>	<b>3,181</b>

Total tonnage entered, 1,000,000.

The Mexican merchant navy embraces 421 sea-going vessels and 847 coasting-craft.

The United States imported from Mexico the following amounts of merchandise:

FISCAL YEARS.		FISCAL YEARS.	
1858.....	\$1,103,501	1868.....	\$1,590,667
1859.....	1,244,084	1869.....	2,336,164
1860.....	1,908,431	1870.....	2,715,665
1861.....	886,112	1871.....	3,209,688
1862.....	817,809	1872.....	4,002,920
<b>Total.....</b>	<b>\$5,959,937</b>	<b>Total.....</b>	<b>\$13,355,104</b>
1863.....	\$3,043,882	1873.....	\$4,276,165
1864.....	6,128,445	1874.....	4,346,364
1865.....	6,220,874	1875.....	5,174,594
1866.....	1,726,092	1876.....	5,150,572
1867.....	1,071,986	1877.....	5,204,264
<b>Total.....</b>	<b>\$18,191,229</b>	<b>Total.....</b>	<b>\$24,151,959</b>

**FISCAL YEARS.**

1878.....	\$5,251,502
1879.....	5,493,221
1880.....	7,209,593
1881.....	8,817,892
1882.....	8,461,599

**Total.....** \$34,784,017

During the last quinquennial period, the United States imported from Mexico, besides, the ensuing amounts of specie (nearly all silver):

**FISCAL YEARS.**

1878.....	\$8,394,146
1879.....	8,654,598
1880.....	9,115,824
1881.....	9,136,824
1882.....	6,631,938

**Total.....** \$41,832,380

In other words, during the last quinquennial period the import of specie from there was 20 per cent larger than that of merchandise.

The domestic merchandise export from the United States to Mexico, during the past twenty-five fiscal years, is shown below:

1858.....	\$3,312,825	1868.....	\$6,441,839
1859.....	2,919,742	1869.....	4,838,107

## RECAPITULATION (MERCHANDISE).

*Import from Mexico.*

Into the United States, 1859-'80 inclusive.....	\$79,004,044
Into the United Kingdom, 1859-'80 inclusive....	87,005,285
Into France, 1859-'80 inclusive.....	26,828,720
Total.....	\$192,838,149

*Export to Mexico.*

From the United States, 1859-'80 inclusive.....	\$136,709,506
From the United Kingdom, 1859-'80 inclusive....	115,644,267
From France, 1859-'80 inclusive.....	118,002,542
Total.....	\$370,356,305

The principal Mexican products imported into the United States, besides silver, during the fiscal year 1882, were:

Cochineal, indigo, and sarsaparilla.....	\$203,803
Coffee, 17,020,669 pounds.....	1,817,584
Dye-woods, 126,890 cwt.....	128,734
Horse-hair, 199,295 pounds.....	88,810
Hides and skins.....	1,525,107
India-rubber, 825,206 pounds.....	164,847
Mahogany and cedar.....	499,776
Sisal hemp, 19,233 tons.....	2,061,939
Sugar (raw), 2,931,649 pounds.....	102,147
Lead, 1,182,064 pounds.....	44,865
Other goods.....	1,874,787
Total.....	\$3,461,899

The chief articles of domestic merchandise exported from the United States to Mexico in the same year were: Agricultural implements, living animals, malt liquors, flour, candles, coal, cordage, cotton goods (these to the amount of \$2,566,790), drugs, glass-ware, iron and steel manufactures (these to the amount of \$3,861,514), leather goods, petroleum, ordnance, paints, paper, quicksilver (824,759 pounds), provisions, soap, leaf-tobacco (1,094,018 pounds), wooden-ware (\$1,426,411 worth), etc., amounting together to \$13,324,505.

The commercial treaty negotiated between the United States and Mexico by Messrs. Romero, Grant, Cañedo, and Trescott, and signed

January 20, 1883, still lacks ratification by the Senate of the United States, debate on which has been postponed to the next session of Congress. Under its provisions the ensuing Mexican articles of merchandise would enter the United States duty free: Palm-oil, living animals, indigo, quicksilver, sugar not over No. 16 Dutch standard, coffee, lobsters, beef, barley, leather-belt, raw-hides and skins, esparto-grass, natural flowers, green fruit, Sisal hemp, eggs, India-rubber, Tampico istle (a fiber kindred to Sisal hemp, and used as a substitute for bristles), jalap, all wood in the rough, honey, orchilla, and all dye-woods and tanning materials, straw, leaf-tobacco, vegetables, and sarsaparilla.

By way of reciprocity, the ensuing American manufactures and other products would enter Mexico duty free: Accordions and harmonicas, metallic wire for telegraphs, wire for carding (No. 26 and upward), barbed-fence wire, plows, spades, hoes and pickaxes, masts and anchors, asbestos for roof-covering, oats, quicksilver, sulphur, crow-bars, stoves, pumps and fire-engines, lime, wooden and iron houses complete, agricultural tools and implements, all sorts of tubing, coal, wire and vegetable cards for machinery, carts, wheelbarrows, coaches and railroad-cars, crucibles, cutlasses for cane-cutting, diligences, dynamite, staves, green fruit, guano, ice, iron and steel rails, hyposulphite of soda, scientific instruments, fire and other bricks, fire-wood, printed books not completely bound, locomotives, water-cocks, marble in the rough, marble slabs only polished on one side and not over forty centimetres square, steam-engines, sewing-machines, all industrial, agricultural, mining, and scientific as well as artistic ma-

chinery and apparatus, whole or in part, together with the rubber-belt belonging to each machine, fuse for mine-blasting, the precious metals ground or in bars, machine patterns and molds, United States gold and silver coin, naphtha, tarred pasteboard for roofing purposes, fodder, fresh fish, Venetian blinds, whether painted or not, lithographic stones, all plants and seeds new in Mexico, all metallic pens except gold and silver ones, crude and refined petroleum, slates for roofing and flooring, blasting-powder, clocks, oars for boats, sausage, all bags from Mexican hemp, earthenware and other shingles, printing-ink, printing-type, etc., rags, green vegetables, iron beams, iron supports for roofing, and anvils.

**MICHIGAN.** The State officers elected in November, 1882, and whose terms of office commenced January 1, 1883, to continue for two years, are:

Governor, Josiah W. Begole; Lieutenant-Governor, Moreau S. Crosby; Secretary of State, Harry A. Conant; State Treasurer, Edward H. Butler; Auditor-General, William C. Stevens; Commissioner of State Land-Office, Minor S. Newell; Attorney-General, Jacob J. Van Riper; Superintendent of Public Instruction, Varnum B. Cochran.\*

Officers appointed by Governor Begole, to hold two years from the first of January, 1883:

Commissioner of Railroads, William P. Innes; Commissioner of Insurance, Eugene Peingle; Commissioner of Immigration (with his office at Detroit), Henry N. Walker; Commissioner of Mineral Statistics (with his office at Marquette), A. P. Swineford; Warden of the State-Prison, Elihu B. Pond; Warden of the State House of Correction, David R. Waters.

The Supreme Court is constituted as follows:

Term expires

Benjamin F. Graves, Chief-Justice.....	Dec. 31, 1883.
Thomas M. Cooley.....	Dec. 31, 1885.
James V. Campbell.....	Dec. 31, 1887.
Isaac Marston.....	Dec. 31, 1889.

Charles C. Hopkins, Clerk;  
Henry A. Chaney, Reporter.

The court holds four terms a year, at Lansing, opening on the Tuesday following the first Monday in January, April, June, and October.

**LEGISLATION.**—Pursuant to proclamation by the Governor, the Legislature met in extra session February 23, 1882. The call specified as subjects of legislation: "The condition of the people in the Huron Peninsula of the State who were sufferers by the forest-fires of the autumn of 1881"; the consideration of the tax system, and the bills reported by the commission appointed during the regular session of 1881; and the division of the State into congressional districts, on the basis of the tenth census, and the apportioning act of Congress.

\* Mr. Cochran resigned in February, and Professor H. R. Gass, of Jonesville, was appointed by the Governor to fill the vacancy.

† Judge Marston has tendered his resignation since the 1st day of January, 1883, and his successor will be elected on the first Monday in April.

During the session other subjects were submitted by special message. The session continued until March 14th (the constitutional limitation), on which day it adjourned *sine die*, having enacted twenty-seven general and twenty-one local laws. Appropriations were made for the following purposes: For the erection of shops, etc., at the State House of Correction, Ionia, \$10,000; for the completion of buildings and other improvements at the State School for the Blind, at Lansing, \$11,300; for the relief of the sufferers by the forest-fires of 1881, \$250,000, and the further sum of \$15,000 for rebuilding the school-houses destroyed by the fires; for new buildings at the State Reform School, Lansing, including heating apparatus, furniture, etc., \$75,000; and for buildings at the State-Prison, Jackson, \$17,000. Of these appropriations the last item was to be paid from the general fund; \$140,000 of fire-relief appropriation to be incorporated in the tax levy for 1883; and all other sums to be levied and collected on the tax-rolls for 1882.

**TAXES, ASSESSMENTS, ETC.**—The most important act of the session was entitled "An act to provide for the assessment of property and the levy and collection of taxes thereon." The machinery of the old tax laws was preserved; property subject to taxation was divided into three classes: real, personal credits, and personal chattels. Exemptions heretofore existing were substantially continued. Indebtedness continues to offset credits, with the provision that the tax-payer desiring such offset shall make an itemized and detailed statement giving the name and residence of each creditor and the amount due each. A board of review is provided, consisting of members appointed by the township board, or city council, as the case may be, and the assessing officer of the township or city, and empowered to hear each tax-payer, and increase or lower the valuation as made by the assessing officer (supervisor of town, ward, or district). The most important change from the old law is in the method of selling the lands upon which the taxes are not collected by the minor officers. Under the old law the Auditor-General proceeded to advertise such lands in some paper published in the county in which they were located, and they were sold at public auction, subject to redemption during one year from the date of said sale. Under the new law: "As soon as practicable after the first day of July in each year, the Auditor-General shall prepare and file in the office of the County Clerk in each county in which lands are to be sold under the provisions of this act, a petition addressed to the Circuit Court for said county in chancery, stating therein, by apt reference to lists or schedules annexed thereto, a description of all lands in such county upon which taxes have remained unpaid for more than one year from the first day of July after their return to the Auditor-General, and the total amount of such taxes, with interest computed thereon to the time

fixed for the sale thereof, extended separately against each parcel of land, and he shall include with, and add to, such total amount against each parcel, sixty cents for the cost of advertising and other expenses of sale. Such petition shall pray a decree in favor of the State of Michigan against said land for the payment of the several amounts so specified therein, and in default thereof that such lands be sold." Notice is to be given of the filing of said petition, and that the hearing on the same will be at the next term of said court, and also that the sale of lands under decree obtained will take place on the following first Monday in May. Section 57, prescribing the method of proceeding in the hearing on said petition, is quoted in full:

SECTION 57. Any person desiring to contest the validity of any tax, shall file in writing his objections thereto with the clerk of the county, on or before the day fixed in said notice for the hearing of such petition, and shall not be allowed to make any objection not therein specified. If, within the first five days after the day fixed in such notice for the hearing of such petition, it shall be made to appear to the court that any person has been prevented from filing objections to any tax, without fault on his part, such further time may be granted for that purpose as may seem proper, not exceeding five days. The court shall give precedence to the hearing of such petition over all other business; shall examine, consider, and determine the matters therein stated, and objections made in a summary manner without other pleadings, and make final decree thereon as the right of the case may be. The taxes specified in the petition shall be presumed legal, and a decree be made therefor, unless the contrary is proved. Evidence shall be taken in open court. All oral testimony shall, at the request of any person interested, be written down and filed. The court may make such orders from time to time as may be necessary to facilitate the proceedings, and shall decide all questions as to the admissibility of evidence; and the decision, so made, shall be final, and not subject to review or appeal. If the lands of two or more persons have been assessed together, the court may, if practicable, separate the same, and apportion to each parcel its just proportion of the taxes, interest, and charges. If any tax shall be found illegal, it shall be rejected. If a part of any tax shall be found illegal, such part shall be set aside, and the remaining tax shall be decreed valid. The total amount of taxes, interest, and charges, as fixed by the court, shall be entered by the register of the court opposite each parcel of land in the column of said record, under the heading, "Amount decreed against lands." If the court shall make any order setting aside the taxes on any parcel of land, or any part thereof, or any special order relating to any particular parcel of land or tax thereon, a brief entry of such order shall be made upon said record, opposite such land or tax, which shall be signed by the judge of the court, either by his full name or initials, and such entry shall have the same effect as if made and entered as a part of the final decree. At least ten days prior to the time fixed for the sale of such lands, the court shall make a final decree in favor of the State of Michigan for such taxes, interest, and charges, as shall be valid, and determine the total amount thereof chargeable against each parcel of land; and shall order and decree that such several parcels of land, or so much of each as may be necessary to satisfy the amount fixed by such decree, shall severally be sold as the law directs. Such decree shall be considered as a several decree in favor of the State of Michigan, against each parcel of land, for each tax included therein. The court may decree such costs against a person contesting any tax as may be equitable, if the tax, or any part thereof which remains unpaid, is adjudged valid.

An appeal from the decree on any disputed tax must be made within ten days, and must be preceded by a payment of the decreed amount to the county treasurer, to be refunded if the Supreme Court shall decide against the validity of the tax. The county treasurer, or Auditor-General, may also appeal from a decree holding any tax invalid. After sales shall have been made by the county treasurer, and within twenty days, that officer shall make and file with the clerk of the court a report of such sale, therein referring to the original petition for the particulars thereof; and all sales shall stand confirmed, unless objections thereto are filed within eight days after the time limited for filing such report, without the entry of any order or further notice.

The practice with reference to setting aside such sale shall be the same, so far as applicable, as in a sale in equity on the foreclosure of mortgages: *Provided*, No sale shall be set aside for inadequacy of price, except upon payment of amount bid upon such sale, with interests and costs: *And provided further*, That no sale shall be set aside after confirmation, except in cases where the taxes were paid, or the property was exempt from taxation. In such cases the owner of such lands may move the court, at any time within one year after he shall have notice of such sale, to set the same aside; and the court may so order upon such terms as may be just. *Provided also*, That no sale shall be set aside after the purchaser, his heirs or assigns, has been in actual possession of the lands for five years. If a sale is set aside, the county treasurer shall refund to the purchaser the amount of his bid, with interest at seven per cent.

On confirmation of sales, and report by the county treasurer to the Auditor-General, that officer shall execute deeds to the purchasers:

Such deeds shall convey an absolute title to the land sold, and be conclusive evidence of title in fee in the grantee, subject, however, to all taxes assessed and levied on such lands subsequent to the taxes for which the same was bid off, and the deed shall so state. The court may, on application, put the purchaser in possession of the premises by writs of assistance.

Provision is also made for the sale of lands bid in by the State for want of private purchasers.

It is provided that assessments and sales shall not be held invalid for mere irregularities or informalities, and that all required records, statements, and certificates shall be *prima facie* evidence of the facts therein set forth. Also by

SECTION 85. In any suit or proceeding to enforce or set aside any tax, such tax shall be held illegal only for one of the following reasons:

1. That no law authorizes such tax.
2. That the person or persons appointed to decide whether a tax shall be raised under a given law, have acted without jurisdiction, or have not imposed the tax in question.
3. That the person or property assessed was exempt from the taxation in question, or was not assessed.
4. That the tax has been paid.
5. That the supervisor, or board of review, in assessing a person or property for taxation, or in the apportionment of the tax to the person or property in question, acted fraudulently.

If any such illegality, omission, or fraud, affects the

amount of the tax only, the tax shall be sustained so far as the same is just and legal.

The provisions of the law are designed to enforce and secure a more prompt and general payment of taxes than heretofore, or, in default, to make tax-titles of some value.

CONGRESSIONAL DISTRICTS.—The act dividing the State into eleven congressional districts constituted them by counties, and in population, as follow :

1. Wayne—166,426.
2. Hillsdale, Lenawee, Monroe, and Washtenaw—156,540.
3. Barry, Branch, Calhoun, Eaton, and Jackson—164,966.
4. Berrien, Cass, Kalamazoo, St. Joseph, and Van Buren—150,563.
5. Allegan, Ionia, Kent, and Ottawa—178,055.
6. Clinton, Genesee, Ingham, Livingston, and Oakland—164,218.
7. Huron, Lapeer, Macomb, St. Clair, and Sanilac—154,392.
8. Gratiot, Isabella, Midland, Montcalm, Saginaw, and Shiawassee—160,292.
9. Antrim, Charlevoix, Kalkaska, Lake, Manistee, Mason, Mecosta, Missaukee, Muskegon, Newaygo, Oceana, Osceola, and Wexford—125,308.
10. Alcona, Alpena, Bay, Cheboygan, Clare, Crawford, Emmet, Gladwin, Iosco, Montmorency, Ogemaw, Osceola, Otsego, Presque Isle, Roscommon, and Tuscola—111,152.
11. Baraga, Benzie, Chippewa, Delta, Grand Traverse, Houghton, Isle Royal, Keweenaw, Leelanaw, Mackinac, Manistowick, Marquette, Menominee, Ontonagon, and Schoolcraft—107,955.

FINANCES.—The financial condition of the State at the close of the fiscal year, September 30th, was as follows :

Cash balance September 30, 1881.....	\$1,793,362 07
Receipts for fiscal year.....	2,916,084 45
Total resources.....	\$4,709,446 52
Disbursements for the year.....	2,951,518 31
Balance in Treasury September 30, 1882.....	\$1,757,938 21
Add United States bonds in sinking fund..	300,000 00
Total cash and bonds.....	\$2,057,938 21

This sum stands to the credit of the following funds:

General fund to meet appropriations and current expenses.....	\$650,920 91
Normal School interest fund.....	925 88
University interest fund.....	8,548 60
Primary School interest fund.....	423,394 08
Sinking fund—cash.....	588,000 00
Sinking fund—United States bonds.....	300,000 00
St. Mary's Falls Ship-Canal fund.....	68,924 12
War fund.....	11,708 39
Sundry deposits.....	5,516 28

Total.....\$2,057,938 21

Balance due September 30th on specific appropriations, \$392,277.90.

The bonded debt of the State was decreased during the year in the sum of \$5,000, leaving the funded and fundable debt September 30, 1882, as follows:

Interest-bearing bonds:	
Six per cent due January 1, 1883.....	\$590,000 00
Seven per cent due May 1, 1890.....	298,000 00
Total interest-bearing debt.....	\$888,000 00
Non-interest-bearing bonds:	
Part paid \$5,000,000 loan adjusted at.....	12,149 97
Total bonded debt.....	\$900,149 97

After a transfer of \$305,895.27 to the primary-school interest fund, and \$16,875 to the general fund, the cash and United States bonds in hand September 30, 1882, and held for that purpose, were sufficient to cancel the bonded indebtedness.

The trust-fund indebtedness was increased during the year from \$3,752,476.84 to \$4,032,867.11. It is constituted as follows:

Primary-School fund.....	\$2,924,925 17
Five per cent Primary-School fund.....	337,996 54
University fund.....	485,601 80
Agricultural-College fund.....	224,865 15
Normal-School fund.....	60,075 45

Total avails of lands sold.....\$4,032,867 11

The State pays 5 per cent on the second item above, 6 per cent on the last item, and 7 per cent on the other bonds.

The receipts on account of specific taxes were:

From railroad companies.....	\$592,215 17
street-railway companies.....	310 50
palace and sleeping-car companies.....	1,068 94
fire-insurance companies.....	68,623 10
life-insurance companies.....	23,550 95
plate-glass insurance companies.....	71 95
mining companies.....	41,218 39
telegraph companies.....	4,130 94
telephone companies.....	1,078 48
express companies.....	1,852 17
plank and gravel road companies.....	1,298 84
river-improvement companies.....	1,351 77
boiler-inspection insurance companies.....	180 59
cornet bands.....	4 50

Total.....\$676,941 29

A decrease of \$73,148 from receipts from same sources in 1881.

The State taxes for the year, as apportioned to the several counties by the Auditor-General in October, were for the following purposes:

For the University.....	\$128,500 00
State Normal School.....	19,500 00
Agricultural College.....	16,194 50
State Public School.....	41,650 00
Michigan School for the Blind.....	29,800 00
Institution for the Deaf and Dumb.....	41,600 00
State Reform School for Boys.....	110,500 00
Michigan Reform School for Girls.....	11,000 00
State House of Correction.....	10,000 00
new Asylum for the Insane.....	150,000 00
Board of Fish Commissioners.....	7,500 00
State Board of Health.....	2,000 00
military purposes.....	57,271 73
relief of sufferers by fire of 1881.....	125,000 00
general purposes.....	272,575 00

Total.....\$1,021,091 23

The apportionment was made on an equalized valuation of \$810,000,000, and the tax was a slight fraction over \$1.26 on each \$1,000 of such valuation, or much less than that rate on the real valuation.

The full reports of the thirteen State banks, published as an appendix to the report of the State Treasurer, show their condition July 3, 1882, as follows:

RESOURCES.	
Loans and discounts.....	\$3,840,083 49
Bonds and mortgages.....	108,698 77
Cash and cash items.....	543,145 47
Real estate and fixtures.....	66,184 95
Due from banks and bankers.....	696,788 97
Expenses.....	21,622 71
Overdrafts.....	14,167 03
Total.....	\$4,795,666 89

LIABILITIES.	
Capital .....	\$797,400 00
Surplus .....	281,886 00
Due banks and bankers .....	74,437 21
Due depositors .....	3,541,812 92
Profit and loss .....	93,051 86
Rediscouts .....	57,011 73
Interest and exchange .....	66 62
Total .....	\$4,795,666 39

In 1881 fifteen banks reported, with total resources, \$4,869,714.72.

The reports of the fifteen savings-banks cover the quarter ending October 2, 1882:

RESOURCES.	
Loans and discounts .....	\$9,143,104 29
Bonds and mortgages .....	1,708,785 15
Cash and cash items .....	1,273,405 40
Real estate and fixtures .....	944,186 66
Due from banks and bankers .....	1,214,673 52
Expenses .....	84,229 89
Overdrafts .....	25,448 00
Total .....	\$13,748,785 91

LIABILITIES.	
Capital .....	\$1,262,100 00
Surplus .....	188,787 93
Due banks .....	111,459 84
Due depositors .....	11,905,000 79
Profit and loss .....	189,891 57
Interest and exchange .....	191,545 73
Total .....	\$13,748,785 91

The increase over the preceding year in loans and discounts is \$1,489,130.53, and in the item of due depositors, \$1,609,975.43.

**PUBLIC LANDS.**—The annual report of the Commissioner of Swamp Lands showed but 49,668 acres subject to appropriation at the close of the fiscal year. Subsequent to that date, and prior to December 31st, the Board of Control had appropriated 13,980 acres, and it was estimated that existing contracts would exhaust the remaining 35,688 acres, or leave none of any value.

The Commissioner of Immigration, in his first, concise, and valuable report, classifies the State, United States, and railroad lands sold during the year, and unsold at the close of the year, as follows:

LANDS.	Acres sold.	Acres unsold.
State lands .....	177,450	683,735
United States lands .....	474,379	1,282,367
Railroad lands .....	226,796	2,857,397

Of the United States lands unsold or subject to location 1,004,140 acres are in the Upper Peninsula, or Marquette district, and 1,875,961 acres of the railroad lands are also in the Upper Peninsula.

**RAILROADS.**—The tenth annual report of the Commissioner of Railroads bears date November 30, 1882, but is principally compiled from the returns made for the year ending December 31, 1881. At that date the number of railroad corporations doing business in the State was 54, and the number of separate managements 32, with a total mileage in the State of 4,252. This mileage was increased in 1882 (though the detailed statistics of the increase are not included in the report) to 4,545, exclusive of 47 miles of ore and forest roads. The

commissioner says: "Ten years since the railroad system of the State was confined almost entirely to the southern third of the Lower Peninsula, the business under the control of only thirty corporations, and the whole value of their property represented by a stock and debt account of \$259,271,228.40. Now of all the counties in the Lower Peninsula there are but eight—Alpena, Alcona, Benzie, Gladwin, Leelanaw, Montmorency, Oscoda, and Presque Isle—without railroad facilities. In the Upper Peninsula the 216.80 miles of railroad in 1872 have increased to 397.33 in 1881, and all its counties but three are now connected by rail with the outside commercial world, and the total amount of stock and debt now reported to this office is \$507,710,593.69. The capital stock paid in, as shown by the reports for 1881, was \$239,505,422.14, being an increase for the year of \$78,925,102.09, or 49.77 per cent. The large increase both in stock and mileage is principally credited to the Chicago and Northwestern; Detroit, Mackinac, and Marquette; and Wabash, St. Louis, and Pacific Companies. The stock per mile is reported at \$20,890, being a decrease of \$6,486.48, or 20.02 per cent. The funded debt was increased during the year from \$142,212,896.73 to \$245,907,462.77, and the floating debt from \$11,159,142.17 to \$22,573,142.02; a total debt increase for the year of \$115,128,295.89. Notwithstanding this aggregate increase, the decrease per mile was \$2,739.54. The total cost of the properties is put at \$487,560,525.79, being \$42,520 per mile of road, while the total stock and debt aggregates \$507,710,593.69, or \$44,275.71 per mile. The amount of stock and debt chargeable to mileage operated in Michigan is \$188,257,300, the cost of which was but \$173,682,876.96. Excess of stock and debt over cost of road-bed and equipment, \$14,474,423. The total receipts for the year were \$76,322,484.14, and the total operating expenses, including taxes, \$50,454,951.15, an excess of receipts of \$25,867,332.99. Against this excess is chargeable: interest on funded debt, \$13,825,472.46; on floating debt, \$310,675.67; for rentals, \$3,001,321.75; leaving to the credit of net income account, \$8,730,063.11. Nine roads failed to earn enough to pay their ordinary operating expenses, their deficiencies being \$109,965.50. But ten companies paid dividends, the amount being \$9,055,250.60. The deficiency in the year's business, after paying expenses, interest, rentals, and dividends, was \$325,187.49. The total number of passengers transported during the year was 18,914,933. Excess over previous year, 5,317,733. The entire passenger mileage, or passengers carried one mile, was 824,103,330, an increased mileage over 1880 of 262,120,506. The average distance traveled by each passenger was 43.57 miles, for which he paid 98 cents, or an average rate per mile of 2.238 cents. The tonnage of freight of all kinds during the year was 37,779,555, an increase over 1880 of 10,949,005, or 40.80 per cent. The total freight

mileage, or tons carried one mile, was 5,753,029,773, an increase of 963,608,964, or 20.12 per cent. The Chicago and Northwestern and the Wabash system are credited with the larger share of both increased tonnage and mileage. The average ton haul was 152.27 miles; the average freight received for each ton moved, \$1.72, and the rate per ton per mile 1.13 cent, an increase of 2.7 mills over 1880. The casualty list was unusually large:

PERSONS.	Killed.	Injured.	Total.
Passengers .....	12	40	52
Employés.....	61	270	331
Others .....	67	61	128

Eighty-three are classed as purely accidental, and 428 as resulting from direct carelessness or want of proper caution. Of the number killed classed as "others," 55 were tramps, trespassers, or ride-stealers, 28 of whom were on the track intoxicated, 11 were killed at highway-crossings, and one was a suicide. Of the same class injured, 51 were tramps or trespassers. The number of passengers killed was one for every 492,448 carried, and the number injured one for every 145,234. Of employés, one in every 286 was killed, and one in each 71 injured. The most prolific cause of injury to employés continues to be the coupling of cars, but nine employés were injured from being caught in a frog.

**LUMBER BUSINESS.**—The following figures, relative to the lumber-cut of the seventy Saginaw River mills, and of the mills tributary to the Saginaw Valley, are abstracted from the full tables found in the "Annual Review," compiled and published by order of the Saginaw Board of Trade:

Pine-lumber cut in 1881.....	967,320,317 feet.
Pine-lumber cut in 1882.....	1,011,274,905 "
At inland mills in Saginaw and Bay Counties.....	17,873,000 "

At other inland and railroad mills.....	150,000,000 feet.
Total pine-cut of year.....	1,490,582,022 "
Hard-wood lumber cut in 1882.....	24,649,900 "
Pine-lumber on dock—sold.....	105,073,000 "
Pine-lumber on dock—unsold.....	204,009,999 "
Logs in boom.....	68,575,000 "
Oak and pine square timber.....	7,853,000 "
Hard-wood lumber at inland mills.....	4,759,900 "
Salt-barrel staves cut.....	49,372,116 pieces.
Salt-barrel headings cut.....	2,851,815 sets.
Shingles cut in Saginaw and Bay Counties.....	295,046,500

With 275,000 feet of shingle-logs in boom. Oak pipe staves cut for foreign markets, 758,082, against 1,537,073 in 1881.

The same publication gives in detail the product of the other lumber districts of the State, and closes with the following summary tables of the cut of pine-lumber for 1882:

## EASTERN MICHIGAN.

Saginaw Valley mills.....	1,028,648,505
Flint and Pere Marquette mills.....	112,638,562
Saginaw Valley and St. Louis Railroad.....	8,500,000
Detroit, Saginaw, and Bay City Division.....	8,000,000
Mackinac Division.....	56,550,000
Tawas.....	49,438,443
Oscoda and Au Sable.....	181,908,525
Alcona mills.....	20,000,000
Alpena.....	179,000,000
Cheboygan.....	82,000,000
Miscellaneous and scattering mills.....	50,000,000

Total.....1,764,688,935

## WESTERN MICHIGAN.

Lake Michigan towns.....	1,476,996,679
Chicago and West Michigan Railroad.....	206,911,000
Grand Rapids and Indiana Railroad.....	329,910,668
Detroit, Lansing, and Northern Railroad.....	102,748,000
Miscellaneous and scattering mills.....	97,851,000

Total.....2,214,117,347

Grand total for Michigan.....	8,973,801,282
Grand total for Northwest, 1882.....	7,519,896,191
Grand total for Northwest, 1881.....	6,768,856,740

**SALT MANUFACTURE.**—The same "Review" gives the following table of the salt inspected during the year:

COUNTIES.	Fine bulk.	Fine barrels.	Packers.	Solar.	Second quality.	Total.
Saginaw County .....	290,573	951,064	1,900	26,535	17,196	1,287,273
Bay County .....	194,270	935,934	6,740	4,800	16,485	1,158,279
Huron County.....	.....	241,955	8,158	.....	9,599	255,012
Iosco County.....	.....	205,700	1,765	.....	4,152	211,667
Midland County.....	.....	69,554	.....	.....	10,685	80,239
Manistee County.....	7,519	80,149	8,645	.....	235	41,562
Gratiot County.....	800	995	.....	.....	1,550	8,285
Total.....	493,167	2,435,385	17,208	81,335	60,222	3,037,317

The total manufacture for the year was 3,204,921 barrels, embracing the grades of fine bulk, fine barrels, packers, solar, and second quality. The average price of salt for the year was 70 cents a barrel.

**MINERAL STATISTICS.**—The Commissioner of Mineral Statistics, Hon. A. P. Swineford, of Marquette, furnishes full tables of the products of the mines and furnaces of the Lake Superior region, from which the following tables are condensed. The first table gives the iron product for the last five years, with the total product for twenty-seven years, making the total 20,584,931 tons, valued at \$164,830,526:

YEAR.	Ore.	Pig-iron.	Ore and pig.	Value.
	Tons.	Tons.	Tons.	
1873.....	1,125,098	17,404	1,142,497	\$6,884,432
1879.....	1,414,182	39,583	1,453,765	11,418,114
1880.....	1,987,596	48,528	2,036,121	19,457,427
1881.....	2,321,815	52,953	2,374,265	20,498,613
1882.....	2,942,438	72,992	3,015,450	26,238,251
27 years.....	20,584,931	916,213	21,501,144	\$164,830,526

The quartz production of the year was 12,623 tons, valued at \$63,115. Total value of ore, pig-iron, and quartz, \$26,301,366. Excess over 1881, \$5,727,655.

The output of the charcoal furnaces was:

FURNACES.	Gross tons.	Value.
Carp River Iron Company's furnaces.	11,886	\$325,490
Deer Lake	8,888	242,908
Jackson	8,657	238,066
Florence	5,400	148,500
Menominee	10,400	286,000
Martel	11,217	305,407
Pioneer	16,619	457,923
Total	72,962	\$2,006,454

The mines which produced each an ore-product valued at over \$1,000,000, were: Lake Superior, \$2,834,885; Republic, \$2,351,109; Chapin, \$2,103,810; Cleveland, \$1,958,140; Champion, \$1,590,090; and Norway, \$1,076,055. The Florence put out a valuation of \$960,930; the Jackson, \$919,885; the Vulcan, \$799,357; the Commonwealth, \$752,503; the Perkins, \$626,008; and the New York, \$539,657. No other mine produced half a million. The product of the Indiana dropped from \$1,024,500, in 1881, to \$36,380.

The product of the copper-mines is stated as follows, in pounds:

Houghton Company's mines	50,770,719
Keweenaw Company's mines	5,462,648
Ontonagon Company's mines	1,025,770
Total	57,259,137

Compared with 1881, the output of the mines producing over one million pounds each was as follows:

MINES.	1881.	1882.
Calumet and Hecla	38,924,482	31,914,726
Quincy	6,815,485	5,553,784
Oscoda	4,506,880	3,841,754
Franklin	3,228,190	3,179,786
Atlantic	3,031,995	3,014,976
Allouez	1,939,845	1,839,408
Central	Not given	1,448,008
Pewabic	1,247,550	1,481,224

The next largest producing mines were: Massachusetts, 837,928 pounds; Conglomerate, 793,100; Grand Portage, \$710,192; Copper Falls, 695,808; Hancock, 672,009; and Phoenix, 531,472.

The average price of copper during the year was 18.41 cents per pound, which would give an approximate value of \$10,541,407.12.

EDUCATION.—The Superintendent of Public Instruction furnishes the following statistics of the primary schools in advance of his annual report:

Whole number of school districts	6,630
Increase over preceding year	104
Whole number of school-houses	6,728
Increase over preceding year	153
Number of children between five and twenty years of age	588,802
Increase over preceding year	20,508
Number of children attending public schools	885,504
Increase over preceding year	18,761
Number of private and select schools	271
Number of pupils attending private and select schools	20,577
Number of teachers employed in public schools—men	3,887
Number of teachers employed in public schools—women	10,580
Total of both sexes	14,467
Decrease since 1881	5

Total wages paid teachers	\$2,193,002 68
Increase over 1881	168,988 84
Estimated value of school property	9,848,498 00
Amount on hand from preceding year	876,882 25
Amount received from one-mile tax	514,504 56
Amount received from primary-school interest fund	626,673 56
Amount received from tuition of non-resident pupils	40,518 18
Amount received from district taxes	2,269,504 47
Amount received from all other sources	406,948 69

Total receipts for the year.....\$4,785,026 74

Total expenditures for all purposes	\$3,789,290 88
Amount carried forward to next year	945,735 81

Total.....\$4,785,026 74

The annual report of the Acting Principal of the State Normal School gives the following summary of students in attendance during the school year 1881-'82:

In Normal department	880
Practice school—Grammar department	77
Primary department	112
Counted twice by transfer	519
Total	8

Total.....511

Number graduated during the year: Common-school course, 48; English courses, 18; language courses, 21. Total, 82. The disbursements for the year were: On account of salaries and current expenses, \$26,650.72; for new building and special purposes, \$24,839.49. Total, \$51,490.21. The receipts, exclusive of balances, Sept. 30, 1881, were \$48,266.57; \$3,415 came from tuition, laboratory, and diploma fees, and \$44,851.57 from the State Treasury.

The report of the President of the State Agricultural College makes the following showing for 1881-'82: Number of students, 221 (a decrease of seven from the preceding year). Classification: Resident graduates, 2; seniors, 29; juniors, 31; sophomores, 56; freshmen, 82; specials, 21. The number of ladies in the several classes increased from seven to nine (one senior, two sophomores, two freshmen, and four in select studies). At the annual commencement, August 15th, the degree of Bachelor of Science was conferred upon 28 graduates, including one lady, the first daughter of the college. During the year 10,225.99 acres of college lands were sold for \$51,129.25; also 1,637.01 acres of forfeited college lands for \$8,335.05; leaving unsold 124,886.74 acres that have never been sold, and 10,583.13 acres forfeited or once-sold lands—in all, 135,469.87. At the same price the sales were made during 1882—\$5 per acre—these lands have a cash value of \$677,345, and may be expected to increase the present endowment fund of \$224,868.15 in that amount. The expenses of the last two years (reported together) were \$167,069.61, and cash balance, September 30, 1882, \$7,211.32.

The annual report of President Angell, of Michigan University, evidences a prosperous year. The number of students enrolled was the same as last year, classified by departments as follows: Department of Literature, Science, and the Arts, 513; Department of Medicine

and Surgery, 380; Department of Law, 395; School of Pharmacy, 100; Homœopathic Medical College, 71; College of Dental Surgery, 75. Of these 184 were women, 110 of whom were in the Literary Department, 44 in the Department of Medicine and Surgery, 2 in Department of Law, 5 in the School of Pharmacy, 19 in the Homœopathic Medical College, and 4 in the Dental College. Concerning these the president says: "A good proportion of the women who have graduated here are holding conspicuous positions either as medical practitioners or as teachers in high-schools, academies, and colleges. No less than six members of the present faculty of Wellesley College, including the president, are graduates of this university. Several women who graduated from the medical department are in heathen lands discharging the varied and responsible duties of medical missionaries." The president further says: "About three fifths of the students in the literary department were from Michigan. More than half of the students in the other departments were from elsewhere. Perhaps no other institution in the country has so wide-spread a constituency. Last year we had students from every one of the Eastern, the Middle, and the Western States, and from every Southern State but four; from four Territories and the District of Columbia; and from Ontario, New Brunswick, Manitoba, the Hawaiian Islands, Nicaragua, Cuba, Bermuda, England, Ireland, Roumania, Egypt, and Burmah." The degrees conferred on examination during the year were: Bachelor of Letters, 8; Bachelor of Science, 9; Bachelor of Philosophy, 19; Bachelor of Arts, 39; Master of Letters, 1; Master of Science, 3; Master of Philosophy, 1; Master of Arts, 4; Doctor of Philosophy, 2; Doctor of Medicine (department of medicine and surgery), 92; Bachelor of Laws, 170; Pharmaceutical Chemist, 40; Doctor of Medicine (homœopathic college), 15; Doctor of Dental Surgery, 32. Total, 435. The honorary degrees were: Master of Arts, 2; Doctor of Philosophy, 2. The degrees of Civil and Mining Engineer are now offered only as second degrees. The receipts of the year, exclusive of balance, September 30, 1881, were \$266,740.06; the disbursements, \$245,884.09; and the balance on hand, September 30, 1882, \$28,118.75. The receipts from students' fees were \$85,979.10, and the payments on account of salaries of officers, professors, and employes, were \$118,390.82.

**CHARITABLE INSTITUTIONS.**—The annual report of the Superintendent of the Michigan Asylum for the Insane, for the year ending September 30, 1882, shows:

Patients September 30, 1881.....	635	
Received during the year.....	290	885
Discharged recovered.....	29	
" improved.....	37	
" unimproved.....	30	
Died.....	49	145
Remaining September 30, 1882.....	740	

The heredity of the 200 patients admitted during the year is stated as follows: Paternal insane—immediate, 13; remote, 11. Maternal insane—immediate, 11; remote, 9. Paternal and maternal insane, 6; brother or sister insane, 25; unclassified, 7; dissolute parentage, 13; unascertained, 35; no insanity reported, 70. Of the same 200, 55 males and 48 females were married; 58 males and 23 females single, and 9 males and 7 females widowed; 98 were farmers, gardeners, or agricultural laborers; 36 common laborers and domestics; 10 workers in leather; 10 workers in stone; and only a small percentage belonged to the professional classes.

The report of the Medical Superintendent of the Eastern Michigan Asylum makes the following showing:

Under treatment September 30, 1881.....	471	
Admitted during year.....	187	558
Discharged recovered.....	44	
" improved.....	26	
" unimproved.....	10	
Died.....	86	
Temporarily absent.....	1	117
Remaining September 30, 1882.....	541	

Of this number 273 are males and 268 females. The superintendent, after classifying the patients under the head of "probable exciting causes," and the tendency to "ascribe insanity to moral causes," says that "insanity is very rarely to be ascribed to a single cause," and reaches the conclusion that "the causes of insanity are manifestly physical and affect the individual by depressing the general health. This interferes with the nutrition of the brain, and mental alienation results." The expenditures for 1882 were \$175,618 for all purposes, and the average weekly cost per capita was \$3.91½.

The Board of Commissioners of the Northern Asylum for the Insane report the purchase of a site near Traverse City, overlooking Grand Traverse Bay, consisting of 339 acres, with contracts for 57 acres adjoining the same; also that plans have been adopted, building material contracted for, and a contract let for the erection of the building.

The report of the Principal of the Michigan Institution for the Education of the Deaf and Dumb gives an enrollment for the session of 1881-'82 of 249. The graduating class numbered but four, chargeable to an increase of the school course from eight to ten years. The disbursements on account of current expenses were \$46,589.74, of which amount \$5,072.76 came from earnings and \$41,516.98 from the State. The trustees say: "The graduates of this institution will compare favorably in literary attainments with those of the high-schools of our State, while in ability to earn a living and become self-supporting we think they surpass any equal number of speaking pupils of eight years' training that may be selected"—which work is accomplished at an average weekly expense for each pupil of \$3.23.

The first biennial report of the Michigan School for the Blind says: "During the period of two years, ending June 22, 1882, there have been 73 pupils enrolled, of whom 55 were in attendance the first year and 63 the second. These pupils were divided into different grades, as follows: first grade, 12; second grade, 18; third grade, 43. Gratifying progress is reported both in the studies pursued in the school and in the industrial department. The disbursements for the fiscal year ending September 30, 1882, were: for current expenses, \$22,140.32; for buildings and special purposes, \$19,728.81. Total, \$41,869.13. Statistics collected by State authority in 1881 give the number of blind persons resident in the State in that year as 540—325 males and 215 females. Of this number 67 were under twenty years old and 48 between the ages of twenty and thirty years; 90 are reported as having been inmates of institutions for the blind, and 382 have never been inmates of any institution.

REFORMATORY AND PENAL.—From the biennial report of the State Public School Superintendent the following statistics for the fiscal year ending September 30, 1882, are collated:

Received during the year.....	150
Indentured during the year.....	175
Returned to counties.....	19
Returned from families.....	64
Died.....	2

Remaining in school September 30, 1882..... 811

Current expenses for year, \$37,200.26, and average cost per capita, \$119.61. Under the head of "Discipline," Superintendent Alden says:

The question is many times asked how the children are disciplined. In answer I have to say, generally, that the character of our government is paternal. The majority of the children are kept in order by the rules and general system of the institution, without resorting to any or much punishment. But all can not be so governed. Some are very disobedient and vicious, destructive of property, overbearing and oppressive toward their fellows, untruthful and dishonest, and resort must be had to such punishments as are best suited to their years, dispositions, and offenses. What will reach one child effectively makes no impression upon another. The circumstances of the particular case in hand can alone determine the punishment.

It has been claimed by some institutions that they do not use corporal punishment. A careful and somewhat extended investigation of this claim has convinced me that they must have *forgotten*. I am convinced that there is not a child's institution in the country where corporal punishment is not occasionally resorted to as the most effective punishment for some children. This institution has never made any such pretensions. As a last resort, when all other things have proved ineffective, a few strokes, from two to ten, as the case may be, are given on the hand with a light switch or leather strap. This is usually sufficient. At least, I am satisfied that if such a moderate punishment fails, greater severity would, in time, tend to harden instead of softening the culprit. Placing children in bed for a part or all of the day, depriving them of play, giving them bread and water for one meal or shutting them up by themselves in a cheerful room where they may have time to reflect and come to themselves, I find sometimes quite effective. In all cases more depends upon the spirit and manner of the person administering the punishment than upon

the punishment itself. I know that there are persons who disapprove of all these or any punishments, but I think that eight years' experience, with twelve hundred children, such as come to us, would considerably modify their views, and they would discover things not dreamed of in their philosophy. It will still ever be true, however, that the "minimum of punishment is the maximum of excellence."

Miss Emma A. Hall, the accomplished and zealous Superintendent of the Michigan Reform School for Girls, in her first report to the Board of Control, gives the number of girls received up to, and in the school, September 30, 1882, as follows:

During August and September, 1881.....	19
From September 30, 1881, to September 30, 1882.....	67
Returned to court.....	3
In school September 30, 1882.....	88

The girls were graded: In Cottage No. 1, or lowest grade, 19; in second grade, 25; in highest grade, 39. "Tickets of leave" had been granted four of the girls of the highest grade, and they were soon to be placed in good homes, where they will receive care, protection, and fair wages for their services, a portion of which will be placed in a savings-bank for them. One girl was but eight years old, eighteen were over sixteen years, and the average age was thirteen and three quarters years. They have made good progress in their studies, and of their industrial advance the superintendent says: "Seventeen can make yeast and bread well, thirty can do dining-room work well, thirty are good general kitchen-girls, five excel in laundry-work, twenty-three are good in general laundry-work, thirty-three in chamber-work, fifteen good sewers, thirty-two can sew straight seams and hem neatly, and thirty-six have begun to learn to sew." Of these same girls the Board of Control say: "They came from wretched abodes, their habits were vile, and their health poor—most of them ignorant, dirty, and untrained. Cleanliness, wholesome food, early hours, exercise, and discipline, have changed them into cleanly, healthy, and useful girls, so that it would be difficult to distinguish them from the pupils attending public schools. Their improvement is greater than the most hopeful of us dared to expect." Also:

Girls who come to us are usually those who have already entered upon a life of vice and sin—all are ignorant—the cases are exceptional where they have not been exposed to the depraving and debasing influences of poverty and vicious associations. The process of reformation is longer and more difficult than that of formation. To implant new and better tastes and purposes—to create a desire for a better life, better surroundings and companionships—can not be effected in a short time. The public must not expect our school to eradicate or overcome the evil tendencies to which these girls have been exposed, unless time is allowed for the work. The girls are treated by the management of the school, not as criminals, but as friendless, unfortunate children committed to their care. The Board of Control stands to them as parents, and as such pity and care for them. It is the aim of the school to make it resemble, as nearly as possible, a well-regulated Christian family, with its household worship, maternal influence, pious counsels, and steady and gentle but authoritative training. All the girls are taught domestic work, to wash

and iron, to cook, to sew, to sweep, and perform all household duties. Some of the girls are too young to do hard work, but they assist in lighter labors.

The girls are taught in the school-room two and a half hours daily in the ordinary branches of the district schools. Four cottages are completed, and three occupied; capacity, thirty-two each.

The statistical tables which accompany the report of the Warden of the State House of Correction at Ionia, for the year ending September 30, 1882, show:

Number of prisoners September 30, 1881 .....	386
" received on sentence .....	1,267
" returned from witness .....	1
Total .....	1,654
Number discharged by expiration of sentence .....	1,034
" " order of court .....	70
" " pardon .....	11
" " death .....	4
" escaped and not recovered .....	6
	— 1,125
Number remaining September 30, 1882 .....	529

The greatest number of prisoners at close of any day, 624; least number, 386. Average daily number, 510. The disbursements on account of current expenses were \$77,381.67; cash earnings for same period, \$40,348.47; excess of disbursements over earnings, \$37,033.20. Deduct from last amount value of labor entering into permanent improvements, material paid for from current expense fund, and value of appraised farm products (\$27,280.17), and the net expenditures exceed the earnings, \$9,753.03.

The annual report of Warden Humphrey, of the State-Prison at Jackson, shows:

Number of convicts September 30, 1881 .....	699
Received during the year .....	202
	— 901
Discharged by expiration of sentence .....	238
" order of Supreme Court .....	2
Pardoned by Governor .....	4
Died .....	8
Escaped .....	8
Transferred to Detroit House of Correction .....	2
Discharged for new trial .....	8
	— 265
In prison September 30, 1882 .....	636

Average length of sentence, three years, nine months, twenty-five days. The general classification of offenses is: against life and person, 49; against chastity and decency, 7; against property, 139; for forgery and counterfeiting, 7. The net earnings of the year are given as \$90,360.97, and the net expenditures, \$98,040.99. During the year contractors paid \$11,155.75 to convicts on account of overwork, or more than twelve per cent of the net earnings.

**POLITICS.**—The biennial general election was held November 7th. On the preceding 23d day of August a Democratic State Convention was held at Jackson; and on the same day the State Convention of the National Greenback-Labor party was held at Grand Rapids. Before the meeting of these two conventions negotiations had been entered upon looking to a union of the two parties upon a single ticket. These negotiations were continued, by tele-

graph, during the sessions of the conventions, and resulted in an agreement between the contracting parties for a division of the State ticket, each party to nominate its own assigned portion and adopt its own platform. The nominations by each party were ratified by the other, and a union ticket thus presented for the suffrages of the electors of the State. A "bolt" from the Grand Rapids Convention took place, and the nomination of a straight Greenback ticket followed.

The Democratic Convention, by a unanimous vote, placed its chosen candidates upon the following platform, a platform heartily indorsed by the entire Democracy of the State:

The Democracy of Michigan, in convention assembled, recognizing the people as the source of political power, and the Constitution as the fundamental law of the land, do solemnly declare:

1. That home rule is the essence of free government; that the line bounding State and national authority is clearly defined, and needs only to be strictly followed to insure the broadest liberty to the people.

2. Earnestly believing that a real civil-service reform is needed to purify every department of the Federal Government, we therefore demand, as an initial but important step in this direction, an amendment to the Federal Constitution which will give to the people of the several cities, villages, and such other postal districts as may be authorized by law, the right to elect postmasters.

We also demand that Federal subordinate officers shall not be appointed or removed because of political belief, nor appointed until their ability and merit have been proved by open public examination and competition, and that political assessments on, or forced contributions from, public officers should be made felony by law.

3. We are unalterably opposed to the unjust, unequal and iniquitous system of taxation called a protective tariff, which oppresses the farmer and laborer, destroys our merchant marine, breeds and enriches monopolies and impoverishes the poor. The traditional policy and principles of the Democratic party are on the side of complete commercial freedom; and we demand immediate and aggressive revenue reform in the direction of free trade, subject to a tariff only sufficient to raise the necessary revenue for the expenditures of government economically administered.

4. That the right of Congress to make appropriations for the improvement of rivers and harbors should be restricted to such as are of national importance; that the people of Michigan can not be bribed with a share of the theft to sanction the waste of \$30,000,000 in two years; and we denounce without distinction of party all who voted in Congress for the iniquitous River and Harbor Bill.

5. That the letting of the printing of the annual tax-sales to party favorites, without competitive bidding, and the keeping in the State Treasury of from one to two million dollars of State funds for the benefit of partisan office-holders while the people are heavily taxed, are demoralizing to the public service, and demand immediate reform.

We cordially invite the voters of Michigan, without regard to previous party affiliations, to join us in an earnest effort to correct these abuses, by withdrawing the administration of State affairs from those who have been already too long in power, and confiding it to those who come freshly from the people, untrammelled by the tyranny of political rings and of party machinery.

The ticket nominated did not meet so cordial an indorsement, but after some protesta-

tions of dissent was generally supported by the party at the polls.

The convention at Grand Rapids put forth the following declaration of principles:

The National Greenback-Labor party of Michigan reaffirms the leading principles of the party, as set forth in the last national platform, which have been forcibly epitomized as follows: First, to destroy sectional strife; second, to pay promptly the public debt; third, to reduce taxes and expenditures; fourth, to establish unlimited coinage of gold and silver; fifth, to substitute government legal-tender paper for bank-issues; sixth, to overthrow corruption at the polls and in representative bodies; seventh, to secure a free ballot and a fair count; eighth, to control by law, and bring into subjection to the interests of the people, all monopolies which have corrupted the public service, and by combination and extortion have established absolute dominion over money or invention, and over land and labor.

1. The right to petition to amend the Constitution is a sovereign power of the people, and we therefore favor the submission to the people of the question of constitutional prohibition of the liquor-traffic for ratification or rejection.

2. We shall support no candidate for any official position who will not pledge himself that if elected he will not accept from any corporation a free pass on any railroad or public conveyance, or its equivalent, while holding official position.

4. We denounce the Republican party for having rechartered the national banks; for having attempted to relieve the banks of taxation rather than the producing classes; and for extravagant appropriations of nearly \$80,000,000 in excess of former years.

5. That the assessment of office-holders for a corrupt campaign fund is the crowning shame of a party owned by grasping monopolists and bossed by unscrupulous politicians, who seek power for the spoils afforded through excessive taxation of the people.

6. That we favor the repeal of the specific tax on railroads and other corporate property, and demand that they be subjected to a tax in the municipality where located, upon the same basis as other property is assessed.

7. That we invite all good citizens to join us in carrying these principles to a successful issue at the ballot-box.

The Republican State Convention met at Kalamazoo, on August 30th, nominated a full ticket with great unanimity, and adopted the following exhaustive set of resolutions:

1. The Republican party of the State of Michigan, assembled in convention for the first time since the tragic death of James A. Garfield, our beloved leader and revered Chief Magistrate, grateful for the inspiring lessons of his life and example of his heroic death, record, first of all, our profound sorrow at his loss and our veneration for his memory; and next, our strengthened and abiding faith in the stability of republican institutions; and our fixed resolve that governments of the people, by the people, and for the people, shall not perish from the earth.

2. Chester A. Arthur, called to a place of power under most trying and delicate circumstances, has proved himself worthy of the high trust reposed in him. He has given to the country an administration conservative, patriotic, and progressive. The Republicans of Michigan extend to him their confidence for the future, based upon the record of the past.

3. The Republicans of Michigan once more declare their devotion to the time-honored and fundamental principles of the National Republican party—liberty for all men; equality before the law; perpetual union of the States; supremacy of the nation; and the inviolable right of every citizen on every foot of American soil to cast his ballot according to his sovereign will,

and to have such ballots, and only such, honestly counted and truly returned to constitute the "voice of the people," which is the voice of God.

4. From its organization until now the Republican party has denounced slavery and polygamy as "twin relics of barbarism." The first perished at the hands of the Republican party, shot to death on battle-fields and buried in amendments to the Constitution. The second disgrace of our civilization and our century must die. We demand that polygamy be destroyed. We cordially commend the efforts of our Senators and Representatives in Congress to that end.

5. Whatever may be our individual views as to the ultimate ideal system of international trade, we are all agreed that the public debt must be paid, the pensions of the nation's defenders and their widows and orphans sacredly guarded, and the current expenses of the Government duly provided for; that the revenues necessary for these purposes must in a large part be derived from duties upon imports, and we affirm that, in the adjustment of these duties in any revision of the tariff, care should be taken to relieve from taxation, so far as practicable, the necessities of the poor, especially such as do not come into competition with American production, and at the same time to afford incidental protection to American producers, to the end that wages may be maintained at the American standard, and America control the American markets.

6. We believe that the time has come when the public debt and rate of interest upon public securities have been so far reduced that our national legislators should consider as an immediate duty the reduction of the burdens of taxation, and, as auxiliary thereto, a revision of the tariff.

7. We believe in a rational civil service which does not create of the official class a separate caste, nor take away from the citizen the inspiration of participation in the administration of the government, yet which requires that offices shall be regarded as trusts to be administered with intelligence, fidelity, and economy, and not as spoils to be distributed as personal perquisites of political managers.

8. In the administration of the State and national Governments we demand efficiency, integrity, and economy; that unfaithful officers be removed and punished; that the public faith and credit be maintained, and the people be provided with a circulating medium, safe, uniform, and constitutional; that monopolies dangerous to the liberties of the people and purity of the laws be disfavored, and that the purity of the ballot be sacredly protected.

9. It is the fundamental right of the people to alter from time to time the organic law of the State as new circumstances or growing evils may require, laying its foundations on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness. The evils of intemperance have become so great that in the name of patriotism the most efficient measures ought to be taken to reduce those evils to a minimum, and as members of no political party are wholly agreed as to whether this can be best done through prohibition or regulation of the traffic in taxing liquors, and as the people are and ought to be the final arbitrators of this question, and as more than 100,000 among the moral and intelligent people of the State have asked by petition that the question be put to the people by the submission to them of a prohibitory constitutional amendment, we declare that we believe that it would be wise and patriotic for the next Legislature to submit such an amendment to a direct vote of the people, and we demand that it be so submitted.

10. Republicans of Michigan demand a full legislative investigation of the transportation question, with a view to securing such legislative enactments as will prevent unjust discriminations in rates by railroad lines operating in the State.

A Prohibition State ticket was also put in the field, upon a platform demanding the sub-

mission to the electors of a constitutional amendment prohibiting the manufacture and sale of intoxicating liquors of whatever name.

The election resulted as follows:

FOR GOVERNOR.

David H. Jerome, Republican.....	149,697	
Josiah W. Begole, Union.....	154,268—	4,571
David P. Sagendorph, Prohibitionist.....	5,854	
Waldo May, Greenbacker.....	2,006	

FOR LIEUTENANT-GOVERNOR.

Moreau S. Crosby, Republican.....	157,615—	8,172
Eugene Pringle, Union.....	149,448	
William G. Brown, Prohibitionist.....	4,440	

FOR SECRETARY OF STATE.

Harry A. Conant, Republican.....	157,609—	8,487
William Shakespeare, Union.....	149,122	
Martin V. Kork, Prohibitionist.....	4,666	

FOR STATE TREASURER.

Edward H. Butler, Republican.....	158,948—	9,280
Lucien S. Coman, Union.....	149,068	
Emory L. Brewer, Prohibitionist.....	4,684	

FOR AUDITOR-GENERAL.

William C. Stevens, Republican.....	157,954—	8,617
James Blair, Union.....	149,387	
John H. Osborn, Prohibitionist.....	4,404	

FOR COMMISSIONER OF STATE LAND-OFFICE.

Minor S. Newell, Republican.....	158,424—	10,714
John F. Vandevanter, Union.....	147,710	
Edward C. Newell, Prohibitionist.....	4,490	

FOR ATTORNEY-GENERAL.

Jacob J. Van Riper, Republican.....	157,269—	7,988
Timothy E. Tarsney, Union.....	149,836	
John H. Tatem, Prohibitionist.....	4,248	

FOR SUPERINTENDENT OF PUBLIC INSTRUCTION.

Varnum B. Cochran, Republican.....	162,594—	14,084
David Parsons, Union.....	148,560	

FOR MEMBER OF STATE BOARD OF EDUCATION.

Bela W. Jenks, Republican.....	157,750—	9,252
Clark B. Hale, Union.....	148,498	
Isaac W. McKeever, Prohibitionist.....	4,352	

The vote for the straight Greenback candidates, not named, varied from 1,005 to 2,141. In the above table (copied from the "Michigan Almanac") the "defective" votes are given to the candidates for whom they were intended, while "scattering" votes are omitted.

The vote polled was not a full one, falling about 40,000 short of the vote on presidential electors in 1880.

In the congressional districts the vote was as follows:

FIRST DISTRICT.

William C. Maybury, Democrat.....	16,147—	4,989
Henry W. Lord, Republican.....	11,208	
William G. Brownlee, Free-Trader.....	778	

SECOND DISTRICT.

Nathaniel B. Eldredge, Democrat.....	15,251—	542
John K. Boies, Republican.....	14,709	
Albert J. Baker, Greenbacker.....	1,265	
Albert F. Dewey, Prohibitionist.....	860	

THIRD DISTRICT.

Henry C. Hodge, Union.....	16,239	
Edward S. Lacey, Republican.....	18,022—	1,784
George Landon, Prohibitionist.....	268	

FOURTH DISTRICT.

George Yapple, Union.....	16,828—	255
Julius C. Burrows, Republican.....	16,078	

FIFTH DISTRICT.

Julius Houseman, Union.....	16,725—	116
William O. Webster, Republican.....	16,609	
William H. Taylor, Greenbacker.....	429	

SIXTH DISTRICT.

Edwin B. Winans, Union.....	18,516—	82
Oliver L. Spaulding, Republican.....	18,484	
— Brewer, Prohibitionist.....	148	

SEVENTH DISTRICT.

Ezra C. Carleton, Union.....	11,540—	239
John T. Rich, Republican.....	11,251	

EIGHTH DISTRICT.

Charles J. Willetts, Union.....	18,918	
Roswell G. Horr, Republican.....	14,872—	954
Benjamin Colvin, Greenbacker.....	588	

NINTH DISTRICT.

Stephen Bronson, Union.....	10,897	
Byron M. Cutcheon, Republican.....	13,129—	2,232

TENTH DISTRICT.

Andrew C. Maxwell, Democrat.....	7,809	
Herschell H. Hotch, Republican.....	11,298—	8,489
Jesse Miller, Greenbacker.....	2,441	

ELEVENTH DISTRICT.

Peter White, Democrat.....	4,840	
Edward S. Breitung, Republican.....	11,298—	6,558
John Russell, Prohibitionist.....	881	

In the Forty-seventh Congress the delegation was solidly Republican. In the Forty-eighth Congress it will be divided: Democrats or Union, 6; Republicans, 5. The members of the Legislature elected are classified:

PARTIES.	Senate.	House.
Republicans.....	19	62
Democrats and Union.....	13	87
Workingman.....	..	1

Republican majority on joint ballot, 80.

Republican majority in the Legislature of 1881, 100.

Two constitutional amendments were voted upon: 1. Increasing the salaries of circuit judges from \$1,500 a year to \$2,500. This was adopted by a vote of: Yes, 85,765; No, 55,641. 2. Providing for a Board of County Auditors in each county, conditioned on the order of the Board of Supervisors (now the Auditing Board) of any given county. Rejected by a vote of: Yes, 23,892; No, 38,065.

The question of a general revision of the Constitution, which the Legislature is required to submit to the electors every sixteen years, was negatived by the following vote: For a revision, 20,937; against a revision, 35,123. The present Constitution was adopted in 1850. In 1866 a revision was voted for and carried. The convention which followed submitted a Constitution differing in many important features, but their work was rejected by the electors. The Legislature of 1873 provided for a commission to revise the organic law, and an extra session held in 1874 amended the commission's revision, and in November, 1874, it was defeated by the electors. The meager vote polled on the question at the last election, as given above, indicates that the mass of the electors care very little whether the Constitution of the State is revised or its outgrown features are perpetuated.

MINNESOTA. STATE OFFICERS.—The Governor of the State is Lucius F. Hubbard, elected in 1881; Lieutenant Governor, Charles A. Gilman; Auditor, W. W. Bradin; Secre-

tary of State, F. von Bombach; Treasurer, Charles Kittelson; Attorney-General, W. J. Hahn; Railroad Commissioner, James H. Baker. The term of the present Executive expires in 1885. The November elections of 1882 gave the Republicans a large majority in the Legislature. In the Senate there are 34 Republicans, 10 Democrats, and 3 Independent members; in the House, 76 Republicans, 28 Democrats, 2 Independents, and one Farmer's Alliance nominee—giving the Republicans a majority of 64 on joint ballot, and securing the return of a Republican Senator to Congress.

**FINANCES.**—The actual receipts from taxes and other sources of ordinary revenue, for the biennial period 1881-'82, exceeded the estimates by \$346,000, but the actual expenditures were \$764,000 in excess of the estimated amount. The revenue fund was overdrawn nearly up to the legal limit of \$150,000, because the Legislature, while making appropriations in excess of the usual amounts for ordinary purposes, and to meet various extraordinary requirements, had failed to increase the tax levy so as to provide sufficient revenue. The advances of \$142,810 were mostly taken from the trust funds of the State. The extraordinary expenditures were on account of the extra session of 1881, the Cox impeachment trial, the new Capitol, interest on the railroad readjustment bonds, etc. The Capitol-building, which was first to have been restored after the fire of March 1, 1881, at a cost of \$75,000, and then rebuilt at an additional cost of \$100,000, has finally been replaced, on the responsibility of the Governor, by a fire-proof structure at an outlay of about \$300,000.

The ordinary receipts for the two years were as follow:

RECEIPTS.	1881.	1882.
State tax.....	\$411,518	\$311,205
Railroad and telegraph taxes.....	380,025	470,556
Miscellaneous sources.....	70,717	107,719
Balance in Treasury November 30, 1880.	138,927	.....
Surplus.....	.....	10,684
Overdraft less balances.....	.....	115,745
Total.....	\$951,778	\$1,015,861

The disbursements for the State government and maintenance of the State institutions were as follow:

DISBURSEMENTS.	1881.	1882.
Legislature, regular session.....	\$73,206	.....
Legislature, extra session.....	46,132	.....
Impeachment court.....	.....	\$28,885
Executive.....	68,545	59,980
Judicial.....	69,796	79,502
Printing.....	88,689	83,208
Miscellaneous and overdrafts.....	143,000	70,095
Support of institutions.....	800,465	812,418
Interest on State bonds.....	19,485	11,706
Interest on railroad readjustment bonds.....	.....	88,086
Buildings.....	174,617	331,983
Total.....	\$924,952	\$1,015,861

The estimated expenditures for 1883 overrun the estimated receipts \$368,925, including the overdrafts already made, but part of the deficit

is expected to be made good by a surplus of \$167,500 in 1884.

The sources of revenue are expanding at a very rapid rate with the settlement and agricultural development of the State. The taxable property of Minnesota increased from \$258,055,543 in 1880, to \$311,200,841. The taxation for all purposes, State and local, in 1881 and 1882 is shown in the following table:

TAXATION.	1881.	1882.
State tax.....	\$379,689	\$741,666
Seed-grain taxes.....	56,616	12,000
General school (1 mill).....	270,737	310,116
Special school.....	1,190,086	1,381,361
County revenue.....	875,640	1,009,465
County interest.....	99,881	106,741
County poor.....	140,116	153,641
County special purposes.....	91,089	164,102
City taxes.....	807,898	1,135,261
Township taxes.....	297,018	303,785
Delinquent road.....	146,420	166,266
Interest on town bonds.....	72,624	120,799
Special city and town.....	271,505	526,122
Total taxes for all purposes.....	\$4,698,771	\$5,725,359

The average rate of taxation for all purposes was 17·3 mills in 1881 and 18·4 mills in 1882.

The total transactions of the State Treasury, including the sales of public lands and investments for the trust funds, conversion of investments, etc., reached \$1,979,558 of receipts and \$1,421,812 of disbursements in 1881, and \$3,201,416 of receipts and \$3,058,317 of disbursements in 1882. The allowance of 5 per cent on the sales of United States lands amounted to \$3,115 in 1881, and rose to \$49,561 in 1882; the sales of pine-timber on the State lands amounted to \$26,638 in 1881, and \$89,174 in 1882; principal paid on sales of school lands to \$37,025 in 1881, and \$20,718 in 1882; on former sales to \$134,774 in 1881, and \$210,863 in 1882; interest on contracts of school lands to \$171,587 in 1881, and \$167,157 in 1882; interest on sales and contracts of internal improvement lands to nearly \$100,000 for the two years; principal from sales of Agricultural College and University lands and interest on contracts, to about \$70,000. The interest paid on the permanent school fund bonds, amounting to \$103,698 in 1881, was \$81,225 in 1882; \$687,000 was realized from sales of United States bonds. A portion of the Missouri bonds held for the trust funds were also sold, and the main part of the trust fund investments converted into the new 4½ per cent railroad adjustment bonds, of which \$1,596,000 were taken for the several permanent funds: \$204,000 of State bonds of 1873 and 1878 were redeemed. The expenses of the university in 1881 were \$47,000; in 1882, \$43,881; the apportionments of school funds in 1881 were \$259,414; in 1882, \$259,097.

In accordance with the act of November 4, 1881, providing for the adjustment of certain alleged claims against the State, there were redeemed 2,232 Minnesota State railroad bonds of \$1,000, and other claims settled to the amount of \$53,088. For the settlement of the

recognized bonds and claims, \$4,253,000 of new  $\frac{4}{2}$  per cent bonds were issued. The only other acknowledged indebtedness of the State is \$25,000 bonds issued in 1873 for building purposes, which mature in 1883, and \$61,000 issued in 1868 for seed-grain distribution, for which the State is to be reimbursed by the counties. The people at the last general election approved the proposition for the application of the internal improvement land fund to the payment of the principal and interest of the railroad adjustment bonds. This will leave only an insignificant portion of the debt as a burden on the taxable resources of the people, as the lands are now marketable, and when all disposed of will swell the fund to at least \$3,000,000.

**EDUCATION.**—There was an increase in the enrollment of the public schools of 22,638 in the two years, the total number enrolled at the end of 1882 being 196,238, as against 173,600 in 1880. There were 567 new school-buildings erected, at a cost of \$759,022, making the total number 4,260, valued at \$3,947,857. The expenditures on the public schools for the two years amounted to \$3,844,866. The three normal schools, at Winona, Mankato, and St. Cloud, had an aggregate enrollment of 939 scholars in 1881, and 1,028 in 1882. Their combined expenses were \$45,859 in 1881, and \$46,081 in 1882. The schools graduated 129 teachers in two years. Aid was extended in 1882 to 38 schools under the act to encourage higher education. New buildings for the university are to be erected, for which appropriations have been granted and the plans adopted. The experimental farm in connection with the Agricultural College has been sold, and more suitable land acquired.

**STATE INSTITUTIONS.**—The State institutions of charity and correction were not calculated for the great additions to the population recently received, so that most of them require to be enlarged. The number of inmates in the State-Prison at the end of 1882 was 279, an increase of 29 in two years. The earnings were \$26,277 in 1881, and \$30,952 in 1882; the current expenses were \$49,964 and \$54,972. Additional walls are in construction, and increased cell-room is demanded. In the Reform School there were 123 inmates. The managers ask for the repeal of the law requiring the counties to maintain the youth they send to the institution. The expenses in 1881 were \$30,101; in 1882, \$31,550. In the Institute for the Deaf, Dumb, and the Blind there are now separate departments for the education of the mutes and the blind. The Imbecile School was removed to a new building in February, but its accommodations, as well as those of the school for the blind, are insufficient, there being 59 applicants waiting admission, for whom there is no room in the imbecile, and 84 blind and 233 deaf-mute youth who have never received instruction. There were 125 pupils in the deaf and dumb, 34 in the blind, and 41 in

the imbecile departments. The current expenses were \$44,278 in 1881, and \$49,807 in 1882. The burned portion of the Insane Hospital at St. Peter has been rebuilt, and the one at Rochester enlarged, but the 635 inmates of the former and 236 of the latter already tax their capacity. The weekly cost per capita in 1882 was \$3.82 at St. Peter, and \$4.18 at Rochester.

**TRADE AND INDUSTRY.**—The capital stock of the banks is reported by the Public Examiner as \$9,351,208 in 1882, and \$7,990,850 in 1881; the surplus funds as \$1,600,977 and \$1,191,425 for the respective years; the deposits as \$22,810,306 and \$20,109,435; loans and discounts, \$27,147,343 and \$22,910,609. This is only a partial exhibit of the banking business, as there are 116 private banks, many of which would not furnish reports.

The amount of insurance risks written in 1882 was \$122,070,500, 250 per cent more than ten years before; the amount of premiums collected, \$1,596,353; of losses paid, \$914,950—nearly three times as much as in 1872.

The total number of immigrants who settled in the State during the two years is estimated by the Secretary of the Board of Immigration at over 100,000.

The Surveyors-General of Logs and Lumber report 276,595,640 feet of logs scaled in 1882, and 260,045,720 in 1881 in the first district; and 312,211,780 feet in 1882, and 238,648,210 in 1881, in the second district. The quantity of lumber manufactured in 1882 is reported as 126,820,590 feet in the first, 423,009,250 feet in the second, and 239,000,000 feet as the estimated quantity in the fifth district.

The agriculture of Minnesota is improving in character as well as extending. Sections which have hitherto been devoted exclusively to wheat now produce a variety of crops. The State is also making marked progress in stock-raising, to which attention has been given only in the most recent time. Fine breeds of stock have been imported in considerable numbers and bought in various parts of the State for breeding purposes. The wheat production has increased every year, owing to the settling up of new lands, but in the older districts the acreage under wheat has diminished largely. Constant cropping and the chinch-bug have reduced the yield and made other crops more valuable. The rotative system of agriculture and stock-raising and dairying are important means for the preservation of the fertility of the soil, which are now introduced in earnest. The number of cattle in the State increased 100 per cent in 1882, of sheep 25 per cent, of hogs 40 per cent. The production of cultivated hay nearly doubled, of butter more than doubled, of cheese quadrupled, of wool more than doubled, of corn more than doubled, and of oats, barley, rye, buckwheat, etc., largely increased.

Flax has recently become a staple agricultural product of Minnesota. There were 505,-

717 bushels of flax-seed produced in 1881, on 83,947 acres, an average of a little over six bushels per acre. The acreage planted in 1882 was 98,309 acres and the estimated production about seven bushels per acre. Flax is planted not merely for the value of the product; it is usually sown as a first crop on newly broken ground, as it keeps out weeds and rots the sod, and is the only crop which can be raised the first year. When grown for the seed alone, it is not ordinarily profitable. The cultivation of flax for the fiber is still in the experimental stage. Besides the difficulty of securing a good fiber, it must be handled with great care. Most of the fiber grown in the Northwest is burned after thrashing.

During 1882 there were constructed within the State 531 miles of new railroad, making the total mileage 3,749 miles. The total cost is returned as \$149,312,631, or \$43,934 per mile. The value of the subsidies in bonds and lands given to the companies by the State of Minnesota is stated by the Railroad Commissioner to be \$76,489,790. The earnings of the lines within the States for the year ending June 30th were reported as \$4,816,218 from passengers and \$13,158,697 from freight; the total earnings as \$18,805,193; the operating expenses as \$10,221,783. There were 9,962,393 passengers carried and 5,883,120 tons of freight transported during the year. The amount of taxes paid to the State by railroad companies was \$470,593 in 1882, against \$315,482 in 1880, \$200,171 in 1878, and \$145,794 in 1876; the aggregate amount of taxes collected from the companies since 1864 was \$2,641,334. Two of the railroad corporations have refused to pay taxes on a part of their incomes, setting up a claim of legal exemption.

The war of rates between the lines of the Northwest, which arose from a dispute over "territorial rights" between the rival companies, called forth a cry of warning from Governor Hubbard. He reminded the companies that they were the creatures of the authority of the State; that it endowed them with valuable franchises and enormous subsidies, and afforded them that protection which gives to all property its greatest value; that their legitimate resources are derived from the patronage of the public, and that their proper and legal relation to the public can only be maintained by dispensing exact justice to every individual and locality. The Railroad Commissioner has elaborated a project for the regulation of rates by a Board of Control, based upon a classification of the roads according to income, and a maximum rate for each class. The question of regulating rates was decided in the negative by the Legislature in 1871, but the recent prosperity of the railroads has wrought some change in the public feeling. It is proposed to place telegraph companies on the same basis as railroads with respect to inspection and taxation, and to require sleeping-car companies to pay a tax on their income. More

effective legislation is demanded, to compel railroad companies to perform their duty as common carriers in the shipment of grain.

The question of public grain inspection is, next to the prohibition question, the most important and pressing subject that engages the attention of the Legislature in the second biennial session. The farmers generally complain of frauds and abuses practiced upon them in the warehousing and grading of grain. They are placed so entirely in the power of the buyers, whose judgment they must accept regarding the quality and value of their products, that the wrongs practiced upon them are exaggerated in their eyes. They consequently demand that a system of official grading, and the regulation of elevators and warehouses, such as has been adopted in other States for the protection of dealers from each other, should be adopted in Minnesota, to protect the producers from the dealers.

The exploration of large deposits of iron ore in the Vermilion Lake region has been begun on a large scale. The ore is of extraordinary value, it being the specular hematite variety, which is best adapted for the production of Bessemer steel. Analyses show 65 to 70 per cent of iron, with only 0.053 to 0.078 per cent of phosphorus.

**MISSISSIPPI. STATE OFFICERS.**—Governor, Robert Lowry; Lieutenant-Governor, G. D. Shands; Secretary of State, Henry C. Myers; Treasurer, W. L. Hemingway; Auditor, Sylvester Gwin; Attorney-General, T. O. Catchings; Commissioner of Agriculture and Immigration, E. G. Wall; Superintendent of Public Education, J. A. Smith. United States Senators, Hon. L. Q. C. Lamar and Hon. J. Z. George. Members-elect of the Forty-eighth Congress—H. S. Muldrow, First District; Van H. Manning (seat contested by J. R. Chalmers), Second District; E. Jeffords, Third District; H. D. Money, Fourth District; O. R. Singleton, Fifth District; H. S. Van Eaton, Sixth District, and Ethel Barksdale, Seventh District.

**FINANCES.**—The revenues of the State for 1882 and 1883 are computed as follows:

Taxation on real and personal property, on a total valuation of \$115,150,120, at the rate of 24 mills, the rate now fixed by law, will produce for two years.....	\$575,750 60
Cash in the Treasury.....	500,000 00
General tax on privileges.....	248,612 29
Collections of 1881 not reported.....	300,000 00
Probable revenue from Land-Office.....	40,000 00
Probable revenue through revenue agent.....	25,000 00
Derived from compromise with Mississippi and Tennessee Railroad.....	65,000 00
Total.....	\$1,549,362 89
Expenditures for the same period:	
Salaries.....	\$105,750 00
Appropriations.....	722,847 71
Immigration.....	25,500 00
Legislature.....	70,495 00
University of Mississippi.....	64,000 00
Common schools.....	600,000 00
Probable expenses not yet ascertained.....	100,000 00

Total expenditures.....\$1,688,592 71

Deducting this sum from the total revenue,

will leave a balance in the Treasury on January 1, 1884, of \$160,770.18.

To the above computation of cash in the Treasury January, 1884, should be added the taxes on 1,000,000 acres of land sold by the State, which will henceforth be subject to taxation. It should also be noted that the sum necessary to pay bonds maturing in 1883, amounting to \$100,000, is included in the item of "appropriations." The entire bonded debt of the State is \$518,150, with funds in the Treasury to pay it off at par, but the holders refuse to sell them except at such a high premium as the State officials are unwilling to pay.

A recent statement by Governor Lowry to this effect, in answer to a question as to the bonded debt of Mississippi, has been widely and severely criticised. It is charged that his statement that the debt only amounts to \$518,150, and could be canceled at once if the holders would sell their bonds at a reasonable premium, "is at variance with the facts as understood by others," alluding, doubtless, to the Planters' Bank and Union Bank bonds, payment of which is prohibited by an amendment to the Constitution, adopted and submitted by a Republican Legislature, and subsequently ingrafted on the Constitution by a Democratic Legislature. The amendment is as follows:

Nor shall the State assume, redeem, secure, or pay any indebtedness, or pretended indebtedness, claimed to be due by the State of Mississippi to any person, association, or corporation whatsoever, claiming the same as owners, holders, or assignees of any bond, or bonds, now generally known as Union Bank bonds, or Planters' Bank bonds.

The Governor was asked for information as to the recognized debt of the State, and, answering in his official capacity, could not be fairly expected to include a claim which is expressly barred by the Constitution he has sworn to support, however opinions may differ as to the propriety of the amendment, which places the Planters' Bank bonds on the same footing as the Union Bank bonds.

The rate of taxation, low as it is, compared with that of other States, might be much reduced were the assessments of property for taxation equal and uniform throughout the State, as the Constitution and the law require. But when assessors are lax or derelict in their duty, and tax-payers undervalue the property, the honest tax-payer has good reason to complain of the undue burden imposed upon him. The State holds for sale at \$6 per acre, about 34,000 acres of what are known as the Chickasaw School lands; and 22,000 acres of internal improvement lands at fifty cents per acre. Within the past two years 1,300,000 acres of levee, swamp, and overflowed lands have been sold to parties mostly outside of the State, by the Board of Levee Commissioners, under a decree of the Court of Chancery. The proceeds of these sales, as they become available, will add

considerably to the public revenues. The Auditor of Public Accounts has on his books upward of 1,000,000 acres of land forfeited for non-payment of taxes which are offered for sale at a very low price. The United States holds for sale or for homestead about 3,500,000 acres in the State, situated mostly in the long-leaf pine-region, extending from the Vicksburg and Meridian Railroad to the Gulf of Mexico. These lands are heavily timbered, and might be converted into admirable sheep-walks. The Government price is only \$1.25 per acre. The estimated number of feet (board measure) of pine-timber now standing in the State reaches, within a small fraction, 25,000,000,000.

EDUCATION.—The cause of public education has been promoted by wise and liberal legislation, and the prospect is more promising than it has ever been. The distributive common-school fund has been increased from \$200,000 to \$300,000, and the limit upon levying taxes for school purposes which hitherto existed—"not to exceed three mills"—has been removed, so that the county supervisors of education may now in their discretion levy a greater tax, which, with other taxes, shall not exceed the aggregate fixed by law. In counties where a sufficient number of educable Indians are found to reside, schools for their exclusive use are authorized to be kept open for the same time as the other public schools. Until January 1, 1886, the basis of distribution of the common-school funds of the State shall be forty per cent of the total population of each county, as shown by the report of the State census of 1880. Several thousand dollars in the Treasury to the credit of the two and three per cent funds are to be applied to common-school purposes, to be used by supervisors in the construction of good houses where needed, and in the repair of those already built. Liberal appropriations were made to the Agricultural and Mechanical College at Starkville, for the erection of new buildings, purchase of land, stock, implements and apparatus, also to the University of Mississippi at Oxford, and to the educational institutions of the colored people—the Alcorn University, the Normal School at Holly Springs, and the Tougaloo University. The representatives of the State in the Federal Congress were requested and instructed by the Legislature to present a memorial to Congress asking aid in maintaining and improving the free-school system, as the danger and obligation connected with illiteracy are not merely local in their character. Among the other judicious acts of the Legislature in reference to education, that prohibiting the sale or giving away of intoxicating liquors within five miles of the University of Mississippi deserves special mention. In addition to the 5,200 common schools in the State, where upward of 425,000 children, white and black, are regularly taught, there are 969 private schools, and for the higher education of both

racess there are the following institutions, most of which are, in whole or in large part, supported by the State: 1. The University of Mississippi at Oxford, in Lafayette County, for white students exclusively. Here tuition is free, except in the law school. The average annual attendance is 250. The State has appropriated \$64,000 for the support of the university, repairs, etc., for the years 1882 and 1883. The board of trustees, at their meeting in June, took a new departure and threw open the doors of the university to females, in concession to the public demand for enlarged educational opportunities for the women of the State. Two restrictions are placed on their admission, namely: first, that they shall not be allowed to board in the campus, except in the families of the professors; and, second, that they may not enter the preparatory department.

2. The Agricultural and Mechanical College at Starkville, Oktibbeha County, is also exclusively for whites. Here also tuition is free, and many of the students are enabled to pay the greater part of their expenses for board by their earnings on the farm connected with the college, where they are daily instructed in the practical details of agriculture, horticulture, and stock-raising. There were 250 students in attendance during the year.

3. The Alcorn University, at Oakland, Claiborne County, is exclusively for colored students. Tuition is free, and the expenses of the college are almost entirely defrayed by the State. The average attendance is a little over 100 students.

4. The Tougaloo College, at Tougaloo, Hinds County, is exclusively for colored students of both sexes. It was established by some benevolent individuals at the North, and receives annually \$3,000 from the State. Tuition is free, and the average attendance is about 125.

5. The State Normal School at Holly Springs, Marshall County, is devoted altogether to the education and training of colored teachers to serve in the common schools. The State sustains it by an annual appropriation of \$8,000. Nine tenths of the taxes levied for the support of the free schools and the endowed colleges are paid by the white tax-payers, and the liberality of the last Legislature in its appropriations for educational purposes shows that the taxation is cheerfully borne, and the benefits of diffused education are duly appreciated.

**STATE BENEVOLENT INSTITUTIONS.**—The Lunatic Asylum, near Jackson, is well managed, but has been found quite inadequate to accommodate the number of the insane for whom admission is sought. At the beginning of the year there were 416 patients in the asylum, or 75 more than it can accommodate comfortably. Besides these, it was estimated that there were 75 insane people in the county jails, and 150 at their homes, where they can not be treated with any reasonable expectation of improving their condition. The death-rate has been un-

usually large among the patients, owing in great measure to the crowded state of the institution. The Legislature has employed the only remedy for this by authorizing the building of another asylum in the eastern part of the State, capable of accommodating 300 patients.

**THE INSTITUTION FOR THE EDUCATION OF THE BLIND**, at Jackson, since the erection of the new building authorized by the Legislature, gives instruction in literature and music, as well as in domestic economy, and certain useful handicrafts, to between 75 and 100 blind children. The present buildings are well arranged, furnished, drained, and heated, and the comfort of the inmates well provided for.

**THE STATE DEAF AND DUMB INSTITUTION**, also at Jackson, is under capable management, but has been inadequate for the number of applicants for admission. The pupils are instructed by signs, the manual alphabet, and writing, and the superintendent proposes, when practicable, to teach the male pupils useful trades, such as printing, carpentering, and shoemaking. The Legislature has made provision for the erection of suitable buildings for the colored mutes, which will render the present institution capable of fulfilling the objects for which it was established.

**RAILROADS.**—Several railroad enterprises have been completed, or are in process of construction, within the State, which will be of incalculable benefit in advancing the material prosperity of the people, besides expending in the State between fifteen and twenty million dollars in the next two years. The Erlanger Syndicate, who bought the old Southern Road, running east and west across the middle of the State, and are relaying it with new steel rails, are also building a road from Meridian to New Orleans, running 160 miles diagonally across the southern portion of the State, opening up the great pine-lands of that section. The road from Natchez to Jackson has been completed. The directors of the Chicago, St. Louis, and New Orleans Railroad have determined to build a road from Jackson to Yazoo City, and have already begun the work. The most important enterprise is that of Mr. R. T. Wilson, of New York, who is building a railroad from New Orleans to Memphis, running parallel with the Mississippi River, and for upward of a hundred miles traversing the most fertile lands on the continent, besides opening up vast forests of cypress, oak, poplar, and walnut timber. The old Memphis and Selma Railroad has been revived and placed under contract, which will traverse diagonally the northern part of the State from northwest to southeast. The old roads have been much improved, and the rates of freight and travel reduced. A bill to create a Board of Railroad Commissioners, similar to that existing in Georgia, "to provide for the regulation of railroad companies and persons operating railroads in the State of Mississippi," passed in the House of Representatives by a large majority, but

failed to pass the Senate. A general law was passed this year exempting from taxation for ten years all railroads constructed hereafter within the State.

**LEGISLATURE.**—The biennial session of the Legislature, having lasted for fifty-seven working days, adjourned March 9th. A large number of bills were passed, among which were several prohibiting the sale of vinous and spirituous liquors at certain localities. An excellent bill for the encouragement of immigration was adopted. Liberal provision was made for the support of the educational and benevolent institutions of the State. Charters were granted to a number of new railroad companies. A new congressional apportionment bill was passed, which provides for an additional (the seventh) district, as follows:

First District: Tishomingo, Alcorn, Prentiss, Itawamba, Lee, Oktibbeha, Lowndes, and Monroe.

Second District: Tippah, Union, Benton, Marshall, Lafayette, De Soto, Tate, Panola, and Tallahatchie.

Third District: Clay, Chickasaw, Yalobusha, Pontotoc, Grenada, Carroll, Montgomery, Calhoun, Webster, Choctaw, Winston, Noxubee, and Kemper.

Fourth District: Tunica, Quitman, Sunflower, Coahoma, Bolivar, Washington, Issaquena, Sharkey, Warren, and LeFlore.

Fifth District: Holmes, Yazoo, Leake, Attala, Neshoba, Scott, Newton, Lauderdale, Smith, Jasper, Clarke, and Wayne.

Sixth District: Hinds, Rankin, Copiah, Franklin, Lincoln, Madison, Claiborne, Jefferson, and Simpson.

Seventh District: Jackson, Harrison, Perry, Greene, Hancock, Marion, Pike, Amite, Covington, Adams, and Wilkinson.

A proposition was made and strongly supported to establish and endow a State Female College, for the higher education of females, but it was not adopted. An amendment to the Constitution proposed by the House of Representatives, for the election of judges by the Legislature, was defeated in the Senate.

Governor Lowry's inaugural address to the joint convention of the State Legislature, in January, contained many sentences worthy of consideration by Southern agriculturists. With reference to the general neglect of diversified farming, he says: "In a material point of view our almost exclusive devotion to the production of a single article of industry is our bane. We buy too much and sell too little. Our corn-cribs and smoke-houses are too far from home. Our income is princely, our expenditures are utterly exhausting. Legislation may do something to remove these barriers to our progress, but individual enterprise and exertion must do much more." As to the practical duties of government, and the proper limits of legislation, he says: "When life, liberty, and property are secure, when the public morals are protected, an efficient system of public education established, and the public health, convenience, and safety well guarded, and all at the smallest practical cost, there is but little omitted from the fundamental obligations of government. Under these conditions, individual action, diversity of interest, and, above

all, the production of the necessities of life at home, ought to cause the springs of prosperity to flow, and insure contentment, progress, and independence. . . . Whoever, either in a public or private capacity, contributes to diversify the industries of Mississippi, and to relieve her from dependence on other States and countries, is a benefactor to the State. The president or managers of a successful factory among us ought to be more highly appreciated and honored by us than any public functionary in the land. . . . A people who have proved themselves to be equal and superior to the exigencies of peace and war, such as those under which other States and nations have perished, can not be incapable of improving and appropriating the advantages and opportunities we enjoy." These remarks are very pertinent when it is remembered that Mississippi, of the Southern States, is almost, if not quite, the largest producer of cotton; that she has only nine cotton-mills, with 704 looms and 26,172 spindles, whose annual production exceeds by nearly half a million of dollars the capital invested, and that she clips only 734,000 pounds of wool, when she might easily grow ten times that quantity and manufacture it into cloth.

**INDUSTRIAL.**—There are several cotton and woolen factories in the State, some of which are very prosperous and some reasonably so. The largest and most productive of these is the Mississippi Mills, at Wesson, Copiah County, 138 miles from New Orleans, on the Chicago, St. Louis, and New Orleans Railroad; of the others, the Natchez Cotton-Mills, and the Rosalie Cotton-Yarn Mills, at Natchez; the Stonewall Manufacturing Company, at Enterprise; the Wanita Cotton and Wool Mills, seven miles northwest of Enterprise; Ulman's Woolen Mill, at Ulmanville, in Hancock County; the Yocona Cotton-Yarn Mills, at Water Valley; the Strawberry Cotton-Mills, near Carrollton (now owned by General John B. Gordon, of Georgia); the Canton Cotton-Factory; and the two cotton-factories at Corinth, are the most successful and prosperous enterprises. The Legislature, at its late session, in order to encourage manufactures in the State, passed a law exempting "all factories hereafter erected" from taxation for ten years. Fruit-culture, grape-growing, and wine-making are among the "infant industries" to which a portion of the people are giving attention. The culture of jute promises to become a leading industry. Jersey cattle are being introduced on the upland farms in many portions of the State, and large sums are paid, with the general object of improving the quality of the cattle, and with the purpose, in some cases, of establishing dairy-farms. Colonel Thomas W. White, of Hernando, De Soto County, has the largest herd for dairy purposes in Northern Mississippi. Large and valuable deposits of gypsum have been discovered near Shubuta, Clarke County.

**THE CONGRESSIONAL ELECTIONS** for members

to serve in the Forty-eighth Congress passed off peaceably. A troublesome dispute has arisen in regard to the election in the Second District, in which Hon. Van H. Manning, Democrat, and General Chalmers, Independent, were the opposing candidates. On counting the votes in the office of the Secretary of State, it appeared that in Tate County 1,472 ballots were cast for J. R. Chalmers, and 1,166 for Van H. Manning. These facts were certified by the three Commissioners of Election for Tate County, but the tally-sheet accompanying the certificate read as follows: "For Congress, Van H. Manning, 1,166; for J. R. *Chambless*, 1,472." On this showing the Secretary of State felt compelled to issue the certificate of election to Mr. Manning, though there is no doubt that General Chalmers received a large majority of the votes cast. The question is, whether the return of the Commissioners of Election, stating that J. R. Chalmers received 1,472 votes, or the tally-sheet showing that J. R. *Chambless* received 1,472 votes, should properly govern the decision of the Secretary of State. Public opinion is pronounced in favor of Chalmers, although that gentleman has become exceedingly obnoxious to a majority of the people of the State, and Mr. Manning is universally respected and esteemed. Hon. L. Q. C. Lamar was re-elected to the United States Senate by a large majority of both Houses of the Legislature.

**MISSOURI. STATE OFFICERS.**—The Governor of the State was Thomas T. Crittenden, elected in November, 1880; Lieutenant-Governor, Robert A. Campbell; Secretary of State, M. K. McGrath; State Auditor, John Walker; Attorney-General, Daniel H. McIntyre; State Treasurer, Philip E. Chappel; Supreme Court Judge, Robert D. Day; Railroad Commissioner, George C. Pratt; Register of Lands, Robert McCulloch.

**FINANCES.**—The finances of the State are in a very satisfactory condition. The obligations of the State are promptly met, and every legal demand made upon the Treasurer is paid as soon as presented. During the present administration not a warrant of the State has been discounted because of non-payment; nor is there a warrant outstanding. Heretofore warrants have been issued and sent to the various civil officers and other claimants throughout the State, and, before the warrants were or could be cashed, they were discounted by some person or bank in the locality to which they were sent. Now the warrants are sent by the Auditor to the Treasurer, who issues a draft therefor upon the Bank of Commerce of St. Louis, upon which the money is received without delay or discount. The whole indebtedness of the State on January 1, 1883, was \$13,979,000. Of this amount \$3,031,000 is in the form of certificates of indebtedness to the school and seminary funds, which will be due in 1911. This part is an amount which the people owe to themselves. The debt will probably never

be canceled, as the interest on it goes to the common schools and the State University. It is but a medium of collecting a tax for the support of education. The debt proper, therefore, of the State amounts to \$10,948,000, and bears 6 per cent interest. The assessment of property for taxation for 1882 was \$649,267,242. It will be observed, therefore, that the interest charge on the people is really only about one mill—one tenth of one per cent. The last of this debt will fall due in 1895. With the certain increase of property and the constant decrease of the interest charge, the debt will be extinguished at the period named—twelve years from now. The constitutional provision on this subject irrevocably fixes the interest and sinking fund as follows:

There shall be levied and collected an annual tax of one fifth of one per centum (twenty cents on the hundred dollars) on all real estate and other property and effects subject to taxation, the proceeds of which shall be applied to the payment of the interest on the bonded debt of this State as it matures, and the surplus, if any, shall be paid into the sinking fund, and thereafter applied to the payment of such indebtedness and to no other purpose.

During the two years of the administration of Governor Crittenden, the public debt has been reduced \$712,000; of which \$252,000 was paid in 1881, and \$460,000 in 1882. This sum shows the amount of bonds taken up and retired since January 10, 1881, with the surplus revenue, proper, of the State, and does not include the \$250,000 renewal revenue bonds—also paid in 1881—issued under act of May 9, 1879, making a total reduction of \$962,000 of the liabilities of the State. If other bonds could have been called during this year, or purchased at a reasonable premium, there is now sufficient surplus revenue on hand to retire \$300,000 more of the State's indebtedness. At no previous period has the State's indebtedness been so rapidly diminished, or the State grown so rapidly, in those elements which give a State a character at home and abroad, as within the last two years.

**LOCAL INDEBTEDNESS.**—The bonded indebtedness of the counties, as shown by the report made by the Auditor under date of January 1st, is \$10,840,082, and that of the townships \$2,649,331—total, \$13,489,414. The interest on much the larger proportion of this is promptly paid and a sinking fund provided for the liquidation of the principal. No more county or township debts are created. It is, therefore, safe to say that when the State debt shall be extinguished, in 1895, there will be little of the county and township indebtedness left.

The bonded indebtedness of cities and incorporated towns in Missouri, omitting St. Louis, is small. The amount is set down at \$3,938,970. Of this amount Kansas City and St. Joseph owe about one half. So that, outside of St. Louis, St. Joseph, and Kansas City, the cities and towns of the State owe only about \$2,000,000. The debt of St. Louis is nearly

equal to that of the State—omitting the certificates to the school and seminary funds—the counties and the towns combined. But all these debts are reduced. They represent a vast amount of public property, of which the people have the benefits. In many instances the amounts contracted were vainly large, and the mode of expending them profligate and dishonest. But the proposed objects were desirable, and the fruits in a majority of the cases have proved of great benefit. Four fifths, perhaps, of the counties and towns have court-houses, bridges, poor-farms, and railroads, whose construction was hastened or was wholly due to these debts, which they would not now part with for much larger amounts than they have become responsible for in getting them. The debt of St. Louis stands for improvements and property which go far toward reconciling the tax-payers to the burden. Among the things the city has to show for its bonded indebtedness are hospitals, water-works, harbor improvements, sewers, insane asylums, market-places, jails, court-houses, the great bridge over the Mississippi, parks, and squares, possessing a value which will be readily perceived by even the most unreflecting.

But the leading consideration in connection with the subject of all these debts is, that, excepting that of St. Louis, they are being fast liquidated, and that a vast amount of capital will in the next few years thus be forced into active channels. Taxation will grow light, and the people will be left free to employ their increased resources in all the improved avenues of production.

**STATE CLAIMS.**—The claims of the State consist of two kinds: First, war claims, or claims arising out of the furnishing of troops and supplies to the United States Government during the late civil war; and, second, claims arising under the enabling act of Congress and the ordinance of acceptance by the State, under which the State was admitted into the Union. This compact guaranteed to the State, in consideration of certain conditions by it accepted, 5 per cent of the net proceeds arising from the sale of all public lands in the State of Missouri after admission, etc. The amount due the State on account of all sales made for cash has been paid; but as a large proportion of the public domain in the State has been located with the military land warrants of the Government, issued in payment of services rendered by her soldiers in various wars, such locations should be regarded as sales for cash, and the State is entitled to 5 per cent thereon. These locations cover about eight million acres, and the five per cent of the proceeds of such sales—estimating the land at the price of \$1.25 per acre—amounts to \$426,000.

The war claims are of two classes: First, those belonging to the State; and, second, those belonging to individuals, which the State is attempting to collect.

By an act of Congress of July, 1861, the

United States Government promised to reimburse the different States for amounts expended by them, respectively, in the organization equipment, and maintenance of troops while acting under competent military authority and in concert with the Federal troops. Under that law, a settlement between the State and the General Government was effected in 1866, by which the State received the amount then shown to have been expended by it up to that date; and it was on account of similar disbursements, subsequently made by the State, that a claim was preferred for the amount not reimbursed by the Government.

The other class of claims, or those belonging to individuals, are those which were, by authority of an act of the Legislature, approved March 19, 1874, audited by a commission created by said act, and on account of which audit and allowance conditional certificates of State indebtedness were issued. These claims have been presented to the Government for payment; but, so far, have been refused consideration upon the ground that, even if they are just, the present laws of Congress only authorize their examination for settlement after they shall have been paid by the State, and that the issuance of conditional certificates of State indebtedness is not payment, as contemplated by the law.

**TAXABLE PROPERTY.**—The total taxable wealth in Missouri, exclusive of railroads, telegraphs, and bridges, returned for 1882, is \$615,000,000, and of this amount \$190,145,000 is returned from St. Louis city. The total amount of State taxes assessed for 1882 was \$2,462,000, and of this \$760,000 was assessed against St. Louis city. It will be seen that nearly one third the taxable property of the State is in St. Louis, and that it pays nearly one third the whole State revenue derived from property tax. The collections from merchants and manufacturers' tax-books in 1881 were \$179,000, of which sum \$106,000 was collected from St. Louis, and the *ad valorem* taxes and licenses collected in 1880 were \$200,000, of which St. Louis paid \$108,000. The whole amount of revenue paid into the State Treasury from the general property tax, merchants' and manufacturers' taxes, and licenses, was, therefore, \$2,841,000; and of this St. Louis paid \$974,000, or more than one third. Next to St. Louis in the amount of general property taxes paid comes Jackson County, with \$135,000; then St. Louis County, \$72,000; next Buchanan, \$53,000; next Saline, \$36,400; next Nodaway, \$26,000; next Lafayette, \$32,000. The counties paying the smallest amounts are Ozark, \$644; Carter, \$877; and Taney, \$885. The counties that show the largest landed property, not including town lots, are St. Louis, \$15,854,000; St. Louis city, \$11,358,000; Jackson, \$8,122,000; Nodaway, \$5,244,000; Saline, \$5,157,000; Lafayette, \$4,884,000; Bates, \$4,240,000. The counties showing the smallest amount of landed property are Ozark, \$131,000; Ta-

ney, \$193,000; Douglas, \$275,000; Stone, \$286,000; Carter, \$336,000.

#### STATE SCHOOL FUNDS.

Total amount of permanent productive funds in the several counties (county, township, etc.) and in the city of St. Louis.....	\$6,124,083 84
Add State fund (proper).....	2,912,517 66
Add Seminary fund.....	122,095 08
Add Agricultural-College fund (sale of lands)...	218,000 00
Total.....	\$9,371,696 58
Add University fund (bonds not heretofore reported).....	200,000 00
Total.....	\$9,571,696 58

Comparing these figures with those given in the last published report of the School Department (1880), there is an increase in the county funds:

Actual increase, or part not heretofore reported by county clerks in two years, of.....	\$205,165 87
In the State fund of.....	2,275 00
And the University funds of.....	818,000 00
Total increase.....	\$520,890 87

The report of 1880 showed that Missouri was the second State in the Union in the amount of permanent funds set apart for public education—Indiana surpassing her \$114,449.02. But as Indiana has no county or township funds, and no fixed or certain provisions for the increase of her State fund, Missouri has advanced beyond her, and now has considerably the largest amount of funds devoted to public education of any State in the Union.

Nor does the amount above given represent all of the school funds. The fines, forfeitures, and penalties realized during the year belong to the county school funds.

#### SCHOOL CENSUS OF 1882.

Total enumeration.....	741,632
Total enrollment.....	488,091
Per cent of enrollment to enumeration.....	65.81
This is an increase (in two years) of enumeration of.....	18,143
And an increase (in two years) of enrollment of.....	5,105

Considering the facts that the school age is between six and twenty years (covered by the enumeration); that very few attend school after the eighteenth year, and very many not after the sixteenth year; that the enrollment does not include those attending private, denominational, or parochial schools of other States; while the enumeration includes all of these, the per cent of enrollment or attendance is scarcely surpassed by that of any other State.

#### SCHOOL STATISTICS.

Expenditures for the last school year.....	\$3,468,737 67
Which is a per capita, on enumeration, of.....	4.677
Which is a per capita, on attendance, of.....	7.106

It must be borne in mind that five large, wealthy, and populous counties make no report of expenditures (on account of township organization), while they do report school population and receipts. The five doubtless expended \$150,000 for schools.

School-houses owned.....	8,273
Increase over 1880.....	28
Schools in operation (white), 8,321; (colored), 501—total.....	8,822
Increase (white), 172; (colored), 9—total increase.....	181

Teachers' wages paid.....	\$2,226,609 58
Increase over 1880.....	8,972 22
Number of teachers employed.....	10,607
Decrease since 1880.....	1,052
Average salaries paid teachers per year.....	\$209 91

It is impossible to tell the average number of months schools have been taught, owing to the defective reports made to the superintendent's office; but, assuming that average to be five months, the average monthly salary of teachers would be \$41.98.

The estimated value of school property in the State, exclusive of the university, four normal schools, and the schools for the Blind and Deaf and Dumb, is \$7,521,695.08.

An increase since 1880 of.....	\$168,293 86
The estimated seating capacity of the schools is..	516,942
An increase of.....	27,807

The total amount of taxes levied by the school districts (DeKalb and Macon not included) is \$2,286,191.66, which is \$0.41 on the \$100 of assessed valuation of taxable property for State and county purposes.

**RAILROADS.**—In his message to the Legislature, at the session in January, 1883, Governor Crittenden made these remarks relative to the railroads in the State:

Section 17 of Article XII of the Constitution forbids the consolidation of parallel or competing lines of railroads within this State. This section was not inserted in the Constitution for the purpose of arraying the police power of the State against the roads, but to prevent their franchises and privileges from being used against the interests of the people, and converted into powers to oppress those who invoked them into existence. I do not know that such consolidations as are prohibited by the Constitution have taken place. It is worthy of the consideration of the proper tribunal, and should receive judicial investigation. The Constitution declares that the question shall be decided by a jury upon proper issues made in the courts. The liberties of no people are safe who suffer their laws or organic acts to be violated by any individual or combination of individuals. If one or more corporations have disregarded this section of the law, they should be dealt with in the manner prescribed by the law. Those immense powers should yield implicit obedience to the law like individuals, receiving its benefits and protection when in submission to its requirements, and its punishments and penalties when they defy its powers. There should be the most amicable feelings between these corporations and the State, each being essential to the prosperity of the other.

**THE INSANE.**—There are 500 patients in the asylum at Fulton, 250 in the one at St. Joseph, and 400 in the one at St. Louis. But this aggregate of 1,150 does not represent one half the number of insane in the State. According to the report of the special committee appointed to visit the institutions there are 2,300 insane persons in the State outside the asylums. Of this number about one fourth are in county poor-houses and jails, and the other three fourths at their homes. More than one half the whole number of insane persons in the State, therefore, are without the treatment that would ameliorate their unhappy condition, if it did not restore them to reason and usefulness. The number is constantly increasing with the increase in the State's population. All the asylums are crowded as they should

not be, and the committee point out the urgent necessity for erecting new asylums, or enlarging the existing ones. In all the institutions there is a sitting-room for each hall. All these sitting-rooms are now provided with cots. It was originally intended that each patient should have a small, separate room; but the pressure upon the asylums has caused this to be abandoned, and in some of the buildings as many as eight patients are now quartered in one room, and the halls are provided with cots, in which patients sleep at night, but which have to be removed in the day. The cost to the State of the 1,150 patients in the asylums is about fifty cents a day each.

The State has been rid of a notorious band of robbers by the efficiency of Governor Crittenden. He alludes to the subject in his message to the State Legislature, and says:

I paid \$20,000 in rewards to various persons for the capture and overthrow of this band of desperadoes, not one dollar of which was taken from the State Treasury. It is not probable that Missouri will again be cursed and disgraced by the presence of such a band of men, confederated together for desperate purposes. It is fully redeemed and acquit of that unwarranted appellation of "robber State." But an insignificant number of people in two or three counties gave countenance to such lawlessness. Our people, with one accord, heartily approve of the measures and means employed to compel these violators of the law to confess its power and majesty, and applaud the stern, unbending determination of the officers who contributed so much to the fulfillment of that purpose.

It is done; and Missouri is to-day one of the most peaceful States in the Union. Fewer crimes are committed within her borders than in those of surrounding States.

Since my inauguration, three other lawless bands were formed and operated in different portions of the State. The "Meyers gang," composed of six men, was organized in New Madrid County for the purposes of robbery and murder. Within a few weeks after its formation two of its members were shot to death while resisting arrest, two were captured, tried under the law and executed, and the other two were sent to the Penitentiary for their crimes.

A band known as the "Mason gang" was organized in Adair County, for the purpose of robbing banks and committing other crimes. It consisted of four men, under the leadership of Frank Mason. In the month of June, 1882, they robbed a bank at Brookfield, Mo. Within one week from the date of the robbery these men were captured, indicted, tried, and sentenced to twenty-five years' imprisonment each in the Penitentiary. The Lewis brothers formed a band in Jasper County for similar purposes. Within a few weeks after commencing their lawless career they were captured and are now in jail awaiting trial.

A system of "high license" has for some time been in operation in the State. It seems to have been successful, as appears by the following facts: In Carrollton, a town of 2,500 inhabitants, there are only six saloons, which pay a revenue of \$3,000—half enough, probably, to meet all the expenses of the city government. In Clarksville, with a population of 2,500, there are only two saloons, which pay \$600 each. In Carthage there are four, which pay \$800 each. In Fulton there are three, which pay \$3,763 a year to the city—quite

one half the whole revenue, if not more. In Higginsville there are four, which pay \$1,600 a year. In Kirksville there are two, which pay in a revenue of \$1,400. In Louisiana there are seven, which pay \$4,800 a year. In Lamar there are four, which pay \$2,400 a year. In Maysville there are eight, which pay \$9,000 a year. In Mexico there are four, which pay \$5,200 a year. In Marshall there are four, which pay \$2,400 a year. In Linneus there is one, which pays \$600 a year. In Neosho there are two, which pay \$1,000 a year.

In those towns where the number of saloons is much greater the revenue yielded by them is much smaller, and it may be added that the general results are less satisfactory. Thus Boonville has ten saloons, which yield only \$1,257 in the aggregate. Cape Girardeau has twenty-three, but the revenue from them all is only \$1,725, less than half as much as Fulton derives from four. Fayette has eight, which yield only \$793. Hermann has fourteen, which only yield \$210. Jefferson City has twenty-seven, which yield only \$1,295. Kansas City has two hundred and thirty-nine, which pay \$46,000. Lexington has sixteen, which pay \$1,600. Sedalia has thirty-three, which pay \$3,730—about the same as Fulton derives from four. St. Charles has twenty-eight, which pay \$1,120. St. Joseph has one hundred and eighty, which pay \$12,000.

It would appear clear enough from this that the greater the number of saloons in a place the less aggregate revenue they pay, and that the most effective way of securing substantial revenue from them is to charge them a license so high as to reduce the number.

The State election, held in November, was for the choice of a Judge of the Supreme Court, a Railroad Commissioner, and a Superintendent of Schools.

For Supreme Court Judge—Sherwood, Democrat, 198,620; Wagner, Republican, 128,239; Rice, Greenback, 33,407.

Railroad Commissioner—Harding, Democrat, 202,137; Hunt, Republican, 125,591; Ritchey, Greenback, 32,576.

Superintendent of Schools—Coleman, Democrat, 202,855; Hill, Republican, 124,759; Booth, Greenback, 32,264.

Sherwood's plurality over Wagner, 70,381; majority over all, 36,974.

Harding's plurality over Hunt, 76,546; majority over all, 43,970.

Coleman's plurality over Hill, 78,096; majority over all, 45,832.

The constitutional amendment increasing the number of Judges of the Supreme Court to six, and dividing the court into two branches, was lost: yeas, 44,149; nays, 142,742.

The Legislature chosen was divided as follows:

PARTIES.		Senate.	House.
Republican.....		6	32
Democratic.....		25	104

The vote for Representatives in Congress was as follows:

Dist.	Republican.	Democratic.	Greenback.
1.. Glover.....	11,407	Hatch..... 16,243	Leavitt.... 667
2.. Dorsey.....	8,628	Alexander.. 19,039	Quayle... 5,302
3.. Thomas.....	12,887	Dockery... 17,261	Burrows... 2,489
4.. Reed.....	10,571	Barnes.... 19,325	Sisson.... 2,185
5.. Crisp.....	8,672	Graves.... 12,695	McCabe... 243
6.. Aldredge....	11,849	Cosgrove... 17,149	
7.. Daudt.....	9,857	Buckner... 14,370	McNair... 1,736
8.. Sessinghaus.	5,514	O'Neil.... 7,240	
9.. McLean.....	6,759	Broadhead. 6,560	Hill..... 463
10.. Manistre....	7,455	Clardy.... 13,536	Jackson... 2,667
11.. Wallace.....	10,580	Bland..... 14,259	Quinn.... 1,187
12.. Terrell.....	9,111	Morgan.... 14,768	Spring.... 3,559
13.. Cloud.....	12,424	Fynn..... 13,904	Haseltine.. 6,123
14.. Carroll.....	7,177	Davis..... 14,023	Kitchen... 2,920

The Democratic pluralities in the last four preceding elections were: Hancock over Garfield in 1880, 55,000; Crittenden over Dyer for Governor, 54,000; Tilden over Hayes in 1876, 58,000; Phelps over Finkelnburg for Governor, 52,000. The Democratic plurality over the Republican vote, therefore, has run pretty evenly at 52,000 to 55,000 for the last six years. But in the recent election it rose to 78,000—an increase of 50 per cent. The change in public sentiment in Missouri as manifested in this election of November, 1882, was a part of the same movement which produced such astonishing results in New York, Pennsylvania, and elsewhere. (See UNITED STATES.)

## N

NAVIES OF EUROPE. THE BRITISH NAVY.—The naval operations before the city of Alexandria have directed attention to the efficiency of the latest models of armored war-ships and the heavy ordnance which they carry. The most effective work in the destruction of the forts was done by the British iron and steel-clad vessels *Inflexible* and *Téméraire*. The former is a turret-ship of 9,515 tons displacement, an indicated power of 8,483 horse, 23 feet draught, and a speed of 14.74 knots. She

towers. Her displacement is 8,571 tons; indicated horse-power, 7,516; draught, 27 feet 4 inches; speed, 14.65 knots. Her guns were not nearly as heavy as those of the *Inflexible*, but were capable of penetrating 13.35 inches of iron at 1,000 yards. She was provided with an upper-deck battery in two fixed towers. These two colossal engines of destruction did most of the work of battering down the defenses of Alexandria. The enormous range of their guns enabled them to carry on effec-

HER MAJESTY'S SHIP INFLEXIBLE.

carries four 80-ton guns. These enormous weapons have a length of 26 feet 9 inches and a caliber of 16 inches, and hurl a projectile of 1,700 pounds weight. The charge is 370 pounds of cubical or prismatic powder, and they are capable of penetrating 22 inches of iron at a distance of 1,000 yards. The turrets are arranged *en échelon*, instead of along the middle line, in order that the whole armament may be fired at once in the line of the keel as well as abeam. The turrets and guns are worked by Rendel's hydraulic system. The *Téméraire* is an iron and steel-clad vessel, with barbette

tive action at a distance of 3,000 to 5,000 yards, while they were entirely out of the reach of the projectiles from the forts. The rotating turrets of the one, and the revolving platforms of the other, also enabled them to bring their heavy guns to bear in different directions without a change of position. The strongest of the Egyptian works suffered little from the fire of the *Alexandra*, *Superb*, and *Sultan*, although engaged at a distance of only 800 yards, while they were speedily reduced when the *Inflexible* and *Téméraire* brought their guns to bear upon them. These guns, however, were of the

muzzle-loading class and were worked slowly. The armament of the forts, moreover, did not consist of the most effective kind of modern ordnance.

The British Admiralty has been engaged in providing several new vessels for the navy during the past year, and every effort is made to bring the latest improvements into use. Two vessels, which have been in course of construc-

	Calliope.	Canada.

Guns, 6-inch breech-loading rifles.	10	6

HER MAJESTY'S SHIP TÉMÉRAIRE.

tion at Chatham Dock-yards, belong to widely-different types. The Calliope, which was begun in October, 1881, is an unarmored corvette, belonging to what is known as class "C." These are not designed so much as fighting-ships as for patrols and escorts, and for service on foreign stations. They are of 2,383 tons displacement, 2,300 horse-power, and their dimensions are 225 feet between perpendiculars, 44 feet 6 inches extreme breadth, and 21 feet 6 inches depth of hold. The transverse frames are of iron, but the bulkhead and skin-plating of steel. They have steel shell-proof decks below the water-line and extending over the whole length of the engines, boilers, and magazines. They are fully rigged and coppered, and provided with large bunker capacity to fit them for long cruises. They are good sailers, and make a speed of 13 knots an hour under steam. The Calliope is intended to combine all the qualities calculated to give to this class of vessels the highest merit. As compared with the Canada, regarded as the best specimen previously floated, it has the following characteristics:

The Calliope is to be fitted with sponsons for 6-inch guns, projecting beyond the sides fore and aft, and with Whitehead torpedoes and machine guns. The other vessel which has been mentioned as under construction is the Impérieuse, an armor-clad, swift-sailing, fighting-ship. It is 315 feet long, 61 feet breadth, 25 feet draught, 7,390 tons displacement, and 8,000 horse-power. She is to carry four 18-ton guns, mounted in barbets, and six 6-inch guns on the broadside, capable of penetrating 12 inches of armor. Two of the barbets will be built across the middle line forward and aft, and the rest abreast of each other at the sides amidships. The heavy guns are situated at twice the height out of water that they are in the turret-ships, and they can be fired, three together, in any direction—ahead, astern, or on the beam. The armor on the sides of the citadel will be 10 inches thick, that across the ends 9 inches, that on the barbets 8 inches, while the armor protecting the pilot-tower will be 10 inches thick. The whole of the protection will consist of the new steel-faced armor. The pe-

culiar shape of the iron beams, which are to support the armored deck containing the coal armor, is what mainly distinguishes the Impé-rieuse from other ships in a similar state of progress. These are bent downward at the ends, so that the sloping contour of the deck at the sides will cause shots to glance off. Her bunkers will be able to store the extraordinary quantity of 1,200 tons of coal. She will be brig-rigged, and will carry a good spread of

canvas. Under steam her speed is expected to be 16 knots an hour.

Of the vessels lately completed in the English dock-yards, and not yet put into service, the most important are the double-turret ships Neptune, Dreadnaught, and Colossus.

The following table contains a list of the armored vessels of the British navy designed for active service, showing the class, displacement, draught, and maximum speed of each:

NAME.	Material.	Class.	Maximum indicated horse-power.	DISPLACEMENT AND DRAUGHT ON TRIAL.		Maximum speed.
				Displacement.	Maximum draught.	
Inflexible.....	Partly steel.....	Turret-ship.....	8,483	9,515	23 0	Knots.

THE FRENCH NAVY.—The French Government has been paying renewed attention to the building up of its naval strength, which has somewhat declined since 1870. Its efforts, indeed, began soon after the report of Admiral de Montaignac, in 1875, on the inefficient condition of the naval defenses. Since that time the dock-yards at Brest, Orléans, Lorient, and Toulon have been busy, but the navy has not yet attained the strength it had in 1867-'68, when the Marquis de Chasseloup-Laubat had brought it to the highest state of efficiency. At the beginning of this year it consisted of twenty-three ironclads of the first class (*bâtiments de combat*), ten of the second class, available only for defensive warfare, and six of the third class, or *gardes-côtes cuirassés*, for the defense of the seaboard. There were also 264 unarmored screw-steamers, 62 paddle-steamers, and 113 sailing-vessels. Many of these ships, however, were only effective on paper. Thus, of the unarmored screw-steamers, more than half were not on active service, being either

stripped of their guns or on the reserve list. Only two of the 29 ships-of-the-line of this class, the *Louis XIV*, 490 horse-power, with 116 guns, and the *Jean Bart*, 400 horse-power, with 66 guns, were afloat last year. Again, 16 out of the 23 first-class ironclads are of antiquated construction, with plates not exceeding 7 $\frac{1}{2}$  inches in thickness at the water-line, and most of them are to be withdrawn from the active list in 1885.

Six new ironclads of the first class, five of the second, and one of the third have been completed during the year, and six others of different sizes are in process of construction. Of these the two most remarkable are the *Formidable*, at Lorient, and the *Amiral Baudin*, at Brest, monster ironclads of 11,300 tons, and armored at the sides with plates of 18 to 25 inches thickness. The three most powerful of the completed ironclads of the French navy are the turret-ships *Dévastation* and *Foudroyante*, and the *Amiral Duperré*. They were designed nearly on the same lines, are 312

feet in length, and constructed mainly of steel. The first-named two have plates of 14 inches, and mount six guns each, that is, four of 38 tons and two of 25 tons; their indicated horse-power is 4,200, and their displacement 9,600 tons. The *Amiral Duperré* has 12-inch plates, and four 38-ton guns. Next in order come the six new ironclads, the *Tempête*, *Tonneur*, *Fulminant*, *Furieux*, *Vengeur*, and *Tonnant*, with 11½-inch plates, and two 38-ton guns apiece. In all of them horizontal steel armor is used of sufficient strength to make the decks bomb-proof, and the guns are mounted *en barbette*—i. e., on swivels, so as to be aimed in any direction. The horse-power of the first three new ships is 4,200, and the displacement 5,495 tons; in the remaining three the horse-power is 3,800, and the tonnage 4,452. Not much inferior to these nine first-class ironclads are the *Redoutable*, 8,658 tons, 6,000 horse-power, six guns, and 9-inch plates; and the *Trident*,

*Friedland*, and *Colbert*, which have all 8½-inch plates, are of 8,164 tons burden, and carry 10 guns apiece—viz., eight of 24 tons and two of 12 or 18 tons. The second-class ironclads, now fifteen in number, have all 6-inch plates. The newest carry four 12-ton guns, the older ones have four 7-ton guns and four of 5 tons. The tonnage of all the fifteen ships is the same, 3,445, but the horse-power varies between 3,963 in the new-built *Victorieuse* and 1,987 in the *Bayard*, *Duguesclin*, *Turenne*, and *Vauban*, also new-built. At the head of the seven coast-guard ironclads stands the *Indomptable*, of 600 tons, with 10-inch plates, and two 38-ton guns; the thickness of the armor-plates in the others varies between 9 inches and 5½ inches.

The following list, made up from the latest official sources, contains the names and description of all the armored vessels in actual service in the French navy:

NAME AND CLASS OF VESSEL.	Thickness of armor, in inches.	Displacement, in tons.	Maximum speed, in knots, per hour.	Armament: number and description of guns (all breech-loading rifles).	Remarks.

		3,648	13		

The French navy also contains twenty-six unarmored cruisers of various sizes and models, from the 5,350-ton frigates *Duquesne* and *Tourville* to the old type of sailing-corvettes

of about 1,200 tons, and some sixty-five gun-boats, with ram bow, wooden hulls, and full sail-power. The general service fleet consists of 9 ships-of-the-line, 6 frigates, 21 sloops of

war, 11 gunboats, 42 transports, and a number of smaller vessels. The Duquesne and Tourville were launched in 1876, and each carries 27 guns and has a calculated speed of 17 knots. Among the 130 screw-steamers which are really available out of a paper total of 264, are 58 gunboats and 35 transports or troop-ships; among the 62 paddle-steamers are 11 frigates, 7 cutters, and 44 dispatch-boats. Of the 113 sailing-vessels, the greater number are employed as *garde-pêches* on the fisheries near the coasts of France. In addition to the ships above enumerated, the following are now

on the stocks: The Kaiman, at Toulon; the Terrible, at Brest; and the Requin, at Bordeaux. All these are armored and have fixed turrets, the guns being mounted on swivels. They are each of 7,168 tons displacement, and are protected at the water-line by compound armor 50 centimetres thick at the top and diminishing to 40 centimetres.

GERMAN NAVY.—No notable additions have been lately made to the strength of the German navy. It contains several moderately heavy armored vessels, equipped with Krupp guns. The following is a list of the armored ships :

NAME OF VESSEL.	Thickness of armor in inches.	Displacement, in tons.	Maximum speed per hour, in knots.	Armament: number and description of guns (Krupp).	Remarks.
Kaiser . . . . .	10	7,560	14·5	8 10½-inch and 1 8½-inch Krupp....	Ram bow, full sail-power.

Six vessels now building .....	2,169	..	.. .. ..	Single-decked corvette, full sail-power.

**NAVY OF ITALY.**—Italy has two of the heaviest armored war-ships afloat, in the *Duilio* and *Dandolo*, which have each a displacement of 10,401 tons and over 21½ inches of armor. They each carry four 100-ton guns and have a maximum speed of 15 knots an hour. The two vessels cost about \$7,000,000. Two others of still greater dimensions, the *Italia* and the

Lepanto, are in course of construction. In the construction of the Duilio and the Dandolo, which were double-screw turret-ships of the Monitor type, each carrying four 100-ton guns of Sir William Armstrong's manufacture, mounted in two turrets, the Italian navy considerably surpassed anything yet supplied to the Royal Navy of Great Britain. But the

HIS ITALIAN MAJESTY'S SHIP LEPANTO.

Italy and the Lepanto, apparently, are very much more formidable, their dimensions being as follow: Length, 122 metres (or 403 feet); greatest breadth, not reckoning the armor, 22 metres 28 centimetres (73.11 feet); height at the middle section, 15 metres 20 centimetres (49 feet 5 inches); medium depth of immersion, 8 metres 48 centimetres (27.81 feet); tonnage, about 15,000. The Lepanto will have four 100-ton guns in a central armored redoubt, and eighteen  $4\frac{1}{2}$ -ton guns in the battery. There are two screws, each moved by two engines and three cylinders on the Penn system, twenty-six boilers, and six funnels. The indicated horse-power is 18,000; the expected speed is seventeen miles. There are only two masts, which serve for signaling. Side-armor being altogether abolished, the system of de-

fense consists in the cellular deck of the first battery, the armor of the main deck, the iron casing of the funnels and passages for projectiles, and the armor of the redoubt containing the four cannon. The Lepanto is 22 metres (72.16 feet) longer than the Duilio and Dandolo, and will have 4,000 more tonnage, about 8,000 extra horse-power, and a covered battery of eighteen cannon, which the above-named ships have not. The Lepanto will therefore be much more powerful. As much as possible, she will preserve the type of a frigate, differing here also from the Dandolo and Duilio. She will cost about twenty-four million francs. The time fixed for launching her is March 17, 1883. The following is a list and description of the other armored vessels of the Italian navy:

NAME.	Armor in inches.	Displacement, in tons.	Speed.	Armament.	Remarks.
Principe Amadeo. ....	6	5,780	..	1 23-ton and 6 18-ton guns.....	Wooden hull, line of battle cruiser, full sail-power.
Palestro .....	6	5,780	10	" "	"
Roma .....	6	5,697	..	6 18-ton and 2 12-ton guns.....	"
Venezia .....	6	5,697	..	" "	"
Castelfidardo.....	$4\frac{1}{2}$	4,194	13	9 9-ton and 2 12-ton guns.....	Full sail-power.
San Martino .....	$4\frac{1}{2}$	4,194	13	" "	"
Maria Pia.....	$4\frac{1}{2}$	4,194	13	" "	"
Ancona.....	$4\frac{1}{2}$	4,194	13	" "	"
Affondatore .....	5	4,070	..	2 12-ton guns .....	Coast defender, full sail-power.
Conte Verde .....	$4\frac{1}{2}$	3,982	..	6 12-ton guns and 1 9-ton gun....	Full sail-power.
Vareso .....	$4\frac{1}{2}$	2,700	10	4 9-ton guns .....	"
Terribile.....	$4\frac{1}{2}$	2,700	10	30 $6\frac{1}{2}$ -ton guns .....	"
Formidabile.....	$4\frac{1}{2}$	2,700	10	" .....	"

In the construction of the Lepanto, the object was to make a ship sufficiently powerful for offensive as well as defensive operations, and possessing greater speed than any other vessel.

Italy has an unarmored fleet of 3 frigates, 7

corvettes, 20 gunboats, 10 dispatch-vessels, 7 screw-transports, and a number of smaller vessels.

NAVY OF SPAIN.—The armored ships of the Spanish navy are included in the following list:

NAME OF VESSEL.	Thickness of armor, in inches.	Displacement, in tons.	Maximum speed per hour, in knots.	Armament: number and description of guns (all rifled).	Remarks.
Numancia.....	5	7,053	13	6 18-ton, 3 9-ton, and 16 7-ton.....	Broadside battery, ram bow, ship-rigged.
Vittoria.....	5½	7,000	..	4 12-ton, 3 9-ton, and 12 7-ton.....	Full sail-power.
Saragossa.....	4½	.....	..	4 11-inch, 2 8½-inch, and 14 7½-inch..	"
Arapiles.....	4½	.....	..	2 18-ton, 5 9-ton, and 10 7-ton.....	"
Mendez Nuñez.....	..	.....	..	4 9-inch and 2 8-inch.....	"
Sagunto.....	6	6,300	..	2 18-ton, 5 9-ton, and 10 7-ton.....	"
Aragon.....	8½	3,650	..	8 guns.....	Being built.
Castilla.....	8½	3,650	..	".....	"
Navarra.....	8½	3,650	..	".....	"
Duque de Tetuan.....	4	600	..	1 6½-inch and 4 4½-inch.....	"
Puigserda.....	4	515	..	1 6½-inch and 2 4½-inch.....	Monitor.

Spain has a small unarmored fleet of large-size vessels, but many small gunboats for the defense of her colonies—in all, 9 frigates, 20 corvettes, and 75 gunboats.

NAVY OF RUSSIA.—The Russian navy contains 29 armored and 10 unarmored ships, besides a general service fleet of 2 frigates, 18 corvettes, and 56 gunboats. The unarmored

vessels include four American-built ships, the Europe, 3,000 tons, the Asia, 2,650, the Africa, 2,580, and the Zabiaca, 1,200 tons, armed with four and six inch guns and making a speed under full sail-power of 12 to 14 knots. The remainder are Russian-built cruisers of 1,334 tons. The following is a list of the armored vessels of Russia:

NAME OF VESSEL.	Thickness of armor, in inches.	Displacement, in tons.	Armament.	Remarks.
Peter the Great.....	14	9,510	4 12-inch 40-ton guns.....	Full sail-power.
Knaz Minin.....	12	8,800	4 11-inch 28-ton guns.....	
Duke of Edinburgh.....	6	4,438	4 8-inch 26-ton guns.....	
General Admiral.....	6	4,438	".....	
Sevastopol.....	4½	6,200	16 8-inch 9-ton guns.....	Wooden hull, ram bow, full sail-power.
Petropaulovskl.....	4½	6,200	20 8-inch 9-ton guns.....	
Knaz Poljarski.....	4½	4,500	10 8-inch 9-ton guns.....	
Admiral Lazareff.....	5½ to 6	3,700	6 9-inch 14½-ton guns.....	
Admiral Grulig.....	5½ to 6	3,700	8 11-inch 27½-ton guns.....	Full sail-power.
Admiral Tchitchagoff.....	6	3,700	2 11-inch 27½-ton guns.....	
Admiral Spindadoff.....	6	3,700	".....	
Pervenez.....	4½	3,300	26 8-inch guns.....	
No-tron-meña.....	4½	3,300	16 8-inch guns.....	Single-turret monitor.
Kreml.....	6	3,300	26 8-inch guns.....	
Auragan.....	4½	1,555	2 9-inch 14½-ton guns.....	
Tiphon.....	4½	1,555	".....	
Latnik.....	4½	1,555	".....	Double-turret monitor.
Lava.....	4½	1,555	".....	
Vetchoun.....	4½	1,555	".....	
Kaldoun.....	4½	1,555	".....	
Streletz.....	4½	1,555	".....	Circular monitor.
Edenorag.....	4½	1,555	".....	
Bronenosetz.....	4½	1,555	".....	
Pern.....	4½	1,555	".....	
Smerch.....	4½	1,330	4 9-inch 14½-ton guns.....	Double-turret monitor.
Tchavargelika.....	5	1,335	4 11-inch 27½-ton guns.....	
Rousalka.....	5	1,335	2 11-inch 27½-ton guns.....	
Norvgorod.....	11	2,490	".....	
Vice-Admiral Popoff.....	18	3,550	2 12-inch 40-ton guns.....	"

The fastest of these are capable of making 13 knots an hour, and the speed of the lighter class is 6 to 7 knots.

NAVY OF AUSTRIA.—Austria has a navy of fair power, as appears from the following list of her armored ships of war:

NAME OF VESSEL.	Thickness of armor, in inches.	Tons displacement.	Speed, in knots, per hour.	Armament.	Remarks.
Tegethoff.....	14-5	7,390	14	6 11-inch Krupp.....	Line-of-battle cruiser, bark-rigged.
Custoza.....	9½	7,060	14	8 10-inch Krupp.....	Line-of-battle cruiser, ship-rigged.
Lissa.....	6½	6,050	13	12 9½-inch Krupp.....	" " " "
Erzherzog Albrecht.....	8-3	5,940	13	8 10-inch Krupp.....	" " " "
Kaiser.....	6½	5,810	12	10 9-inch Armstrong.....	" " " "
Don Juan d'Austria.....	4½	3,550	8-5	12 7-inch Armstrong.....	Line-of-battle cruiser, ram, ship-rigged.
Kaiser Max.....	4½	3,550	8-5	".....	" " " "
Prinz Eugen.....	4½	3,550	8-5	".....	" " " "
Erzherzog Ferdinand Max.....	5	5,140	10-3	14 8-27-inch Krupp.....	Line-of-battle cruiser, ship-rigged.
Habsburg.....	5	5,140	10-3	".....	" " " "
Salzmander.....	4½	3,110	7	10 7-inch Armstrong.....	Ordinary station service, ship-rigged.
Maros.....	1-5	310	5-6	2 5-9-inch Krupp.....	River monitor.
Leitha.....	1-5	310	5-6	".....	"

NAVY OF TURKEY.—Turkey has 15 armored vessels besides 1 ironclad monitor and 8 river gunboats, and an unarmored fleet of 1 ship-of-

the-line, 5 frigates, 7 corvettes, 14 gunboats, and 44 transports and smaller vessels. The following is a list of the armored ships:

NAME OF VESSEL.	Thickness of armor, in inches.	Displacement, in tons.	Maximum speed, in knots, per hour.	Armament: number and description of guns (all rifled).	Remarks.
Mesoodiyeh.....	12	8,994	18 7/4	12 18-ton and 8 6½-ton guns.	Ram bow, ship-rigged.
Noosretiyeh.....	10	7,900	13	10 12-ton and 2 6½-ton guns.	" " " "
Aziiziyeh.....	5½	6,400	12	1 12-ton and 15 6½-ton guns.	Ram bow, bark-rigged.
Osmaniyeh.....	5½	6,400	12	" " " "	" " " "
Orkaniyeh.....	5½	6,400	12	" " " "	" " " "
Marmondiyeh.....	5½	6,400	12	" " " "	" " " "
Assar-i-tevrik.....	8	5,687	12	8 12-ton guns.	Full sail-power.
Peth-i-Bulend.....	9	2,719	14	4 12-ton guns.	" " " "
Mookademî Khân.....	9	2,719	14	" " " "	" " " "
Avni ilah.....	6	2,314	12	" " " "	Ram bow, full sail-power.
Mooyini Zâfir.....	8	2,314	13	" " " "	" " " "
Idjalliyeh.....	.....	2,300	11	2 12-ton and 2 6½-ton guns.	Full sail-power.
Nedj-im-shefket.....	.....	2,300	11 5	5 9-ton guns.	" " " "
Assar-i-shefket.....	.....	2,300	11	" " " "	" " " "
Haiz-i-Rahman.....	1½	2,300	12	2 9-ton and 2 4-ton guns.	" " " "

NAVY OF HOLLAND.—The Dutch navy contains 20 armored ships of war ranging from 1,500 to 5,200 tons displacement, besides six lighter ironclad rams and gunboats, and an unarmored fleet of 1 frigate, 31 corvettes, 31

small gunboats, 13 side-wheel steamers, and 16 torpedo-boats. The following is a list and description of the heavier armored vessels of Holland; the unarmored fleet is composed of vessels of her former navy:

NAME OF VESSEL.	Thickness of armor, in inches.	Displacement, in tons.	Armament.	Remarks.
Koning der Nederlanden.....	8	5,201	4 11-inch Armstrong and 4 4½-inch Krupp guns.	Ram bow for general service.
Prins Hendrik der Nederlanden.....	4½	3,822	4 9-inch Armstrong.	" " " "
Guinea.....	6	2,340	2 9-inch Armstrong.	Ram bow for coast-defense.
Buffel.....	8	2,163	" " " "	" " " "
Schorpioen.....	8	2,141	" " " "	" " " "
Ster.....	6	2,036	" " " "	" " " "
Cerberus.....	5½	1,506	" " " "	" " " "
Bloedhond.....	5½	1,506	" " " "	" " " "
Heiligerlee.....	5½	1,506	" " " "	" " " "
Krokodil.....	5½	1,506	" " " "	" " " "
Tijger.....	5½	1,392	" " " "	" " " "
Adder.....	5½	1,541	" " " "	" " " "
Haal.....	5½	1,541	" " " "	" " " "
Hyena.....	5½	1,541	" " " "	" " " "
Panther.....	5½	1,541	" " " "	" " " "
Wesp.....	5½	1,541	" " " "	" " " "

The speed of those of 2,000 tons and upward is about 12 knots an hour, and of the lighter vessels about 8 knots.

armored vessels and an unarmored fleet of 3 frigates, 9 corvettes, and 12 gunboats, which is sufficient for immediate defense. The armored ships are the following:

NAVY OF DENMARK.—Denmark possesses 7

NAME.	Thickness of armor, in inches.	Displacement, in tons.	Armament.	Remarks.
Helgoland.....	12	5,265	1 12-inch, 4 10½-inch, and 5 5-inch guns.	Broadside, full sail-power.
Odin.....	8	3,086	4 10-inch guns.	Frigate, full sail-power.
Denmark.....	4½	4,664	12 8-inch and 12 6-inch guns.	" " " "
Peder Skram.....	4½	3,321	6 8-inch and 12 6-inch guns.	" " " "
Gorm.....	8	2,308	2 10-inch guns.	Corvette, full sail-power.
Lendernen.....	5½	2,044	2 9-inch guns.	" " " "
Rolfé Krake.....	4½	1,323	3 8-inch guns.	" " " "

CONSTRUCTION OF GUNS: ENGLISH METHOD.—There has been for some years an almost continuous revolution going on in the construction of heavy ordnance to be used on board ships of war. It is now generally acknowledged that the most effective type of gun for fleets

and forts is a breech-loading rifled cannon of steel, firing projectiles of moderate size with great velocity. Twenty-five years ago the prevailing type was the muzzle-loading, smooth-bore, cast-iron weapon of enormous caliber. The largest of these attained a diameter of bore

of twenty inches or more. England began arming her fleets and fortresses with rifled cannon in 1858. A system of breech-loading was adopted at the same time, but so many accidents occurred in the working of the guns that the system fell into disfavor with the navy, and, after a long investigation and competitive trials, both the War Office and Admiralty determined to return to muzzle-loading ordnance. That system has continued to prevail until within a year or two; but another change of opinion has taken place, and it is generally admitted that there must be a rearmament of the British navy and forts with breech-loaders. The great steel-clad vessels of the present English fleet are armed with muzzle-loaders, some of which have great power: the 80-ton guns of the *Inflexible* have a caliber of sixteen inches, carry a projectile of 1,700 pounds, with a powder-charge of 370 pounds, and will penetrate 27.5 inches of iron at 500 yards. The muzzle velocity is 1,520 feet per second, and the muzzle energy 27,213 foot-tons—that is, the equivalent of 27,213 tons of metal falling one foot. The 25-ton guns, such as are carried by the *Téméraire*, the *Monarch*, and the *Alexandra*, have a twelve-inch caliber, 600-pound projectile, 85 pounds powder-charge, and penetrate 13.9 inches of iron at 500 yards. Their muzzle velocity is 1,180 feet per second, energy 7,030 foot-tons. The 18-ton guns forming part of the armament of the leading vessels of the fleet have 10-inch caliber, 400-pound projectiles, 70 pounds charge, penetrate 12.7 inches at 500 yards, have muzzle velocity of 1,364 feet per second, and energy of 5,160 foot-tons. The 12-ton guns are 9-inch caliber, 250-pound projectile, 50 pounds charge, 10.4-inch penetrating power, 1,420 feet per second muzzle velocity, and 3,496 foot-tons muzzle energy. The most common gun of all, the chief armament of cruisers, is the 6½-ton rifled cannon with a 7-inch bore, 115-pound projectile, 30 pounds charge, capable of penetrating 7.7 inches of iron at 500 yards, with a muzzle velocity of 1,525 feet per second, and energy of 1,246 foot-tons. These all load at the muzzle.

**GERMAN ORDNANCE.**—Germany adopted breech-loading ordnance at about the same time with Great Britain, but, instead of abandoning it after trial, endeavored so to improve its construction as to avoid the defects which caused disaster to the guns. The German system has been adopted by Russia, Austria, Denmark, and Holland. The present Krupp gun is breech-loading and consists of a steel body strengthened by hoops. The largest class has a twelve-inch caliber, and is bound with three tiers of hoops. Its projectile weighs 715 pounds, its powder-charge is 158 pounds, and it develops a working effect of 12,584 foot-tons. The French have a type of breech-loaders of their own, which have been adopted by Spain and Sweden. The largest of these have a caliber of 32 centimetres (12.6 inches), and throw a shot of 770 pounds with 132 pounds of powder,

developing an energy of 10,390 foot-tons. The prevailing manner of construction is to cut off the base of the breech from an iron body, insert a steel lining as far as the trunnions, and shrink hoops of steel around the exterior; but experiments with all-steel guns have been going on for some time.

**ITALIAN ORDNANCE.**—The standard naval ordnance of Italy is the Armstrong muzzle-loader, though there are some batteries of French breech-loaders. The newly ordered 100-ton guns are to be breech-loading, with the Armstrong mechanism for closing the breech. These are the largest afloat, being 32 feet long, having a caliber of 17 inches, and weighing 222,800 pounds each. The projectile is of steel, weighing 2,000 pounds, and is driven by a charge of 471 pounds of powder, with a velocity of 1,584 feet per second, and a working effect of 34,550 foot-tons.

**TENDENCY OF CONSTRUCTION.**—The tendency of construction is clearly toward steel guns of great length, rifled bore, of moderate caliber, using large charges of slowly-burning powder, and loading at the breech. Various devices have been tried to re-enforce the metal used, in such a way as to counteract its defective tendencies. Certain degrees of cohesive strength, elasticity under violent strain, and ductility, to prevent rupture, are desirable. As no limits are assignable to the force which it is desirable to impart to a projectile, it is impossible to define any bounds for the caliber and strength demanded in artillery. The problem is, therefore, the production and selection of a material combining in due proportions and in the highest degree cohesive strength, elastic extensibility, and ductility and malleability. No one of these properties is found in the highest degree in any metal possessing either of the two others in an equally high degree, and as yet no fixed relation is known between them. Of all the metals available for gun-construction, some of the varieties of steel, especially the low steel, combine the qualities desired in the greatest degree. These metals have been combined, and the strains have been sought to be overcome, first, by the method of initial tension, which is effected by shrinking heated iron bands around the parts in danger from pressure, as in the Woolwich system, or by slipping a tube into the bore after it has been enlarged by heat, as in the Palliser system, and, second, by the method of varying elasticity, which places the metal that stretches the most within its elastic limit around the surface of the bore, so that by its enlargement the explosive strain is transmitted to other parts. Among the methods of re-enforcement which appear to be growing in favor is that of winding the body of the gun with steel wire, in spirals of considerable obliquity, alternate layers running in opposite directions, and solidifying with a more fusible metal used as a solder. The walls of the bore may be the mandrel around which the wire is woven, then the

fused metal is poured in, and, after cooling, the gun is shaped, rifled, and finished. Armstrong obtained the following results with his wire gun: Caliber, 10.236 inches; weight, 21.5 tons; projectile, 500 pounds; charge of powder, 300 pounds; pressure in chamber, 18.6 tons. The relation between the charge and the projectile is here enormous, the former being over one half the latter.

**THREE TYPES OF GUNS.**—Authorities on improved ordnance are advocating three types of guns, all, however, being steel breech-loaders. For armor-piercing, it is said, a long, pointed bolt, nearly solid, is required, which must strike with great velocity, and must, therefore, be propelled by a very large charge of powder. Hence, an armor-piercing gun should have a large chamber and a comparatively small bore of great length. For pieces intended for breaching fortifications, on the other hand, no enlarged powder-chamber is wanted, but the shell must be made to hold the most powder for a given weight, and therefore must be rather short and thick. Hence the bore of the gun must be large, and need not be long, as little velocity is required. For producing destructive effects among troops a third kind of projectile should be employed—namely, shrapnel. For the effective discharge of this missile a large powder-charge is necessary, while, as the shell has to hold as many bullets as possible, the bore must be large enough to contain a short projectile of the given weight. Thus the proportions of the shrapnel-gun were intermediate between those of the armor-piercing gun and of the shell-gun.

**EXPERIMENTS AT SPEZIA.**—Some very interesting experiments were made at Spezia, Italy, in the latter part of November, for the purpose of testing the resistance of armor-plates, and the perforating or crushing power of heavy ordnance. The primary object was to ascertain by competitive trial the comparative merits of the compound plates of Cammell & Co. and Brown & Co., of Sheffield, England, and the all-steel plates of Schneider & Co., of Creusot, with a view to providing the most effective armor for the monster ships, the *Italia* and the *Lepanto*. The scene of the trial was the polygon of Muzziano, at Spezia, where similar experiments took place in 1876. On that occasion the Creusot establishment had carried off the palm, and the Duilio and Dandolo had in consequence been armored with Schneider plates; but the English manufacturers proceeded to make improvements in their plates by covering an iron backing with a face of steel. It was claimed for these compound plates that they were superior to those made wholly of steel. But the Messrs. Schneider had also made improvements in their work, and before ordering the armor for its new vessels the Italian Government determined to make a new trial at Spezia.

The cut on page 579 represents the gun in position as used at the experiments at Spezia. It

is not mounted in a turret, but on a pontoon built for the purpose. It was loaded and worked, however, by the mechanism to be used in the turret described further on, and precisely as it will be on board ship.

In the left-hand corner is represented the missile before the first shot at the Schneider plate. In the right-hand corner is represented the same missile after the shot.

The cut on page 580 represents the three targets after the first and second fire at Spezia.

The Cammell, the Brown, and the Schneider plates, each 11 feet long, 8½ feet broad, and 19 inches thick, and weighing about 32 tons, were severally bolted, according to the methods of the competing manufacturers, to a heavy backing of oak and old metallic targets. These were set up at a distance of a little less than 100 yards from a 100-ton muzzle-loading Armstrong gun, which was anchored in a huge float off the shore. Two shots were fired at each plate, the first with a charge just sufficient to perforate 19 inches of iron, and the second with a charge capable of perforating 24 inches of iron. These were respectively 328 and 478 pounds of Fossano powder. The projectiles used were from the San Vito Arsenal, and were of pig-iron from the Gregorini foundry, weighing 2,003 pounds each. The caliber of the Armstrong gun used was little less than 18 inches. The striking velocity of the shot in the first test was 1,220 feet per second, and the total energy 20,000 foot-tons. In the second test the striking velocity was 1,560 feet, and the total energy 33,900 foot-tons. At the first shot both the English plates were badly cracked. The projectile penetrated the Brown plate 14 inches, and broke off. The Cammell plate was penetrated six inches. In both there were numerous cracks, some of which extended clear through, while the backing was badly wrenched, and the frames and bolts broken. The Schneider plate was penetrated eight inches, but was left absolutely without a crack, and its frame and backing were intact. At the second shot both the English plates were shattered to fragments, which fell at the foot of the target, leaving the backing bare and badly shattered. Of the Cammell plate this was literally true, and only a single piece of the Brown plate was left clinging to the target by a broken bolt. The Schneider plate was penetrated nine inches, or less than half its thickness. It received a few insignificant cracks, but the backing was uninjured, and not a bolt was broken. The projectile itself was badly shattered. The Government commission, as a result of the experiment, awarded the palm of superiority to the Schneider plate, which was then subjected to a crucial test. It was attacked at point-blank range with the same high powder-charge, and great velocity used in the second competitive trial, and with the hardest projectiles made. The striking velocity in this case was 1,538 feet per second, and the total energy

THE ONE-HUNDRED-TON GUN USED AT SPEZIA.

THE TARGETS USED AT SPEZIA.

34,000 foot-tons. Two shots were fired, the first with the Whitworth compressed-steel projectile, and the second with the Gregorini cast-steel. The former penetrated the plate only 8 inches, and was itself shortened 16 inches, bulging out in spherical form; the latter penetrated 13 inches, and then broke off, being also badly blunted. The result of these experiments was to turn the scale, for the time at least, in favor of the resisting power of armor-plates, as against the penetrating force of ordnance.

**HANDLING THE GUN.**—On the following day, at Spezia, there was another important and interesting series of experiments in the trial of the new Armstrong breech loading 100-ton guns intended for the Italia and Lepanto. This monstrous piece of ordnance is composed for more than half its weight of steel, the rest being wrought-iron. The inner tube and the nest tube which embraces it are both of steel, and on the exterior of the gun are rings of the same material. Its principal dimensions are as follow: Length over all, 468 inches; length of bore (26 calibers), 442 inches; length of rifling, 335·4 inches; diameter at muzzle, 33·3 inches; diameter at breech, 65·5 inches; diameter of bore, 17 inches; diameter of powder-chamber, 19·5 inches. One of the most interesting points with regard to the gun is the method of mounting it. The usual trunnions are entirely absent. The gun lies imbedded on a sort of sledge-carriage, which is a mass of steel weighing about fourteen tons. Projecting rings, which form part of the gun, rest in grooves, and prevent any backward or forward motion of the piece on the carriage, and rotatory motion is prevented by strong steel straps. Thus the gun and carriage are securely bound together, having their axes parallel, and recoil together in the same direction. The carriage rests and slides upon the planed surface of two cast-steel beams of about ten tons weight each. They are held together by the recoil-press, and their front ends pivot vertically on a massive hinge. Thus the axes of the gun, the carriage, the recoil-press, and the slide are all parallel, whatever the elevation, and the difficulty of restraining the rotatory motion caused in other systems by recoil is completely got rid of. The whole weight is taken by two powerful hydraulic presses, which work always together, being acted upon by one common supply-pipe. If the muzzle of the gun is to be elevated, the hydraulic rams sink, and the slide, pivoting on its front end, is lowered in rear, carrying with it recoil-press, gun, and carriage. The reverse takes place when the gun is to be depressed. By this simple arrangement a host of difficulties are at once eliminated, and some terrible strains removed from the system. And not only is there the advantage of harmonious recoil, but the pivoting on the end of the slide enables the gun to be fired through a very small port, which it would fill almost completely. The loading arrangements are also

extremely simple, and present some features of novelty. With the exception of bringing up the ammunition and ramming, which are performed by another hydraulic apparatus, the whole business of opening and closing the breech is performed by two levers close together, which are worked by one man. He can not make a mistake, for nothing can be moved out of its proper order, and, whatever position a lever may be in at the end of its last movement, the next act is performed merely by pushing or pulling the lever to the opposite side. One pair of levers works the whole breech-closing apparatus, prepares the gun for loading, or opens the breech after discharge. Another pair of levers runs the gun out and in, and elevates or depresses it. It is impossible to run it back or forward too far, and the whole mighty mass of metal may be managed by the hand of a lady, who can not possibly make a mistake. All the movements involved in opening the breech, withdrawing the breech-screw, replacing and closing the breech, can be performed in less than one minute. No damage can be done in the heat of action, and the gun can not be fired till the operation of loading and closing the breech has been completely performed.

The motive power in the processes of loading and laying the gun is hydraulic pressure, the mechanism for which is not attached to the gun itself. The hydraulic pumps are worked by a small steam-engine, which is governed in its rate of work by the pressure of water produced. It never ceases work, but, when no movement is required of any of the parts, its action is feeble, and only keeps up a certain normal pressure. But if any motion of the system is required and the touch of a lever opens the way for water to create that motion, the engine instantly sets off briskly and continues to act till the cessation of movement tells it that its services are no longer required. It then drops back at once to its slow and feeble action. The engine is seated on a tank, from which the pumps draw their water, and to which the water is returned after being exhausted from the various cylinders and pipes. Behind and across the breech of the gun, but entirely separate from it, is a slide-bed similar to that of a lathe, and on this bed moves a saddle which carries the loading-tube and a rest for the breech-screw when drawn out of the gun. By touching the levers for elevating and running back, the gun is brought into the loading position exactly. A touch of another lever brings the saddle into its proper position, unlocking and turning the breech-screw as it comes. A touch on the third lever brings up a piston from the rear and makes it engage a catch in the breech-screw. The same lever moved in the opposite direction draws out the breech-screw upon a bed made to receive it on the saddle, which is then drawn out of the way by a reverse movement of the lever which brought

it up. As the saddle moves sideways, that part of it containing the loading-tube comes into position exactly behind the rear end of the bore. The small piston which withdrew the breech-screw now pushes the loading-tube into the gun. The projectile and its two half-charges are always kept ready on trolleys, which rise by hydraulic pressure from their places in the magazines, and arrive between the hydraulic rammer-head and the breech of the gun. Other levers thrust them forward into their places; the loading-tube is withdrawn and the breech closed by a reversal of the different movements just described, which do their work more quickly than the description of their action can be read. The breech of the gun can not be moved till all is complete, and the piece can not be fired unless the breech is accurately closed and locked to prevent its opening.

The absence of trunnions and the method of mounting makes it possible for two of these guns to be worked side by side in a turret, but the arrangements on the Italia and Lepanto are for firing *en barbette* from behind a breast-work which completely shields the men from the fire of an enemy. In the trial of the gun at Spezia, eighteen rounds were fired with charges of varying weight, but the new armor-plates were not used in the experiment. Fos-sano (Italian) and prismatic (German) powder were provided, but, as there was found to be little or no choice between them, the former was mostly used. The maximum velocity attained was 1,833 feet per second, and the highest energy 46,700 foot-tons, sufficient to raise the gun itself a height of 500 feet, and to penetrate thirty inches of wrought-iron. The following table exhibits the results of the different rounds fired:

No. of round.	Pounds of powder.	Weight of projectile.	Velocity—feet per second.	Pressure in bore of gun—foot-tons per square inch.
1....	496	.....	1,493	10.9
2....	551.2	.....	1,496	11
3....	551.2	{ Chilled 1,974 }	1,512	11

The results of these experiments threaten to turn the efforts of governments in the arming of navies in the direction again of large vessels and ordnance of heavy caliber and enormous power.

NAVY OF THE UNITED STATES. In comparison with last year, the condition and prospects of the navy are somewhat improved, although far from being yet what it is felt that they ought to be. From the report of the Secretary of the Navy for 1882, it is plain that the following facts and statements are worthy of careful consideration:

1. The available *cruising war-vessels* of the navy are—

One first-rate (the Tennessee).....4,480 tons displacement.  
Fourteen second-rates, from 1,100 to 4,000 " "  
Twenty-two third-rates, " 900 to 1,900 " "

Thirty-seven in all. Four of these, of less than 1,400 tons displacement, have iron hulls; all the others are built of wood. These vessels are good and commodious for all ordinary naval exercises, and useful for displaying the national flag upon the seas and in the harbors of the commercial world. But they are of low speed, with inferior engines and destructive capacity, compared with the present war-ships of other navies. It is urgently recommended by the Secretary of the Navy and his advisers in the service, that the wooden vessels be replaced, as speedily as possible, by new iron or steel cruisers. The honor and reputation as well as the interests of the country demand that the navy of the United States be placed on a footing of efficiency to meet all possible emergencies.

2. The available *armored vessels* are thirteen fourth-rates, the single-turreted monitors, from 1,800 to 2,100 tons displacement. These vessels were built twenty years ago, have no speed, and have been mostly laid up since the war. Three of them are in commission for harbor-defense, in the Hudson and Delaware Rivers and at Hampton Roads.

3. Under the head of *Ordnance*, it appears that the guns of the navy are—

Smooth-bore muzzle-loading (of various calibers)..... 2,232  
Parrott muzzle-loading (40-pound rifles)..... 77  
Muzzle- and breech-loading (converted rifles)..... 87

These last have fair power, and may be useful for the present at least; but the others are wholly behind the age. "With not one modern high-powered cannon in the navy, and with only eighty-seven guns worth retaining, the importance of action for the procurement of naval ordnance seems apparent, if the navy is longer to survive."

4. *Officers and Seamen*.—On July 1, 1882, the record stood:

937 officers, on sea duty, annual pay..... \$1,880,000  
644 " on shore duty, annual pay..... 1,563,200  
236 " waiting orders, " "..... 376,300  
1,817..Total.....\$3,822,800  
7,074 seamen, receiving..... 2,170,096  
950 apprentices, receiving..... 152,556

Add to these over 800 officers on the retired list, and the officers and privates of the marine

corps, receiving \$1,292,130, and the total annual pay amounts to \$7,440,182. The enormous disproportion of officers to only thirty-one vessels in commission is pointed out, and the gradual reduction, as ordered by Congress, from 1,817 to 1,562 is urged. This latter number will be amply sufficient for all the needs of the service. The Secretary recommends that the officers and seamen of the navy should be actively employed in all matters of the national Government upon or in direct connection with the ocean, so as to increase knowledge and improve and strengthen the navy. A useful change in the existing law of promotion is also recommended.

5. *Navy-Yards.*—There are seven large yards in full and expensive operation, viz.: at Portsmouth, N. H., Boston, New York, League Island (Philadelphia), Washington, Norfolk, and Mare Island, Cal., one other at Pensacola, Fla., and one in embryo at New London, Conn.; with naval stations at Key West, Fla., New Orleans, La., Sackett's Harbor, N. Y., Mound City, Ill., and Port Royal, S. C. The total cost of permanent improvements and repairs, including the sites, at these navy-yards, from their establishment to June 30, 1882, was \$54,237,772.67. Total expenditure for last year, under all bureaus (excluding Mare Island), was \$2,608,379.02. The number of officers and employes at the several navy-yards is about 7,300. Although these yards are too many and too expensive for any present or even prospective needs, it is not easy to determine what is best to be done with them. A commission appointed by order of Congress, in August, 1882, has the whole matter under consideration, and will report in due time upon the question of sale or retention. Boards of naval officers have been appointed to see to the disposal of old and unserviceable material in the navy-yards; but no sales have yet been made. Inspection Boards have also been appointed to examine all the vessels in the navy, and report as to those unfit for service and those unfinished in any navy-yard. It is expected that some definite results will soon be attained.

6. The present service rendered by the navy consists in keeping the vessels appointed on the several stations, viz., the North Atlantic, the South Atlantic, the European, the Pacific, and the Asiatic stations. On the first station are six ships, engaged in exercises in fleet tactics, etc. On the second are three vessels. On the third are three vessels, which were present at Alexandria, in Egypt, during the year's troubles, and gave timely aid and comfort to American citizens and others. On the fourth are seven vessels, looking after the interests of the country in the Pacific. One of the vessels was required in the waters of Alaska Territory. On the fifth station are four ships, and three others are under orders to join the station. Besides these there is the Apprentice Training Squadron, consisting of five vessels. Cruises to Europe were made during the sum-

mer, and a cruise to the West Indies ordered for the winter. Eight vessels were engaged on special service, surveying duty, experimental cruises, etc.

7. The several *Bureaus* to which the work of the navy is intrusted report encouraging progress. The Bureau of Ordnance is occupied in plans and efforts to secure the construction of high-powered guns, in experimenting with torpedoes and electric lights, etc. Urgent call is made for speedy aid of Government toward means for perfecting the making of steel forgings, and furnishing a steam-hammer, of which at present there is none in the country sufficient for heavy forgings. Under the Bureau of Equipment and Recruiting much was accomplished in the fitting out of ships, manufacture of cables and anchors, etc. Enlistments of seamen and apprentices were to the number of 5,260, 478 being boys. Congress having authorized the construction of two new steel cruising-vessels, estimates have been furnished of the probable cost by the Bureaus of Steam-Engineering and of Construction and Repair. According to these, the vessels will cost something less than \$2,000,000 each. It is also estimated that, to complete the four double-turreted monitors, which have been much disputed about from year to year, it will require \$3,165,000. The Advisory Board, having in charge the construction of the new steel cruisers, is proceeding with care and deliberation, the determination being to spare no pains to design and complete the two best ships which can possibly be constructed in this country. The Secretary of the Navy further recommends the construction of three or four smaller vessels, of high speed, etc., at a cost of \$7,000,000 each for two, and \$500,000 each for others. The sanitary condition of the navy, as reported by the Bureau of Medicine and Surgery, appears to be better than usual.

8. The United States *Marine Corps* contains 1,681 enlisted men, 984 on board ships in commission, and 877 occupied in shore duty. The legal number of privates is 2,500. As Congress has appropriated for only 1,500, the Secretary calls for appropriations for 2,000.

9. The *Naval Academy* is efficiently and satisfactorily conducted, and the *Naval Observatory* is doing good work. The erection of the new observatory (which was authorized by Congress three years ago), on the site selected on Georgetown Heights, is urgently recommended.

10. The *expenditures* for the year were \$13,936,294.96, being \$2,336,508 less than the appropriations available for the current expenses of the Navy. The estimates furnished by the chiefs of the respective bureaus (for the fiscal year ending June 30, 1884), for pay, supplies, building new ships, machinery, etc., amount to a little over \$27,000,000. The Secretary of the Navy thinks that they may be revised so as to amount to about \$21,000,000.

11. The *Light-House Service* and *Coast-Sur-*

vey occupy at present the time and labors of 81 officers and 275 seamen. The Secretary urges that, as these branches of the public service are maritime in their nature and purpose, they ought to be placed in direct connection with the Navy Department and severed from the Treasury Department. In like manner, the Secretary holds that it is every way desirable that the *Revenue-Cutter Service* be under the direction of the Navy Department, instead of forming a part of Treasury Department work. He argues the question quite fully, and presents various cogent reasons for the view he advocates. It hardly admits of doubt, he thinks, that the Revenue Marine and the Life-Saving Service should be joined to the navy, not only as a matter of economy, but as affording valuable training and discipline for younger and unemployed naval officers.

12. Under the head of the *Commercial Marine*, there is a full discussion of the importance of fostering and strengthening this branch of the nation's strength and prosperity. Every one knows how deeply depressed is the condition of American commerce, how largely the carrying-trade has fallen into the hands of foreigners, and how unwilling capitalists are to put their money into shipping under its present manifold disadvantages arising from foreign competition. It is urged, further, that not only does the passive policy of neglect injure our mercantile marine, but also that various impositions are heaped upon it in the way of fees, taxes, pilotage-dues, and other exactions. Several remedies are suggested, for the purpose of removing these impositions, extending protective measures to this neglected industry, and reforming the administration. Compulsory pilotage and numerous extravagant fees ought to be abolished. Government bounty should be extended for the construction of vessels in the United States, and for their navigation in the foreign trade. The French shipping law (early in 1881) has adopted this plan, and Bismarck has recommended similar measures for German shipping interests. "The most natural, legitimate, and effective method of protecting and reviving the merchant marine of the country, is to pay a compensation for carrying the United States mails in American ships on the great ocean-highways sufficient to result in the permanent establishment of fast steamship lines. It is not the cost of building the ships that deters capitalists from investing in lines of steamships: it is the impossibility of competing by such lines, during the earlier years of their existence, with the lines already in successful operation and sustained by large annual payments from foreign governments." In illustration of the policy pursued by other nations in this matter, it is stated that England has paid, as mail compensation to her steamship lines during the last fifteen years, from four to six million dollars annually. France, in 1878, paid for foreign mail service more than four

millions and a half; Italy more than one and a half million in 1879; Austria, the same year, a little over a million; while the United States paid for foreign mail service, the year ending June 30, 1880, only \$196,684. By this system, it is urged, these nations have virtually taken possession of the commercial waters of the world, and driven out our vessels; and by this method they have secured an auxiliary navy, every mail steamship company furnishing ships built according to governmental requirements, and subject to be taken for national use in time of war. Our country must follow a like policy, or she can never recover her place among maritime nations.

Recommending a reform of administration by establishing a Bureau of Mercantile Marine in the Navy Department, the Secretary concludes his report as follows: "These criticisms and recommendations are made with a sincere and earnest desire to promote the success of the navy and the commercial interests of the country. If the naval establishment is not to be made effective, it should be discontinued, and the fifteen millions annually expended should be reserved to procure, in national emergencies, the assistance of foreign ships and guns. If governmental measures are not soon adopted to promote the carrying-trade and to arrest the disappearance of American ships from the ocean, we shall soon cease to be a seafaring people, and shall not need to maintain a navy of our own. These are strong expressions, but they are justified and required by the present condition of our naval and maritime interests."

NEBRASKA. STATE GOVERNMENT.—The following were the State officers during the year: Governor, Albinus Nance, Republican; Lieutenant-Governor, G. C. Carns; Secretary of State and Adjutant-General, S. J. Alexander; Treasurer, G. M. Bartlett; Auditor of Public Accounts, John Wallichs; Attorney-General, C. J. Dilworth; Superintendent of Public Instruction, W. W. W. Jones; Secretary of Board of Agriculture, J. C. McBride; Commissioner of Public Lands and Buildings, A. G. Kendall; State Law Librarian, Guy A. Brown. Judiciary, Supreme Court: Chief-Justice, George B. Lake; Associate Justices, Amasa Cobb and Samuel Maxwell.

GENERAL CONDITION.—Governor Nance, in his message to the Legislature of 1883, remarking on the prosperous condition of the State, says:

Since the last regular session of the Legislature there has been a marked degree of prosperity in every department of industry, and our growth in population and wealth has been a marvelous event, even to those who had indulged the most sanguine anticipations in contemplating the possibilities of the future. A brief review of our State history may be profitably considered in this connection. At the date of admission into the Union, in 1867, the population of Nebraska was estimated at 70,000, and the aggregate valuation of taxable property of the State was \$20,115,252. The population at the present time, as estimated on the basis of a moderate increase over the census of 1880,

is not less than 600,000. The total assessed value of property as shown by the grand assessment roll of 1882, on file in the office of the State Auditor, is \$98,-537,475.11.

The sparse settlements of 1867 were remote from centers of trade and railroad connections, and were deprived of most of the comforts of life. The people of Nebraska are now brought into close relations with the commercial and social world, and it is a gratifying fact that every organized county in the State, except eight, has railroad facilities. Two principal agencies have accomplished this transformation. The homesteaders, under the liberal policy of the General Government, accepting a heritage which in itself was a valuable legacy, have toiled from year to year with untiring energy and splendid success in improving the lands thus secured. The capitalists of this and other countries, having a degree of faith in our future which has been more than justified by results, pushed the work of railroad extension in Nebraska with unexampled zeal, and thus opened the way for the large immigration which followed from the Eastern States and the Old World.

The policy of the General Government in granting aid to railroads, as in giving homesteads to settlers, was designed to promote the common welfare, and it speedily gave us a railroad system which has been a potent agency in developing our natural resources. The practical co-operation of the above-mentioned agencies has brought us to a period of prosperity which is contemplated with feelings of pride by every citizen of Nebraska.

**FINANCES AND EDUCATION.**—The receipts and disbursements of the Treasury for the two years ending November 30, 1882, as shown by the Treasurer's report, were as follow:

Balance in Treasury, November 30, 1880 .....	\$343,018 61
Receipts from all sources during the two years ending November 30, 1882, including transfers .....	1,943,307 64
Total amount .....	\$2,286,326 25
Disbursed during same period, including transfers .....	1,814,211 75
Balance on hand, November 30, 1882 .....	\$472,114 50

The bonded indebtedness of the State is:

Relief bonds due in 1885 .....	\$50,000 00
Funding bonds due in 1897 .....	449,267 35
Total .....	\$499,267 35

The aggregate valuation of property assessed for taxation in 1881, as shown by the Auditor's report, was \$93,142,456.99, and in 1882, \$98,-537,475.11. The rates of levy, and amounts that will accrue to the State on the assessment of 1882, are as follow:

General fund, four and one half mills .....	\$437,874 44
Sinking fund, one quarter mill .....	23,736 15
School fund, one mill .....	95,537 47
University fund, three eighths mill .....	36,951 56
Total .....	\$594,099 62

The number of acres of educational lands held by the State, November 30, 1882, was 2,-582,366.65. Of this amount 217,080 acres have been sold but not deeded, 489,440 have been leased, leaving 1,872,846.65 acres subject to sale or lease. During the two years preceding the above date 274,699.70 acres were leased at an estimated aggregate valuation of \$824,-099.10. During the same period 88,627 acres were sold for the sum of \$657,971.42, being an average of \$7.42 per acre.

The report of the State Superintendent of Public Instruction embodies a fund of valuable

information concerning the common-school system of the State. The school attendance in 1882 was 115,546, an increase of 14,770 over the number in attendance the previous year. The total value of school property is estimated at \$2,054,049.18. The permanent school fund is invested as follows:

Cash in Treasury, November 30, 1882 .....	\$185,208 87
United States four per cent bonds .....	15,000 00
County bonds .....	308,600 00
Mortgages .....	4,000 00
State funding bonds .....	326,267 35
Claims in hands of Attorney-General for collection .....	7,692 23
Notes from sales of school-lands .....	1,470,919 49
Grand total .....	\$2,262,687 44

The fund derived from this endowment has increased from year to year in about the same proportion as the increase of population, consequently the distribution per capita has not materially changed.

The unfortunate controversy which was for some time a disturbing element in connection with the affairs of the State University has been brought to a close, and the faculty is in process of reorganization upon a basis which enables the institution to enter upon a period of enlarged usefulness and prosperity.

A period of uninterrupted prosperity is reported by the Principal of the State Normal School—the last year being the most prosperous in its history. The catalogue shows an attendance of 318 students.

**STATE INSTITUTIONS.**—On the 30th of November, 1880, there were 193 patients in the Hospital for the Insane. During the two years following, 288 were received, 165 discharged, 1 escaped and 42 died; leaving 273 in the hospital November 30, 1882. The hospital farm has been very productive during the past year, and the crops produced have materially decreased the average cost of maintaining the inmates.

The average cost per capita per week of maintaining the inmates of the asylum, including salaries and expenses of every kind during the past two years, has been \$3.24½.

At the regular session of 1881 the Legislature provided for the construction of an additional building in connection with the Institute for the Deaf and Dumb. The building has been erected and completed by contract under the general supervision of the Board of Public Lands and Buildings, and is now partly occupied.

The total number of pupils in attendance is 120, an increase of 24 over the number reported two years ago. The average cost per capita per week of maintenance of inmates has been \$3.29.

The educational and industrial departments of the Institute for the Blind have been conducted with success. The number enrolled at the present time is 25. The average cost per capita per week of maintaining the inmates during the past two years has been \$5.33.

In accordance with the act of the Legislature

of 1881, providing for the organization of a State Reform School at Kearney, George W. Collins was appointed superintendent. The school was formally opened in June, 1881, and has been successfully operated since that time.

The discipline in the State-Prison has been all that could be desired and the health of the convicts under the supervision of the prison physician has been exceptionally good, only one death having occurred in the last two years. The number of prisoners reported by the warden on the 30th of November, 1882, was 261. Of these, 3 were United States prisoners, 7 were from New Mexico, and 39 from Wyoming—leaving 212 that were State convicts—an increase of only 6 over the number reported two years previously.

The Legislature of 1881 provided for the erection of a Home for the Friendless, and made an appropriation for that purpose, which has been successfully used.

**FISH COMMISSION.**—In March the Board of Fish Commissioners purchased a hatchery in Sarpy County. This property embraces fifty-two acres of land, upon which is situated a water-supply which is considered the finest in the State for a hatchery. In October, 1881, the commissioners received from the United States Commissioner of Fisheries, 500,000 salmon-eggs, which were immediately hatched, and the young fish distributed in the streams of the State. In November of that year the commissioners obtained a supply of German carp, a very valuable fish which may be readily propagated for food by every farmer who will provide himself with the proper facilities. The commissioners have also obtained and distributed a considerable number of brook and California trout.

**EXECUTIVE RECOMMENDATIONS.**—The Governor recommends legislation for the purpose of increasing the number of judges and judicial districts, and also "that a small appropriation be made for the purpose of preparing and publishing immigration documents under the immediate supervision of the State officers, giving full and reliable information concerning our varied resources."

The Secretary of State recommends the repeal of the act of 1869, providing for an annual State census, as the law is inoperative in some counties, the returns, therefore, being of little value. Instead of an annual census, it is recommended that a State census be taken in the year 1885, and every ten years thereafter, thus alternating with the United States census.

**CAPITOL-BUILDING.**—The west wing of the new Capitol-building, which was commenced in 1879, was completed and occupied by the close of 1881. The eastern extension was substantially completed by the 1st of November, 1882, and was formally accepted by the Board of Public Lands and Buildings on the first day of December, 1882. The total cost of the two wings was a little less than \$175,000.

**LEGISLATURE, SPECIAL SESSION.**—On the 10th

of May the Legislature convened in special session, at the call of the Governor, for the following purposes:

1. To apportion the State into three congressional districts, and to provide for the election of representatives therein.
2. To amend an act approved March 1, 1881, entitled "An act to incorporate cities of the first class, and regulating their duties, powers, and government," by conferring additional power upon cities of the first class, for the purpose of paving or macadamizing streets and alleys, and also providing for the creation and appointment of a Board of Public Works therein.
3. To assign the county of Custer to some judicial district in the State.
4. To amend section 69, chapter 14, of the compiled statutes of Nebraska, entitled "Cities of the second class and villages."
5. To provide for the payment of expenses incurred in suppressing the recent riots at Omaha and protecting citizens of the State from domestic violence.
6. To give the assent of the State to the provisions of an act of Congress to extend the northern boundary of the State of Nebraska.
7. To provide for the payment of the ordinary and contingent expenses of the Legislature, incurred during the special session hereby convened.

With respect to the boundary extension, the Governor says:

By an act of Congress approved March 23, 1882, the northern boundary of the State of Nebraska was extended so as to include all that portion of the Territory of Dakota lying south of the forty-third parallel of north latitude, and east of the Keya-paha River and west of the main channel of the Missouri River, subject to the provision that the act aforesaid shall not take effect so far as jurisdiction is concerned until the Indian title has been extinguished and the State of Nebraska shall have assented to the provisions of said act. This subject is submitted for your consideration, in order that you may determine what action shall be taken by the State for the purpose of giving final force and effect to said act of Congress.

The session was closed on the 25th of May.

**TEMPERANCE.**—A temperance convention of the ministers of the State was held in Lincoln on the 9th and 10th of May, which adopted the following among other resolutions:

*Resolved*, That the people hold the only power that can settle the question, and to the people the question must finally be submitted, and we therefore appeal to our next Legislature, and ask them to submit the question to the people of the State in the form of a constitutional amendment prohibiting the manufacture and sale of alcoholic liquors as a beverage.

*Resolved*, That while we labor earnestly for the adoption of such constitutional amendment, and for the enactment of suitable laws to carry it into effect, we appreciate the fact that intemperance is a vice, and that against its influence we must labor and pray until human nature has become subject to the grace of God through our Lord Jesus Christ; and that the hope of the enforcement of laws relating to intemperance lies in an awakened public conscience and a right public sentiment.

*Resolved*, That the fact that the American saloon is a licensed institution makes it none the less an evil, and that the paying of a large sum of money for the privilege of committing a crime, abates none of the heinousness of the crime, but tends to connect those who take the money with the sin.

*Resolved*, That speedy prohibition by constitutional amendment for the State and nation is desirable, possible, and highly probable in the near future.

**PARTY CONVENTIONS.**—The Republican State Convention met in Omaha on September 20th, and nominated the following ticket:

For Governor, James W. Dawes, of Saline County; for Lieutenant-Governor, A. W. Agee, of Hamilton; for Secretary of State, E. P. Roggen, of Lancaster; for Treasurer, Loran Clark, of Boone; for Auditor, John Wallichs, of Hall; for Commissioner of Public Lands and Buildings, A. G. Kendall, of Howard; for Attorney-General, Isaac Powers, of Dakota; for Superintendent of Public Instruction, W. W. W. Jones, of Lancaster; for Regent of the University, C. H. Gere, of Lancaster.

The platform adopted is as follows:

*Resolved*, That the Republicans of Nebraska, in convention assembled, stand by the fundamental principles of the Republican party as enunciated in an unbroken line of national and State platforms, the chief of which are free labor; free speech; the right of every qualified citizen to vote once at every election, and have that vote counted under the restrictions of just and equitable election laws; free, non-sectarian schools; sound currency on a specie basis, under national control; the raising of national revenues by taxation of luxuries and articles of consumption not essential to the comfort and well-being of the people, and from a tariff on imports so adjusted as to protect home labor and the investment of capital in home industries; and legislative control of corporations.

*Resolved*, That we uphold and maintain the enforcement, by well-considered legislation, of the clause in our State organic law that prohibits unjust discriminations and extortions by railroad corporations, while recognizing the importance of fostering and protecting them as necessary factors in our progress and prosperity; and that we trust to the honesty and courage of the people, in their political capacity, to repel encroachments of corporate power upon the rights and privileges of citizens on the one hand, and, on the other, to deal justly and fairly with all property interests under whatever name or form, without unjust discrimination or extortion in the matter of levying taxes, or regulating prices of commodities or charges for services.

The following were the Republican nominees for Congress:

First District, A. J. Weaver, of Richardson; Second District, James Laird, of Adams; Third District, E. K. Valentine, of Cuming.

The Democratic State Convention also met in Omaha in September. Its nominees were the following: For Governor, J. S. Morton; Lieutenant-Governor, J. H. Warner; Secretary of State, C. J. Bowlby; Auditor, Charles Leach; Attorney-General, J. C. Crawford; Commissioner of Public Lands, Henry Grebe; Superintendent of Public Instruction, Charles A. Speice; Regent of University, John H. Burks; Treasurer, P. D. Sturdevant.

The Greenback State Convention was held in Lincoln. This body appointed a committee to wait upon the Anti-Monopoly State Convention, which met in Hastings on September 27th. The result was the following joint ticket:

For Governor, E. P. Ingersoll, of Johnson County, President of the State Farmers' Alliance; for Lieutenant-Governor, D. P. Reynolds, of Hamilton; for Secretary of State, Thomas Kirtley, of Franklin; for Treasurer,

P. D. Sturdevant, of Fillmore; Auditor, John Beatty, of Wheeler; Attorney-General, John Barnd, of Buffalo; Superintendent of Public Instruction, J. J. Points, of Douglas; Commissioner of Public Lands, C. H. Madley, of Adams; Regent of University, Thomas Bell, of Otoe.

**ELECTION RETURNS.**—The election in November resulted in the choice of the Republican State ticket by a plurality vote, except in the case of Treasurer, to which office Sturdevant, the joint nominee of the opposition, was chosen. The following are the figures, excluding a few hundred scattering votes:

FOR GOVERNOR.	
Dawes.....	49,495
Morton.....	28,562
Ingersoll.....	16,991
Total.....	89,048
FOR LIEUTENANT-GOVERNOR.

## FOR REGENT OF THE UNIVERSITY.

Gere.....	43,221
Burks.....	38,113
Bell.....	4,769

A vote was also taken on a proposed amendment to the Constitution, extending the right of suffrage to women, with the following result: For the amendment, 25,756; against, 50,693. For Congressmen three Republicans were elected:

## FIRST DISTRICT.

Weaver.....	17,022
Redick.....	12,690
Gilbert.....	8,707

## SECOND DISTRICT.

Laird.....	12,988
Moore.....	10,012
Harman.....	8,060

## THIRD DISTRICT.

Valentine.....	11,284
Turner.....	7,842
Munger.....	9,882

The Legislature, to meet in January, 1883, will consist on joint ballot of seventy-one straight Republicans, forty Democrats, and twenty-two Anti-Monopolists, the Republicans having a majority in the House, and the opposition in the Senate.

NETHERLANDS, THE, a monarchy of Western Europe. The Constitution, proclaimed in 1848, vests the legislative authority in the King and the two Houses of the States-General. The First Chamber is composed of 39 members, elected by the Provincial Councils from among the class paying the highest taxes. The Second Chamber is elected by ballot, at the rate of one deputy to every 45,000 inhabitants, and consists of 86 members. Every Netherlander who is of age, is domiciled, and pays from 20 to 160 guilders of direct taxes, according to the locality, has the right to vote. Clergymen, judges, and provincial governors are ineligible. The members of the Second Chamber receive pay. One half the members of the Second Chamber retire every two years, and one third the members of the Upper House every three years. The initiative in legislation is confined to the Lower House, the Upper House possessing only the rights of approval and amendment. The ministers must attend the meetings of both Houses, and have a voice in the deliberations, but no vote. The veto power, reserved to the King, is never exercised. Either or both Houses may be dissolved by the King, but new elections must take place within forty days. The executive authority is exercised in the name of the sovereign by a responsible council of ministers. The reigning sovereign is William III, born in 1817, who succeeded his father, William II, March 17, 1849. The heir-apparent is Alexander, Prince of Orange, his only son, born in 1851. The Cabinet is composed of the following members: Baron W. F. van Rochussen, Minister for Foreign Affairs, and appointed June 19, 1881, who replaced Baron Lynden van Sandenburg as President of the Council in the latter part of 1882; Dr. C. Pynacker Hordyk, Minister of the

Interior, appointed February 9, 1882; Dr. A. E. J. Modderman, Minister of Justice, appointed August 19, 1879; Baron Dr. C. T. van Lynden van Sandenburg, Minister of Finance, appointed in August, 1881; Dr. O. W. Stavenisse de Brauw, Minister of the Colonies, succeeding Baron van Goltstein; Baron G. J. G. van Klerck, Minister of the Waterstaat, Commerce, and Industry, appointed August 19, 1879; Major-General A. E. Reuther, Minister of War, appointed August 19, 1879; W. F. van Erp Taalman Kip, Minister of Marine.

AREA AND POPULATION.—The decennial census of 1879 gave the area of the Netherlands as 32,972 square kilometres, or 12,678 square miles, and the population as 4,012,693, comprising 1,983,164 males and 2,029,529 females. The total population in 1869 was 3,579,529. The annual enumeration of December 31, 1881, gives the population as 4,114,077, distributed among the eleven provinces as follows:

PROVINCES.	Population.	PROVINCES.	Population.
North Holland.....	713,288	Overijssel.....	277,946
South Holland.....	835,112	Drenthe.....	120,784
Utrecht.....	197,688	Groningen.....	287,153
Zealand.....	189,806	Friesland.....	329,309
North Brabant.....	475,498		
Limburg.....	242,122	Total population.	4,114,077
Guelderland.....	476,026		

The movement of population for four years was as follows:

YEARS.	Marriages.	Births.	Deaths.	Excess of births.
1878.....	30,710	150,493	98,486	52,007
1879.....	30,655	155,089	98,099	56,990
1880.....	30,849	151,850	102,806	48,574
1881.....	29,849	150,690	95,447	55,243

The population was divided in 1879, as to religion, into 2,469,814 Protestants, 1,439,137 Catholics, 81,693 Israelites, and 29,049 of other beliefs.

The population of the chief cities, on December 31, 1881, was as follows:

CITIES.	Population.	CITIES.	Population.
Amsterdam.....	328,047	Leyden.....	41,631
Rotterdam.....	157,270	Haarlem.....	39,977
The Hague.....	123,499	Tilburg.....	29,469
Utrecht.....	71,387	Leeuwarden.....	29,079
Groningen.....	48,000	Maestricht.....	28,917
Arnhem.....	42,761	Dordrecht.....	27,722

The number of domestic letters forwarded by the post in 1881 was 44,144,240; of foreign letters, 13,298,865; of postal-cards, 17,640,758; total letters, 75,083,863; of newspapers for the interior, 36,646,830; for foreign parts, 3,308,804; total newspapers, 39,955,634. The receipts amounted to 4,260,168 guilders; the expenses to 3,005,286 guilders. (The guilder, or florin, is equivalent to 38½ cents.)

The length of the state telegraph lines at the commencement of 1882 was 3,943 kilometres, or 2,460 miles; the length of wires 14,373 kilometres, or 8,980 miles. The state had 203 stations, the companies 215. The number of dispatches sent in 1881 was 3,281,792, of which 1,972,158 were of domestic, and 1,279,495 of foreign, destinations. The receipts

amounted to 1,083,190 guilders; the expenses to 1,416,734 guilders.

The length of the railroads in operation on the 1st of January was 1,976 kilometres, or 1,230 miles, of which 1,010 kilometres, or 630 miles, belonged to the state.

The export and import trade of Holland with the principal foreign countries, and with the Dutch colonies, was in 1879 and 1880, in millions of guilders and tenths of millions, as follows:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1879.	1880.	1879.	1880.
German Zollverein.....	207.5	238.6	259.3	251.7

The number of sailing-vessels entering Dutch ports in 1881 was 3,539, of 2,662,324 tons, of which 3,326, of 2,609,601 tons, were laden, and 1,246, of 869,001 tons, were of Dutch nationality; the number of steamers was 4,863, of 7,417,575 tons, of which 4,776, of 7,292,876 tons, were with cargoes, and 1,089, of 2,054,918 tons, were Dutch. The merchant marine in 1881 consisted of 802 sailing-ships, of 658,887 cubic metres displacement, and 78 steamships, displacing 204,396 cubic metres.

Colonies.—The colonial possessions of the Netherlands have a total area of 666,700 square miles, and contain more than six times the population of the mother-country.

Java and Madura, the most important of the Dutch East India colonies, with an area of 51,324 square miles, have, according to the census of 1879, a population of 19,298,804 persons. The rest of the Dutch East Indies, comprising Sumatra, Riau, Banca, Billiton, Borneo, Celebes, the Moluccas, New Guinea, Timor, Bali, etc., have collectively an area of about 665,000 square miles, and a population estimated at 8,400,000. The European and foreign population of the Dutch East Indies is as follows: European civilians, 39,318; Chinese, 308,886; Arabs, 15,012; Hindoos and others, 33,221. Nearly three fourths live in Java and Madura. The capital of Java, Batavia, contains 102,901 inhabitants.

The other important cities are Samarang, with 69,141, and Soerabaya, with 120,254 inhabitants.

The American colonies of the Netherlands are two in number: Surinam, or Dutch Guiana, 45,890 square miles in area, containing in 1880 69,476 inhabitants, inclusive of about 17,000 Indians and bush negroes descended from maroons, or runaway slaves; and the colony of Curaçoa, or the Dutch West Indies, 434 square miles in extent, and containing 42,530 inhabitants.

The item of colonial administration in the Netherlands budget applies to the West India colonies only. The expenditures of Surinam for 1882 are given in the estimates as 1,330,300 guilders, the receipts as 1,164,944; the expenditures of Curaçoa as 565,498, the receipts 528,631 guilders. The great East India colonies have their separate budget voted by the States-General. The estimates state the receipts for 1882 as 138,913,703 guilders, the expenditures as 148,499,631 guilders. The receipts in 1881 amounted to 142,602,554 guilders, the expenditures to 144,671,160 guilders. In normal years a large surplus revenue is produced for the benefit of the home government, averaging between 1869 and 1876 nearly 20,000,000 guilders. The sources of revenue are given in the budget for 1882 as follow:

RECEIPTS.	In Holland.	In the Indies.	Total.
Sales of coffee.....	35,668,043	10,048,000	45,716,043
Sales of quinine.....	183,867	.....	183,867
Sales of tin.....	4,825,499	.....	4,825,499
Opium monopoly.....	.....	18,984,000	18,984,000
Customs.....	.....	9,015,000	9,015,000
Land-tax.....	.....	18,028,000	18,028,000
Salt duty.....	.....	7,105,500	7,105,500
Posts and telegraphs.....	.....	1,256,500	1,256,500
Railroads.....	855,000	2,220,000	3,075,000
Various sources.....	719,642	80,004,652	80,724,294
Total.....	42,252,051	96,661,652	138,913,703

Of the disbursements 24,859,110 guilders were expended in Holland, and 123,640,521 guilders in the colonies. About one third of the annual expenditure is for the army, and one third for the general administration in Java and the Netherlands.

The "culture system," or species of serfdom on which the Government of Java is based, has been abolished in respect to the production of indigo, pepper, tea, tobacco, and other articles, and is now confined to the cultivation of coffee and sugar. Forced labor in the production of the sugar-cane is to be done away with likewise in 1890. The bulk of the population are agricultural laborers. Nearly the whole of the soil is claimed as Government property. Private ownership is confined to the northwestern residencies, where a number of Netherlanders possess estates. The right to exact forced labor from the natives on Government or private property is limited to one day out of seven, for which the laborers receive no wages. The vast and complicated official organization has a single head, the Governor-General, who has the

power to make laws and regulations subject to the restrictions laid down in the code of regulations adopted in 1854, and to the authority reserved to the States-General. The Governor-General is Frederik s'Jacob, who entered upon his duties in July, 1881.

The sales of colonial produce on account of the Government are transacted in Holland on the so-called consignment system by the Netherlands Trading Company, which has been the Government's agent since 1824. This company, which has made enormous profits ever since the establishment of the culture system in 1832, originally advanced the capital to start that system, on which the state guaranteed  $4\frac{1}{2}$  per cent interest. By a new contract concluded with the company in November, 1882, the commissions on sales are reduced from 2 to  $1\frac{1}{2}$  per cent, and the Government is relieved of the costs of the factory in Batavia.

The foreign trade of the Dutch East Indies, in 1878 and 1879, was of the following amounts, in guilders:

IN 1878.	Imports.	Exports.
Merchandise.....	115,971,000	172,490,000
Specie.....	24,479,000	7,477,000
Total.....	140,450,000	179,967,000

IN 1879.	Imports.	Exports.
Merchandise.....	136,668,000	171,758,000
Specie.....	17,981,000	8,988,000
Total.....	154,651,000	175,743,000

The principal exports in 1879 were of the following values:

EXPORTS.	Guilders.
Coffee: By the Government.....	33,499,000
" By individuals.....	32,257,000
Sugar.....	47,867,000
Tin: By the Government.....	8,772,000
" By individuals.....	8,531,000
Indigo.....	2,950,000
Hides.....	1,895,000
Cloves and nutmegs.....	2,503,000
Rice.....	1,623,000
Tobacco.....	14,612,000
Tea.....	1,821,000

The revolt of the Atchinese in Sumatra continued through the year 1882. In September an important victory of the Dutch troops was announced to have been achieved on the 13th, by which the rebels lost their chief, Nyahassin, and many men. Later dispatches showed that the rebellion was spreading. The replacement of the military by a civil government seemed to have been premature, but Minister de Brauw, when questioned on the subject of restoring the military administration, expressed unwillingness to interfere with the authority of the Stadtholder of East India.

ARMY AND NAVY.—The Dutch army consists of two distinct elements, the volunteers and the militia. The militia was organized in 1861, to supplement the volunteer forces. They are drawn by lot, and serve nominally five years; but after being drilled for a year they are al-

lowed to go on furlough, and are only called in for six weeks each year. Besides the regular army, there is a civic guard called the Schuttern, composed of all the members of communes between twenty-five and thirty-five years of age. The regular army on the war footing numbers 2,320 officers and 62,687 men. The army of the Dutch East Indies is composed entirely of volunteers. In 1881 it mustered 1,456 officers and 31,693 men. Of the rank and file, 15,399 were Europeans, 156 Africans, and 16,130 natives.

The navy in 1882 consisted of 103 steamers with 393 guns, and 19 sailing-vessels with 157 guns. (See NAVIES OF EUROPE.)

FINANCE.—The total revenues in the five years 1873-'77 averaged 110,000,000 guilders, the expenditures slightly more. The budget estimates for 1882 place the total receipts at the sum of 107,421,555 guilders, the expenditures at 129,987,644 guilders.

The public debt in 1882 stood at 941,308,450 guilders, including 10,000,000 of paper money; 613,294,400 guilders bore interest at  $2\frac{1}{2}$  per cent; 90,312,150 at 3 per cent; 10,150,000 of sinking-fund bonds at  $3\frac{1}{2}$  per cent; and 186,239,400, being the old national debt, and 31,312,500 guilders of new bonds issued under the law of 1878, at 4 per cent.

FOREIGN RELATIONS.—The operations of the British in North Borneo gave rise to considerable mistrust and excitement in Holland, which found expression in the Chamber in a request to the ministry to have the boundary-line fixed between this new British colony and the Dutch possessions in Southern Borneo. The ministry announced that they had the assurances of the British Government that British sovereignty would not be proclaimed on the island, and that they would therefore not take the responsibility of creating difficulties on the question. A large part of the year was taken up with settling a new commercial treaty with France, which was framed on the principle of the most favored nation. An international fishery convention, between Holland, England, France, Belgium, Germany, and Denmark, was signed in May. It provides for guarding the fisheries by cruisers from the navies of the contracting powers, and for the decision of disputes between fishermen of the different nationalities.

POLITICS.—The year, which witnessed a remarkable and prolonged ministerial crisis, ended with no important results except that of spurring the Government to take up the questions which have been postponed for three years. The financial difficulties of the Government caused by the continued deficits in the home and East Indian budgets reached no conclusion in 1882, the proposition to raise a new loan to cover the deficits and extend the railroads being postponed. There is a total deficiency of 53,500,000 guilders in the accounts of the Netherlands and 44,000,000 in those of Java, including the estimated deficits for 1883. The question of amending the school laws was

brought up by the Catholics and Evangelical religionists, and, during the discussions, the Liberals showed a less uncompromising disposition than heretofore.

NEVADA. The Governor of Nevada during the year was John H. Kinkead. His term expired on January 1, 1883, and he was succeeded by Jewett W. Adams, elected on the Democratic ticket.

The affairs of the State have been without any important change; its growth in population has been slow, and its prosperity in mining diminished.

The Nevada Asylum for the Insane has been constructed and furnished, at the comparatively small cost of \$63,000, and put in actual operation this year.

The law case pending before the Supreme Court in 1881, upon the payment of \$1,279.79, claimed by the Nevada Orphan Asylum in Virginia City as its due portion of the money appropriated by the previous Legislature for distribution among all the orphan asylums in the State which are conducted in a non-sectarian manner, has been decided adversely to the said institution, upon the ground that it is sectarian. This asylum was founded nearly twenty years ago, and, with the school attached to it, is under the management of the Sisters of Charity, who are Catholics. The Court held, as a certain principle, that "not who are instructed, but what is taught, must determine the question of sectarianism."

The public debt of Nevada is \$336,587.50, and the State has \$331,127.03 in coin on hand. The receipts for the years 1881 and 1882 amounted to \$302,435.74 and \$303,445.94 respectively; the expenditures, to \$346,117.01 and \$286,842.66, leaving for the two years in the Treasury a cash balance of \$27,868.99. For the collection of her revenue the State now pays the collector at the rate of 14 per cent.

The aggregate valuations of assessable property in the State, for the year 1882, amounted to \$29,109,889.86, which sum included the net proceeds of mines.

The depreciation of property has not been general throughout the State. Its value has decreased in eight of the fourteen counties, namely, Douglas, Eureka, Humboldt, Lyon, Nye, Ormsby, Storey, and White Pine, to the collective amount of \$2,071,980.45, of which sum \$1,286,607.29 belongs to Storey County alone, the depreciation of this county's property having been the greatest in the whole State, and in less than a twelvemonth. In 1881 it was valued at \$5,212,823.39; in 1882, at \$3,926,216.10. In the remaining six counties—Churchill, Elbo, Esmeralda, Lander, Lincoln, and Washoe—assessable property has, on the contrary, increased in value for 1882 to an aggregate amount of \$1,074,77.15 over 1881, the depreciation for the whole State amounting to \$997,903.30.

With reference to the net proceeds of mines,

the decrease for 1882 was principally in the counties of Esmeralda, Eureka, and Lander, to a total amount of \$801,817.11, making an aggregate decrease of assessable valuations in the State of \$1,799,720.41, as compared with those for 1881.

The assets of the State School fund amount to \$622,008.85, of which sum \$576,610.50 are invested in undoubted securities. The Governor predicts the time to be near at hand when the tax-payers will be entirely free from the necessity of contributing any part of their money for the support of the common schools.

The whole number of children of school age, from six to eighteen years, throughout the State, at the close of 1882, was 10,483. The money apportionment made for them by the Superintendent of Public Instruction, in his semi-annual report for the first half of 1883, amounts to a total of \$30,354.40, or at the rate of little less than six dollars a year for each child. Storey County has by far the largest number of children of school age—3,152; Ormsby and Eureka coming nearest to it, with 1,182 and 1,014 respectively. Churchill County has the smallest number of such children, 96.

The State University fund amounts to \$56,630, invested in undoubted securities, as the School Fund. The expense of keeping this university open the Governor thinks to exceed by much the benefits resulting from it.

The public institutions are under praiseworthy management in every respect, and realize the objects for which they were intended.

The number of the insane persons in Nevada, brought from the asylum at Stockton on July 1, 1882, and lodged in the asylum erected for them at Reno, was 148. The Legislature of 1879 had appropriated for their care and treatment at Stockton during the years 1881 and 1882 the sum of \$100,000, the unemployed balance of which, amounting to \$15,682.50, has now been expended in bringing them over from Stockton, and in supporting the institution.

In the State Penitentiary the number of convicts on January 1, 1881, was 138, increased soon after to 162, and then, in the course of two years, gradually diminished, their number on December 31, 1882, being 113. Two of them are women. Four escapes from the State-Prison have occurred during 1881-'82, but all of the fugitives have been recaptured. The cost to the State for feeding, clothing, and guarding each prisoner during the two biennial terms of 1879-'80 and 1881-'82, has been 72'35 and 66'96 cents *per diem*, respectively. Of the four items making up this cost, as set down by the warden in his last report, the highest is that of "salaries, arms, and ammunition—37'78 and 32'02 cents"; nearest to it comes that of "commissary stores—27'85 and 27'73 cents," respectively. At the session of 1879, the Nevada Legislature appropriated \$100,000 for the current expenses of the State-Prison, and

\$60,000 for its boot and shoe manufactory, in which occupation the convicts are almost exclusively employed. During the two years 1881-'82 there have been from this factory \$1,995.86 of profits, with about \$600 of bad debts. Out of the proceeds from the sales of boots and shoes manufactured at the Nevada Penitentiary within the said two years, the warden has paid into the State Treasury the sum of \$55,836.69.

The Republicans of Nevada met in State Convention at Reno on September 4th, to nominate their candidates for the several State offices, a member of the Lower House of Congress, and a Supreme Court Judge, as follow:

For Governor, Enoch Strother; Lieutenant-Governor, Charles E. Laughton; Secretary of State, J. M. Dormer; State Treasurer, George Tuffy; State Comptroller, J. F. Hallock; State Attorney-General, W. H. Davenport; State Printer, J. C. Harlow; State Superintendent of Public Instruction, C. S. Young; State Surveyor-General, Charles S. Preble. For Judge of the Supreme Court, O. R. Leonard; Clerk of the Supreme Court, Charles F. Bicknell; member of Congress, C. C. Powning.

The following, among other resolutions, were adopted:

*Resolved*, That we have faith in the prudent and sagacious administration of President Arthur, and believe it will result in promoting the best interests of the country.

*Resolved*, That the presence in our midst of a servile race of aliens, incapable of assimilation with our institutions, is a perpetual menace to all classes of society. The relief extended to our people by the passage of a law excluding the Chinese by a Republican Congress, and approved by a Republican President, is a genuine cause of satisfaction. We are in favor of strenuously enforcing the provisions of said law, and we pledge the Republican party to labor now and henceforth to secure such further legislation as will permanently exclude the Chinese.

*Resolved*, That we recognize the paramount importance of maintaining unimpaired the free public-school system of the State. We shall defend it against sectarian, political, or other improper influences, and we favor such additional legislation as the condition and wants of the common schools of the State may require. As free institutions, they should be so conducted as to satisfy poor and rich alike; and upon this principle we urge the adoption of some system by which this State shall furnish the text-books at the lowest possible figure.

*Resolved*, That owing to the remote position of Nevada from the seaboard, and the entire absence of navigable waters and competing lines of railroads to and from commercial centers, we demand from Congress such wholesome and effective legislation as will place our people on terms of equality in respect to transportation charges with communities specially favored by railroad monopolies.

*Resolved*, That we pledge the Republican party of Nevada to such a course of enlightened legislation as will extend to railroad and all other corporations doing business in this State the same protection and the same rights before the law as are accorded to individuals—no more and no less.

The Democratic party of Nevada held its State Convention at Eureka on September 6th, and nominated the following candidates:

For Governor, Jewett W. Adams; for Lieu-

tenant-Governor, William Burke; for Secretary of State, James W. Richards; for State Treasurer, George H. Shepherd; for State Comptroller, P. J. Dunne; for State Attorney-General, George W. Merrill; for State Superintendent of Public Instruction, A. E. Key; for State Surveyor-General, George Ernst; for State Printer, D. E. McCarthy; for Judge of the Supreme Court, M. N. Stone; for Clerk of the Supreme Court, A. E. Ham; for member of Congress, G. W. Cassidy.

For District Judges: for the Third District, William Sewell; for the Fifth District, W. O. Grimes; for the Sixth District, Henry River; for the Seventh District, J. McMullen.

The Democrats elected their nominees, Jewett W. Adams for Governor, George W. Merrill for State Attorney-General, and re-elected G. W. Cassidy for the member of Congress from Nevada. The Republicans elected their nominees for Lieutenant-Governor and for all the other officers of the Executive Departments, also for State Printer, for Surveyor-General, for Judge of the Supreme Court, and for Clerk of that court. The majority for Governor was 881.

The State Legislature is composed of 36 Representatives and 20 Senators, ten of whom hold over from the previous election. This body at its meeting in January, 1883, will be divided as follows: In the Senate, Democrats 12, Republicans 8; in the House of Representatives, Republicans 24, Democrats 14: the Republicans having a minority of 4 in the Higher House, a majority of 10 in the Lower, and of 8 on joint ballot.

**NEW HAMPSHIRE.** The State officers were as follow: Governor, Charles H. Bell; Secretary of State, Eli B. Thompson; State Treasurer, Solon A. Carter; Councilors, Thomas J. Jameson, Lyman D. Stevens, John W. Wheeler, George H. Stowell, Arthur L. Meserve.

**DEBT AND FINANCES.**—The State debt is as follows:

Net indebtedness June 1, 1881.....	\$3,372,770 05
“ June 1, 1882.....	8,830,757 48
Reduction during the year.....	\$42,018 57
Receipts from all sources during the year.....	\$909,608 90
Cash on hand June 1, 1881.....	37,507 87
Total receipts during the year.....	\$947,116 27
Expenditures for all purposes during the year.....	855,894 79
Cash on hand June 1, 1882.....	61,111 43
Total.....	\$947,116 27

The ordinary State expenditures during the last fiscal year amounted, in the aggregate, to \$201,492.80; the extraordinary to \$59,441.41. This sum includes the expenses made on the new prison, \$4,854.31; express taxes and interest refunded, \$652.57; Yorktown centennial, \$7,000; National Guard's equipments, \$10,000, and other items of outlays of no frequent occurrence.

**RAILROADS.**—The names of all the railway lines operating in New Hampshire, either

within her limits only, or in connection with lines worked in other States, and the tax assessed on each of them by the State Board of Equalization; also the names of her several telegraph companies, and the amounts of the taxes levied on them respectively, are given in the following lists, published in October, 1882:

RAILROADS.	Amount of tax assessed on each road.
Eastern.....	\$3,997 25
Boston and Maine.....	16,511 14
Ashuelot.....	1,696 23
Boston, Concord, and Montreal.....	23,762 73
Fitchburg.....	192 60
Nashua and Lowell.....	4,275 12
Wilton.....	2,890 90
Cheshire.....	12,914 90
Grand Trunk.....	6,852 05
Northern.....	16,490 43
Concord.....	27,762 20
Manchester and North Weare.....	901 84
Concord and Portsmouth.....	5,459 52
Dover and Winnepesaukee.....	8,839 43
Portsmouth, Great Falls, and Conway.....	2,502 05
Manchester and Lawrence.....	17,196 67
Concord and Claremont.....	5,856 59
Sullivan County.....	5,751 00
Worcester and Nashua.....	1,987 34
Mount Washington.....	1,595 56
Suncook Valley.....	1,613 63
Portland and Rochester.....	173 43
Monadnock.....	1,141 40
Portland and Ogdensburg.....	445 14
Total.....	\$170,008 85

The taxes assessed upon the several telegraph companies are shown in the following table:

TELEGRAPH COMPANIES.	Amount of tax assessed on each line.
Western Union.....	\$657 81
American Union.....	83 83
Atlantic and Pacific.....	22 94
Northern.....	19 20
Maine.....	49 43
Montreal.....	24 75
New Hampshire.....	9 17
Chester and Derry.....	8 00
American.....	45 00
Stratford and Colebrook.....	8 05
Total.....	\$867 73

The valuation of the railroads for assessment purposes has been reduced this year to \$82 on \$100 of supposed actual value; and that has been the average rate of their taxation throughout the State. The aggregate amount of railroad-tax for 1882 is about \$13,000 less than in 1881, because of the said undervaluation, and because the lower rate of taxation has now been assessed on other property within the State generally.

The land and water areas of New Hampshire have been ascertained, from accurate measurements by Henry Gannett, the geographer of the tenth census, as follows:

"The total land area of New Hampshire, by counties, in square miles, is, Rockingham, 740; Strafford, 320; Belknap, 400; Carroll, 780; Merrimack, 920; Hillsborough, 980; Cheshire, 780; Sullivan, 580; Grafton, 1,525; Coos, 1,980=9,005. Water area of the State, 300. Total gross area, 9,305 square miles." (For the details of State institutions, see "Annual Cyclopædia," 1881.)

STATE CONVENTIONS.—The Prohibitionists of the State held a convention at Nashua, on June

VOL. XXII.—38 A

7th and 8th. Some weeks prior to the meeting the purpose of the convention was publicly stated to be "to devise some more effective way than the 'spotter system' to suppress the sale of intoxicating liquors." It was also announced that in the local committee of arrangements all parties were represented by their respective adherents as members, and that delegates from all were invited to take part in the convention, which was to be, as it were, "a mass-meeting of temperance men, who desire to confer together concerning the suppression of an evil." At various times during its proceedings, the convention was addressed by a number of prominent citizens, devoted to the interests of prohibition; and the chief result of its deliberations, characterized throughout by earnestness and harmony, was a new constitution, which, without changing the character and purpose of the association, gives it a somewhat different form. Soon after the first meeting of the delegates had been organized, a committee of nine was appointed, with Governor Bell at its head as chairman, and two women among its members, "to prepare a plan for the organization of a State association." This committee, on the second day of the session, reported the following constitution, which was unanimously adopted by the convention:

#### NEW HAMPSHIRE STATE TEMPERANCE UNION.

To promote the cause of temperance, both by moral and legal means; to secure unity and vigor of action among the bodies engaged in promoting this cause, and to aid in diffusing useful information on the subject, by lectures and in print, this constitution is formed.

ARTICLE I. This association shall be known as the New Hampshire State Temperance Union.

ART. II. The officers shall consist of a president and three vice-presidents, a secretary, a treasurer, and an executive committee of fifteen.

ART. III. The president shall preside at all meetings of the Union, and in his absence the vice-presidents in order of election. The secretary shall keep a record of all meetings of the Union; shall attend to the necessary correspondence, and also perform any other duties that shall devolve upon him by action of the Association or Executive Committee. The treasurer shall receive all moneys due the Union, and disburse the same as directed, taking vouchers for all expenditures, and keeping an accurate account of the same. All the officers shall constitute a board of direction, a majority of whom shall constitute a quorum for the transaction of business. They shall meet as often as they may elect, and as often as once in six months. The Executive Board shall adopt such measures for the promotion of the objects of the Union as shall seem to be prudent and effective.

ART. IV. Any person may become a member of the Union by the payment of one dollar or more to the treasurer, and thereby authorizing the secretary to append his name to the constitution.

ART. V. The Executive Board may make all necessary by-laws to carry out this constitution, which shall be subject to revision by the Union at its annual meeting.

The following declaration of principles was subsequently reported from the committee on resolutions, and unanimously adopted:

1. We believe that there is no reform calling for greater exertion and sacrifice than that which seeks to

help men to break away from the bondage of strong drink.

2. We believe there is no cause more just and commanding than that which aims at the extermination of a traffic which is the source of nine tenths of all poverty, misery, and crime.

3. The prohibitory law of this State, now on trial for twenty-five years, while partially inoperative from lack of enforcement in many places, has exerted a wholesome and restraining influence, and its efficiency has been abundantly proved wherever and whenever enforced.

4. The time has come in the history of this reform to declare our firm and unalterable conviction that the duty of enforcing all laws, the prohibitory law included, is incumbent on the police and solicitors, and on the selectmen, and mayor, and aldermen of cities and towns; and the same diligence and impartiality are due from them that the courts have employed in upholding the prohibitory law among the statutes of the State.

5. The reform clubs, temperance unions, and all other organizations that aim to carry out the practical work of the temperance cause, both by moral and legal suasion, should receive the approval and support of all good citizens.

6. That the lavish and corrupt use of money in procuring the nomination and election of civil officers is an alarming and growing evil; is a reproach to the State, turning our politics into a school of corruption, and threatening, unless checked, to undermine popular elections and overwhelm republican government itself; and we call upon the people to rebuke the practice, and wipe out the reproach in every effective way.

7. To secure the enforcement and strengthening of the prohibitory and all other laws of the State, we recommend to the people, especially in the choice of all executive officers and members of the Legislature, that they vigilantly see to the nomination and election of capable, upright, temperate, and independent men.

The following additional resolution was then offered by a delegate, and unanimously adopted by the convention:

*Resolved*, That this convention recommend such legislative action as will insure the use in the public schools of an elementary treatise on alcohol as a poison.

In preparation for the general election in November, 1882, the Republicans of New Hampshire met in State Convention at Concord, on September 12th, to nominate their candidates. Little less than 650 delegates, from all sections of the State, were in attendance. The nominations were as follow:

For Governor, Samuel W. Hale, of Keene; Railroad Commissioners, Edward J. Tenney, of Claremont; Benjamin W. Hoyt, of Epping; and Stillman Humphrey, of Concord.

For members of Congress, by Congressional District Conventions, were nominated: First District, Martin A. Haynes, of Gilford; Second District, Ossian Ray, of Lancaster.

The following among other resolutions were unanimously adopted:

*Resolved*, That the Republicans of New Hampshire reaffirm their faith in those principles which have given liberty, peace, and prosperity to the whole country; while in the untimely death of the late President Garfield, endeared to the nation by his public and private virtues and whose brief service gave promise of a brilliant future, we recognize a great national calamity; we also recognize the patriotism, ability, and fidelity of his successor, and rejoicing in the success of

his administration we tender to President Arthur the assurance of our heartiest confidence and support.

We reaffirm and indorse the principle of a protective tariff as the safeguard of American industries, by which our great manufacturing interests have been fostered and maintained, and American labor has been protected against the ruinous competition of the scantily-paid labor of foreign nations.

We believe in the re-establishment of American commerce, by the encouragement of our shipping and ship-building, and by the enactment of laws discriminating in favor of those interests. We believe, also, in the re-establishment of the American Navy.

We maintain the principle of the prohibition of the traffic in intoxicating drinks, a traffic so disastrous to the best interests of the people, and we demand that all laws for the prohibition of this traffic shall be fearlessly and impartially enforced.

We recognize the great importance of common schools as essential to our national security and prosperity, and we favor national assistance toward the complete establishment of such a system throughout the whole country.

The public revenues have been and are collected economically and faithfully, but we believe that the term of office should be made for a fixed number of years, and legislation should be adopted to make appointments conditioned solely upon fitness.

The Democratic party, represented by about 450 delegates, held its State Convention at Concord on September 13th, and Martin V. B. Edgerly was declared its nominee for Governor.

The following resolutions, with others, were adopted:

The Democrats of New Hampshire in convention assembled, while affirming their adherence to the grand principles of Jefferson, Jackson, Madison, and Douglas, enumerate the following as their platform: . . .

2. We demand the equal taxation of all property, individual and corporate.

3. We advocate the passage and strict enforcement of the anti-bribery bill of General Marston, defeated by the last Republican Legislature.

4. We denounce the present system of blackmailing office-holders, Government clerks, and employés, practiced by the Republicans, to secure corruptive funds for the purchase of votes, and condemn all uses of money, and all other means used for corruption of the ballot at popular elections.

5. We affirm our unalterable opposition to all monopolies, both in State and nation. . . .

7. We believe the present tariff system is unequal and oppressive, and therefore demand its immediate revision, to the end that American industries and labor may be properly protected, without creating and fostering monopolies.

8. We recognize the growing evil of intemperance, and view with alarm the sale of spirituous liquors, in all the cities and larger towns of the State, in open defiance of the law; in view of which facts, we charge the Republican party with cowardly and designedly evading the enforcement of the prohibitory law, and steadily shamming on the temperance question, and record our opposition to all sumptuary laws and our condemnation of that hypocrisy which places a law upon the statute-book, and then evades its enforcement. . . .

11. We charge the Republican party with inaugurating and steadily practicing wholesale bribery at elections for twenty years past, until our elections have become a grand auction, and the offices go to the highest bidder; they have practiced bribery and intimidation of voters until New Hampshire politics are a stench in the nostrils of the whole country; they have used the arm of corporate power in terrifying and controlling the votes of their employés to an extent equal

to the Ku-klux among voters of the South, until the working-men of these corporations know they must vote the Republican ticket or be discharged.

For Congress, George Chandler was nominated in the First District, and — Hosley in the Second.

The result of the general local election, on November 7, 1882, was almost entirely favorable to the Republican nominees. The aggregate vote for Governor numbered 76,218; of which Mr. Hale received 38,399, Mr. Edgerly 36,879, and 840 were scattering.

With reference to the other officers, the Republicans elected the three Railroad Commissioners, both of the two Congressmen, and the first four of the five State Councilors, the Democrats having elected Mr. Aldrich, their nominee for the Fifth District, as Councilor.

The General Assembly at its next session will be divided as follows: Senate of 24 members—Republicans 17, Democrats 7; Lower House, composed of 307 Representatives—Republicans 188, Democrats 114, Independents 3, Greenbackers 2.

**NEW JERSEY. STATE GOVERNMENT.**—The following were the State officers during the year: Governor, George C. Ludlow, Democrat; Secretary of State, Henry C. Kelsey; Treasurer, George M. Wright; Comptroller, Edward J. Anderson; Attorney-General, John P. Stockton; Adjutant-General, William S. Stryker; Chancellor, Theodore Runyon; Vice-Chancellors, Abraham S. Van Fleet and Amzi Dodd; Clerk of Supreme Court, Benjamin F. Lee; Clerk in Chancery, George S. Duryea; Chancery Reporter, John H. Stewart; Law Reporter, Garret D. W. Vroom; State Librarian, James S. McDanolds; State Superintendent of Public Instruction, Ellis A. Apgar; State Geologist, George H. Cook; Chief of Bureau of Statistics, James Bishop; Secretary of the State Board of Health, Ezra M. Hunt, M. D.; Chief Justice of the Supreme Court, Mercer Beasley.

**LEGISLATURE.**—The Legislature met on the 9th of January, and adjourned on the 31st of March. An act to prevent vending, using, or exploding of guns, pistols, toy-pistols, or other fire-arms, to or by persons under the age of fifteen years, makes violations thereof misdemeanors. An act amending the school law provides that an annual meeting for the election of school trustees shall be held in each district on the Tuesday of the week following the annual town meeting; that women shall be eligible as school trustees; and that there shall be an annual census taken in May of all children residing in each district between the ages of five and eighteen. An act was also passed providing for the examination in certain cases of applicants for admission as attorneys to the Supreme Court. Other acts were the following: An act to encourage the establishment of public libraries in any town or municipality in the State, and to provide for taking care of and perpetuating the same; an act to authorize

cities and boroughs to provide by ordinance for the licensing, regulating, restraining, and taxing of auctions and auctioneers; an act to provide for the better protection of the drivers of horse-cars on street passenger-railroads in the cities and towns of the State; an act to provide for the licensing and regulating of milk-dealers and their agents in cities, incorporated boroughs, or police, sanitary, and improvement commissions, and incorporated camp-meeting associations or sea-side resorts; an act to prevent the adulteration and to regulate the sale of milk; an act to regulate fares on horse-cars in cities of the first class (fixing a maximum of five cents); and an act to regulate the sale of petroleum and its products. Another act divides the cities of the State into four classes, viz.: first class, over 100,000 inhabitants; second class, 12,000 to 100,000; third class, all other cities, except sea-side resorts on the Atlantic coast; fourth class, such sea-side resorts. An act was also passed providing that corporations may increase their capital stock to provide means for the payment of bonds that are due or about to become due.

**FINANCES.**—The financial transactions of the State are kept by the Treasurer under four general accounts, viz.: Agricultural College Fund, Library Fund, School Fund, and State Fund.

The income of the *Agricultural College Fund* is entirely derived from the interest on \$116,000 of State bonds, purchased with the proceeds of the sale of lands donated by the General Government. It amounts to \$6,960, and is paid over to the Agricultural College, as designed by the donors of the land.

The *State Library Fund* is small.

The Treasurer includes in the operations of the *School Fund* the amount received by him as the result of the State school-tax, but the whole of this amount is returned to the several counties.

Under the law of 1881, the rate of the school-tax was changed from two mills on the dollar of property to four dollars for each child between five and eighteen years of age. The sum produced was to be paid into the Treasury on the 1st of January; 90 per cent of it was to be returned within ten days to the counties paying it, and the remaining 10 per cent was to be distributed by the State Board of Education, according to their discretion, among the several counties.

The amount produced by this tax and paid into the Treasury during the year 1880 was.....	\$1,922,740 00
And for the preceding year, under the former system.....	1,017,784 88
Increase.....	\$904,955 82

The school-tax for 1882 amounts to \$1,342,656, a further increase of nearly \$20,000.

The assets of the School Fund at the close of the fiscal year embrace railroad stocks and bonds, United States bonds, State and city bonds, bonds of school districts, bonds and mortgages and other items of value, as follow:

Railroad and bank stock .....	\$46,500 00
United States bonds .....	555,000 00
Railroad bonds .....	117,000 00
State and city bonds .....	35,000 00
Bonds of school districts .....	96,100 00
Bonds and mortgages .....	999,508 50
Principal of riparian leases .....	1,124,119 53
Real estate bought at foreclosure .....	82,000 00

Total property of the fund .....	\$3,055,228 03
Interest due on bonds and mortgages .....	52,616 78
Rents due on riparian leases .....	67,118 22
Balance on hand .....	201,764 29

Total property of the fund .....	\$3,376,727 27
Total property, November 1, 1881 .....	2,899,658 00

Increase during the year .....	\$477,069 27
--------------------------------	--------------

The receipts of the fund during the year were \$172,427.64.

The disbursements were:

Appropriation to public schools .....	\$100,000 00
Amount invested .....	872,200 00
Premium on United States bonds purchased .....	8,125 00
Cash on hand, October 31, 1882 .....	201,764 29
	\$677,089 29

The assets of the State Fund are as follow:

Stock of the joint companies .....	\$288,700 00
Bonds of the joint companies .....	24,000 00
	\$312,700 00

Besides these there are held Centennial stock (values) .....	74,116 67
County bonds, securing surplus revenue, loaned .....	764,670 44

Total .....	\$1,151,487 11
-------------	----------------

The following table presents an exhibit of the receipts and expenditures of the years 1881 and 1882:

RECEIPTS.	1881.	1882.
Tax on corporations .....	\$646,025 98	\$678,455 24
State tax .....	120,564 20	
State-Prison receipts .....	56,611 20	76,032 78
Interest and dividends .....	80,310 00	80,310 00
Judicial fees .....	20,318 21	17,594 12
Official fees .....	2,798 83	11,758 52
Fines of revision .....	880 00	825 00
Fines and forfeited recognizances .....	629 50	4,039 13
Licenses and fees .....	615 00	500 00
Fees returned .....		7,521 29
Sales of ordinance .....		1,489 89
Assessments on private acts .....		50 00
Total receipts .....	\$873,747 87	\$928,525 47
Balance at beginning of year .....	\$84,780 45	167,274 89
Temporary loan .....		250,000 00
Total .....	\$1,268,478 32	\$1,240,799 86
Total disbursements .....	\$1,096,203 98	\$1,104,303 75
Balance at close of year .....	167,274 89	136,496 11
Total .....	\$1,268,478 32	\$1,240,799 86

From these figures it will be observed that the disbursements of the year exceeded the receipts in the sum of \$280,778.28. This excess was met by diminishing the bank balance in the sum of \$30,778.28, and by borrowing \$250,000.

The business of the Riparian Commission during the past year was much more than double that of the preceding year, thus practically evidencing the recognition by the shore owners of the rights of the State in the riparian lands, and their disposition to acquire them for themselves by purchase or lease. These grants

and leases have been made in every county of the State fronting on tide-waters. The lands still in possession of the State are of great value, particularly in the Bay of New York, and in the Hudson and Delaware Rivers. The operations of the commissioners during the year were as follow:

Grants of the fee .....	\$210,152 28
Leases converted into grants .....	83,275 50
Leases made at a rental of 7 per cent. ....	197,820 03

Total .....	\$441,247 86
Received on leases heretofore made .....	65,202 45

Total .....	\$506,450 81
-------------	--------------

Besides these, leases and grants amounting to \$40,000 have been agreed upon, but are awaiting the completion of papers. The commissioners, in accordance with the powers vested in them, and in response to applications for increased accommodations for warehousing, shipping, and other commercial pursuits, have established a new exterior line for piers farther out into the river in front of Jersey City.

The following is the valuation of the ratables in the several counties of the State:

	Valuation.
Atlantic .....	\$4,577,238 00
Bergen .....	16,097,571 00
Burlington .....	25,556,143 00
Camden .....	19,217,840 00
Cape May .....	8,528,265 00
Cumberland .....	12,111,000 00
Essex .....	108,494,000 00
Gloucester .....	13,786,260 00
Hudson .....	91,901,996 50
Hunterdon .....	21,067,571 00
Mercer .....	29,890,820 00
Middlesex .....	18,826,000 00
Monmouth .....	27,991,000 00
Morris .....	21,040,447 00
Ocean .....	8,228,998 00
Passaic .....	27,953,845 00
Salem .....	18,896,976 00
Somerset .....	16,300,000 00
Sussex .....	9,969,557 00
Union .....	24,016,100 00
Warren .....	18,762,205 00

Total .....	\$527,451,222 50
-------------	------------------

**RAILROAD TAXATION.**—The rate at which railroad property is taxed is, as compared with that which affects that of individuals, very small. The present rate was established by the charters of the companies many years ago, when the success of railroad enterprises was the subject of much doubt and uncertainty, and when it bore a more equal comparison with that of the tax on individuals. While the latter has increased very materially, the former has remained the same. On this subject the Governor says:

I would state that, from the opportunities which I have had and from the facts which have been presented themselves, I am led to believe that the labor of securing information in regard to the value of railroad property is too onerous to be conducted by any officer not specially intrusted with it, and whose time is not wholly at his command for that purpose. The special duties required of the Comptroller in this regard are foreign to the regular work of his office, are a very large addition to it, and are performed without compensation. He is, for these and other reasons, compelled to depend, in a very great degree, upon the statements made to him by the companies, and prevented from securing such accurate information as

would warrant him in rejecting them as being "untrue or insufficient," and yet, until he does this, the statement of the company is required to be taken. This difficulty can be remedied by vesting the power and duty of examining and approving the reports, and the facts upon which they are based, in an officer specially appointed for that purpose. The law doing this should require annual report of the operations of the office to be made to the Governor and Legislature.

If this be done, the proviso of the act of 1876 be repealed, and the Legislature shall itself give such a construction of the words "true value" as will clearly show them to mean the full worth of the enterprise to the company using it, the tax from this source can be very materially increased, as it undoubtedly should be.

**STATE INSTITUTIONS.**—The number of convicts in the State-Prison at the beginning of the year was 803; received during the year, 454; discharged and died, 459; leaving in the prison at the close of the year, 798; being 5 less than at the close of last year. Of this number 32 are females and 766 are males. Contracts have been made, and are now in force, with several parties for the labor of these men. These contracts specify the minimum number which the contractors agree to take and pay for, with the right to use a larger number at the same price. The following table shows, in a condensed form, the several contracts; the number which the contractors agree to pay for, the number employed on each, and the price paid per man per day:

CONTRACT.	Minimum to be paid for.	Number employed.	Price per day.
Shoes .....	100	100	60 cents.
Laundry .....	80	85	50 cents.
Shirts .....	80	95	50 cents.
Collars .....	20	60	50 cents.
Boxes .....	20	20	50 cents.
Whips .....	40	40	50 cents.
Rubber goods .....	30	70	50 cents.
Total .....	870	470	.....

Of the 296 men not actually employed on the several contracts, 41 are used as runners; 20 in the kitchen and laundry; 47 in different trades and employment around the prison and grounds; 64 are crippled, old, and infirm; sick and attendants in hospital, 28; leaving 96 persons capable of labor unemployed.

By the report of the Supervisor, the expense of maintaining the prison during the year was as follows:

Maintenance .....	\$62,502 80
Repairs .....	5,734 83
Paid discharged convicts .....	1,402 00
Salaries of officers and inspectors .....	9,000 00
Salaries of deputies .....	51,073 81
Total .....	\$129,762 94
Earnings of prisoners .....	68,599 67
Net loss to the State .....	\$61,163 27
Net loss of previous year .....	68,888 94

The number of inmates of the Reform School for Boys at the beginning of the year was 266; committed, 180; returned, 23; total, 419; 97 of these were discharged, leaving in the institution at the close of the year, 322, a very marked increase over the number of last year.

The amount of money from the State expended in the maintenance of the school was \$23,076.25; there was derived from the labor of the boys in the shirt-factory, \$14,859.92; from the sale of farm products and miscellaneous sources, \$3,499.22; and from the board of boys, \$589.06. The farm products amounted to nearly \$10,000, an increase over last year of about \$3,600; and over 400,000 bricks were manufactured, nearly 800,000 of which were used in the construction of the new family building, a saving of about \$3,000.

The number of pupils in the Industrial School for Girls at the close of last year was 25; committed during the year, 20; returned to the school, 6; making a total of 51. Of these, 7 were discharged and returned to friends, 10 indentured, and 3 out on trial, leaving at the close of the year 31 inmates. For the support and care of this number, the State has invested in real estate and personal property, as shown by the inventory of the institution, some \$45,000. The cost of maintenance was \$6,151.72, leaving a balance on hand of \$981.55.

The State provides for the care of the insane in its institutions at Morristown and Trenton, and in the county asylums of Burlington, Camden, Cumberland, Essex, Hudson, Passaic, and Salem. Toward the support of these institutions the State pays \$1 per week for each county patient in the several asylums; and \$7 per week for each convict patient in the Trenton Asylum. The counties pay \$3 per week for each patient sent to the State asylums.

The reports of the managers and superintendent of the Trenton Asylum show that there were in the institution at the beginning of the year 577 patients; received during the year, 186; total, 763; of these, 77 were discharged and 57 died, leaving at the close of the year 629 patients. Of these, 504 were county patients, 35 were convict patients, and 90 were private patients, five of the last class being from other States.

The receipts for the year were: From the State for county patients, \$24,264.16; for convict patients, \$13,450.69; from the counties for county patients, \$79,955.68; from private patients, \$24,913.14; from sales of products, etc., \$7,860.14; from rents, \$324; these, with the balance on hand at the beginning of the year, amounted to \$166,584.20. The expenditures were \$151,061.52, leaving a balance on hand at the close of the year of \$15,522.68. The annual inventory shows the property of the institution to be \$108,484.88, a falling off from last year of about \$6,000.

The number of patients in the Morristown Asylum at the beginning of the year was 641; received during the year, 174; discharged, 93; died, 55; remaining at the close of the year, 667. Of these, 524 were county patients and 143 private patients; of the private patients 66 were from other States.

Besides the inmates of the State institutions, there were in the county asylums 746 patients,

divided as follows: Essex, 328; Hudson, 222; Camden, 79; Burlington, 64; Passaic, 36; Cumberland, 10; and Salem, 7. For these the State pays \$1 per week, and the amount paid from the State Treasury during the year was \$37,640.40.

The number of pupils either wholly or partly supported by this State in institutions located in other States, at the close of the year, was 232. Of these, 139 were deaf and dumb, 44 were blind, and 49 were feeble-minded.

**FISHERIES.**—It appears, from a census report of the commercial fisheries of the United States, that New Jersey produced in 1880 \$3,176,589 worth of fishery products, taking the sixth place in the list of fish-producing States. In some of the special fisheries it takes a higher rank. Its oyster products, valued at \$2,030,625, are exceeded only by those of Maryland and of Virginia. Its crab-fisheries, from which the fishermen realize \$162,612, are more extensive than those of any other State, while its quahaug (hard-clam) fisheries are second only to those of New York. In the menhaden-fisheries it stands fifth on the list, the oil, scrap, and compost produced in 1880 being valued at \$146,286. Its river-fisheries are of minor importance, the total yield being only 2,752,000 pounds, netting the fishermen \$91,435.

**EDUCATION.**—The report of the State Superintendent shows a steady improvement in school matters. The school-tax produced very considerably more than in the previous year; the surplus revenue over \$3,000 more; and the amount raised by district tax for teachers' salaries and maintaining the schools is over \$23,000 more.

**ELECTION RETURNS.**—Members of Congress and of the Legislature were elected in November. Republicans were elected in the second, third, fourth, and fifth congressional districts, and Democrats in the first, sixth, and seventh. The following list shows the composition of the districts and the vote:

## FIRST DISTRICT.

COUNTIES.	Ferrell, Democrat.	Robeson, Republican.	Bristol, Greenback.	Woolman, Prohibition.
Camden.....	5,887	5,387	24	282
Capo May.....	1,044	923	65	59
Cumberland.....	3,939	3,036	411	352
Gloucester.....	2,964	2,897	120	76
Salem.....	2,727	2,577	64	174
Majority.....	16,541	14,825	684	943

## SECOND DISTRICT.

COUNTIES.	Parker, Democrat.	Brewer, Republican.	Howland, Greenback.
Atlantic.....	1,609	2,089	82
Burlington.....	6,068	5,651	126
Mercer.....	5,765	1,636	...
Ocean.....	1,093	1,723	44
Majority.....	14,535	15,604	270

## THIRD DISTRICT.

COUNTIES.	Ross, Democrat.	Kean, Republican.	Urner, Greenback.
Middlesex.....	4,634	5,709	298
Monmouth.....	5,540	4,455	1,053
Union.....	2,717	5,022	2,107
Majority.....	21,891	15,186	3,463

## FOURTH DISTRICT.

COUNTIES.	Harris, Democrat.	Howey, Republican.	Larison, Greenback.
Hunterdon.....	2,717	2,987	467
Somerset.....	2,126	2,767	71
Sussex.....	2,737	2,484	121
Warren.....	3,365	3,329	219
Majority.....	10,945	11,567	873

## FIFTH DISTRICT.

COUNTIES.	Ryle, Democrat.	Phelps, Republican.	Potter, Greenback.	McCormick, Prohibition.
Bergen.....	3,175	3,397	23	77
Morris.....	3,795	4,632	279	660
Passaic.....	5,733	6,372	85	291
Majority.....	12,708	14,841	387	1,023

## SIXTH DISTRICT.

COUNTY.	Fiedler, Democrat.	Blake, Republican.	Hook, License.
Essex.....	17,200	14,780	363
Majority.....	2,420		

## SEVENTH DISTRICT.

COUNTY.	McAdoo, Democrat.	Collins, Republican.
Hudson.....	15,147	11,566
Majority.....	3,581	

The total vote was as follows: Democratic, 99,962; Republican, 97,869; Labor and Greenback, 6,032; Prohibition, 1,971; Democratic plurality, 2,093. The Legislature, to meet in January, 1883, will be constituted as follows:

	Senate.	House.
Republicans.....	12	25
Democrats.....	9	35

**NEW YORK.** When the New York Legislature met on the 3d of January, it was composed of 17 Democrats and 15 Republicans in the Senate, and 67 Democrats and 61 Republicans in the Assembly, but the political control was neutralized by a division among the Democrats. Three of the Senators and six of the Assemblymen from New York city had been elected as Tammany candidates against the so-called "regular" or "County Democracy" nominees. Two other Assemblymen, also allied with Tammany, acted with the six "straight" Tammany men. In the State canvass of 1881 the Tammany delegates from New York city had been ruled out of the State Convention, and that association

had taken an independent course in regard to local officers. Holding the balance of power in the Legislature, it seemed disposed to use its advantage in order to make terms with the leaders of the regular Democracy. The Tammany Representatives declined to take part in the caucuses by which candidates for offices in the two Houses were nominated at the beginning of the session. The Democrats named John C. Jacobs, of Kings County, as their candidate for President of the Senate, and Charles E. Patterson, of Rensselaer, for Speaker of the Assembly, but the Tammany men refused to support them. The Republicans nominated Thomas G. Alvord, of Onondaga, for Speaker, the Lieutenant-Governor being the presiding officer of the Senate. In advance of the nominations, representatives of the Tammany organization had made certain demands as the price of its co-operation with the Democrats. Among these were the chairmanship of the Committees on Cities in both Houses, a satisfactory composition of the Committees on Railroads and on Commerce and Navigation, a share in the subordinate offices, and a pledge excluding Jacobs from the chair of the Senate. These demands not being complied with, the Tammany members persisted for several weeks in opposition to the Democratic efforts to organize the two Houses.

The Senate had a presiding officer in the person of the Lieutenant-Governor, and was able to proceed with business, although the election of a Clerk was impossible, and there were no standing committees; but the Assembly could do nothing until organized, the Clerk of the former Assembly presiding from day to day. In the ballots for Speaker the Tammany members cast their votes for J. J. Costello, of New York. The struggle over the organization was interrupted on the 16th of January by proceedings in honor of Senator Webster Wagner, who had been killed in an accident on the New York Central and Hudson River Railroad near Spynen Duyvil. The Governor made this accident the occasion for a special message recommending more rigid requirements for the protection of passengers on railroad trains, and an act for that purpose was subsequently passed. Pending the organization an effort was made by the Republicans of the Senate to secure a modification of the rules, which should give the presiding officer the power to appoint standing committees. This power had been taken from the Lieutenant-Governor and given to a president *pro tem.* at a time when the former was a Democrat and the majority in the Senate was Republican. In the Assembly an effort was made to secure the adoption of a resolution appointing Charles E. Patterson temporary Speaker. Both of these expedients were unsuccessful. On the 25th of January there was a conference of the Democratic members of the Assembly, but as one of the demands of the Tammany men was that Patterson should be withdrawn as a candidate for Speaker and

the selection made from five names to be presented by them, it resulted in nothing. Other fruitless conferences and caucuses followed, but finally, on the 2d of February, Patterson was elected Speaker, the Tammany members having been induced to vote for him by concessions, said to include the control of the Committees on Cities and on Railroads. The final vote was 59 for Patterson and 51 for Alvord. The next day 58 bills were introduced in the Assembly, including one by C. S. Baker, of Monroe County, for the establishment of a Railroad Commission, and one by Mr. Sheehy, of New York, compelling the elevated railroads of that city to reduce their fare to five cents. A new difficulty arose before the list of committees was presented by the Speaker. The Tammany men grew distrustful and withdrew from a caucus called for the purpose of revising the nominations for subordinate offices and refused to support the candidates. This produced another dead-lock on the election of a Clerk. Meantime in the Senate it had been proposed to get along without committees, referring all bills to the Committee of the Whole; also to select one Democrat and one Republican member, who should, in conjunction with the Lieutenant-Governor, arrange the committees; but neither of these plans obtained sufficient support. The Speaker of the Assembly presented the list of standing committees on the 14th of February, and it served to intensify the dissatisfaction of the Tammany members. They not only complained of the composition of the important committees, but declared that distinct pledges had been violated. They showed their resentment next day by voting for the Republican candidate for Clerk and assisting to elect him. On the same day the Tammany Senators voted with the Republicans to modify the rules and permit the Lieutenant-Governor to appoint the committees. This action was speedily followed by a completion of the organization of the two Houses by the co-operation of the Republicans and Tammany Democrats. Charges of a political bargain between them were freely made, and Governor Cornell and Mr. John Kelly were credited with an understanding through which it was effected. These accusations were denied by both Republicans and Tammany men. It was the 25th of February before the work of legislation was begun in earnest, and it was still somewhat embarrassed by the peculiar division of the two Houses and the independent attitude of the Tammany Democrats, who held the balance of power.

The session continued until the 2d of June. There were 1,222 bills introduced in the Assembly and 735 in the Senate, and the number which passed both Houses was about 800. One of the most important subjects dealt with was that providing for the regulation and supervision of railroads. The bill introduced in the Assembly by Mr. Baker, of Monroe, for this purpose, was substantially the commission bill

of the Hepburn Committee, reported in 1880. It provided for the appointment of three commissioners by the Governor, by and with the advice and consent of the Senate, and defined their powers. The bill was kept in the hands of the Railroad Committee without action until the 23d of March, when, on motion of Mr. Baker, it was taken from the committee to be considered by the House. The opposition was then directed against the provision giving the Governor the power to appoint the commissioners, and a long political wrangle ensued. Mr. Armstrong, a Republican, proposed an amendment naming the commissioners in the bill. Mr. Haggerty, a Tammany representative, proposed that there should be four commissioners, and that the Governor be required to take two from each political party. Another proposition was to postpone the selection until January, 1883, in order that the existing Governor might not exercise the power of appointment. Then Mr. Haggerty modified his amendment, so that it provides for three commissioners, to be appointed by the Governor, one of whom "shall be selected from the party which cast at the last general election the greatest number of votes for Secretary of State"; one "from the party which cast at the last general election the next greatest number of votes for Secretary of State, one of whom shall be experienced in railroad business"; and one "upon the recommendation of the presidents and executive committees, or a majority of such, of the Chamber of Commerce of the State of New York, the New York Board of Trade and Transportation, and the National Anti-Monopoly League of New York, or any two of such organizations so represented, in case of disagreement." Following this was a substitute proposed by Mr. Welch, Democrat, that the commissioners be elected by the people. On the 6th of April the bill was ordered to a third reading, all amendments affecting appointments having thus far been defeated, by a vote of 69 to 55. When the bill finally passed the Assembly, on the 19th of April, however, it was with the amendment making the commissioners elective. This was adopted by a vote of 66 to 57, and the bill then passed, 106 to 15. When it was reported in the Senate, it was with a change embodying the Haggerty proposition in regard to the appointment of commissioners. A proposition to restore the Assembly provision was defeated, 13 to 14; a motion to give the Governor an untrammelled choice was lost, 9 to 14; an effort to have the commissioners named in the bill failed, and for some time final action was prevented by the refusal of the Democratic Senators to vote. The opposition was based mainly on political objections to giving Governor Cornell the power to name the commissioners at all. Finally, after a long struggle, in which the various propositions were repeatedly voted on, an amendment retaining the Haggerty, or anti-monopoly, method of appointment, but

postponing the exercise of the appointing power until a new Governor had been chosen, was agreed to, and the bill passed both Houses in that form on the 25th of May. In the Senate there was but one dissenting voice on the first vote, that of McCarthy, of Syracuse, and in the Assembly the vote was 75 to 39. Efforts were made to secure a veto of the bill, but it was signed by the Governor.

The powers given to the Railroad Commission were chiefly those of inquiry and supervision, all enforcements of law having to be effected through the action of the Attorney-General. Its main purpose was to secure publicity, the investigation of all complaints, and full reports to the Legislature. The Commissioners receive \$8,000 a year each, and have allowances for assistance and expenses. The yearly cost, which must not exceed \$50,000, is to be borne by the railroad companies; one half in proportion to net income, and one half in proportion to length of main track.

A bill which attracted a good deal of attention was one providing that the elevated railroad companies of New York city should, in lieu of other public charges, pay a tax of 4 per cent on their gross receipts, and relieving them of a large amount of taxes already due, though disputed, on their property. The bill, as first submitted, was understood to have the approval of the Mayor and Comptroller of the city; but it was materially modified, and they not only withdrew their approval, but earnestly opposed its passage, on the ground that it unjustly discriminated in favor of these particular corporations, and deprived the city of a large amount of revenue rightly due to it. After the bill had passed both Houses, several members professed to have voted for it under a misapprehension, and a resolution recalling it from the Governor passed the Senate, but was defeated in the Assembly. The bill was vetoed by the Governor after the close of the session, although the companies made strenuous efforts to induce him to sign it, ex-Senator Conkling acting as their attorney in the matter. Another bill that attracted considerable attention was a general act providing for the construction of street surface railways. It was claimed that it covered certain schemes for street railways in the city of New York, without providing sufficiently for the protection of public and private interests. This bill also passed, and was vetoed by the Governor after the close of the session. A bill compelling the elevated railroad companies to reduce their fares to five cents passed the Senate early in the session, but action upon it was prevented by its opponents in the Assembly.

Among the bills passed was one for the regulation of primary elections, but it was so limited as to apply only to the city of Brooklyn. It contains stringent provisions against fraudulent voting and false counting in primary elections, and empowered inspectors at such elections to

administer an oath to persons offering to vote, as to their qualifications, in case they are challenged. Violators of the law are subject to penalties of fine not exceeding \$3,000 and imprisonment not exceeding three years. Primary elections are defined as embracing "all elections held by any political party, convention, organization, or association, or delegates therefrom, for the purpose of choosing candidates for office, or the election of delegates to other conventions, or for the purpose of electing officers of any political party, organization, convention, or association." Qualifications of voters at such elections are left to be "prescribed by the association holding the primary or convention." A bill was passed providing that in New York city one alderman should be elected in each Assembly district, and one from the city at large, who should be the president of the board.

A joint resolution, submitting to a vote of the people the amendment of the Constitution abolishing tolls on the canals, and providing for their support by taxation, passed the Senate by a vote of 22 to 10, and the Assembly by a vote of 74 to 44. The following is the text of the amendment affecting the third, fifth, and sixth sections of Article VII:

SECTION 3. The first and second sections of this article having been fully complied with, no tolls shall hereafter be imposed on persons or property transported on the canals, but all boats navigating the canals, and the owners and masters thereof, shall be subject to such laws and regulations as have been or may hereafter be enacted, concerning the navigation of the canals. The Legislature shall annually, by equitable taxes, make provision for the expenses of the superintendence and repairs of the canals. The canal debt contracted under the section hereby amended, which on the first day of October, eighteen hundred and eighty, amounted to eight million nine hundred and eighty-two thousand two hundred dollars, shall continue to be known as the "canal debt, under Article VII, section 3, of the Constitution"; and the sinking fund applicable to the payment thereof, together with the contributions to be made thereto, shall continue to be known as the "canal debt sinking fund," and the principal and interest of said debt shall be met as provided in the fifth section of this article. All contracts for work or materials on any canals shall be made with the person who shall offer to do or provide the same at the lowest price, with adequate security for their performance. No extra compensation shall be made to any contractor; but if, from any unforeseen cause, the terms of any contract shall prove to be unjust and oppressive, the Canal Board may, upon the application of the contractor, cancel such contract.

SEC. 5. There shall annually be imposed and levied a tax which shall be sufficient to pay the interest and extinguish the principal of the canal debt mentioned in the third section of this article, as the same shall become due and payable, and the proceeds of such tax shall, in each fiscal year, be appropriated and set apart for the sinking fund constituted for the payment of the principal and the interest of the aforesaid debt. But the Legislature may, in its discretion, impose for the fiscal year, beginning on the first day of October, eighteen hundred and eighty-three, a State tax on each dollar of the valuation of the property in this State, which may by law then be subject to taxation, sufficient, with the accumulations of the sinking fund applicable thereto, to pay in full both the principal and interest of the canal debt before mentioned, and

the proceeds of such tax shall be appropriated and set apart for the sinking fund constituted for the payment of the principal and the interest of said debt. In the event of such action by the Legislature, then the Legislature shall, under the law directing the assessment and levy of such tax, make such provision for the retirement of the canal debt as it shall deem equitable and just to the creditors of the State.

SEC. 6. The Legislature shall not sell, lease, or otherwise dispose of the Erie Canal, the Oswego Canal, the Champlain Canal, the Cayuga and Seneca Canal, or the Black River Canal, but they shall remain the property of the State and under its management forever. All funds that may be derived from any lease, sale, or other disposition of any canal shall be applied in payment of the canal debt mentioned in the third section of this article.

An amendment was also submitted authorizing an increase of the judicial force of the Supreme Court, in the following terms:

SECTION 28. The Legislature, at the first session thereof, after the adoption of this amendment, shall provide for organizing in the Supreme Court not more than five general terms thereof; and for the election at the general election next after the adoption of this amendment, by the electors of the judicial districts mentioned in this section, respectively, of not more than two Justices of the Supreme Court, in addition to the justices of that court now in office in the first, fifth, seventh, and eighth, and not more than one justice of that court in the second, third, fourth, and sixth judicial districts. The justices so elected shall be invested with their offices on the first Monday of June next after their election.

A joint resolution proposing a constitutional amendment guaranteeing the right of local self-government to cities passed both Houses. Amendments in favor of woman suffrage and prohibition of the liquor-traffic were defeated. A bill conferring the right of suffrage on women was defeated on its third reading, the Attorney-General having given it as his opinion that the right could not constitutionally be conferred by the Legislature. A bill was passed allowing the closing address in criminal trials to the defense, and was approved by the Attorney-General, who gave his opinion, at the request of the Governor, but it was nevertheless vetoed. The interest law was so modified as to permit advances of money to an amount not less than \$5,000, repayable on demand, and secured by negotiable instruments as collateral, at rates to be agreed upon in writing between the parties. In effect, it removed the application of the usury law from "call loans." No serious effort was made to pass a bill apportioning the congressional representation of the State by new districts. A bill requiring telegraph wires to be laid underground in cities was defeated. An appropriation of \$1,000,000 to complete the Capitol was made, and \$1,250,000 for the completion of the East River Bridge was authorized. After considerable controversy, \$200,000 was appropriated to continue the work of the Emigration Commission of New York city. This was signed after the close of the session, on the understanding that funds should not be drawn from the appropriation by the commissioners after the bill pending in Congress providing for a head-money tax should pass.

An unusual number of investigations were set on foot, some of which were to continue during the recess. Among the latter was one regarding the effect of dealing in "futures" and getting up "corners" in grain, provisions, etc., and one affecting the administration of the Department of Public Works in New York city. There were two investigations of alleged abuses in the management of receiverships of insolvent insurance companies—one made by the Senate and the other by the Assembly. The former was conducted by the regular Insurance Committee of the Senate, and was continued during the recess. In the Assembly, it was proposed at first to place the investigation in the hands of the Committee on Insurance, but, as there were some indications of a purpose to smother the inquiry, it was promptly taken from that body and placed in the hands of a special committee, of which Mr. Chapin, of Kings County, was the chairman, and Major Haggerty, of New York, proved to be an active and zealous member. The report of this committee was submitted about two weeks before the end of the session. The principal charges had been that there were unnecessary delay, inordinate expenses, and general laxity of management in closing up the affairs of insolvent insurance companies and savings-banks. These were fully sustained by the investigation. Among other features of the committee's report were a review and condemnation of the course of Judge T. R. Westbrook, of the Supreme Court, who, as was alleged, had made several appointments of receivers and granted many of the orders under which their extravagant and inefficient proceedings had taken place. Many facts and details were presented in the report, and legislation was recommended. Several acts were considered, some of which had been introduced into one House or the other, before the committee's report was made. One of these, submitted in the Assembly by Mr. Sharpe, of Ulster, and providing for the general charge of the winding up of insolvent corporations by the State Treasurer, with the legal aid of the Attorney-General, passed both Houses, but was vetoed by the Governor after the close of the session.

Another important investigation was set on foot in the Assembly by the following resolution, offered by Mr. Roosevelt, of New York:

*Whereas*, Charges have been made from time to time by the public press against the late Attorney-General, Hamilton Ward, and T. R. Westbrook, a Justice of the Supreme Court of this State, on account of their official conduct in relation to suits brought against the Manhattan Railway; and

*Whereas*, Those charges have, in the opinion of many persons, never been explained or fairly refuted; and

*Whereas*, It is of vital importance that the judiciary of this State should be beyond reproach: therefore—

*Resolved*, That the Judiciary Committee be and it is hereby empowered and directed to investigate the conduct of the late Attorney-General, Hamilton Ward, and Justice T. R. Westbrook, in relation to the suits

against the Manhattan Elevated Railroad, and report at the earliest day practicable to this Legislature.

This resolution was strenuously opposed by the friends of Judge Westbrook, but was adopted on the 12th of April by a vote of 99 to 14. There was some delay in beginning the investigation, and at the request of the committee it was allowed the assistance of counsel, Mr. Albertis Perry, of Oswego, and Mr. F. L. Stetson, of New York, being selected for the purpose. The inquiry was conducted in part at Albany and in part in the city of New York. Efforts were made to secure a final adjournment of the Legislature before the investigation was finished, but it was defeated. The committee made its report on the 31st of May. The majority, after reviewing the evidence, presented their conclusion in the following resolution:

*Resolved*, That Theodoric R. Westbrook, a Justice of the Supreme Court of this State, has not, upon the evidence submitted to the Judiciary Committee of this House, been guilty of any impeachable offense.

In justifying this conclusion, the signers of the report, consisting of W. A. Ponder, chairman of the committee, F. B. Smith, Amasa J. Parker, Jr., O. S. Searl, James D. McClelland, and D. S. Potter, said:

The statutory description of impeachable offenses is "mal and corrupt conduct in office and high crimes and misdemeanors (1 R. S. [fifth ed.], 456). The term "mal and corrupt conduct in office," as defined by Judge Grover in the case of a judicial officer, consists of "an intentional violation of duty to the prejudice of public justice, or a reckless exercise of his functions, indifferent as to whether what was done was right or wrong." Applying this test to the judicial conduct of Judge Westbrook, as disclosed by the evidence before them, your committee have come to the conclusion that, although in some instances his actions have been indiscreet and unwise, yet there is nothing in that conduct which affords ground for impeachment. The committee have discussed at some length the merits of orders for the granting of which it is urged that Judge Westbrook should be impeached. They have done this in order to ascertain, if possible, whether or not the judge was actuated by unworthy or improper motives in granting such orders, and not because they deemed it within their province to review his errors, whether of fact or of law. Every lawyer knows that almost daily orders are made and judgments given, which, on review by the judge himself or an appellant tribunal, are vacated, modified, or reversed as being improvident, irregular, or illegal. Tribunals are especially established by the Constitution and laws for the correction of such errors, and it would be a dangerous precedent for a legislative committee to assume this prerogative and condemn a judge for his mistakes, omissions, or inadvertencies. Under such a system, and tried by the standard which has been urged upon the committee in this case, there is not a judge in the State who would be safe from impeachment. The private character of Judge Westbrook is without a stain. His industry and ability are shown by his numerous opinions recorded in the reports, by the united voice of the bar of the Third Judicial District, and the testimony in this case. Before recommending the impeachment of such a judge, your committee have deemed it their duty to require that specific acts of mal and corrupt conduct on his part should be established, not by hearsay, or surmises, or fanciful inferences, but by legal and convincing evidence. In the opinion of your committee that has not been done.

A minority of the committee, consisting of Alfred C. Chapin, of Brooklyn, and James E. Morrison, of New York, recommended impeachment "for mal and corrupt conduct in office." In their brief report they said:

The undersigned do not consider that, on all the evidence, a resolution of removal would be justifiable. It seems to us clear, however, that a *prima facie* case has been established, and that upon all the evidence adduced the said justice should be put upon his trial. Until the charges made before your Judiciary Committee are met by better and clearer explanations than have been offered thus far, the said justice should not continue to exercise the duties of his office.

In our judgment the committee's duty is limited to ascertaining and declaring whether or no Justice Westbrook is liable to removal or impeachment. Censure by implication or by direct resolution is not among the powers of the Assembly. Morally, such censure may perhaps carry the same weight as would similar declarations from any other body of equal numbers. Legally no such right exists. These are not censurable offenses. The different departments of government are not subject to each other's control or suspension, unless by virtue of some express enactment. We shall, therefore, refrain from addressing any didactic remarks to this justice or to the judiciary of our State. We desire to correct a wide-spread and dangerous misapprehension prevailing as to the scope and nature of the judicial misbehavior which justifies impeachment. A Justice of the Supreme Court is chosen for fourteen years. The office is one of emolument and high honor. He may be impeached for high crimes and misdemeanors, and also for mal and corrupt conduct in office. We must exclude both high crimes and misdemeanors, and in defining mal-conduct we must attend solely to such offenses as are neither high crimes nor misdemeanors, and which do not necessarily constitute corrupt conduct.

Mr. Robert A. Livingston, of the committee, concurred in the minority report, but recommended impeachment for "mal-conduct" only, the evidence in his opinion not showing "corrupt or dishonest motives." Messrs. Worth, Chamberlain, and Robert Armstrong, Jr., united in a statement of dissent from many of the "statements and conclusions of fact" in the majority report, but of concurrence in the recommendation that the judge be not impeached. Action on the reports excited warm discussion in the Assembly. Mr. Roosevelt moved the adoption of the minority report of Messrs. Chapin and Morrison, but the motion was defeated—yeas 27, nays 84, not voting 17. The majority report was adopted by a vote of 77 to 35, 11 members not voting. Charges were not wanting to the effect that the railroad power and influence were instrumental in securing this result of the investigation.

The veto-power of the Governor was very freely exercised during the session, and a large number of measures which passed both Houses were defeated after adjournment by a failure to receive the Executive approval. Among the acts vetoed after the adjournment was the Civil Code, one of a series of codifications of the laws of the State prepared under the direction of Mr. D. D. Field; the Military Code; the Sharpe Receivership Bill; and the acts already mentioned regarding the taxation of elevated railroads and the chartering of surface street-

railways. Items in the annual "Supply Bill," amounting in the aggregate to \$326,863.84, were also vetoed on a variety of grounds.

The political canvass of the year may be said to have begun early in the session of the Legislature. The charge that the Governor had a political understanding with the Tammany forces in that body, through which the "dead-lock" upon the organization of the two Houses was broken, whether true or not, was not without influence. The election of a Democrat to succeed Senator Wagner from the Saratoga District was generally interpreted as indicating Republican dissatisfaction. About the same time Isaac V. Baker, Jr., was appointed Superintendent of State-Prisons, to succeed Louis F. Pilsbury. The appointment was at the time very generally regarded as a political one, intended to promote the renomination of Governor Cornell. It was confirmed by the Senate with the aid of Tammany votes. It was this incident which largely influenced the opposition afterward made to giving Governor Cornell the power to appoint the members of the proposed Railroad Commission, and led to restrictions upon the appointing power in the act establishing the commission, and the postponement of its operation until 1883. The vetoing of the bill regarding the taxation of elevated railroads in opposition to the arguments of ex-Senator Conkling, who acted as counsel for the companies, was also believed to have an effect on the Governor's chances for a renomination, which he was avowedly seeking. Mr. Conkling was credited with having great influence with the national Administration and with some of the political managers of his party in the State, and it soon became evident that that influence would be exerted against Governor Cornell's renomination. As early as the month of March the Hon. Charles J. Folger, Secretary of the national Treasury, began to be talked of as an "Administration candidate" for Governor of New York. During the summer it became evident that the Governor's canvass for a renomination and the efforts to defeat it by his enemies, represented by the Conkling faction, were threatening the Republican party with a serious division. On the 20th of August a Republican newspaper published at Albany distinctly declared, on what was afterward avowed to be the Governor's authority, that Mr. Conkling was working to defeat Mr. Cornell's renomination, chiefly from resentment at his action in vetoing measures in which the ex-Senator was interested as the representative of great corporations. From that time the contest in the party was clearly defined. The supporters of the Governor labored openly for his renomination, and it soon became apparent that the so-called "Stalwarts" and "machine Republicans" were against him, and had the sympathy of the Administration at Washington. It was also the avowed purpose of the latter to make Secretary Folger the candidate

for Governor. There was a compromise element of the party which favored the nomination of some men not identified with the faction contest, and with them the favorite for the nomination was General James W. Wadsworth.

The Republican State Committee held a meeting in New York city on the 2d of August, to determine on the time and place of holding the State Convention. The friends of Governor Cornell were in favor of an early convention, September 5th being the date preferred by them, but it was decided by a vote of 18 to 14 to hold the convention on the 20th of September. This was taken as indicating the strength of the Governor with the State Committee. It was decided to hold the convention at Saratoga, the vote being 17 for that place, 12 for Syracuse, and 3 for Rochester. The committee voted unanimously to refund to N. M. Curtis the \$1,000 fine and his expenses in defending himself in the prosecution for collecting political contributions from public employes, in case he should finally be compelled to pay.

The Anti-Monopoly organization displayed considerable political activity during the year, but exerted its influence without making nominations. It held conferences at Albany during the session of the Legislature, chiefly for the purpose of influencing action on the Railroad Commission Bill, and the act as passed had its approval. A meeting was held in New York near the middle of August, at which a State Committee was organized, and a call issued for a State Convention to be held at Saratoga on the 13th of September.

Early in August efforts were made through conferences and committees to secure the co-operation in the approaching canvass of the three Democratic factions of New York city known as Tammany Hall, Irving Hall, and the County Democracy. The Democratic State Committee met at Saratoga on the 8th of August, and decided to have the State Convention held at Syracuse on the 21st of September. The following resolution in the interest of harmony was adopted by the committee:

*Resolved*, That while this committee neither possesses nor will attempt to exercise any control over the methods by which delegates to the ensuing State Convention may be chosen in any Assembly district of this State, and while it recognizes the supreme power of the convention to pass upon the title of delegates to seats therein, we nevertheless express our earnest desire that but one delegation, and that fully representative in character, may be sent to such convention to represent each Assembly district of the State. We, therefore, respectfully appeal to all men in the State professing to be Democrats, or sympathizing with our purposes, and desiring victory in the election, to use all honorable means to secure such result. To this end we respectfully advise that such electors unite in the same primaries or caucuses at a place and time to be designated by the Assembly district organization whose delegates were recognized by and admitted to the State Convention of 1881, and that the caucuses or primaries thus convened shall select their own officers and appoint their own tellers of election by the vote of the electors there assembled.

The following was also embodied in the call for the convention:

The Democratic electors of the State of New York, and all others who desire to co-operate in a determined effort, at the ensuing election, to reform the public service, and protect the people against the encroachments of those who are using public franchises as if they were only private rights; and all citizens who are opposed to the unparalleled prodigality of the Republican party, and to the continuance of the present enormous and unnecessary taxation of the labor and business of the country, are requested to choose three delegates from each Assembly district to represent them in a State Convention, to be held at Albany on the 21st of September next, at twelve o'clock, noon, for the purpose of nominating candidates for State offices to be filled at the next election, and to transact such other business as may properly come before the convention.

The first political convention actually held was that of the Greenback-Labor party, which took place at Albany on the 19th of July. Epenetus Howe, of Tompkins County, was nominated for Governor; James Allen, of Kings, for Lieutenant-Governor; L. J. McParlin for Judge of the Court of Appeals; and L. G. McDonald, of Glens Falls, for Congressman-at-large. A platform was adopted reaffirming the principles of the party, condemning the penal code and the system of contract labor in prisons, demanding the election of all public officers, including postmasters, and favoring local self-government for all communities. It also contained the following declarations:

That all railroad and telegraph companies doing business under the laws of this State, and which have forfeited their chartered privileges as common carriers by failing to provide suitable and speedy facilities for transacting their business, should immediately be taken possession of by the State, and operated for the benefit of the people. That all persons employed by such corporations should be liberally, justly, and promptly paid for their services, and that any interruption to business, resulting from failure on their part to pay their operatives such rates, should deprive such corporations of their chartered privileges. That the stock and bonds of all railroad and telegraph companies should be limited to the actual cost of construction and equipment. That any burden imposed on commerce or travel to pay interest or dividends on any excess of that amount is in violation of the fundamental law of public use which permits legislative sanction authorizing the construction of railroads and telegraphs. That no discriminating rates between individuals or communities should be allowed. That the books of the companies representing such property should be open to public inspection, and that commissioners should be elected by the people to carry out these provisions.

That incorporate capital which now holds absolute control over the money, the highways, the public lands, and the legislation of this State and country, should be restricted in its power to purchase or control large tracts of land; and, as this is a question of special interest to farmers—as a matter of protection to them—we demand that all land owned by individuals or corporations in excess of what is required for their personal use, or for the transaction of their business, should be taxed so as to render its ownership valueless.

A Labor Convention was held at Buffalo on the 12th of September, but no nominations were made. The resolutions adopted demand-

ed the abolition of contract labor in prisons; the abolition of tenement cigar-factories; factory inspection so as to permit no child under fourteen years of age to be employed; the enforcement of the compulsory educational act; and the reduction of the hours of labor to ten hours a day in all the factories of the State; the establishment of a Bureau of Labor Statistics, to be managed by officers appointed upon the recommendation of the State labor organization; the repeal of the sections of the penal code that aim to prevent the lawful assembling of working men and women; the establishment of a printing-office for the State documents instead of letting the same out by contract; the enactment of an employers' liabilities act, making the employers responsible for accidents occasioned through the carelessness of employes; a law giving mechanics and laborers first lien for labor performed; that all employers of labor pay cash weekly, in lawful money, for labor performed.

The Anti-Monopoly Convention took place at Saratoga on the following day. No nominations were made, but a platform of extraordinary length was adopted. Among the more practical propositions which it contained were the following:

3. Corporations have the right to make charges for service which, without favoritism or unjust discrimination, will pay the expense of their economical administration and reasonable dividends on the capital actually invested, but commissioners should be provided to supervise and control them. When they conform to the law and the objects of their creation, they are entitled to efficient protection.

4. Canals, rivers, and water-ways of the country should be constantly and efficiently maintained free of tolls.

5. The Federal Government should own the telegraph lines, and operate them as a part of the postal system, establishing a tariff of rates limited to the cost of maintenance and transmission.

6. Savings-banks should be established in connection with the Post-Office Department, in which the poor can safely deposit their earnings.

7. The currency issued to the national banks should be retired. All currency, whether metallic or paper, should be issued and controlled by the Government only, and be redeemable in gold and silver.

8. The lavish grants to railroads should be discontinued, and those which have been forfeited by reason of non-compliance with the terms of the grants should be restored to the national domain.

9. Combinations to inflate or depress prices, without regard to value, are immoral and wicked, and should be prohibited by law.

10. The penal code should be amended and objectionable sections repealed; a labor bureau should be added to the State departments, to collect statistics and procure information, and make reports and recommendations to the Legislature for the benefit of protection of labor, with adequate powers in cases of public emergency to arbitrate and arrange questions arising between laborers and corporations, and where laborers are employed by public corporations to establish and alter the wages to be paid.

12. State-prisons and penitentiaries are established to prevent crime and to reform criminals, not to make profits for private persons, or to injure the interests of labor. Therefore, the contract system in these institutions should be abolished, and the labor of the convicts be so employed as not to injure the interests of merchants and laboring-men.

14. The civil service must be divorced from politics and reformed. Honesty and efficiency must be made the conditions upon which subordinate offices may be secured or retained.

15. Women have the same inalienable right as men. Taxation without representation is odious. There is no sufficient reason why men should monopolize the ballot. Therefore, men and women should be equal before the law. Women should have equal pay with men for equal work, and if they desire to vote they should be allowed to exercise that right.

16. The present demand of the people is the election of a Governor and a Legislature which will carry into execution the Railroad Commission Bill, abolish free passes on railroads, reform the laws of assessment and taxation, and establish labor bureaus, with sufficient power to protect labor. Therefore, it is the duty of every anti-monopolist and anti-monopoly league to ascertain whether the candidates of existing parties will favor these necessary reforms as soon as they are nominated, and, if they will not, to see that a candidate is nominated and elected who will obey the voice of the people.

On the morning of September 20th, previous to the assembling of the Republican State Convention at Saratoga, there was a meeting of the State Committee, at which thirty-two of the thirty-three members were present, or represented by proxy. Stephen B. French, of New York, appeared in place of W. H. Robertson, of Westchester, presenting what purported to be a proxy sent by telegraph. The selection of a temporary chairman for the convention by the committee was regarded as a test of the strength of Cornell and his opponents. E. M. Madden, the candidate of the latter, was selected over E. L. Pills by a vote of 18 to 14; Mr. Carpenter, chairman of the committee, who had been regarded as an "anti-Stalwart," voting for Madden, as well as French, who acted as proxy for Collector Robertson. The result was a victory for the anti-Cornell men. An attempt was made in the convention to set aside the choice of the committee for temporary chairman, but it was defeated by a vote of 251 to 243. Mr. Madden made a brief address, counseling harmony and a united support of the action of the convention. Subsequently the temporary organization was made permanent. The first important business of the convention was the nomination of a candidate for Governor. The names of Alonzo B. Cornell, Charles J. Folger, James W. Wadsworth, John H. Starin, and John O. Robinson, were presented in complimentary speeches, and the first ballot resulted as follows:

Whole number of votes cast.....	497
Necessary to a choice.....	249
Charles J. Folger.....	233
Alonzo B. Cornell.....	180
James W. Wadsworth.....	69
John H. Starin.....	19
John C. Robinson.....	6

A second ballot was taken, and considerable excitement was caused by changes of votes in various delegations to the Cornell or Folger side of the account. The result was:

Whole number of votes cast.....	497
Necessary for a choice.....	249
Charles J. Folger.....	257
Alonzo B. Cornell.....	223
James W. Wadsworth.....	18

On motion of United States Senator Miller, who had led the Cornell forces, the nomination of Folger was made unanimous, though many delegates refrained from voting on the motion. The convention then adjourned until the following day. Some excitement was caused the same evening by an announcement from Collector Robertson that he had sent no proxy to Mr. French, and had not authorized him to act in his place on the State Committee. The alleged proxy proved to have been written on a "sending blank" of the telegraph company, and never to have been received over the lines. It was regarded as an impudent forgery, and this fact added not a little to the dissatisfaction which the defeat of Cornell produced, it being alleged that the whole power of the "party machine" in the State, backed by the influence of the national Administration, had been used to crush a faithful Governor because he had offended ex-Senator Conkling and the corporations which he represented. On the second day of the convention, B. Platt Carpenter, of Dutchess County, was nominated for Lieutenant-Governor, receiving 280 votes out of 494 on the second ballot. His principal competitor was Hamilton Fish, Jr. A. B. Hepburn, of St. Lawrence, was nominated for Congressman-at-large, receiving 309 votes to 156 for George S. Batcheller, of Saratoga, and 8 for other candidates. Charles Andrews, of Onondaga, was unanimously nominated for Chief-Judge of the Court of Appeals. The platform, which was presented by Mr. George Bliss, chairman of the Committee on Resolutions, and unanimously adopted, was as follows:

*Resolved*, That the Republican party of New York has no new doctrine to present upon the questions which have heretofore occupied much of public attention, such as honest money, pure elections, the regulation of the traffic in intoxicating liquors, the protection of home industry, and the necessity of restricting the power and influence of corporations. It is content to be judged by its past declarations and acts.

2. That equitable taxation, reaching corporations as well as persons, is approved as a correct system which should be perfected; that the practical results of recent legislation upon the subject fully justify the action of the Republican party in its adoption.

3. That monopolies oppressing the people, or unfairly discriminating against local interests, are wrong in principle and should not be tolerated.

4. That stringent legislation should be enacted to secure the purity and honesty of primary elections, and that all possible safeguards should be thrown about these sources of the political action of the people.

5. That the practice of appealing to the Legislature to overrule the action of the local authorities when confining themselves within the powers conferred upon them should be discouraged both by the Legislature and the Governor, and should be resorted to only in extreme cases.

6. That changes in the fundamental law should not ordinarily be the subject of party action, but they should when proposed always be carefully scrutinized by the people, who should signify their wishes with reference to them as generally they do in their selection of their representatives. We, therefore, urge the people of the State, without reference to party, to examine with intelligent care the constitutional amendments submitted to them, and to give full expression at the polls to their judgment and wishes thereon.

7. That while there are varying opinions on the sale of liquors, we subscribe to the principle that propositions on that subject, like all other propositions for change in the fundamental law, ought to be submitted to the popular vote.

8. That the conduct of the Democracy in this State during this year emphatically attests anew their signal unworthiness of public confidence. They signalized their return to power in the Legislature by wantonly sacrificing the public interests upon the altar of greedy and reckless partisanship. A party which could devote nearly two months to a quarrel of its factions for spoils, but could give no time to the equalization of taxation, and to other questions vitally affecting the welfare of the people, insults the intelligence of the electors of New York when it asks them to approve its flagrant abuse of legislative powers by handing over to it the executive branch of the State government.

9. That the financial achievements of the Republican Administration are next in importance to its work of the preservation of the nation itself, as they are attended by the rapid liquidation of a great public debt, incurred to meet the national emergency, and by the reduction of the rate of interest to its present low figures, and that it is the policy of the party to bring taxation within the lowest possible limits, and, by the strictest system of economy, reduce the governmental expenses and the number of those employed in the collection of the revenue, thus relieving the people of all unnecessary burdens.

10. That the civil service should be placed upon a proper basis by adequate legislation, so as to give facilities for the execution of the law now upon the statute-book, with competitive tests for admission to the service so arranged as to secure the necessary qualifications for the positions sought, together with a fixed term for incumbents, removals from office during the term of appointment to be only for cause.

11. That the recent law of Congress designed to suppress polygamy, which offends the moral sense of mankind and prevents the administering of justice through the usual instrumentalities of law, approves itself to the people, and that it should be supplemented by such laws as may be necessary to attain the object in view.

12. That the economy and efficiency of the present Republican State Administration entitle its members to the highest praise. Governor Cornell's fearless and firm exercise of the veto-power, while it has naturally brought down upon him hostile criticism, has shown his determination to protect the interests of the State and the people alike against individuals and corporations.

13. That we tender the President, Chester A. Arthur, our assurance of confidence in his Administration, and our approval of the wise and patriotic course pursued by him under the embarrassing circumstances of his accession to office. His courage in resisting the enactment of the River and Harbor Bill, which violated the accepted rules of constitutional power, and which, while authorizing many needed public improvements, carried with it a large and wasteful appropriation for works of neither national nor public good, has secured for him the admiration even of his enemies.

14. That a hearty support be pledged to the nominees of this convention, whose records in public life, distinguished abilities, and special fitness commend them to the people's approval at the ballot-box.

When the Democratic Convention met at Syracuse, on September 21st, there was a full delegation present from each of the three local factions of New York city, and the first day was spent in organization and the settlement of their claims by the Committee on Contested Seats. An intense desire for union and harmony was displayed, and found expression in the report of the committee and its acceptance

by the convention, with the cheerful acquiescence of the factions concerned. The report of the committee, which was submitted on the morning of the second day of the convention, recognized the County Democracy as the regular delegation; but, with the view to success for the party at the polls and for the purpose of securing entire harmony, recommended that the County Democracy be allowed 38 delegates, Tammany Hall 24, and Irving Hall 10.

The following platform was adopted:

The Democracy of New York, in convention assembled, declare:

1. *Whereas*, The country is again subjected, by Republican maladministration, to the evils and abuses which afflicted it in 1874, we reaffirm the principles of our platform that year, under which the Republican party was driven from power and the government of the State brought back, for a time, to the practice of economy and honesty.

2. We arraign the Republican majority in Congress for culpable failure to reduce the amount of taxation to a sum sufficient only for the legitimate requirements of the Government, under an honest and frugal administration; and we favor such tariff and fiscal reforms as shall relieve an overtaxed people from all unnecessary burdens, and prevent the accumulation of a fund to be lavished in profligate legislation, and in support of a horde of useless and idle placemen. In particular, we proclaim our condemnation of the River and Harbor Bill, in which, by the multiplication and mutual support of obnoxious provisions, the infamous measure purchases its passage through Congress in disregard of the limitations of the Constitution, and to the deprivation of public morals.

3. In the nomination of the Secretary of the Treasury for Governor of New York, by which, in effect, the candidate for the chief magistracy of the State was appointed by the President, we see a fresh and impressive proof of the dangerous power of public patronage, and, urged by this alarming spectacle, we protest against Federal intervention in State elections, and repeat our demand of 1881 for reform and purification of the civil service; and we are further admonished by the recent experience of Republican corruption of the necessity of forbidding, by penal enactment, the levying of black-mail from dependent office-holders to promote the interests of the party, which finds no support in the intelligent and independent convictions of the people.

4. We hold the present Republican Administration responsible for the unredressed outrages on our foreign-born fellow-citizens, and we demand for them, when abroad, the protection to which they are entitled in return for the voluntary allegiance which the honor of the American Government requires shall be extended to them.

5. We charge that in this State the Republican party has lowered the standard of public service by its local administration, and by the representatives it has sent to the two Houses of Congress. That it has made the State Legislature an instrument of the lobby to rob the public and enrich corporations, and has refused to its Governor the renomination which was due to him by custom, because he dared to use his veto-power to thwart such purpose, in disregard of those who sought to control him by the influence of political and moneyed power.

6. We demand the restoration of the New York State National Guard to the efficiency of which it has been deprived, and which made it representative of the soldierly spirit of the people.

7. In order to restore our merchant marine to its former prosperity, we demand the immediate revision and amendment of the laws relating to the shipping and carriage of ocean-freights.

8. We favor the adoption, by the next Legislature, of the resolution of 1882, providing amendments to

the Constitution for the local self-government of cities.

9. Primary elections, openly and honestly conducted, afford the surest means of securing the most suitable candidates for public office, thus best preserving the democratic form of government. We, therefore, favor the speedy passage of general laws providing against fraud and intimidation at such election.

10. The public welfare demands that the various questions relating to chartered monopolies and methods of transportation should be met and decided, and we are in favor of the adoption of measures to restrict the growing power of such monopolies. They should be subjected to the strict supervision of the commission now provided by law. All unjust discriminations in the transportation of passengers and merchandise should be prohibited. The charges of corporations, which have taken the property of private citizens for public use, should be limited to the cost of the service, with a reasonable profit, instead of the mercenary exaction of "all the traffic will bear." The laws should be so revised that taxation may be reduced, as far as possible, and that personal and corporate property may severally pay their fair proportion of the taxes.

11. We approve the submission to the vote of the people of the constitutional amendment in favor of free canals, and we have full confidence that they will dispose of it in such a manner as to promote all the great interests of the State, agricultural, manufacturing, and commercial.

12. We reaffirm the policy always maintained by the Democratic party, that it is of the first importance that labor should be made free, healthful, and secure of just remuneration. That convict-labor should not come into competition with the industry of law-abiding citizens. That the labor of children should be surrounded with such safeguards as their health, their rights of education, and their future, as useful members of the community, demand. That workshops, whether large or small, should be under such sanitary control as will insure the health and comfort of the employed, and will protect all against unwholesome labor and surroundings. That labor shall have the same right as capital to combine for its own protection, and that all legislation which cramps industry, or which enables the powerful to oppress the weak, should be repealed; and, to promote the interests of labor, we recommend the collection of statistics and information respecting the improvements, needs, and abuses of the various branches of industry.

13. Whereas the founders of the Democratic party inculcated frequent recurrence to fundamental principles, the Democracy of New York again avow their fidelity and respect for the liberty of the individual, which characterized the administration of the Government in the primitive days of the republic.

The first choice for a candidate for Governor was greatly divided, and the following was the result of the first ballot:

Whole number of votes cast.....	384
Necessary to a choice.....	193
Henry W. Slocum.....	93
Roswell P. Flower.....	97
Grover Cleveland.....	66
Allan Campbell.....	87
Erastus Corning.....	85
Homer A. Nelson.....	26
Waldo Hutchins.....	13
Perry Belmont.....	12

On the second ballot, Slocum and Flower had 123 votes each, and Cleveland only 71; but it was evident that a break in the forces was impending. The third ballot was taken amid much excitement, and resulted as follows:

Whole number of votes cast.....	389
Necessary to a choice.....	192
Grover Cleveland.....	211
Henry W. Slocum.....	156
Roswell P. Flower.....	13

The nomination was made unanimous, and the ticket was completed at leisure at an evening session. D. B. Hill, of Elmira, was named for Lieutenant-Governor; Henry W. Slocum, of Brooklyn, for Congressman-at-large; and W. C. Ruger, of Onondaga, for Chief-Judge of the Court of Appeals.

There was a Prohibitory Convention at Syracuse, on the 4th of October, at which the following resolutions were adopted:

*Resolved*, That we recognize the hand of Almighty God in a movement that has already accomplished so much for the suppression of the liquor-traffic in other States, and that is kindling so great enthusiasm among the friends of temperance in our State.

*Resolved*, That we call for the submission to the people of this State of an amendment to the Constitution prohibiting the manufacture and sale of alcoholic beverages.

*Resolved*, That we do not identify ourselves with any partisan movement, but as a convention representing temperance societies and Christian churches of the State of New York we do seek such legislation as shall free our noble State from the power of rum, which we recognize as an enemy of all that is good; and we do hereby call upon all good citizens, irrespective of party or creed, to aid in this object.

After discussion the following was added: "And that we pledge ourselves to vote for no candidate for the Legislature who will not publicly pledge himself in favor of submitting such amendment to the vote of the people."

A. A. Hopkins was selected as the Prohibition candidate for Governor.

On the 3d of October the State Committee of the Anti-Monopoly League issued an address, in which it declared in favor of the Democratic State ticket.

An organization in favor of the free canal amendment of the Constitution was formed by various commercial bodies in New York during the month of July, known as the Free Canal Union; but the political conventions generally were content to declare in favor of submitting the question to the people for their decision.

Shortly after the Republican Convention the State Committee of the party was reorganized, with John F. Smyth, of Albany, as chairman, and with the "Stalwart" element in full control. The following resolution was adopted at its first meeting:

*Resolved*, That the State Committee expresses its detestation of the attempt made at Saratoga to influence the decision of the late State Committee by the use of a forged telegram, and its detestation of all the methods and purposes to which such wretched fraud and treachery apply, and that this committee tenders its cordial co-operation to any authorities or persons investigating the crime, to the end that its authors may be speedily ascertained and held up to the scorn of the people.

Mr. Folger sent to the chairman of the convention a long letter of acceptance, on the 2d of October, in which he referred to the charges of forgery, the manifest dissatisfaction existing in the party, and a suggestion in some quarters that he ought to decline the nomination. He was of opinion, however, that the convention was properly constituted and had acted delib-

erately, and he did not feel at liberty to decline. He referred to the circumstances under which the nomination came to him without any seeking on his part, and made a long statement of his position on various State questions. He was in favor of economy, local self-government, regulation of primary elections, supervision of corporations, etc. On the same day Mr. Hepburn sent the following letter to the chairman of the State Committee:

NEW YORK, October 2, 1882.

*The Hon. John F. Smyth, Chairman Republican State Central Committee.*

DEAR SIR: Having received no formal notice of my nomination for the office of Congressman-at-large by the recent Republican Convention, I address this communication to you. It is quite apparent that, owing to the unfortunate circumstances that have come to light since the adjournment of the convention, a very large portion of the Republicans of the State are not disposed to accept its conclusions as an authoritative utterance of the party. Nothing should be left undone to secure the unity and harmony of the party, and I don't think it right to enter upon the canvass without an earnest effort in that direction.

It seems to me that for the purpose of attaining such result all questions should be submitted anew to the representatives of the party assembled for such purpose, and in furtherance of that object, while fully appreciating the very high compliment paid me by the convention, and returning my sincere thanks for the same, I deem it my duty to acquaint you with my declination of said nomination. Very respectfully yours, A. B. HEPBURN.

On the following day Mr. Carpenter accepted the nomination for Lieutenant-Governor in a letter of some length, in which he disclaimed seeking the nomination, or being concerned in any bargain. Mr. Andrews the same day briefly accepted the nomination for Chief-Judge. The vacancy on the ticket occasioned by the declination of Mr. Hepburn was filled by the State Committee, who designated Howard Carroll, of New York, as the candidate for Congressman-at-large.

The acceptance of the nominations by the Democratic candidates was formally made on the 7th of October. The following are the principal declarations of Mr. Cleveland's letter:

Our citizens, for the most part, attach themselves to one or the other of the great political parties, and, under ordinary circumstances, they support the nominees of the party to which they profess fealty. It is quite apparent that under such circumstances the primary election or caucus should be surrounded by such safeguards as will secure absolutely free and uncontrolled action. Here the people themselves are supposed to speak; here they put their own hands to the machinery of government, and in this place should be found the manifestation of the popular will. When by fraud, intimidation, or any other questionable practice, the voice of the people is here smothered, a direct blow is aimed at a most precious right, and one which the law should be swift to protect. If the primary election is uncontaminated and fairly conducted, those there chosen to represent the people will go forth with the impress of the people's will upon them, and the benefits and purposes of a truly representative government will be attained.

Public officers are the servants and agents of the people, to execute laws which the people have made, and within the limits of a Constitution which they have established. Hence the interference of officials

of any degree, and whether State or Federal, for the purpose of thwarting or controlling the popular wish, should not be tolerated.

Subordinates in public places should be selected and retained for their efficiency, and not because they may be used to accomplish partisan ends. The people have a right to demand here, as in cases of private employment, that their money be paid to those who will render the best service in return; and that the appointment to and tenure of such places should depend upon ability and merit. If the clerks and assistants in public departments were paid the same compensation and required to do the same amount of work as those employed in prudently conducted private establishments, the anxiety to hold these public places would be much diminished, and, it seems to me, the cause of civil-service reform materially aided.

The system of levying assessments for partisan purposes on those holding office or place can not be too strongly condemned. Through the thin disguise of voluntary contributions this is seen to be naked extortion, reducing the compensation which should be honestly earned, and swelling a fund used to debauch the people and defeat the popular will.

I am unalterably opposed to the interference by the Legislature with the government of municipalities. I believe in the intelligence of the people when left to an honest freedom in their choice, and that when the citizens of any section of the State have determined upon the details of a local government, they should be left in the undisturbed enjoyment of the same. The doctrine of home-rule, as I understand it, lies at the foundation of republican institutions, and can not be too strongly insisted upon.

Corporations are created by the law for certain defined purposes, and are restricted in their operations by specific limitations; acting within their legitimate sphere they should be protected; but when by combination or by the exercise of unwarranted power they oppress the people, the same authority which created should restrain them and protect the rights of the citizen. The law lately passed for the purpose of adjusting the relations between the people and the corporations should be executed in good faith, with an honest design to effectuate its objects, and with a due regard for the interests involved.

The laboring classes constitute the main part of our population. They should be protected in their efforts peaceably to assert their rights when endangered by aggregated capital, and all statutes on this subject should recognize the care of the State for honest toil, and be framed with a view of improving the condition of the working-man.

We have so lately had a demonstration of the value of our citizen soldiery in time of peril that it seems to me no argument is necessary to prove that it should be maintained in a state of efficiency, so that its usefulness shall not be impaired.

Certain amendments to the Constitution of our State, involving the management of our canals, are to be passed upon at the coming election. This subject affects diverse interests, and, of course, gives rise to opposite opinions. It is in the hands of the sovereign people for final settlement; and as the question is thus removed from State legislation, any statement of my opinion in regard to it at this time would, I think, be out of place. I am confident that the people will intelligently examine the merits of the subject, and determine where the preponderance of interest lies.

The expenditure of money to influence the action of the people at the polls, or to secure legislation, is calculated to excite the gravest concern. When this pernicious agency is successfully employed, a representative form of government becomes a sham, and laws passed under its baleful influence cease to protect, but are made the means by which the rights of the people are sacrificed, and the public Treasury despoiled. It is useless and foolish to shut our eyes to the fact that this evil exists among us; and the party which leads in an honest effort to return to better and purer meth-

ods will receive the confidence of our citizens and secure their support. It is willful blindness not to see that the people care but little for party obligations when they are invoked to countenance and sustain fraudulent and corrupt practices. And it is well for our country and for the purification of politics that the people, at times fully roused to danger, remind their leaders that party methods should be something more than a means used to answer the purposes of those who profit by political occupation.

An incident of the canvass which attracted some attention was a letter of Secretary Folger to a Republican meeting at Albany, in which he spoke of the effect of Democratic success upon the material interests of the country in the following terms:

As the barometer tells of atmospheric changes imperceptible to the senses, so the state of the great markets of the country shows the sentiment of the business of the country as to political events. Take one instance. The Ohio election took place on Tuesday, the 10th day of this month. It resulted in a gain to the Democratic party of several Congressmen for the next Congress. At once there arose a jubilant claim from the organs of that party that the next House of Representatives would be Democratic. How did business and capital regard that claim and the consequence of it, if true? It is estimated from well-founded data, that on Wednesday, the 11th day of October, the day following, there was a shrinkage of values in the great properties of the country of over forty millions of dollars. That shrinkage has been going on since. Do the business interests of the country look with dread to a return of the Democratic party to a control of Federal legislation? Is it a well-founded dread? Will the election of the Democratic ticket in the State of New York increase it, and give it greater reason for existence? These are questions for hesitating Republicans to ponder.

Both candidates for Governor were questioned by the Civil-Service Reform Association as to their sentiments toward the cause which it represented. Mr. Folger, in his reply, said:

In any public capacity in which I may be placed I will use the legitimate influence that I have thereby to further legislation desirable for the improvement of the public civil service, and well devised therefor, and to that end will call the attention to the matter of any body which I have the right to address upon such a subject.

I have already, in an official capacity, more than once, in communication with my subordinates, declared that they need not feel forced to give for party purposes, and have promised them immunity if they refuse; and have declined sanction of a tour of visitation of request for contributions.

Mr. Cleveland's reply contained the following:

I have no hesitation in saying that I fully approve of the principles embodied in the Pendleton bill relating to this subject, and that I should be glad to aid in any practical legislation which would give them a place in the management of the affairs of the State and of municipalities, so far as they can be made applicable thereto. I believe that the interests of the people demand that a reform in the national and State administrative service should speedily become an accomplished fact, and that the public should receive honest and faithful service at the hands of well-fitted and competent servants. When contests between parties are waged for the purpose of securing places for professional politicians, of high or low degree, whose only recommendation for appointment is their supposed ability to do partisan service, the people are apt to be defrauded by the displacement of tried and faithful ser-

vants, well able to perform the duties for which they are paid with the people's money, and the substitution of those who are unfit and incompetent. In this way the interests of the party may be subserved, but the interests of the people are neglected and betrayed. This pernicious system gives rise to an office-holding class, who in their partisan zeal, based upon the hope of personal advantage, arrogate to themselves an undue and mischievous interference with the will of the people in political action; this breeds the use of dishonest and reprehensible methods, which frequently result in the servants of the people dictating to their masters. If places in the public service are worth seeking, they should be the reward of merit and well-doing, and the opportunity to secure them on that basis should be open to all. Those holding these places should be assured that their tenure depends upon their efficiency and fidelity to their trusts, and they should not be allowed to use them for partisan purposes. The money they earn they should receive and be allowed to retain, and no part of it should be exacted from them by way of political assessments. It seems to me that very much or all of what we desire in the direction of civil-service reform is included in the doctrine that the concerns of the State and nation should be conducted on business principles, and as nearly as possible in the same manner that a prudent citizen conducts his private affairs. If this principle is kept constantly in mind, I believe the details of a plan by which its adoption may be secured will, without much difficulty, be suggested.

In the city of New York the canvass was characterized by a local contest of more than usual interest. An effort was made to secure a non-partisan municipal government by means of citizens' nominations. A committee was appointed for the purpose at a public meeting, and Mr. Allan Campbell, Comptroller of the city, was nominated for Mayor, and Colonel Emmons Clark for Sheriff, while William A. Butler was renominated for County Clerk. Before these nominations were made, however, the three Democratic factions had agreed upon a ticket bearing the names of Franklin Edson for Mayor, Alexander B. Davidson for Sheriff, and Patrick Keenan for County Clerk. An effort was made to induce the Republican organization to support the citizens' ticket, but it insisted upon John J. O'Brien as a candidate for County Clerk, which seriously impaired the unity of its support.

Before the election it became evident that the dissatisfaction in the Republican ranks was deep and wide-spread, and that the differences between the leaders of the factions were well-nigh irreconcilable, while the Democrats were united in an effort to profit by this condition of things and gain ascendancy in the State. The election took place on the 7th of November, and resulted in an overwhelming Republican defeat.

The official returns showed the total vote for Governor to be 918,894, divided as follows:

Grover Cleveland, Democrat.....	535,818
Charles J. Folger, Republican.....	342,464
Epenetus Howe, Greenback.....	11,974
Alphonse A. Hopkins, Prohibition.....	25,783
Blank and scattering.....	8,355

Cleveland's plurality over Folger was 192,854, and his majority over all, 151,742. For other State offices the votes were:

#### LIEUTENANT-GOVERNOR.

David B. Hill.....	534,636
B. Platt Carpenter.....	387,855
James Allan.....	11,894
William H. Boole.....	27,158
Blank and scattering.....	4,818

Whole number.....

Hill's plurality, 196,781. 915,861

#### CHIEF-JUDGE OF THE COURT OF APPEALS.

William C. Ruger.....	432,222
Charles Andrews.....	409,428
Lawrence J. McParlin.....	10,527
Charles A. Hammond.....	16,234
Blank and scattering.....	1,600

Whole number.....

Ruger's plurality, 73,400. 920,605

#### CONGRESSMAN-AT-LARGE.

Henry W. Slocum.....	503,954
Howard Carroll.....	394,232
Leonard G. McDonald.....	10,567
Linus S. Freeman.....	14,724
Blank and scattering.....	5,474

Whole number.....

Slocum's plurality, 109,722. 928,941

The two amendments of the Constitution were ratified by large majorities. There was some doubt as to the form of ballot required in voting on the canal amendment. The amendment effected changes in sections 3, 5, and 6 in Article VII, but the bill providing for its submission to a vote of the people, and prescribing the form of ballot, declared that ballots should read, "For the proposed amendment to section 3, Article VII of the Constitution," or against the same, as the case might be, making no mention of the other sections to be changed. The Attorney-General, when consulted before the election, advised that ballots should mention all three of the sections to be affected, and expressed doubt as to whether the amendment would have the full effect intended unless all three were included. Ballots were prepared and distributed, nevertheless, in strict accord with the law, but some were used which accorded with the Attorney-General's view. The result was, that the vote as declared stood:

For the amendment to section 3 of Article VII of the Constitution.....	456,105
Against the same.....	168,151
For the amendment to sections 3, 5, 6, of Article VII of the Constitution.....	9,609
Against the same.....	20,061
Blank and scattering.....	260

Whole number..... 679,186

The only counties where ballots were counted for and against amendments to sections 3, 5, and 6 of Article VII, were Monroe, Orange, Putnam, and St. Lawrence.

After the election the Attorney-General was consulted as to whether this was a valid ratification of the amendment as affecting the three sections, and he gave it as his opinion that it was. The judiciary amendment was adopted by a vote of 248,784 in its favor, to 75,644 against it, and 626 blank and scattering. Nineteen of the Representatives in Congress chosen from the districts were Democrats. The names of those elected, with their several

majorities, were as follow—"D" signifying Democrat, and "R" Republican:

DISTRICT.	Congressmen.	
1.....	Perry Belmont, D.....	18,729
2.....	William E. Robinson, D.....	8,236
3.....	D. R. James, R.....	2,398
4.....	Felix Campbell, D.....	7,550
5.....	Nicholas Muller, D.....	15,873
6.....	S. S. Cox, D.....	11,317
7.....	William Dorsheimer, D.....	4,614
8.....	John J. Adams, D.....	1,185
9.....	John Hardy, D.....	8,974
10.....	Abram S. Hewitt, D.....	14,361
11.....	Orlando B. Potter, D.....	1,102
12.....	Waldo Hutchins, D.....	6,726
13.....	John H. Ketchum, R.....	14,203
14.....	Lewis Beach, D.....	691
15.....	John H. Bagley, Jr., D.....	8,457
16.....	Thomas J. Van Alstyne, D.....	6,303
17.....	Henry G. Burleigh, R. (no opposition).....	17,685
18.....	F. A. Johnson, R.....	9,191
19.....	A. X. Parker, R.....	5,213
20.....	Edward Wemple, D.....	89
21.....	George W. Ray, R.....	445
22.....	Charles R. Skinner, R.....	1,269
23.....	J. Thomas Spriggs, R.....	1,676
24.....	N. W. Nutting, R.....	1,611
25.....	Frank Hiscock, R.....	728
26.....	Sereno E. Payne, R.....	971
27.....	J. W. Wadsworth, R.....	1,088
28.....	S. C. Millard, R.....	1,609
29.....	John Arnot, D.....	2,178
30.....	H. S. Greenleaf, D.....	5,734
31.....	Robert S. Stevens, D.....	8,680
32.....	William F. Rogers, D.....	727
33.....	F. B. Brewer, R.....	2,549

himself with marked ability in that position. Two years later he was the Democratic candidate for the office of District Attorney, but was defeated by a small majority by Lyman K. Bass. Mr. Cleveland pursued his professional practice with success until 1870, when he was chosen Sheriff of Erie County, holding that office three years. He then returned to active practice, and not long after became the head of the firm of Cleveland, Bissel & Sicord, which has won a leading position at the Buffalo bar.

GROVER CLEVELAND.

In the local contest in New York city the citizens' ticket was defeated, and that of the united Democracy was successful. The vote was: For Mayor—Edson, 97,802; Campbell, 76,385. For Sheriff—Davidson, 97,376; Clarke, 77,158. For County Clerk—Keenan, 84,180; Butler, 50,898; O'Brien, 38,930. The Democratic majority for Mayor was therefore 21,417; for Sheriff, 20,218; and, for County Clerk, Keenan's plurality over Butler was 33,282. The city vote for Governor was: Cleveland, 124,914; Folger, 47,785; Howe, 1,537; Hopkins, 584.

In the Legislature of 1883 the Senate remained unchanged, as its members are chosen for two years. It consisted of 18 Democrats and 14 Republicans. The Assembly consisted of 84 Democrats, 42 Republicans, 1 Republican and Working-man, and 1 Independent.

GROVER CLEVELAND, the new Governor, was born in the town of Caldwell, Essex County, N. J., March 18, 1837, but his family was of New England origin, his father, Rev. Richard Cleveland, having been a Presbyterian clergyman at Norwich, Conn., whence he removed to New Jersey some time before the son's birth. Having obtained what education the public schools of his native town afforded, young Cleveland attended an academy at Clinton, N. Y., for a time. At the age of seventeen he set out for the West to seek the wide opportunities afforded in that section. His first intention was to go to Cleveland, but, stopping with an uncle in Buffalo for a time, he concluded to make his home there. He studied law, and was admitted to practice in 1859. In 1862 he was appointed Assistant District Attorney of Erie County, and acquitted

In the fall of 1881 popular dissatisfaction with the administration of municipal affairs in Buffalo led to a warm local contest. The Democrats nominated Mr. Cleveland for Mayor, knowing that his independence, uprightness, and ability would win much support from the opposite party. The result justified their calculations, and he was elected by a majority of more than 5,000, though the Republican majority in the city was ordinarily between 2,000 and 3,000. The vigorous, independent, and popular character of his administration there, as well as his success in the canvass which preceded it, attracted attention throughout the State, led to his nomination for Governor, and contributed to the overwhelming success of his candidacy.

The funded debt of the State on the 30th of September, the close of the fiscal year, deducting an unapplied balance in the sinking fund of the canal debt, was \$6,385,356.30. Of this sum, \$122,694.87 was the amount necessary to yield, at 6 per cent interest, the sum required to pay the annuities to Indians; \$3,000 was unclaimed bounty debt; and the remainder, \$6,259,661.43, represented the canal debt. The only change in the funded indebtedness of the State during the last fiscal year was a contribution of \$309,717 to the sinking fund. The aggregate receipts of the State Treasury during the fiscal year, including a balance from the previous year amounting to \$5,531,858.71, were \$17,735,761.59; the payments during the same

period amounted to \$13,898,198.21, leaving a balance in the Treasury at the beginning of the new fiscal year of \$3,837,563.38. The amount received from taxes on corporations during the year was \$1,539,684.27, being an increase of \$546,959.11 over the previous year. The rate of taxation for the current fiscal year was fixed by the Legislature at 2½ mills on the dollar, which was estimated to yield a revenue of \$6,820,022.29. The assessed value of property is \$2,985,682,567, of which \$2,432,661,378 is real estate.

The revenues of the canals, for the year ending September 30th, were as follow:

Tolls.....	\$647,602 88
Rent of surplus water.....	1,910 85
Miscellaneous sources.....	10,456 62

Total.....	\$659,970 35
The expenditures amounted to.....	658,510 01

Leaving a surplus of..... \$6,460 84

For the year ending September 30, 1881, the revenue failed to meet the expenditures by the sum of \$205,642.45. The following is a statement of freight carried and tolls collected from the opening of navigation to December 1st in the years 1881 and 1882:

	Tons moved.	Tolls collected.
1882.....	5,421,720	\$655,195 51
1881.....	5,143,877	631,621 11
Gain in 1882.....	277,843	\$23,574 45

The tolls received after September 30th, with an unexpended appropriation in the canal fund, amounting together to \$588,000, were deemed sufficient for repairs until the end of the current fiscal year, after which the canals will have to be supported by taxation. Eighty-nine claims, amounting to \$168,652.57, were filed with the Board of Canal Appraisers during the year. During the same time 273 claims, aggregating \$866,741.58, were disposed of, the awards amounting to \$19,644.76. The cost of maintaining the board, exclusive of awards, was \$39,639.20, of which \$15,280.07 was paid to attorneys employed to defend the State against claimants.

Seventy-six banks of discount and deposit were engaged in active business under the provisions of the banking laws of the State, on the 1st day of October. On that day their condition was reported as follows:

Resources.....	\$122,563,460
Capital.....	18,805,700
Surplus and profits.....	9,657,702
Due depositors.....	82,050,980
Other liabilities.....	12,049,078

The increase in deposits during the year was \$6,333,850; profits, \$729,527; loans and discounts, \$5,503,379; and the net aggregate increase in assets was \$9,099,888. During the year six new banking associations were organized, one failed, and one was converted from a State to a national bank. On the 1st day of July, 1882, the number of savings-banks reporting to the Superintendent of the Bank De-

partment was 127, of which number 11 were in process of voluntary liquidation. During the year one new savings institution was organized, and one closed, having first paid its depositors and creditors in full. The condition of the savings-banks on the day named was as follows:

Resources.....	\$460,123,582
Due depositors.....	400,748,888
Surplus.....	59,187,089
Other liabilities.....	222,705
Number of open accounts.....	1,066,518

The increase in these several items during the year was as follows:

Resources.....	\$35,918,774
Deposits.....	80,071,541
Surplus.....	6,538,656
Open accounts.....	70,776

There were 14 trust, loan, and mortgage companies in the State, whose condition on July 1st was as follows:

Resources.....	\$139,758,534
Capital.....	12,579,500
Surplus and profits.....	9,854,376
Deposits.....	104,888,185
Other liabilities.....	12,486,473

This statement shows an increase over the preceding year of \$10,765,848 in deposits, \$1,322,027 in surplus and profits, and a net aggregate increase in assets of \$13,869,620. On the 1st day of October there were in the State 14 corporations for the safe-keeping and guaranteeing of personal property, employing \$2,676,900 of capital in the aggregate.

There were 151 fire-insurance companies doing business in the State on the 1st day of July, of which 69 were New York State companies, 55 were organized in other States, and 27 were foreign companies, with assets amounting in the aggregate to \$154,810,890.43; their total liabilities, including capital stock, were \$111,423,096.62, and their net surplus \$43,387,793.81. There were 12 marine insurance companies doing business in the State on the 1st day of January, with assets amounting to \$22,888,423.93, and liabilities, including capital stock and scrip, amounting in the aggregate to \$18,183,850.69, leaving a net surplus of \$4,704,573.24. There were 12 life-insurance companies organized and doing business under the laws of this State, with assets amounting in the aggregate to \$225,966,512.02; liabilities, \$187,050,970.48, leaving a surplus, as regards policy-holders, of \$38,915,541.54. There were also 17 life-insurance companies organized in other States, but doing business in New York, with total assets of \$208,310,947.58, and liabilities amounting to \$169,813,325.83, leaving a surplus, as regards policy-holders, of \$33,497,621.75; also one foreign life-insurance company, with total assets in the United States of \$123,735.09, liabilities \$5,248.75, and surplus \$118,486.34. There were six casualty-insurance companies, of which two were New York companies, two organized in other States, and two were foreign companies, with aggregate assets amounting to \$3,110,737.11; liabilities, \$1,948,199.53, and a net surplus of

\$1,162,537.58. The number of co-operative insurance companies transacting business in the State on the 1st day of January was 115, having 325,524 certificates in force, of which 90,219 were written during the year 1881. Within the last-mentioned year 28,274 certificates terminated, and losses to the amount of \$4,742,090 were paid by this class of insurance organizations. During the year 1882 there was organized under the general insurance laws of the State one mutual fire-insurance company, with a paid-up cash contribution of \$200,000, and one plate-glass insurance company, with a paid-up capital of \$100,000. Eight fire-insurance companies, four organized in other States and four foreign companies, were during the year admitted to transact business in the State, with total assets amounting to \$3,220,464.36, and liabilities, including capital stock, amounting to \$1,554,788.42. Thirteen fire, two life, and two marine insurance companies, have ceased to do business in this State during the year.

On the 1st day of July, 1882, the amount of securities, for the protection of policy-holders insured by the various insurance companies transacting business in the State, held on deposit in the Insurance Department, as required by law, was \$13,594,749.30, classified as follows:

New York State life-insurance companies.....	\$2,852,097 86
New York casualty-insurance companies.....	201,509 95
New York fire-insurance companies.....	1,638,000 00
Fire-insurance companies of other States.....	20,100 00
Foreign insurance companies.....	8,868,041 99
Total.....	\$13,594,749 30

The value of the property held by the various charitable institutions, on the 30th day of September, was \$41,103,809.54, of which \$33,501,605.36 was real estate, and \$7,602,304.18 personal property. The receipts of these institutions during the last fiscal year were \$10,186,810.91, derived from the following sources:

State of New York.....	\$719,302 40
Cities and counties.....	4,236,130 00
Paying inmates.....	371,017 13
Invested funds.....	397,074 90
Donations.....	1,238,876 59
Loans.....	355,943 00
Labor of inmates.....	68,747 05
All other sources.....	2,760,620 84
Total.....	\$10,186,810 91

The expenditures during the same period were as follow:

State institutions.....	\$1,432,819 84
County and city institutions.....	2,340,806 55
Incorporated benevolent institutions.....	5,391,439 23
The number of State paupers in the various institutions September 30, 1881, was.....	164
Committed during the year ending September 30, 1882.....	1,392
Total.....	1,556
During the same period the number of deaths was.....	43
Discharged.....	1,350
Under care October 1, 1882.....	163

Of the number reported as discharged, 778 were furnished transportation to their homes

in other States and countries, or to their places of legal settlement.

Forty-eight lunatic, idiotic, crippled, blind, and otherwise disabled alien paupers, were sent back to the countries whence they came by the State Board of Charities during the year.

The number of insane in the various institutions on the 30th day of September was 10,443, distributed as follows:

In State institutions.....	8,105
In county poor-houses and asylums.....	1,995
In city almshouses and city asylums.....	4,739
In private asylums.....	603
In the Asylum for Insane Convicts at Auburn.....	141
Total.....	10,438

Of the insane in the State institutions, 2,022 were confined in the Willard and Binghamton Asylums, they being entirely of the chronic class. The number of insane persons in the several institutions, as given above, is 384 in excess of that reported at the close of the previous year.

The earnings and expenditures of the several State-Prisons during the year ending September 30th were as follow:

AUBURN.	
Earnings.....	\$120,234 16
Expenses.....	122,926 48
Deficiency.....	\$2,692 27
CLINTON.	
Earnings.....	\$60,361 59
Expenses.....	99,606 40
Deficiency.....	\$39,244 88
SING SING.	
Earnings.....	\$241,321 93
Expenses.....	193,127 20
Surplus.....	\$48,194 73

The total earnings of the three prisons were \$6,257.58 in excess of their expenses. On the 30th day of September the number of convicts confined in Sing Sing Prison was 1,526, while Auburn contained 912, and Clinton 499. The Asylum for Insane convicts at Auburn contained 141 inmates, of which nine were women.

The public-school statistics for the year ending September 30th are as follow:

Total receipts, including balance on hand October 1, 1881.....	\$12,543,446 84
Total expenditures.....	11,181,986 55
Amount paid for teachers' wages.....	7,956,383 96
Amount paid for school-houses, repairs, furniture, etc.....	1,525,578 26
Estimated value of school-houses and sites.....	30,333,641 00
Number of teachers employed for the legal term of school.....	20,599
Number of teachers employed during any portion of the year.....	31,232
Number of children attending public schools.....	1,041,089
Number of persons attending normal schools.....	6,156
Number of volumes in school-district libraries.....	705,512
Number of persons in the State between the ages of five and twenty-one years.....	1,681,113

The number of children attending public schools during the last fiscal year was 19,807 in excess of the number reported the year previous.

The number of immigrants landed at Castle Garden during the year was about 460,000, being the largest number landed in any year

since the creation of the commission in 1847. Of the appropriation of \$200,000, made by the Legislature for the maintenance of the commission, \$47,569.46 had been expended at the close of the year in protecting the immigrants while landing, directing and forwarding those who had destinations fixed upon, assisting such as sought employment, and caring for the sick and helpless, and \$23,473.24 for special repairs to buildings. Under an act of Congress, passed in August, the sum of fifty cents for each alien passenger intending to remain in this country was thereafter collected by the United States Treasury Department, and credited to the Emigration Commission. The sum collected for the first three full months after the law went into operation was \$8,000 less than the expenditure for that period.

The total cost of the new State Capitol to the close of the year, including \$150,000 available for work in progress, was \$14,222,993.09. The two legislative chambers and offices for most of the State officers were completed. The Court of Appeals room was expected to be finished by March 1, 1883. The amount expended during the year was \$1,400,000, applied mainly to the completion of the east front and roof, the outer walls of the west front, the main tower, and certain rooms and offices. The outer walls were substantially completed. The commissioners estimated that \$1,000,000 to \$1,250,000 would be needed for the next year's work. Statements having been made to the effect that certain parts of the building were unsafe—and especially so the heavy vaulted ceiling of the Assembly Chamber—Governor Cornell appointed a commission, consisting of W. P. Trowbridge, Charles Babcock, and George B. Post, to make an examination. The report of the commission, made on the 26th of September, sustained the statements in part, and recommended that the stone vaulting in the Assembly Chamber be replaced by a construction of wood, on account of its great weight and insufficient support. The architects of the Capitol, Leopold Eidlitz, H. H. Richardson, and Frederick L. Olmsted, replied to the criticisms and conclusions of the commission in a communication to the Governor, dated October 6th. They showed that the apprehensions regarding the safety of the Assembly Chamber were without foundation, giving in detail the supports, the variations from perpendicular of columns, the settling of bases, etc., which were less, rather than more, than is usual in such cases. The closing paragraph of the architects' statement is as follows:

We find in the report of the commission no warrant for any further recommendation, except that the fractured stone still remaining in the main vault be replaced; that the work be properly pointed, and that the equilibrium of all the vaults be reviewed, and, if need be, corrected. Nor can we find in the report warrant for any other opinion than that when these slight repairs are made the vaulted ceiling of the Assembly Chamber will be a perfectly sound and perma-

nent structure. In its present condition, and without repairs, there is nothing in the condition of the ceiling to warrant apprehensions in regard to its safety, or to prevent the immediate occupation of the chamber by the Assembly.

General Newton M. Curtis, special agent of the United States Treasury in the New York Custom-House, was indicted in the early part of the year, under the law forbidding public officers to collect contributions of money for political purposes. On trial he was convicted, and a motion in arrest of judgment, and for a new trial, was denied by the Circuit Court in July. The decision was sustained on an appeal to the Supreme Court of the United States in December. (See *POLITICAL ASSESSMENTS*.)

The freight-handlers' strike in New York city, during the summer, led to an important judicial decision regarding the obligations of railroad companies, and the power of the State through the courts to compel them to fulfill those obligations. (For particulars of the case see page 456, under *LABOR, MOVEMENTS OF*.) In rendering the decision of the General Term in January, 1883, Judge Davis said:

The question presented by the motion is one of signal importance. It is whether the people of the State can invoke the power of the courts to compel the exercise by railroad corporations of the most useful public functions with which they are clothed. If the people have that right, there can be no doubt that their Attorney-General is the proper officer to set it in effective operation on their behalf. The question involves a consideration of the nature of this class of corporations, the objects for which they are created, the powers conferred, and the duties imposed upon them by the laws of their creation and of the State. As bodies corporate, their ownership may be, and usually is, altogether private, belonging to the holders of their capital stock, and their managements may be vested in such officers and agents as the stockholders and directors under the provisions of the law may appoint. In this sense they are to be regarded as trading or private corporations, having in view the profit or advantage of the corporators. But these conditions are in no just sense in conflict with their obligations and duties to the public. The objects of their creation are from their very nature largely different from those of ordinary private and trading corporations. Railroads are in every essential quality public highways, created for public use, but permitted to be owned, controlled, and managed by private persons. But for this quality the railroads of the respondent could not lawfully exist. Their construction depended upon the exercise of the right of eminent domain, which belongs to the State in its corporate capacity alone, and can not be conferred except upon a "public use." The State has no power to grant the right of eminent domain to any corporation or person for other than a public use. Every attempt to go beyond that is void by the Constitution, and, although the Legislature may determine what is a necessary public use, it can not by any sort of enactment divest of that character any portion of the right of eminent domain which it may confer. This characteristic of "public use" is in no sense lost or diminished by the fact that the use of the railroad by the corporation which constructs or owns it must from its nature be exclusive. That incident grows out of the method of use, which does not admit of any enjoyment in common by the public. The general and popular use of a railroad as a highway is therefore handed over exclusively to corporate management and control, because that is for the best and manifest advantage of the public. The progress of science and

skill has shown that highways may be created for public use of such form and kind that the best and most advantageous enjoyment by the public can only be secured through the ownership, management, and control of corporate bodies created for that purpose, and the people of the State are not restricted from availing themselves of the best modes for the carriage of their persons and property. There is nothing in the Constitution hostile to the adoption and use by the State of any and every newly developed form or kind of travel and traffic which have a public use for their end and aim, and giving to them vital activity by the use of the power of eminent domain. When the earliest Constitution of our State was adopted, railroads were unknown. The public highways of the State were its turnpikes, ordinary roads, and navigable waters. The exercise of eminent domain in respect to them was permitted by the Constitution for the same reasons that adapt it now to the greatly improved methods of travel and transportation, and in making this adaptation there is no enlarged sense given to the language of the Constitution so long as its inherent purpose—the creation only of public uses—be faithfully observed.

The judge proceeded to show that as a result of the public character of the functions of a railroad corporation, it was not only obliged to furnish facilities and accommodations, but, as an agency of the State, to fulfill the purpose for which it was chartered. As to the peculiar relation of the company as a common carrier, he said :

On other public highways every person may be his own carrier, or he may hire whosoever he will to do that service. Between him and such employé a special and personal relation exists independent of any public duty, and in which the State has no interest. In such a case the carrier has not contracted with the State to assume the duty as a public trust, nor taken power to do it from the State by becoming the special donee and depository of a trust. A good reason may therefore be assigned why the State will not by mandamus enforce the performance of his contract by such a carrier. But the reason for such a rule altogether fails when the public highway is the exclusive property of a body corporate which alone has power to use it, in a manner which of necessity requires that all management, control, and use, for the purposes of carriage, must be limited to itself, and which, as a condition of the franchise that grants such absolute and exclusive power over a user of a public highway, has contracted with the State to accept the duty of carrying all persons and property within the scope of its charter as a public trust. . . . It is the duty of the State to make and maintain public highways. . . . It is not the duty of the State to be or become a common carrier upon its public highways, but it may in some cases assume that duty, and whenever it lawfully does so the execution of the duty may be enforced against the agents or officers upon whom the law devolves it.

It was next shown from various authorities that railroad companies could be compelled to furnish appliances, etc. These obligations, said Judge Davis, are no more binding than is the duty to carry freight and passengers. This duty is, in fact, "the *ultima ratio* of their existence, the great and sole public good, for the attainment and accomplishment of which all the other powers and duties are given or imposed. It is strangely illogical to assert that the State through the courts may compel the performance of every step necessary to bring a corporation into a condition of readiness to do the very thing it is created to do, but it is

then powerless to compel the doing of the thing itself." As to the point that the State is not injured by the refusal of a corporation to perform its duty, and has, therefore, no interest in the question, Judge Davis said, it was no test that the State suffers no direct pecuniary injury. The sovereignty of the State is injured whenever any public function vested by it in any person, natural or artificial, for the public good, is not used or is misused or is abused, and it is not bound to inquire whether some one or more of its citizens has not thereby received a special injury for which he may recover damages in his private suit. Such an injury wounds the sovereignty of the State, and thereby, in a legal sense, injures the entire body politic. The State in such a case as this has no other adequate remedy. The fact that individuals may have private remedies for the damage done them does not preclude the State from its remedy by mandamus. Again, the provisions of the Railroad Act, as amended by chapter 133 of the Laws of 1880, which give corporations power to regulate the time and manner in which passengers and property shall be transported, can not be construed to justify a general or partial suspension of receiving and transporting freight.

Regarding the interference of the strike, the judge said: "According to the statement of the case, a body of laborers acting in concert fixed a price for their labor, and refused to work for less. The respondents fixed a price for the same labor, and refused to pay more. In doing this neither did an act violative of any law, or subjecting either to any penalty. The respondents had a lawful right to take their ground in respect of the price to be paid and adhere to it if they chose, but if the consequences of doing so were an inability to exercise their corporate franchises, to the great injury of the public, they can not be heard to assert that such consequence must be shouldered and borne by an innocent public who neither directly nor indirectly participated in their causes." If, however, it had been shown that a strike of the skilled laborers had been caused or compelled by some illegal combination or organized body which held an unlawful control of their actions, and sought through them to enforce its will upon the companies, and that the latter in resisting such unlawful efforts had refused to obey unjust and illegal dictation, and had used all the means in their power to employ other men in sufficient numbers to do the work, and that the refusal and neglect complained of had grown out of such a state of facts, a very different case would have been presented for the exercise of the discretion of the court as well as of the Attorney-General.

The controversy with the employés of the railroads furnished no valid excuse, in the opinion of the Court, for neglect or refusal to perform their public duties. The conclusion was as follows :

The duties imposed must be discharged at whatever cost. They can not be laid down, or abandoned, or suspended, without the legally expressed consent of the State. The trusts are active, potential, and imperative, and must be executed until lawfully surrendered; otherwise, a public highway of great utility is closed or obstructed without any process recognized by law. This is something no public officer charged with the same trusts and duties in regard to other public highways can do without subjecting himself to mandamus or indictment. We are not able to perceive the difficulties that embarrassed the court below as to the form of a writ of mandamus in such cases. It is true the writ must be specific as to the thing to be done; but the thing to be done in this case was to resume the duties of carriers of the goods and property offered for transportation—that is, to receive, carry, and deliver the same under the existing rules and regulations as the business had been accustomed to be done. There was no necessity to specify what kinds of goods should be first received or carried, or whose goods, or, indeed, to take any notice of the details of the established usages of the companies. It was the people who were invoking the writ, on their own behalf, and not for some private suitor, or to redress individual injuries. The prayer of the petition indicated the proper form of the writ.

The Court of Appeals in October reversed the decision of the General Term of the Court of Common Pleas of New York city in the case of Story against the New York Elevated Railroad Company, and ordered a new trial on the merits. The main point involved was, the right of the owners of property abutting on the line of the elevated railroad to recover damage for the injury done to such property. The question was examined at great length, and the decision was in favor of the right to recover. The conclusions in this particular case were as follow:

1. That the plaintiff, by force of the grant of the city to his grantors, has a right or privilege in Front Street which entitles him to have the same kept open and continued as a public street for the benefit of his abutting property.
2. That this right or privilege constitutes an easement in the bed of the street which attaches to the abutting property of the plaintiff and constitutes private property within the meaning of the Constitution, of which he can not be deprived without compensation.
3. That such a structure as the Court found the defendant was about to erect in Front Street, and which it has since erected, is inconsistent with the use of Front Street as a public street.
4. That the plaintiff's property has been taken and appropriated by the defendant for public use without compensation being made therefor.
5. That the defendant's acts are unlawful, and as the structure is permanent in its character, and if suffered to continue will inflict a permanent and continuing injury upon the plaintiff, he has the right to restrain the erection and continuance of the road by injunction.
6. That the statutes under which the defendant is organized authorize it to acquire such property as may be necessary for its construction and operation by the exercise of the right of eminent domain.
7. In view of the serious consequences to the defendant, we think no injunction prohibiting the continuance or operation of the road in Front Street should be issued until the defendant has had a reasonable time after this decision to acquire the plaintiff's property by agreement or by proceedings to condemn the same.

The general course of the argument in the decision of the court sustained the view that

the State could not grant privileges in the streets of a city which should be inconsistent with their use and enjoyment as such, and that any injury to the value of property or restriction upon its free and full use by the owner, was *pro tanto* a taking of such property for which compensation must be made.

NICARAGUA\* (REPÚBLICA DE NICARAGUA), one of the five independent states of Central America.

STATE OFFICERS.—The President of the Republic is Dr. Adam Cárdenas (successor to Señor Don Joaquin Zavala), inaugurated on March 1, 1883. The Cabinet comprised the following Ministry: Foreign Affairs and Public Instruction, Señor Francisco J. Medina (*ad interim*); Interior, Justice, and Public Worship, Licentiate V. Navas; and Finance, War, and Marine, Colonel J. Elizondo.

The President of the Senate is Señor Don B. Guerra; and the President of the Chamber of Deputies, Señor Don J. G. Bolaños.

FOREIGN REPRESENTATIVES.—The Consul-General of Nicaragua in New York is Mr. Alexander J. Cotheal, and the Consul is Mr. C. R. Flint.

The United States Minister accredited to the five Central American Republics, and resident at Guatemala, is Mr. H. C. Hall; and the United States consular agent at the port of Corinto, is Mr. E. Deshon.

ARMY.—By the terms of the new military code, all male citizens of the republic between the ages of eighteen and fifty-five years are compelled to serve in the army. The strength of this last is reported at 703 rank and file (regular troops), and 9,600 militia.

PUBLIC INSTRUCTION.—To the details given in the volume for 1881, it may here be stated that measures have been taken for the establishment of schools for females at Leon and Granada, under the auspices of the Government. The teachers in these, as is the case in most of the schools throughout the country, will be foreigners. A corps of French instructors was to arrive in the early months of 1883 for the School of *Artes y oficios* (*arts and trades*). The salaries of the director and four sub-directors were fixed at \$3,600, \$1,600, \$1,500, \$1,400, and \$1,300, respectively. The State Library at Managua (the capital) contained, with recent accessions, 10,000 volumes. It is only within the past six years that the central Government has assumed the direction and defrayed the expenses of this important branch, and the expenditure steadily increased in each successive year, having amounted to \$185,816.44 for the biennial period 1881-'82, against \$111,215.90 and \$61,546.99 for 1879 and 1880, and 1877 and 1878 respectively. Military schools were organized in Managua, Granada, and Leon, where the instruction was to comprise reading, writing, arithmetic, and *moral militas*.

\* See "Annual Cyclopaedia" of 1881 for statistics of area, territorial divisions, population, etc.

**FINANCE.**—The national revenue for the biennial period 1881-'82 amounted to \$3,351,766.60, against \$2,436,093.39 for 1879-'80, as stated in the *Cuenta General del Tesoro* published by the Minister of Finance in January, 1883. Of the revenue for 1881-'82, \$1,275,506 were derived from the custom-house; \$779,811 from the spirit-tax; \$447,029 from the tobacco-tax, and \$193,703 from slaughter-houses.

The following table shows the amount and branches of the expenditure for the biennial fiscal period 1881-'82:

Executive, Legislative, etc., Departments.....	\$112,548 42
Ministry of the Interior, etc.....	518,068 99
" War and Marine.....	889,466 89
" Foreign Affairs.....	762,457 82
" Finance.....	1,353,611 87
Sundries.....	109,787 87
Total.....	\$3,240,940 86

Hence there resulted a surplus of \$110,826.24.

Referring to the remarks given in the volume for 1881, on the subject of the national debt, it may not be uninteresting here to transcribe the observation of the Minister of Finance contained in his report presented to the Congress at the end of the year: "The only foreign debt, as you know, that weighed upon the republic, constituted our share of the Federal debt of 1824. The *Memorias* successively laid before you relating to the biennial fiscal periods 1875-'76 to 1879-'80 apprised you that on March 27, 1874, that indebtedness was *settled*, with the legal representative of the holders of the old Central American bonds, at £31,510, and that the state faithfully kept the agreement then made. As I had the honor of informing you in my *Memoria* for 1879-'80, the debt at the end of 1880 was reduced to £4,170 15s. 6d., which remained unpaid because the bondholders did not present their titles, notwithstanding due publication of the agreement, and that the latter had been promptly complied with by the state. It was supposed that the whole of the bonds would, in the course of so long a time after their emission, have been redeemed, but during the biennial period 1881-'82, £1,100 were paid through Messrs. Jimenez & Sons, of London. Thus this debt is brought down to the insignificant sum of £4,011 15s. 6d., which the Government is ready to discharge on presentation of the bonds. Hence the national revenue is not encumbered by any foreign debt."

The home debt, which at the end of 1880 stood at \$920,257.70, has since been reduced to \$426,352.55, as appears from the official report above referred to.

**COMMERCE.**—The exports for the biennial period 1881-'82 were of the total value of \$4,022,317.51, against \$3,708,331.95 for 1879-'80. Chief among the staples sent out of the country were coffee and India-rubber, which together represented 50½ per cent of the entire exports.

The following tables exhibit the quantities and values of these articles exported in the periods therein expressed:

## COFFEE.

PERIODS.	Quantities.	Price.	Value.
	Quintals.*		
1877-'78 .....	86,119.90	\$15 20	\$546,401 99
1879-'80 .....	80,574.69	10 60	855,620 25
1881-'82 .....	120,266.64	9 00	1,082,899 76

## INDIA-RUBBER.

PERIODS.	Quantities.	Price.	Value.
	Quintals.*		
1877-'78 .....	84,993	\$45 00	\$1,662,210
1879-'80 .....	29,729	45 00	1,337,505
1881-'82 .....	29,315	45 00	1,319,175

In view of the progressive depression in the price of coffee in all markets, and the continued decrease in the production of India-rubber, it is apprehended in Nicaragua that the balance of trade, now so largely in favor, will at no distant day be turned against the republic. In the mean time, with increased facilities of transport by rail, the general foreign commerce will be considerably developed, and dye-woods will come to compensate in a measure decay in the coffee and rubber exports.

The imports for the period 1881-'82 were of the total value of \$3,362,544.44, against \$2,936,483.96 for the period immediately preceding. By far the largest portion of the foreign trade is with Great Britain (the exports to which in 1881-'82 were of the value of \$1,263,439.10, and the imports from which \$1,378,674.66), the United States (exports to, \$1,655,960.88—imports from, \$812,906.07), and France (exports to, \$366,374.32—imports from, \$641,307.28). Next in order follow Germany, and the other states of Central America. The trade in the biennial period last past was divided as follows between the several ports of the republic:

Corinto.....	{ Exports.....	\$1,337,669 98
	{ Imports.....	1,262,841 00
San Juan del Norte.....	{ Exports.....	1,556,818 86
	{ Imports.....	1,266,219 91
San Juan del Sur.....	{ Exports.....	408,464 65
	{ Imports.....	309,759 64
Chinendega.....	{ Exports.....	44,925 17
	{ Imports.....	18,866 83

Of these ports, the second is on the Atlantic, the other three on the Pacific coast.

**RAILWAYS, TELEGRAPHS, ETC.**—The railway † now in course of construction was completed and open to traffic as far as Chinendega in 1882; and it is confidently expected that by November, 1884, there will be uninterrupted communication by rail from the Pacific terminus of the line to Managua and Granada, when transit by rail and water from ocean to ocean will at last be an accomplished fact.

Telegraphic communication with Honduras, *via* Paraiso, was established during the year, and with the remainder of the world by the Central and South American submarine cable; and the tariff for dispatches to all points of Central America was reduced to uniformity with that for messages within the republic.

\* Of one hundred pounds.

† See "Annual Cyclopædia" for 1881, p. 662.

Nicaragua joined the Postal Union in 1882.

MISCELLANEOUS.—A steam soap-factory was put in operation in Leon, and bids fair to prove successful.

A treaty of extradition with Colombia was signed on July 3, 1882.

In the United States increasing interest is taken in the consummation of the Nicaragua interoceanic canal route.\* The Legislatures and Boards of Trade of the Pacific States have urged the Government to aid the scheme; subscriptions to stock in the canal were reported as having been made in San Francisco, and it was deemed probable that New Orleans would warmly support that initiative. The promoters of the enterprise announce their determination to prosecute it, spite of puissant adversaries, and to commence work at once in the event of obtaining the three per cent guarantee which they seek from the United States Government.

NON-INTERVENTION AMONG NATIONS, THE PRINCIPLE OF. SOME RECENT VIEWS.—The justice of the intervention or non-intervention of the supreme authority of one nation in the internal affairs of another nation is one of those questions which occur in the science of international law. Its solution in any case which may arise should, therefore, be found in the rules and customs recognized in such law. What, then, is international law? The term "law" is generally defined to be a rule of action prescribed by a superior, and commanding what is right, and prohibiting what is wrong. It is in consequence of this prescription of the superior that the obligation to obedience arises in those on whom the law is imposed, and the justness of the act commanded, and the unjustness of that prohibited, is inferred. With a precise use of language, therefore, it is evident that the term law can not be applied to the science embraced in international law, unless there is a superior to prescribe its rules, and to decide relative to the justice or injustice of actions. How can this take place, since the subjects of international law are sovereign nations, and the matter of its rules consists of their mutual relations and actions? The earliest writers on the science seem to have been aware of an impropriety in the use of such a designation. This is indicated by the titles of their works. Thus Grotius, regarded as the founder of the science, entitled his book "On the Rights of War and Peace." Hobbes afterward wrote "De Cive," or on citizenship; and Puffendorf called his distinguished work "Of the Law of Nature and of Nations." He was followed by Bynkershoek with "Questions on Public Law," Wolf on "The Law of Nations," and Vattel "On the Law of Nations." The term "international law" was introduced by Jeremy Bentham about 1790, and, notwithstanding many objections by others, it has become generally accepted as the appropriate designation of the science. But it would seem that the

most perplexing points which came under the consideration of these writers, were those which treated of the prescriptive authority of a law of nations, and of the obligation to obey it. Both of these are necessary elements of a law, and the position which they occupy in international science is very distinctly stated by Wheaton.\*

THE OBLIGATION OF INTERNATIONAL LAW.—"There is no legislative or judicial authority, recognized by all nations, which determines the law that regulates the reciprocal relations of states. The origin of this law must be sought in the principles of justice applicable to those relations. While in every civil society or state there is always a legislative power which establishes, by express declaration, the civil law of that state, and a judicial power which interprets that law and applies it to individual cases, in the great society of nations there is no legislative power, and consequently there are no express laws except those which result from the conventions which states may make with one another. As nations acknowledge no superior; as they have not organized any common paramount authority for the purpose of establishing, by an express declaration, their international law; and as they have not constituted any sort of Amphictyonic magistracy to interpret and apply that law, it is impossible that there should be a code of international law illustrated by judicial interpretations. The inquiry must then be, What are the principles of justice which ought to regulate the mutual relations of nations—that is to say, from what authority is international law derived? When the question is thus stated, every publicist will decide according to his own views, and hence the fundamental differences which we remark in their writings."

ITS SOURCE OF AUTHORITY.—The views of various writers on the source of authority in international law, and consequently of the extent of its obligatory force, are worthy of notice. Grotius, the earliest of these writers, sought to lay down certain rules of justice which would be binding on men living in a state of nature, independently of any positive laws of human institution. These rules he designated as natural law, and aimed to apply them to mutual relations of separate communities living in a similar state with respect to each other. The substance of international law he thus makes to consist in certain rules of justice, binding upon men in a state of nature. These he designates as "natural law." The source of these rules of justice, and the ground upon which they rest for their obligatory force, are brought forward in his definition of natural law. These rules, he says, are the dictate of right reason, pronouncing that there is in some actions a moral obligation, and in other actions a moral deformity, arising from their respective suitableness or repug-

\* See "Annual Cyclopædia" for 1881, p. 662.

"Elements of International Law," second annotated edition.

nance to the rational and social nature, and that, consequently, such actions are either forbidden or enjoined by God, the Author of Nature. Actions which are the subject of this exertion of reason are in themselves lawful or unlawful, and are, therefore, as such, necessarily commanded or prohibited by God.\*

These views are in conformity with the philosophy of the period in which Grotius lived. They recognize an arrangement and order in all things, of which God is the author, and which is designed to be the immutable order of the universe. Within the province of human actions justice is the rule which secures the observance by them of that order, and injustice expresses the departure from it, and is a violation of the rule. Thus he finds the source or foundation of the rules which should govern the relations of nations to each other to be a part of that basis upon which rests the superstructure of all human actions, and that the authority for these rules is none other than that of the Creator and Author of all things.

But the application of this law of nature, as it is, related to man as an individual, and also to men united in one common society, soon led to a distinction in his views. Thus Wheaton observes: "The term natural law is here evidently used for those rules of justice which ought to govern the conduct of men, as moral and accountable beings, living in a social state, independently of positive human institutions (or, as is commonly expressed, living in a state of nature), and which may more properly be called the law of God, or the divine law, being the rule of conduct prescribed by him to his rational creatures, and revealed by the light of reason, or the sacred Scriptures. As independent communities acknowledge no common superior, they may be considered as living in a state of nature with respect to each other, and the obvious inference drawn by the disciples and successors of Grotius was, that the disputes arising among these independent communities must be determined by what they call the law of nature. This gave rise to a new and separate branch of the science called the law of nations—*Jus Gentium*."†

This law of nations Grotius distinguished from the natural law by the different nature of its origin and obligation. These features of the natural law have been stated, but the origin and obligation of the law of nations he attributed to the general consent of nations. This distinction has been also expressed by designating the one as the natural and the other as the positive or voluntary law of nations.

Neither Hobbes nor Puffendorf expressed an approval of this derivation of the origin and obligatory force of the positive law of nations. The former, in his work "*De Cive*," says: "The natural law may be divided into the natural law of men, and the natural law of states,

commonly called the law of nations. The precepts of both are the same; but since states, when they are once instituted, assume the personal qualities of individual men, that law, which when speaking of individual men we call the law of nature, is called the law of nations when applied to whole states, nations, or people."\* To this view Puffendorf implicitly subscribes, saying that "there is no other voluntary or positive law of nations properly invested with a true and legal force, and binding as the command of a superior power."† Here the issue is directly made between authority and obligation arising out of *consent* of nations, and the same arising under the law of nature. After denying that there is any positive or voluntary law of nations founded on the consent of nations, and distinguished from the natural, Puffendorf admits that the usages and comity of civilized nations have introduced certain rules, for mitigating the exercise of hostilities between them; that these rules are founded on a general tacit consent, and that their obligation ceases by the express declaration of any party, engaged in a just war, that it will no longer be bound by them.

Bynkershoek, who wrote later than Puffendorf, says: "The ancient juriconsults assert that the law of nations is that which is observed in accordance with the light of reason, between nations, if not among all, at least certainly among the greater part, and those the most civilized. According to my opinion, we may safely follow this definition, which establishes two distinct bases of this law, namely, reason and custom."‡ It will thus be seen that the sources and obligation of international law are, by this writer, laid upon the bases of reason and custom. The views thus far presented, with the exception of the latter writer, represent international law as a branch of the science of ethics, and consider it as the natural law of individuals applied to regulate the conduct of men in societies, called states. Wolf, the next writer, separated the law of nations from that which treated of the duties of individuals. He says: "Since such is the condition of mankind that the strict law of nature can not always be applied to the government of a particular community, but it becomes necessary to resort to laws of positive institution, more or less varying from the natural law, so in the great society of nations it becomes necessary to establish a law of positive institution more or less varying from the natural law of nations."§ He then advances the fiction of a great republic or commonwealth of nations upon whose assent this law of positive institution is supposed to be founded, and thus derives its origin and obligation.

Vattel, who followed Wolf, differs from him in the manner of establishing the foundations

of the voluntary law of nations. He says: "I do not find the fiction of such a republic either very just or sufficiently solid to deduce from it the rules of a universal law of nations, necessarily admitted among sovereign states. I do not recognize any other natural society between nations than that which nature has established between all men. It is the essence of all civil society that each member thereof should have given up a part of his rights to the body of the society, and that there should exist a supreme authority capable of commanding all the members, of giving to them laws, and of punishing those who refuse to obey. Nothing like this can be conceived or supposed to exist between nations. Each sovereign state pretends to be, and in fact is, independent of all others. Even, according to Mr. Wolf, they must all be considered as so many free individuals, who live together in a state of nature, and acknowledge no other law than that of nature itself, and its Divine Author."\* According to his view, the law of nations in its origin is nothing but the law of nature applied to nations; yet, he says, there are many cases in which the natural law does not furnish the same rule of decision between state and state as would be applicable between individual and individual. It is the art of accommodating this application to the different nature of the subjects in a just manner, according to right reason, which constitutes the law of nations a particular science.

The two last-named writers, together with Grotius, recognize an application of the natural law, to regulate the conduct of nations in their intercourse with each other. This is designated by the former as "the necessary law of nations," because they are absolutely bound to observe it, as it is binding upon states as upon individuals; while Grotius designates it as "the internal law of nations," being obligatory upon nations in point of conscience. By others this is termed "the natural law of nations," which is immutable, and founded on the nature of man. To embrace the whole science of international law, the first-named writers, Wolf and Vattel, recognize a voluntary law of nations, arising from the presumed consent of nations, a conventional law resulting from compacts between particular states, and a customary law resulting from usage between particular nations. The obligation of the voluntary law, Vattel establishes in a manner unlike Wolf, as above mentioned.

The view of Heffter, a writer of distinction, is that the law of nations is a law common to all mankind, which no people can refuse to acknowledge, and the protection of which may be claimed by all men and by all states. He places the foundation of this on the incontestable principle that wherever there is a society there must be a law obligatory on all its members; and hence deduces the consequence that there must be likewise for the great soci-

ety of nations an analogous law. Again, he says: "Its sanction (the law of nations), or the obligation of all men to respect it, results from the moral order of the universe, which will not suffer nations and individuals to be isolated from each other, but constantly tends to unite the whole family of mankind in one great harmonious society."\*

An eminent French writer on this science† questions the propriety of using the term "law of nations" as applicable to those rules of conduct which obtain between independent societies of men. "There can be no right where there is no law, and there is no law where there is no superior; without law, obligations, properly so called, can not exist; there is only a moral obligation resulting from natural reason." M. Hautefeuille, an admirable French writer, says: "From the primitive law, that is, from the natural law, flows the entire international law. Its principles are not only to be found in Grotius and Hobbes, but they are in the hearts of all men. The natural law executed with exactitude, would secure to all nations the tranquil exercise of all their rights, that is to say, peace and happiness."‡

Mr. Wheaton gives us this definition of the science: "International law, as understood among civilized nations, may be defined as consisting of those rules of conduct which reason deduces, as consonant to justice, from the nature of the society existing among independent nations; with such definitions and modifications as may be established by general consent."§ The sources of international law, he says, are text-writers of authority, treaties of peace, ordinances of particular states, adjudications of international tribunals, written opinions of official jurists, and the history of wars, negotiations, and other transactions relating to the public intercourse of nations. His view of the obligatory authority of these rules of conduct must be sought for in his definition and general remarks. Thus of the text-writers of authority he says, "Without wishing to exaggerate the importance of these writers, or to substitute in any case their authority for the principles of reason, it may be affirmed that they are generally impartial in their judgment." Here the authority is ascribed to the principles of reason, or rather, principles deduced by reason. In the definition he makes the substance of international law to consist of those rules of conduct which reason deduces from the nature of society. The distinctive powers of man are reason and free-will; the former to deduce the truth, and the latter to choose or accept it. The great principle that determines the character of all the actions of men toward each other, is justice. When, therefore, Mr. Wheaton requires in

his definition that the rules of conduct shall be deduced by reason, as consonant to justice, he assigns to them the highest authority which can be ascribed to intellectual approval. But if the investigation be pursued, and it be asked, whence the simple deductions of reason consonant with justice derive authority over human actions, the answer will show that it is from the same source from which the natural law derives its authority, viz., the Creator of all things.

In another place he presents the following remark: "Grotius would, undoubtedly, have done better had he sought the origin of the natural law of nations in the principle of utility, vaguely indicated by Leibnitz, but clearly expressed and adopted by Cumberland, and admitted by almost all subsequent writers as the test of international morality. But in the time when Grotius wrote, this principle, which has so greatly contributed to dispel the mist with which the foundations of the science of international law were obscured, was but very little understood. The principles and details of international morality, as distinguished from international law, are to be obtained not by applying to nations the rules which ought to govern the conduct of individuals, but by ascertaining what are the rules of international conduct which, on the whole, best promote the general happiness of mankind."\* Here it would appear as if utility was the principle by which to test the right or wrong in the actions of nations toward each other; commending that which is useful as right and promoting the general happiness of mankind, and prohibiting that which is not useful as wrong and injurious to the general happiness of mankind. But there can be no incompatibility between true utility and true justice. Why, then, in one instance say that the principle of utility is admitted as the test of international morality, and in another instance say that international law consists in those rules of conduct which reason deduces as consequent to justice from the nature of society, etc.? If the precepts of international law are consonant to justice, then the observance or the violation of them determines their international morality, which in no sense can be determined by utility, although it may be consonant with it.

Turning now to the Italian school of writers, one of the most eminent† presents this view: "If the society of nations is governed by natural law, the atoms which compose it must be absolutely equal. Men under the scepter of nature are all equal, and accordingly commonwealths are equal if the international state be one of nature. The proposition that independent communities, however different in size and power, are all equal in the view of the law of nations, has largely contributed to the happiness of mankind, though it is constantly threatened by the political tendencies of each successive

age. It is a doctrine which probably would never have obtained a secure footing at all if international law had not been entirely derived from the majestic claims of nature by the publicists who wrote after the revival of letters."

The opinions of these writers on international law, thus briefly presented, serve to show upon what an uncertain foundation the authority and obligation of its precepts seem to rest. Sovereign states being considered as the subjects of its commands, there is not to be found anywhere a state so supreme as to prescribe, with the authority of a superior, rules of conduct to others. Indeed, their relations to each other seem to resemble very much those of an individual in social life, who is said "to be on his good behavior." If, however, he violates the tacitly approved courtesies and rules of society, he is pronounced "disorderly," and is approached by a representative of an authority which has the right to command and the power to enforce.

Nothing like this exists among sovereign states, but various substitutes have been suggested or attempted, such as a permanent congress of states, a confederation of states, etc., all of which have been temporary in their nature, and without efficient obligatory force. The conference of certain European states at Constantinople during the year, relative to the affairs of Egypt, presents an illustration of the highest condition to which a practical application of international law has attained. The arbiters of Europe assembled to decide the fate of Egypt, not upon the principles of justice, but upon such terms as shall preserve the peace of Europe.

VIEWS OF THE ITALIAN SCHOOL.—But, without pursuing this aspect of the question further, it will now be interesting to turn to Italy and consider the views there advanced. Italy, consisting of several distinct and independent governments, as is well known, has been "unified," as it has been termed, under the government of the strongest. A revolution so extreme in one aspect, a consolidation so vast in another; a confederation of such incongruous elements in one sense, a subjugation so entire in another, embracing as it does a church asserting universal and more than human moral authority, must, in whatever manner it is viewed, elicit a multitude of interesting questions. None of these is it here proposed to notice, but simply to present those declared principles of international law under which it is maintained that all these events can come to pass in perfect accord with the principles of justice, and be secured in permanence consistently with the principles of honor and rectitude among states. "The change," said Cavour, "which has just been accomplished in Italy, has not only been inspired by the principle of liberty, like the English Revolution of 1688; it has been founded on the right of nationality, which gives it additional force."\*

BEGINNING OF THE SCIENCE.—The latest of Italian writers assumes that the science of international law really began to exist after the Peace of Westphalia in 1648, and was one of the fruits produced by the changes made under the religious revolution of the preceding century.\* The emancipation of humanity from Catholic theocracy placed man at the head of secular affairs, and released his free-will from all restraints except those which were approved by his personal reason. This constituted liberty as an essential right of human personality. "In fact, a man is not a person if he is not free; and Aristotle called slaves half-men, because they are deprived of personal liberty.† Liberty, however, we do not understand in the cloudy sense given it by many philosophers. In our meaning, liberty is that which was defined by the great Revolution of France in the last century; it consists in doing all that is not injurious to others. And so long as one man does not impair the liberty of another man, so long does he exercise his right; for right, according to us, is the assemblage of those conditions under which the free-will of every one may co-exist with the free-wills of all the others. Now, because the state, as Plato used to say, is man considered on a grand scale, the same principles, which do for individuals, do for states; and international law is nothing else than a system of principles by the means of which the free-will of one state may co-exist with the free-wills of the other states; in other words, it is the right of nature applied to the mutual relations of states among themselves. According to our view, the state is the people organized to unity: *Civitas*, as Cicero said, *est constitutio populi*; *populus autem est, non omnis coetus quoquo modo congregatus, sed coetus multitudinis juris consensu et utilitatis communione sociatus*. Hence it is natural that in every state there should be a *suprema potestas* which governs the multitude, a sovereign power which is the expression of the will of the organized multitude. Now, when a state is governed by a supreme power which habitually exercises its sovereignty over the people without being subject to any foreign control, then there is autonomy and independence, which consists in a spontaneous, habitual, and complete sovereignty.‡ Any one, therefore, who will meddle in the internal affairs of a state violates its independence and autonomy; non-intervention, therefore, as a principle, is nothing else than the respect due to the independence and autonomy of states. And as personal liberty is for the individual, so independence is for a state the most precious good. Without this there can be neither moral dignity nor power, nor prosperity, nor glory in the state, nor respect for it on the part of others. A state without independence is a carcass—a body in which life is wanting. Non-interven-

tion, therefore, as a principle, is just and lawful, because it is the observance of the liberty of states; wherefore it must be scrupulously respected, even when to violate it might be advantageous; for justice must at all times prevail over utility; and, besides, history informs us that the violation of justice, although it may have been profitable for a short time, has ultimately proved detrimental. For us, therefore, utility has a value only when it is supported by justice. Consequently, every independent state is free to do at home what it pleases; and, even if it violates justice, provided its acts do no injury to others, it is fully sovereign, because there is no power superior to states, and no state has the mission of executing the avengements of justice, outside the limits of its own territory."

EXPLANATION.—A few words in explanation are necessary to set forth the view here presented. The writer says: "Now, because the state, as Plato used to say, is man considered on a grand scale, the same principles which do for individuals, do for states; and international law is nothing else than a system of principles by the means of which the free-will of one state may co-exist with the free-wills of the other states; in other words, it is the law or right of nature applied to the mutual relations of states among themselves."

The prime natural rights of man are life, liberty, and the pursuit of happiness, and "for the protection of these rights governments are instituted."\* That is, among the highest rights of man, is the right to his life, and to the safety and liberty of his person. This right is often designated as sacred; as if it were, on the one hand, a possession of the highest value to the individual, and, on the other, beyond the reach of violability by any one. The man has the universally recognized right of peaceable possession and enjoyment, which is attended by the corresponding duty obligatory upon every other man, not to interfere with or disturb this possession. But the right of peaceable and secure possession on his part is a right of non-interference and non-intervention as regards all others. For right, says this writer, "is the assemblage of those conditions under which the free-will of every one may co-exist with the free-wills of all the others." Therefore the right of non-interference and non-intermeddling by others is no less a right than that of peaceable and secure enjoyment, if, indeed, the one expression is not the equivalent of the other.

SOURCE OF THE PRINCIPLES.—Now it is from this source that the writer derives the principles of international law; or, rather, with him, these are the principles of that science. He says: "The same principles which do for individuals, do for states; and international law is nothing else than a system of principles by the means of which the free-will of one state may co-exist with the free-wills of the

\* American Declaration of Independence, 1776.

other states; in other words, it is the right (law) of nature applied to the mutual relations of states among themselves." The obligatory force of this law is, therefore, the same as that which obliges a man not to interfere with the life or liberty of his neighbor. Asserting the equal sovereignty and independence of all states, it follows that to each belongs the right of non-intervention or non-interference as against all others. France, subsequent to her first revolution of 1789, when threatened by successive coalitions of the great European monarchies, relying on the independence of nations, contended for non-intervention as a right.\* Understood as an expression of the independence of states, the principle of non-intervention is not denied by any publicist; and even the famous "Holy Alliance" of European sovereigns, which was a negation of that principle, while it violated the principle, professed to respect the independence of nations.

NON-INTERVENTION EXPLAINED.—But an explanation of the term "non-intervention," as here used, is necessary. "In order rightly to define the question of non-intervention," says this writer, "we begin with giving the true meaning of the word *intervention*; and this is the more necessary, because intervention is often spoken of in various senses, and many times in a sense different from that which it ought to have: 'According to the strict signification of the word, to intervene would express the interposing of one or more powers between two peoples at variance, or between the contending parties of one and the same people. And this is understood of armed, or, at all events, coercive intervention; inasmuch as the non-coercive and simply amicable is never and in no case unlawful, and in most cases it is even wished for and welcomed. In diplomacy, however, the modern use of that word makes it more properly to signify the interfering of one or more powers in the internal affairs of an independent state, whenever the condition of those affairs is likely to prove of serious detriment to others.'† We intend by intervention to designate meddling in the internal affairs of a nation, let this be amicable—which, though caused by the brotherhood of peoples, is yet unlawful and humiliating—or let it be coercive; for either form of it constitutes an intermeddling. And from the idea we assign to the word *intervention*, it will follow that the principle of non-intervention is applicable to all those cases in which a foreign state will interpose in the relations existing between government and governed, between citizens and citizens of one and the same nation."

WHEN IS A NATION RESPONSIBLE FOR ITS ACTS?—Nations being thus constituted, each equal in sovereignty and independence, and as possessing an absolute right of non-interven-

tion on the part of others, it may be asked, When is a nation responsible for its acts? Then only is a state responsible for its acts when these impair the right of others; and then there is injury done to the right of others when this right is so just and evident that the violation of it is manifestly prejudicial, or seriously dangerous, to the power concerned. Thus, a state, whose existence should be made to depend on the injuries done to others, has no right to exist; and intervention there is just, because the independence of any one must never be exaggerated to the point of becoming injurious to the independence of others. Such states, therefore, as should intend to live by piracy, would have no right to exist. In like manner, a state which should purpose to found for itself a universal monarchy, or declare its intention to impose its own principles on other states by the force of arms, would violate the independence of others, and should be punished.\*

Great caution is required here, says the writer, and he maintains that this extreme remedy should be adopted only when no satisfactory diplomatic explanations are given, and when a state provokes agitation in other countries and violates their independence to such a degree as to render an armed intervention for their very existence indispensable. "But so long as such declarations of principles are only poetical aspirations, so long as foreign states have the power of repressing agitations within their own limits, they must abstain from invading the territory of a threatened state, and not act as the potentates of Europe did in the last century, when they invaded France under the pretext of a platonic declaration issued by the French constituency—that it would with arms support those people in foreign countries who should demand their freedom. This intervention was unjust, and has been the source of many great evils, because that declaration did not constitute a grave danger to the existence of the intervening states, as they possessed within themselves the power to suppress any rising of their own people. We hold that intervention is to be used only as an extreme remedy under circumstances of the most serious character. In this case it is not a violation of our principle. For, certainly, that state which proclaims universal monarchy, or intends to enforce on another people the observance of its own principles, does not exercise a right belonging to it, because it oversteps the limits of its own territory; and hence it follows that the intervention is just—nay, according to our views, there would be in this case only legitimate defense on the part of foreign states, but no intervention, as no internal affair of the threatening state is interfered with."

\* If the end of the last and the beginning of the present century saw all Europe combined against France, it was not on account of the internal changes which France thought necessary for her own political and civil reformation; but because she attempted to propagate, first, her principles, and afterward her dominion, by the sword.—Lawrence's Wheaton's "Elements," p. 122.

\* Lawrence's Wheaton's "Elements," etc., p. 120.

† "New European Public Right," chap. ix, § iv.

"In like manner, every meddling of one State in the affairs of another state for the purpose of protecting its own interests or the interests of those who live under its administration, provided these interests are based on justice, is legitimate defense, not at all contrary to the principle of non-intervention, which remains firm and unshaken."

**OBJECTIONS TO THE PRINCIPLE.**—Having shown the justice and lawfulness of the principle sought to be established, the effort is then made to refute all objections by an examination of the various cases of intervention. In relation to forms of government, it is held that the independence of states being admitted, it is natural that each gives to its own government the form answering to the wishes of the people who are to live under it; and each has the fullest right of molding itself into a republic rather than a monarchy, or into a representative rather than an absolute monarchy. Everybody is master of himself in his own house; and since national sovereignty is absolute and inalienable, and there is no superior authority, it follows that every nation, either by itself or through its representatives, is the sole and supreme judge in the choice of its own head, and of the manner in which its sovereign powers are to be constituted, organized, and exercised: governments are made for the nations, not nations for the governments. This is the theory—that all government originates with the people; whatever form they please, they may give to its administration. Referring to the author of the "New European Policy," this view is presented: "The liberty possessed by every nation to govern itself internally has two very different aspects. The one regards the dictates of what is true and good; the other the lawful relations with foreign states. With reference to the first aspect, certainly it is unlawful for a people to act against the principles of moral and political reason; as to the second, however, it appears manifest that within its territorial limit a state may make a good or ill use of its own right, in the same manner as the possessor of an estate may squander away his own property and sink from wealth to mendicacy. If the loss and the guilt remain within the erring state itself, and if nothing goes out beyond its frontiers, except the erroneous example and influence, the legal confines of nations are still untouched, and the external autonomy remains inviolable. A different conclusion would be reached if a people agitated by intestine discords and insurrections should send into the neighboring provinces secret emissaries, arms, money, prints, books, etc. Such a half-armed and perfidious manner of propagating its own maxims does certainly break the reciprocal faith of nations, and furnishes a right to repel it by the use of means sufficient to the end. But what else was done at Lubiana and Verona, except clothing with legal and solemn forms an armed propaganda of certain principles? What did the Austrian

army teach by forcibly entering into Piedmont, the Romagna, and Naples, except the unlimited sovereignty of princes and the irreparable servitude of subjects? What did the Duke of Angoulême intend to demonstrate to the Castilian people with his bayonets, but this most singular proposition—that it was unlawful for Bonaparte to spread by force beyond the Pyrenees the maxims of 1789, but that it was just and lawful for the Bourbons to spread by force the doctrine of divine right? Hence, either the independence and the internal sovereignty of states do not exist, and can receive a limit from the will and pleasure of some foreign states; or it must be admitted that the right of armed intervention can never be used where that sovereignty, although it makes a wrong use of itself, yet does not in fact exceed its territorial limits; and what it sends out beyond them is only the invisible and incoercible action of example and opinions, only the distant echo of words, the mysterious union of moral sympathies."\*

Again, it is argued by the writer that governments which are the best, and thoroughly based on justice and reason, are not disheartened at the sight of contrary examples; for, to false and subversive ideas they oppose sound and preservative ones: nay, the sight of a tumultuary multitude elsewhere, with its excesses of all sorts, would prove most useful to teach moderation and instruct their own people, as the sight of the drunken slave was a lesson of sobriety to the Spartan. England, separated from French soil by a narrow strait of the sea, was undisturbed by the half-republican, half-social revolution at Paris in 1848. Holland suffered nothing from it; Belgium nothing—a narrow country, without frontiers, and almost inclosed within France, but governed by the best institutions. Hence, either the example, the opinions, the principles of your neighbor are corrupt and fatal; and in this case it will suffice to show their wickedness and turpitude, even if this were not soon enough demonstrated by their effects; or the work of your neighbor and the maxims he inculcates agree with truth and justice, and, in that case, your intervention for the purpose of overthrowing and trampling them under foot is as wrong and unlawful as it is powerless and ineffectual. Why does a dogma of truth and justice acquire with time and exert a much greater power, by itself alone, than all the armies, the policies, and the statutory decrees can give it?

**A METAPHOR EXPLAINED.**—To the lively metaphor urged by certain diplomatists a thousand times, to represent the injustice of the principle of non-intervention—viz., that when a neighbor's house is on fire, one does not hesitate and wait, but runs and enters, with every instrument he can get, to extinguish the flames as soon as possible—they say we act in like manner when the terrific conflagration of rev-

\* Mamiani's "New European Public Law," chap. xl.

olutions is burning near us, and threatens our own houses. To this objection it is replied that a less unfit comparison would be to say that, in your neighbor's house, they have begun to lead a licentious and disorderly life; much different, at all events, from your own. You at once perceive that you have no reason and no right whatever to intrude upon your neighbor, and compel him to change his morals and his ways of life, since he works no injury or loss to your property; does not associate with your children, for the purpose of seducing and corrupting them; does not, in a word, trespass on that limit within which the private liberty of citizens is maintained co-existently. In fact, some aver that those changes and revolutions, on account of which the autonomy of states is broken up, are a destructive and devouring fire; whereas others deny it, and consider it a better metaphor to say that political changes and revolutions must be likened rather to those vehement but momentary remedies by the means of which nature cleanses, transforms, embellishes, and reordains its works.

INTERVENTION WHEN ASKED FOR.—To the question whether the intervention when asked by the state itself is just and lawful, it is said in reply that many writers have acknowledged it to be just in a certain manner. But apart from this consideration it is urged as necessary, in the first place, to see whether the intervention is asked for by the general will of the state, or by the governing power, or by the people respectively; for, when government and people unite to request the intervention of a foreign state, they perpetrate an injustice, because they abdicate their own independence and sovereignty. The general will is that which ought to prevail, and an appeal to foreign mediation is unnecessary for accomplishing its ends. If the intervention is called for by a people against their sovereign, it is equally unjust. A people that is pressed down by a tyrannic government rebels, and a civil war ensues, in which each of the opposite parties has a supreme power and a standing army; is there a necessity of recognizing in them the character of belligerents, and of intervening in favor of either? To this question it is said, in reply, that if the principle of nationality is involved in the case—that is, if the contestants are of distinct nationalities—the intervention is just and holy; but if the case presents the spectacle of a truly civil war between citizens of one and the same nation, the intervention is unjust and wrong. Upon this question international science is divided. Grotius, Vattel, Heffter, and Phillimore admit the intervention. The Italian school denies it. They say that foreign intervention is useless, because, to decide upon internal affairs, belongs to the people; and as civil contests are confined to internal affairs, all intermeddling with them must be abstained from; that one of the contending parties will win which has

the greater strength and number of adherents. Neither is intervention in favor of the people against a tyrant just; for the army, which defends the king, is nothing else than the armed nation, and when the people justly rebel the soldiers will of course fraternize with the insurgents. It is impossible to suppose that a man, in order blindly to follow the commands of his superior, will unsheath his sword, and push it against the breast of his father, or brother, or son.

VIEWS OF NATIONALITY.—Where the principle of nationality is involved, it is above admitted that the intervention would be just and holy. This admission undoubtedly follows from the special views entertained of the subject of nationality, and upon them is principally based the division which separates the Italian school from other writers. Some notice of these views should here be taken. It has been said by the distinguished Carutti that "the ill use of nationalities is the most enormous crime man has perpetrated on earth. In the eyes of those who look sharply into the past, slavery and the so-called castes are nothing but the consequence of the conquests of nations over nations. The generations who succeeded to the first invaders have received their ancestors' inheritance and maintained that servitude of individuals which had been originally imposed on the conquered people as a means of domineering over them. National personality is as much sacred as the individual, and the dominion of one nation over another nation is to the same extent iniquitous as the dominion of one man over another man; neither long possession, nor compacts, nor benefits conferred can justify it."\* The chief objection urged against the principle of nationality, to the end of denying it, has been brought by those who declared that it was a thing of difficult determination. It is said, in reply, that there are certain characters which, notwithstanding their imperfections, do yet constitute nationality. Not to speak of race, which embraces many nationalities, we have the language, which is the most potent factor of nationality; wherefore Fichte's saying is asserted to be always true—"the tongue is the nation." Some exceptions to the contrary notwithstanding, peoples who speak the same language have a feeling of their common origin, a feeling of brotherhood and affection, because language is the most powerful bond that unites men among themselves. History, manners, laws, religion, and territory are potent means of constituting nationality. But the greatest force of cohesion which becomes the most potent factor of nationality, and which joins again all the separate and dispersed parts of a nation, is the sentiment of political consolidation, and the consciousness of nationality which has been set down as a basis of this principle by Mancini, to whom has been ascribed the honor of having reformed "the international-

\* "De principiis del governo libero," lib. iii, cap. i.

al right (law)" by resting it upon the principle of nationality.\* Viewing this sentiment as true and just, and that every people has the right to form a state by redeeming itself from a foreign servitude, the question of intervention is presented. That is, the question whether or not it is lawful to intervene in favor of a people that rebels against foreign oppression and claims the right of constituting itself into an autonomous and national state. The Italian school, professing the principle of non-intervention in an absolute manner, acknowledges the justice and lawfulness of intervention in this case. In explanation, it is said that "there is not true intervention in the case; the question involved is not an internal one, but international. In fact, where there is not a constituent moral unity and a sameness of native country, there are virtually many states, and not one state; and therefore, if foreign armies rush in to help a people which sword in hand is justly demanding that autonomy of which it has been robbed, they do not properly make an act of intervention, because they do not use violence to meddle in the internal affairs of an identified political community, but to defend the cause of one nation against its external adversaries, and to give brotherly succor to a people that is unable to constitute itself into a national state."

INTERVENTION BY TREATY.—Again, it is asked if foreign intervention in the affairs of a state is not just and lawful, when it takes place by virtue of a treaty or convention? This is acknowledged to be right by the greatest number of writers.† In answer to the question, however, it is said by the Italian writers that treaties and conventions are contracts made between state and state, and are therefore subject to the same principles which regulate contracts. Now, the civil law declares null all contracts made against morality and against the laws. So treaties are null before the laws and morality, which contain a violation of morality and of justice; which impair the essential rights of states, one of which is their independence. Therefore those which allow foreign intervention are null. If they are made by the general will, it is sufficient to say that no nation has the power to abdicate its own autonomy; if the treaties are made by the sovereign, they are likewise null, because he, by constitutional right, has not the power to make treaties without the approbation of Parliament. If the sovereign is an absolute prince, he has not the power to make personal treaties in his favor and against the people whose chief and representative he is. Those treaties whereby the independence of a small and feeble state is guaranteed on the part of all the nations of Europe against the avidity of a powerful neigh-

bor, are not to be condemned. For, in such case, there is no intermeddling in internal affairs, nor in the form of government.

INTERVENTION AGAINST MERCENARY TROOPS.—Again, it is asked, If a government uses foreign mercenary troops as a means of support to act despotically against its people, whether foreign intervention in favor of the people and against the government is lawful? It has been shown that the intervention of foreign troops in favor of a sovereign against a people is unjust; therefore a foreign state may rightly step in and defend this people for the purpose of repelling the external force brought in contrary to the law of nations. So, likewise, the intervention of a state in favor of a people that rebels against the sovereign who is protected by mercenary troops, is just, because it does not aim at violating the autonomy and independence of the state.

UNION OF STATES.—Again, it is asked, if one state can unite itself with another, and out of two independent states constitute one state; and if in this case a foreign state may impede the annexation. The reply is, that "when there are many states politically independent of each other, yet belonging to one and the same nation, and they are willing to unite together for the purpose of constituting themselves into one national state, it is evident that they not only have the full right to do so, but by doing it they also integrate their own personality, and supply a natural want of the peoples to form an individual total, called national state." Therefore it is said that nothing could be more unjust than that a foreign government should impede the fusion of several states into one national unity, because every nation has the innate right of constituting itself into one single state. It is also declared to be an example of the scrupulous observance of the principle of non-intervention, when the constitution of nationality is involved which was given in 1860, when, by virtue of this principle, proclaimed by Napoleon III and by the Government of England, Italy was enabled to constitute its national unity by the annexations to Piedmont, under the dynasty of Savoy, of the other independent Italian states. Therefore it is concluded that when the principle of nationality is involved, all annexations are just and lawful, and the principle of non-intervention must be strictly observed.

ANNEXATIONS.—Annexations based on nationality have of late prevailed extensively in Europe. The basis of the present kingdom of Italy was unity of race, which was declared to be confirmed by popular sentiment, as indicated by universal suffrage. This principle was the plea for the incorporation with Sardinia, in 1860-'61, of Tuscany, Parma, and Modena, the greater part of the Pontifical states, and also of the late kingdom of the Two Sicilies. The conquest of Lombardy from Austria, and its cession to Sardinia by France, had previously been made. On the same

ground of national autonomy the cession of Savoy and Nice by Sardinia to France, by treaty in 1860, was defended. The King, in his proclamation to the inhabitants, said, "I could not forget that the great affinities of race, language, and customs render your relations with France more intimate and natural."\* The people of Germany long entertained the idea of a government based on a common nationality, with Prussia as the leader, before the consummation actually took place. At that period, also, the principle of nationality was invoked for uniting the conterminous peoples of common race in Turkey and Austria. It is also asserted that the annexation of one state to another, when, besides the proximity of territories, they have in common between them the same interests, sentiments, origin, traditions, wants, and manners, would be equally just and lawful. But it is a condition that such annexations should be the effect of the free-will of the two peoples. "For, if these annexations were willed, instead, by one only of the two peoples, and submitted to by the other, then, there being violation of the liberty of a people, every intervention for hindering such annexation would be just and lawful, because it would be a defense of the weak against the strong." It was alleged by those who resisted the annexation of some of the states of Italy, that an honest and impartial expression of the approval of the people had not been obtained.

**THE CASE OF SUCCESSION.**—Again, it is asserted that, in questions relating to successions, all interventions are unlawful, except when their purpose is to impede the fusion of nationalities; that intervention in favor of vassal states is just, because it is an anomalous alliance rather than an intervention; that it is just in favor of colonies which aspire to their own independence, also in the affairs of armaments; political equilibrium is combated as nothing else than a name employed to cover the ambition of some governments.

**THE CASE OF RELIGION.**—In the case of religion the following view is presented: "Any intervention having for its object to impose religion upon a people is unjust and unlawful, because it impairs the right which every man has to follow that which he believes to be true. Nor can we admit as just the intervention against a state which persecutes the followers of a given religion among its own people. . . . What shall we say of all those foreign interventions in favor of the papacy, which, under the pretense of defending religion, were stifling all liberty in peoples subject to the Catholic theocracy? In the eyes of right, such interventions are unjust and unlawful, because neither the defense of religion (which was in no wise threatened), nor the need of propping a political power adverse to the religious character, odious to the peoples themselves over whom it dominated, are means that justify foreign in-

tervention in the internal affairs of a state. But time has given justice its due. The famous breach of Porta Pia, on September 20, 1870, has avenged the oppressed: the political power of the papacy has fallen down for ever. Rome has become the capital of resuscitated Italy, and for ten years she has offered to the world the grand spectacle of her being the seat of a new kingdom, and the center of the Catholic faith. Liberty sits by religion: the spiritual independence of the Pontiff, more than to the law of the guarantees, a law of purely internal and not of international character, is intrusted to the honor and loyalty of the Italian people, who well know how to discriminate the sentiment of its own nationality and autonomy from the respect due to the religious liberty of the supreme Pontiff, and to the faith of their ancestors."

**THE ROMAN QUESTION.**—One might be led to suppose from the sentiments of this extract that\* "the political popedom (temporal power) has vanished before the supreme right of the Italian nationality," and that the well-known "Roman question" had ceased to exist. But to allow such a conclusion to remain would be to mislead readers. Some explanation, therefore, is here necessary. After the Government of Sardinia resolved to effect the "unification of Italy," and had prepared herself by temporization to cope with her powerful adversaries, she found her greatest obstacle to success was the Roman Catholic Church. This was an organization recognized by the European nations as sovereign and independent. It occupied a territory in Italy that had long been subject to the civil jurisdiction of its head, who received and sent forth ambassadors, and it was thus admitted to the rank of a civil power among nations. As such civil power it was the feeblest of all. But it likewise claimed to be a spiritual power, and asserted that it was organized and commissioned by the divine Redeemer of all men to be his representative on the earth, and to teach, with power to effect a reconciliation between him and them in their rebellion against him. These claims were recognized and respected and obeyed by the princes and subjects of most of the civil powers of Europe, among which were Sardinia and the states of Italy. Between the temporal and the spiritual there has been a perpetual conflict, and the question was now agitated in the public mind, why resort should not be made to civil liberty as the means by which to terminate the conflict between church and state. Count Cavour, then the Prime Minister of Sardinia, confiding in the omnipotence of political liberty, after mature reflection, launched forth the famous formula, "*A free church in a free state.*" He made it the compass by which to guide his policy.† In the memorable session of Parliament preceding his death he offered it as a

† "Rassegna Nazionale," of Florence.

guide to his successors; for himself it was necessary to provide by moral means for the liberty and spiritual independence of the Pope. It was the duty of Italy, entering at whatever moment into Rome, to provide such guarantees that there would be no occasion to regret the disappearance of the temporal power. Hence arose the general idea of guarantees to be accorded to the Pope, when the government of liberty should regulate the relations of church and state upon the ruins of royal prerogatives and the sovereign jurisdiction of the civil power in ecclesiastical affairs. After a few months Cavour died, and Ricasoli succeeded him. "The latter with his friends desired in the first place to make a serious trial of the formula of Cavour, and to conclude the religious question on such conditions that the Curia—as they believed—would be, in the end, obliged to admit that the situation of the Church in Italy was better than in all the other countries of Europe."\* But Ricasoli fell in 1862 under the furious blows of the radicals, and with him went all projects relative to Rome and the Curia. In 1866 a new ministry was formed, and he was again at its head. He was now convinced that, before taking a step, Italy should make known to Europe the real position in which she wished to place the Pope. The situation which ought to be made for the papacy should be regulated by a law † promulgated in ecclesiastical right and freely approved by the Italian Government. ‡ The retreat of the French troops would be the signal for the occupation of Rome by the Italian Government, with the assent or, at least, with the tacit approbation of Europe, satisfied beforehand by the law thenceforth to be called the law of guarantees. The form of a law on the plan stated above was presented to Parliament, and received with so much opposition as to produce a ministerial crisis. Two ministers retired in February and March, 1867, and Ricasoli followed in May. Four years later new political conditions obliged the Government to recede, and the project or bill so sharply rejected in 1867 was accepted in 1871 with the addition of Title I. The events of 1870 offered an easy occasion to the Italian Government to occupy Rome. It was done on September 20th. The cabinets of Europe observed a mysterious silence. They maintained their ambassadors around the Pope, a fact which, contrary to the hopes of the revolutionary element, signified that they considered him to be a sovereign. They acted then as if nothing had taken place on September 20th, although the Pope, since that date, had practically not been king. What, then, should the Italian Government do, and especially its prime minister Sella? The papacy presented itself before his face, surrounded by the College of Cardinals, representing Catholicity whole and entire, surrounded like-

wise by a European diplomatic corps, which persisted in seeing in it a sovereign; it was free and independent of all human power. Hence it was required to make a virtue of necessity and to inscribe, spontaneously at least in appearance, in the general laws a recognition of the sovereign dignity of the Pope, and to confer on him all the attributes of royalty. This first principle being adopted, it was necessary by enactment to legalize its consequences: recognize the authority and independence of the Sacred College, which, on the death of the Pope, could provide a successor and serve him as a full senate during his life. It was likewise necessary to recognize formally the European diplomatic corps accredited near the Holy See.

The first part, or Title I, of this law of guarantees, so far as relates to the manner of execution, was then, and continues, a general internal act, but in its practical application it is necessarily clothed with the complete character of international law. All that applies to the Pope, the Sacred College, the diplomatic corps resident near the Holy See, bears the character of relations with a foreigner. Whether willingly or not, it is a fact that Italy has desired by that law to reassure foreign powers against the fear which they had conceived lest innovations would be brought in their relations with the Holy See, in consequence of the presence of the Italian Government at Rome. In reality they have kept the right to send, to change, to suspend their ambassadors near the Pope, and the ambassadors are recognized, treated, respected, not only in the former pontifical state, but in all the kingdom, in the same manner as the diplomats accredited near the King. By this law Italy has willed, likewise, that the chief of Catholicity shall preserve his former independence, remaining a stranger to the kingdom, or, as one says, that he should preserve his extra-territoriality in his own palace, or without, even to the frontiers of the country, as if, although deprived of political power, he remained truly sovereign. By this law, again, Italy has willed that the foreigner who should be called to the cardinalate, or to any other position of ecclesiastical or pontifical administration, acquires *ipso facto* all the rights of an Italian citizen, so that he can be neither punished nor censured by reason of his execution of orders of the Pope and in the normal fulfillment of his functions. "If this is not matter of international law, let some one say in what international law consists."\*

OTHER CASES OF INTERVENTION.—Let us return to our subject. All intervention in relation to commerce is also asserted to be unlawful, unless it is based on treaties. So all intervention in civil wars, and in favor of humanity, is condemned. These conclude the cases passed under consideration. Without stopping to consider the various conflicts among European nations brought forward by this writer, in illustration of the principles he has endeavored to

\* "Deutsche Rundschau," of Berlin.

† Le droit publique ecclésiastique.

‡ "Rassegna Nazionale."

\* "Rassegna Nazionale."

establish, it will be sufficient to present the following extract from his concluding remarks: "In the first part of our work we have shown that the principle of non-intervention represents the autonomy and liberty of nations, and that it is the fundamental principle of the law of nations. We have seen that, whatever diplomatists and statesmen say of it,\* notwithstanding, it is the absolute rule of right which admits of no exceptions, save only in the case of defending a people's nationality and independence; in which case there is a brotherly succor, or an anomalous alliance, if one may so term it, rather than a true intervention. In the second part we have examined into the various cases of intervention that have occurred in modern times, condemning and justifying in conformity with these principles.

"Now we must answer an objection which naturally presents itself before us. It will be said, Where is the worth of the principles for which you contend, since history informs us that they are constantly violated and that international law has a purely moral value, it being deprived of the power of compulsion? We answer that the intrinsic virtue of a principle is not destroyed by the force which opposes or retards its practical application; that the science of right has performed the duties of its mission when, resting upon evident demonstrations, it declares successful injustice to be iniquitous, and, holding it up to the execration of the world, tends at least to impede its propagation and lessen its mischievous influence on the destinies of mankind. There is certainly no tribunal superior to states, which might punish the violations of the principles of international law; but we call to mind as profoundly true the maxim of the German poet, 'The world's history is the world's tribunal!' Yes, history is the people's tribunal; and it is in its immortal pages we see the fatal effects produced by the violation of the principle of non-intervention; the bloody wars of succession, the dismemberment of Poland, the terrific republican wars and the wars of Napoleon, the tragical end of Maximilian, are eloquent examples which show the justice of the principle of non-intervention, and the pernicious consequences produced by the violation of it. If there is no supreme tribunal, however, which might enforce the observance of this principle, it is the duty of a wise and enlightened policy to observe it and to cause it to be observed."

NORTH CAROLINA. STATE OFFICERS, ETC.—Governor, Thomas J. Jarvis; Lieutenant-Governor, James L. Robinson; Secretary of State, William L. Saunders; Treasurer, John M. Worth; Auditor, William P. Roberts; Superintendent of Public Instruction, John C. Scarborough; Attorney-General, Thomas S.

Kenan. United States Senators, Zebulon B. Vance and Matthew W. Ransom. Representatives in Congress (elect), Walter F. Pool, First District; James E. O'Hara, Second District; Wharton J. Green, Third District; William R. Cox, Fourth District; Alfred M. Scales, Fifth District; Clement Dowd, Sixth District; Tyre York, Seventh District; Robert B. Vance, Eighth District; Ridsen T. Bennett, State at large. The apportionment act of Congress, in conformity with the census of 1880, gave North Carolina nine members of the House of Representatives—one more than the number of her Representatives in the Forty-seventh Congress. As the Legislature was not in session to define the limits of the additional congressional district, and as there was no statutory provision for the election of a Congressman by the "State at large," the question arose as to what course should be pursued so that the State would have the full representation to which she will be entitled in the Forty-eighth Congress. The Governor requested the opinion of the Attorney-General, his "constitutional legal adviser," which that officer gave, to the effect that there must be "an express warrant of authority to hold a legal election"; that the election law of 1876-'77 makes no provision for holding an election "for a member of Congress to be chosen by the votes of the State at large," but says that the State shall be divided into eight districts, designating the counties embraced in each; that, though the power to make or alter the regulations made by the State for holding elections of Senators and Representatives is among the powers delegated by the Constitution to the Federal Government, that power was not exercised by the apportionment act, which only says that, if the State be entitled to an additional Representative, he *may* be elected at large, and if the number be decreased, the whole delegation *shall* be elected at large, unless the Legislature has provided, or shall otherwise provide, before the time fixed by law for the next election of Representatives; that the apportionment act has not undertaken to designate the "places" or prescribe the "manner," or "make" any "regulations" for holding such election; that the State statute fails to meet either contingency—an increase or decrease in the number of Representatives; that a change in the number necessitates a corresponding change in the election law, as well in the case of a gain of one member as if the number had been decreased, and that, for a legal election, the machinery or details must be provided by the law itself, and not supplied by inference or implication. "The fact that the law authorizes the election of officers *therein named*, by general vote, furnishes the best reason that it does not apply to officers *not therein named*." He therefore recommended that an extra session of the Legislature be called, as any action would be "illegal unless authorized by some positive statute." On the receipt of this opinion, the

\* Wheaton and Calvo, writers on international law, and Guizot and Chateaubriand, politicians, say that, in this matter, principles of certainty can not be set down, and that all depends upon the circumstances of the practical policy.

Governor addressed a communication to the Council of State, composed of the Secretary of State, Treasurer, Auditor, and Superintendent of Public Instruction, by whose consent alone he is authorized to convene the Legislature in extra session, which was as follows:

STATE OF NORTH CAROLINA, EXECUTIVE DEPARTMENT,  
RALEIGH, March 7, 1882.

*To the Honorable the Council of State.*

GENTLEMEN: The question which I submit to you to-day is, "Shall the Legislature be convened in extra session?" Upon this question I ask your advice, and, if your advice be in favor of the call, what time will you suggest as likely to work the least inconvenience to the members?

The extraordinary occasion which, in my opinion, makes an extra session necessary, is the new apportionment act giving North Carolina nine members of the House of Representatives of the Congress of the United States. Since and before the passage of this act I have given the matter a thorough and close investigation, and I can find no authority or machinery for the election of a member of Congress by the State at large. But desiring to get authoritative information on this subject, I asked the Attorney-General for his official opinion, intending to let his decision of the question be my guide. My letter to him and his reply are herewith submitted.

My constitutional legal adviser having decided that there is no machinery by which a member of Congress for the State at large can be elected, there is nothing else left for me to do but to ask your consent and advice to call the Legislature together to provide the necessary legislation. However others may feel and act, I am not willing that North Carolina, by any act or omission of mine, shall be deprived of any part of her representation and influence in the national Legislature, nor am I willing to take part in holding an election which I am advised by the law officer of the State is without authority of law. I am, very respectfully,

Your obedient servant,

THOMAS J. JARVIS.

The Council of State—the Secretary of State dissenting—decided that it was not necessary to put the State to the heavy expense of an extra session, and that the election of the ninth member of Congress by the popular vote of the entire State would be a legal election. Three of the Democratic members of the present Congress concurred with the majority of the Council in opposition to the opinion of the Attorney-General, the views of the Governor, and the protest of the Secretary of State. The question is a nice one. Does the act of the Federal Congress which merely declares that in case a State be entitled to an additional representative, he *may* be elected at large, amount to such a change or alteration of the regulations of the State as to the "times, places, and manner of holding elections for representatives," as does away with the necessity of any State law on the subject?

The political campaign of this year was unusually animated. Opposed to the regular Democratic party were the Republicans and "Liberals," the latter consisting chiefly of so-called Independent Democrats, who had become dissatisfied with their party and had coalesced with the Republicans to defeat it. The "County Government" Bill and the "Prohibition" Bill, passed by Democratic Legisla-

tures, were the points against which the coalition directed their main attacks. By virtue of authority granted by the Constitution of 1875 the Legislature of 1877 passed an act providing that the county magistrates should henceforth be elected by the Legislature, and the county commissioners, who levy the county taxes and administer the county affairs generally, should be appointed by the magistrates, instead of, as theretofore, elected by the people of the various counties. The reason for this change was that in the eastern portion of the State the negroes, without property or intelligence, controlled the elections, and were piling up a mountain of debt which threatened to crush the people. The western section, though comparatively free from this grievance, joined the east and passed the present "county system," as a matter of financial salvation. The Republicans and Liberals charged that the obnoxious law deprived the people of the right of local self-government, but the popular voice was outspoken in defense of the system as a choice of evils. The Prohibition (of liquor) Bill, which was submitted to the people and defeated by a large majority a year ago, was charged to be a Democratic measure, and, though no longer a living issue, was used, probably, as a sample of the evil designs of which the coalition supposed the Democrats to be capable, in order to defeat the regular Democratic nominees. Of the nine members of Congress, including the member from the State at large, the coalition only succeeded in electing two opponents of the "Bourbon" Democracy. The following table, showing the comparative expenses of the State government during two years of Republican administration and two years of Democratic administration, which was used effectively during the campaign, reconciled a great many voters to the alleged anti-Republican spirit of the "county system":

	1869.	1870.	1880.	1881.
Legislature.....	\$191,702	\$161,491	\$17,695	\$56,259
Contingencies.....	76,506	57,884	13,607	21,215
Salaries.....	30,628	37,286	20,096	20,060
Judiciary.....	54,130	53,302	83,218	37,920
Public printing.....	34,652	34,503	7,901	12,763
Total.....	\$387,048	\$349,406	\$97,597	\$148,217

The leading issues in the congressional canvass made by the Democratic party, were the internal revenue taxation and the conduct of the internal revenue officers, and the reckless extravagance and corruption of their opponents.

FINANCIAL CONDITION.—The act of March 4, 1879, "to compromise, commute, and settle the State debt," expired by the prescribed limitation of the law on January 1, 1882. It provided for the redemption of the principal of the bonded debt therein recognized, as follows:

Bonds issued prior to May 20, 1861, 40 per cent. exclusive of \$100,000 of old bonds surrendered under a special act by the Albemarle and Chesapeake Canal Company..... \$5,477,400 00

Brought forward.....	\$5,477,400 00
Bonds issued since the close of the war, by authority of acts passed before the war, and registered certificates of the Board of Education, 25 per cent.....	8,261,045 00
Bonds issued under the funding acts of March 10, 1866, and August 20, 1868, 15 per cent....	3,888,600 00
Total.....	\$12,627,045 00

Bonds have been redeemed as follows:

First class, as described above, 40 per cent....	\$4,244,500 00
Second class, at 25 per cent.....	2,164,045 00
Third class, at 15 per cent.....	2,412,200 00
Total.....	\$8,820,745 00

New 4 per cent bonds have been issued as follows:

For bonds at 40 per cent.....	\$1,697,800 00
For bonds at 25 per cent.....	541,011 25
For bonds at 15 per cent.....	361,880 00
Total.....	\$2,600,641 25

In this amount are included certificates issued in exchange for fractional sums less than \$50, still outstanding, and receivable for new bonds, in amounts of \$50, \$100, \$500, and \$1,000.

The old bonds yet outstanding and fundable under the act are—

Redeemable at 40 per cent.....	\$1,282,900 00
Redeemable at 25 per cent.....	1,097,000 00
Redeemable at 15 per cent.....	1,476,400 00
Total.....	\$3,856,300 00

Should the General Assembly, at its session in 1883, extend the compromise act of March 4, 1879, the actual and prospective debt of the State will be:

Actual debt bearing 4 per cent interest.....	\$2,600,641 25
Prospective debt bearing 4 per cent interest....	988,870 00
Actual debt bearing 6 per cent interest.....	1,720,000 00
Prospective debt bearing 6 per cent interest (old bonds now being renewed).....	1,075,000 00
Total.....	\$6,384,511 25

The receipts of the "Public Fund," which is charged with all moneys derived from taxation and other ordinary sources of revenue, and credited with all disbursements of whatever character, not connected with the Educational Fund, for the fiscal year, ending September 30, 1882, amounted to \$755,881.44. From these are to be deducted \$42,000, tax on fertilizers, appropriated to the exclusive use of the Department of Agriculture; \$59,500 interest on mortgage bonds of the Western North Carolina Railroad; and \$29,460 paid by the receiver of the dividends accruing to the State from stock in the North Carolina Railroad, and applicable to payment of interest, October 1, 1882, on new "construction" bonds, making a total of \$130,960, and which, being deducted from \$755,881.44, leaves \$624,921.44 available revenue. The total disbursements for the fiscal year amount to \$629,112.37. Deducting from this amount \$43,500 on account of Agricultural Department, and not properly a part of the general fund, and \$58,555 paid as interest on the mortgage bonds of the Western North Carolina Railroad, the expenses legitimately chargeable to the fiscal year amount to \$527,057.37. The balance to the credit of the Pub-

lic Fund at the close of the fiscal year was \$254,189.78, made up as follows:

Accumulated funds to pay interest on the 4 per cent consolidated debt of the State.....	\$224,086 96
Amount received from receiver of North Carolina Railroad.....	29,460 00
Amount applicable to general expenses.....	642 82
Total.....	\$254,189 78

This large balance to the credit of the interest fund is due to the fact that nearly \$1,000,000 of the new 4 per cent bonds remain unsued because the redemption of the old bonds under the act of March 4, 1879, was discontinued on January 1, 1882, by the expiration of the time prescribed for the exchange.

The revenue act of the State authorizes a tax of six cents on the hundred dollars' worth of property, for the general fund for the support of the State government; a tax of eleven cents on the hundred dollars of property, for the support and completion of the asylums for the insane; a tax of five cents on the hundred dollars of property for the support of convicts and construction of the penitentiary, and a tax of six cents on the hundred dollars of property for the payment of interest on the public debt, making a total tax of twenty-eight cents per hundred dollars on the assessed value of property, the aggregate value of which, as shown by the report of the State Auditor, published November 30, 1882, amounts to \$167,738,639. The estimated expenses of the State for each of the years 1883, 1884, and 1885, are:

General Assembly, sessions 1883 and 1885, mileage and per diem, each.....	\$55,000 00
Executive Department.....	21,500 00
Judiciary.....	37,000 00
General expenses, including printing, contingencies, etc.....	50,000 00
Penitentiary.....	75,000 00
University of North Carolina.....	12,500 00
Oxford Orphan Asylum.....	5,000 00
Normal schools.....	8,000 00
Institutions for Deaf, Dumb, and Blind.....	36,000 00
Support and completion of Insane Asylums.....	140,000 00
Total.....	\$440,000 00
Interest on outstanding 4 per cent bonds.....	104,000 00
Total.....	\$544,000 00

As is the case in many other Southern States, the valuations of real and personal property for taxation in North Carolina are far below the cash value, and very unequal in the various counties. The limit of taxation fixed by the Constitution is 66 $\frac{2}{3}$  cents on the \$100 worth of property. Of this, as already stated, 28 cents are required to pay the expenses of the government, and the remaining 38 $\frac{2}{3}$  are needed to pay the expenses of the counties. If the property throughout the State were equitably and uniformly assessed, it is generally believed the aggregate value of the real and personal property in the State would be fully \$300,000,000, which would either allow a large reduction of the rate of taxation, or furnish a surplus which could be devoted to educational purposes, and thus largely increase the number and efficiency of the public schools. It is estimated that there are 490,000 educable children in the

State, and the amount raised by State taxes for education has never exceeded \$500,000.

A final and satisfactory settlement has been made, and is now being executed, of the question so long in dispute between the State and the bondholders of the North Carolina Railroad. The State is the owner of \$3,000,000 of stock in that road; private stockholders own \$1,000,000. To pay for this stock the State issued her bonds in 1853-'54-'55, to run for thirty years, at 6 per cent, and to secure their payment pledged the dividends accruing on her stock for the payment of the interest, and the stock itself for the payment of the principal. In 1866 \$205,000 of these bonds were taken up, leaving outstanding \$2,795,000. The road was leased to the Richmond and Danville Railroad in 1871, for  $6\frac{1}{4}$  per cent on the capital stock; and soon after a suit, known as the Swasey suit, was commenced in the Federal Court to subject the rental arising from the lease to the payment of the interest on the bonds. A receiver was appointed, who has found the dividends to be sufficient to pay the interest. Under an act of the Legislature of 1879, providing for the adjustment of that part of the State debt incurred in aid of the North Carolina Railroad, three commissioners were appointed to make the settlement. After many delays from various causes, a plan of adjustment was agreed on, and signed by bondholders representing \$2,000,000, and by the commissioners, by which the old bonds are to be exchanged for new bonds of equal amount, with interest payable semi-annually at the rate of 6 per cent per annum, the surplus of the dividends on the stock owned by the State, after paying the interest on the new bonds, to be used as a sinking fund for the payment of interest on such of the old bonds as have not been presented and proved in the Federal Court, and then for the payment of the interest and principal of the new bonds. Up to December 31, 1882, the Treasurer had issued, under this agreement, \$1,720,000 new bonds. It is expected that the remaining outstanding old bonds will be exchanged during the next year, and thus a valuable property will be saved to the State, without imposing any additional tax on the people. By this settlement the bondholders "rebate to the State \$240 of interest on each bond delivered for renewal."

It is feared that an attempt will be made in the Federal courts to enforce the payment of the \$22,000,000 "special-tax" bonds, fraudulently issued by the "carpet-bag" government in 1868 and 1869, and since repudiated by the laws and Constitution of the State. The holders of these bonds, unable to surmount the constitutional provision that a State can not be sued by a citizen of another State, propose to transfer, or have already transferred, their claim to the State of New York, who may bring suit, it is supposed, in the Supreme Court of the United States, the Legislature of New York having passed a law to that effect.

STATE INSTITUTIONS.—The catalogue of the University of North Carolina, at Chapel Hill, shows 199 students in attendance during this collegiate year, of whom eight were taking a post-graduate course. In addition to the regular courses of study, a "teacher's course" of two years was established during the year, which is designed to fit young men to become competent teachers either in public or private schools. It would be very well if other colleges at the South would follow this good example, for nothing—not even want of money—retards public education in the Southern States so much as the want of properly qualified teachers. The university is growing in numbers and usefulness, and rapidly recovering from the severe shocks it sustained from the war, and the misrule of several years after the war had closed. The institution received during the past year \$12,000 from the State. The completion of the railroad between Chapel Hill and Raleigh, which took place in May, was enthusiastically celebrated by a large concourse of people. Davidson College, under Presbyterian, and Trinity College, under Methodist, control, though patronized by all religious denominations, have been well attended, and have done good work in the higher education of the people. The latter institution sustained a heavy loss in the death, on November 7th, of Dr. Braxton Craven, LL.D., president of the college. The other colleges, academies, and high-schools throughout the State are all said to be in a prosperous condition. There are 817 churches in the State, of the estimated aggregate value of \$789,025. During the year \$84,402 have been expended for building and repairing churches.

THE COMMON SCHOOLS.—The school law, passed at the last session of the General Assembly in 1881, has been found to work admirably. The means requisite to carry it out, so as to fulfill the design of its framers, can not be supplied by the State under the existing Constitution, which limits the authority of the Legislature to levy taxes to \$2 on the poll and  $66\frac{2}{3}$  cents on the \$100 worth of property. When the expenses of the State and county governments are paid, the sum left to be appropriated to the support of the public schools is small, as compared with what is needed, and which the people seem to be ready to contribute. The State Board of Education made arrangements early in the year for opening five normal schools for whites, and later for an equal number for colored pupils. These schools have been well attended, and promise to do much good.

The Institution for the Deaf, Dumb, and Blind, according to the report for the two years ending December 31, 1882, provided during those years for 105 deaf and dumb and 91 blind inmates, who have been judiciously instructed in several useful handicrafts, as is shown by the satisfactory operation of the shoe, broom, and mattress shops in the me-

chanical department of the institution. There is a separate department for colored people where, during the two years, 38 deaf and dumb and 22 blind pupils have been received and taught. This, it is claimed, was the first institution of the kind at the South to make provision for colored pupils.

**THE PENITENTIARY.**—On the large buildings under construction for several years, and which have cost a large sum of money, satisfactory progress toward completion was made during this year. The main prison was sufficiently advanced in December to allow of the transfer of the convicts heretofore confined in old, temporary buildings, to the new, well-ventilated and well-heated cells; \$110,000 have been expended upon this institution during the past fiscal year. The total cost is upward of \$1,000,000. As far as possible the convicts are made to earn their support, and thus relieve the tax-payer, by employing them wherever practicable on the public works. The old and decrepit and female convicts work on a farm near Raleigh, and their work has proved to be moderately profitable. On November 1st there were 996 convicts in the State; of these, 137 were white and 859 colored.

**THE ASYLUMS FOR THE INSANE.**—If the necessary appropriations be made to complete the buildings now in process of construction for the accommodation of the insane, no State will have provided more liberally than North Carolina for the treatment of this unfortunate class. Besides the large asylum near Raleigh, containing on November 1st 265 patients—140 males and 125 females—the Western Asylum at Morganton is now partially completed, and will be ready to receive patients early in the next year, and an asylum for insane colored people is being already built at Goldsboro, now containing over 100 patients. So much has insanity increased within the past quarter of a century, that it is doubtful whether even these three institutions will be adequate to treat the number of insane in the State. There were over 1,000 lunatics on November 1st, cared for in the various counties. During the year the State has expended \$158,000 on these asylums. The Oxford Orphan Asylum has sheltered, fed, clothed, and educated during the year 145 orphan children, at a cost of \$14,032.66, to which the State contributed \$5,000. The institution is under the auspices of the Masonic fraternity, who manage and control it, and contribute liberally to its support.

**RAILROADS.**—The completion in May of the railroad from Wolf Creek to Paint Rock, makes the connection continuous between the North Carolina system of railroads and the East Tennessee, Virginia, and Georgia trunk line. The branch just finished crosses the French Broad at two places—handsome iron bridges, 440 feet apart, spanning the river at both points. The masonry-work of these bridges is all of black granite. The road from Asheville to Pigeon River is completed. The grad-

ing is finished to the top of Balsam Mountain, and the work between that point and the Cowee Tunnel, sixteen miles farther, is progressing. The tunnel is on the west bank of the Tuckaseegee River, and takes the road through Cowee Mountain, and then down the Tuckaseegee to Charleston, Swain County, crossing the Tennessee River near the mouth of the Nautehala, thence along that stream to Red Marble Gap, and, cutting through the mountains and striking the head-waters of Valley River, runs down that water-course to Murphy. The engineering difficulties in cutting through Balsam, Cowee, and Nautehala ranges are very great, rendering progress at these points apparently slow.

The act passed by the last Legislature providing for the sale of the State's interest in the Cape Fear and Yadkin Valley Railroad failed to be carried out because conditions were attached to it with which the purchasers refused to comply. The State owns \$555,000 worth of the stock. The grading is almost completed to Walnut Cove, the work being done by convict-labor. The Atlantic and North Carolina Railroad from Beaufort to Goldsboro, ninety-five miles, was leased last year for thirty years to the Midland North Carolina Railroad Company for \$40,000 per annum, on condition that the lessees should build a road from Goldsboro to Salisbury. Having only built twenty-two out of one hundred and fifty miles of this road, and suspended further work, the Atlantic Company have declared the lease forfeited, and have taken steps to recover possession. The State has a nominal interest in the Atlantic road to the amount of \$1,266,000. This stock is worth less than ten cents in the dollar, and subject to a lien amounting to \$248,000, with accrued interest since August, 1868. It is proposed that the next Legislature shall authorize the State to surrender her interest to the Midland or any other company, on condition that the road from Goldsboro to Salisbury or Charlotte be completed as rapidly as practicable. There is a strong party in the State in favor of the creation of a Railroad Commission, and when the Legislature meets in January a bill for that purpose will be introduced and, it is believed, will be adopted. The suits brought by the State Treasurer against the Wilmington and Weldon, Seaboard and Roanoke, Raleigh and Gaston and Petersburg Railroad Companies, to recover taxes levied by the Legislature, have been decided in favor of the State. The question involved was whether the provisions of the charters of the defendant companies exempting them from taxation, protected them from the taxes levied by the General Assembly in the acts of 1877 and 1881. Their charters exempted their property from taxation, but the taxes in question were levied on their *franchise*, not upon the corporate *property*. The Raleigh and Seaboard Railroad has been completed this year from Williamston to Tarboro, and the work between the latter point

and Raleigh is in progress. The railroad from Halifax to Scotland Neck, twenty miles in length, was finished in April, opening a fine section of the State.

The commemorative celebration of the Mecklenburg Declaration of Independence took place at Charlotte, on May 20th. The streets were fairly decked with flags and banners, filled with citizen soldiers in bright uniforms, and at least 20,000 people from the surrounding country. Governor Jarvis and his staff, Senators Vance, Ransom, Wade Hampton, and Bayard were present. The Mecklenburg Declaration was read by Senator Ransom, and Senator Vance introduced the orator of the occasion, Thomas F. Bayard, of Delaware. The address was enthusiastically received, especially the sentiments contained in the following extract:

I wish I could impress upon you, gentlemen, and not upon you only but upon our fellow-countrymen everywhere, the fatal fallacy and mischief that underlies and inheres to every proposition to use the money of the people—drawn from them by taxation, the powers of their government, the force of their government, under any name or pretext—for any other than really public objects and ends. I include the maintenance of public honor, dignity, and credit, the protection of American citizenship everywhere, among the just objects for the exercise of governmental powers; but I wish to deny here and everywhere, now and at all times, the rightfulness of involving the welfare and happiness of the 50,000,000 men, women, and children of the country, whether by laying taxes upon them which are not needed for the support of their government, or paying bounties and subsidies to maintain lines of private business which are too unskillfully or unprofitably conducted otherwise to sustain themselves, or promising the presence of our fleets or armies, or risking the issue of peace or war, or shedding the blood of our soldiers and sailors in aid of schemes of private greed or personal ambition under the guise of claims foreign or domestic.

The fisheries of North Carolina constitute a large and valuable industry. Upward of 5,000 persons, 100 vessels, and 3,000 boats are employed in the business. The average annual product is upward of 30,000,000 pounds of fish, worth between \$800,000 and \$900,000. The catch of the "alewife" is larger in the waters of North Carolina than in those of any other State, being a little under 16,000,000 pounds annually. The shad-fisheries yield about 4,000,000 pounds, and, being marketed earlier, are worth more than those caught elsewhere. The mullet-fisheries are second only to those of the Florida coast. Of terrapins upward of 40,000 are caught annually, of the estimated value of \$11,000. Owing to the success which has attended the operations of the fish-hatching commission, this industry may be expected to grow rapidly in extent and value.

**BANKS.**—There are fifteen national banks in the State, with a present capital of \$2,501,000, and a surplus fund of \$474,956. The individual deposits at the last statement amounted to \$2,889,789, and other deposits to \$190,840; the loans and discounts to \$4,738,012.

**A GENERAL REVIEW.**—The year 1882 has

been in the main a prosperous one. The public health has been generally good. In material progress, railroad construction, mining, and agriculture, the State has made a healthy though not rapid advance. The educational system has widened its sphere of efficiency, and has gained in popular favor. The financial condition is sounder and more hopeful than it has been for years, because directed and controlled by honesty, good faith, and economy in those who receive and pay out the people's money. The cotton-crop is undoubtedly short. The price is low, and the expense of making it was heavy. The uncertainty as to what Congress will do as to the tobacco-tax, has disorganized the tobacco-trade, but when the question is once settled, either one way or the other, it is hoped that the industry will revive. The area planted in cotton is becoming greater every year, and the improved culture is annually increasing the yield per acre. It is becoming, however, a serious question whether nine cents per pound will cover the actual cost of production, without taking into the account any allowance for interest on the investment. The Geological Museum, recently established and arranged in the building of the Department of Agriculture, gives a gratifying view of the resources of forest, field, and mine of the "Old North State." The exhibit of iron-ores from fifteen counties is large in number and variety. Handsome specimens of gold, silver, copper, and plumbago are to be seen. The display of white and colored marbles, both rough and polished, of which the supply is said to be inexhaustible, is very attractive. Specimens of kaoline, mica, asbestos, marl, talc, granite, and sandstone are also shown. The exhibit of woods is remarkably fine, comprising 112 different varieties. The manufacturing enterprises, the number of which is increasing largely from year to year, are prosperous and remunerative. The people are more industrious and progressive. North Carolina used to be called "the turpentine State," and later "the peanut State." Now she is known for her cotton, rice, grain, woods, minerals, tobacco, and manufactured goods, and her intellectual progress keeps pace with her material growth. There are, it is reported, 3,802 factories in the State, worth \$13,045,639, employing 18,109 hands, who are paid \$2,740,758 in wages, and who work up materials worth \$13,090,937, and produce goods worth \$20,095,037. The manufacture of pine-wood oil (an industry confined exclusively to Wilmington) has grown largely in proportions and importance. The oil is distilled from "fat pine" or "lightwood" at the rate of eighty gallons of oil to one cord of the wood. Its chief use is for the preservation of wood, especially for the timbers of ships and boats. It is becoming an article almost of as much importance as tar and turpentine. The receipts of produce at the port of Wilmington, for the year ending December 31st, were: Cotton, 123,572 bales;

spirits of turpentine, 88,669 casks; rosin, 476,- 72,070 barrels. The exports for the same 367 barrels; tar, 72,654 barrels; crude turpen- time were:

EXPORTS.	Lumber.	Spirits of turpentine.	Rosin.	Tar.	Crude turpentine.	Cotton.	Peanuts.
	Feet.	Casks.	Barrels.	Barrels.	Barrels.	Bales.	Busbels.
Domestic.....	31,217,061	84,620	105,414	55,988	2,179	72,624	58,885
Foreign.....	9,074,085	53,276	888,904	15,507	130	67,708	.....
Total.....	40,291,146	87,896	444,318	71,445	2,309	140,332	58,885

Among the articles of export from Wilmington the amount of peanuts is worthy of notice, having reached 58,885 bushels. The estimated value of the exports is \$10,000,000. A comparison of the American tonnage of steamships and sailing-vessels shows how rapidly the coasting transportation has been absorbed by steamers. The tonnage of Wilmington for 1882 is as follows:

No.	American.	No.	Foreign.
	Tons.		Tons.
78	Steamships..... 73,591	152	Barks..... 58,890
10	Barks..... 3,589	43	Brigs..... 11,426
11	Brigs..... 2,923	11	Schooners.... 1,048
198	Schooners..... 51,381		
297	Vessels..... 131,434	206	Vessels..... 71,364

O

OBITUARIES, AMERICAN. ALLEN, Professor WILLIAM A., born March 27, 1808; died August 29, 1882. After graduating from Bowdoin College in 1833, he was called to teach Latin and Greek in the Methodist Seminary at Cazenovia, N. Y., remaining there about two years, when he took charge of the High School at Augusta, Me. In 1836 he went to Carlisle, Pa., where he was Professor of Natural Philosophy and Chemistry in Dickinson College, and in a few years assumed that also of English Literature and Philosophy. He remained there about thirteen years. In January, 1850, he was appointed President of Girard College in Philadelphia, which position he held until the end of his life, with the exception of a few years spent in retirement, and as President of the Pennsylvania Agricultural College. He was a writer of considerable thought, and the long and important office he held at Girard College testifies to his great abilities as an instructor. He at one time was President of the American Bible Society; this, however, did not interfere with his college duties. His health had been declining for some years, and for several months before his death he was incapacitated for active duty.

COLEMAN, LYMAN, D. D., born June 14, 1796, in Middlefield, Mass.; died March 16, 1882, at Easton, Pa. President Coleman graduated at Yale College in 1817; he then held for three years the post of principal in the Latin Grammar School at Hartford, and was at the expiration of that time made a tutor in Yale College, having among his pupils many who subsequently became eminent. Mr. Coleman studied theology, and for seven years was pastor of the Belchertown (Mass.) Congregational Church. After a year or two spent in foreign travel, and study in Germany, he devoted himself to teaching, and was for five years Principal of the Burr Seminary in Vermont, and then held the post of Principal of the English

Department of Phillips Academy in Andover. Next, he was Professor of German in Princeton College where he received the degree of S. T. D.; then he became Professor of Latin in Lafayette College, Easton, Pa., and occupied the position for twenty years. Mr. Coleman was a man of great erudition and wide culture, and few surpassed him in teaching. He was the author of "Antiquities of the Christian Church" (1841), "Ancient Christianity" (1852), "Historical Text-Book and Atlas of Biblical Geography" (1854), "Prelacy and Ritualism" (1869), and other works. In all these books is the print of conscientious and laborious research; their style is easy, and to the Biblical student they are of much value, and are still used as text-books. A short time before his death, he presented to the pastor of the Belchertown (Mass.) Congregational Church a valuable Hebrew concordance compiled by himself; accompanying the book was the following message to his first and only parish: "Pity me, O my people! for the hand of God hath touched me." He had been stricken with paralysis not long before.

CROSMAN, GEORGE H., born in Taunton, Mass., in 1798; died in Philadelphia, May 28, 1882. In September, 1819, he entered West Point, and graduated in 1823. He served as brevet second-lieutenant of the Third Infantry, and was afterward promoted to the position of full second-lieutenant, Second Infantry. In 1828 he was promoted to the position of first-lieutenant of the Sixth Infantry, and in October, 1830, was made quartermaster. During the period of the "Black Hawk" War he was engaged in the hazardous and hard duty of quartermaster in the Indian country, and in 1837 was promoted to the position of captain in the same regiment. He was also again made quartermaster, and placed on staff duty. During the Mexican War he was in active service in Texas, and at the storming of Palo Alto took

a conspicuous part. For service of meritorious character in this fight he was brevetted major. In 1856 he was put in charge of the quartermaster's department in Philadelphia, and in that year was brevetted a lieutenant-colonel. In 1860 he was sent to Utah, but returned to Philadelphia in 1861. In 1863 he was promoted to colonel, and made depot quartermaster, and in 1865 was given the highly complimentary position of brevet brigadier and major-general United States Army, for "faithful and meritorious service during the civil war." General Crosman was retired from the army in 1866, being over sixty-two years of age, but was on duty again in Philadelphia as Chief Quartermaster of the Department of the East. For some years past he had been living in retirement.

DEFREES, JOHN D., born at Sparta, White County, Tenn., November 8, 1811; died at Berkeley Springs, West Va., October 19, 1882. In 1818 Mr. Defrees was apprenticed by his father to a printer in Ohio, in connection with which pursuit he studied law. His first vote was given to Henry Clay for President. In 1836 he was admitted to the bar by the Supreme Court of Indiana, having removed to that State a few years previous, and in conjunction with his brother established a weekly newspaper. Mr. Defrees soon evinced political shrewdness, and was sent to the Legislature, where he distinguished himself sufficiently to be several times returned. In 1844 he resigned his seat in the State Senate, and bought "The Indiana State Journal," a weekly paper, published at Indianapolis. He located at the capital of the State, and made his paper a daily, which he edited for a number of years. After the Whig party declined, and the Republican party was organized, he associated his interest with the new party, and in 1856 became the first Republican State Chairman, which position he occupied until 1860. Mr. Defrees was intimate with many of the leading politicians of that period, among whom were Clay, Crittenden, Webster, and Corwin. He was regarded as a very adroit politician, and was valuable to his party. President Lincoln appointed him to the office of Government Printer, which he filled for many years.

DENNISON, WILLIAM, born in Cincinnati, O., November 9, 1815; died at Columbus, O., June 15, 1882. His father, a well-known and prosperous business-man, took great pride in his son William, and gave him a classical education. In preparation for college he had the benefit of the best schools in Cincinnati, and in 1831 he entered as freshman the Miami University at Oxford, O. In September, near the close of his twentieth year, he graduated with high honor, returned to Cincinnati, and commenced the study of law in the office of Nathaniel G. Pendleton and Stephen Fales. After completing his legal studies and being admitted to the bar, he began the practice of his profession in his native city. In politics

Mr. Dennison was an original Whig; throughout the existence of that party organization he was a firm, consistent, and zealously active member of it. In 1847 he was elected to a term of two years in the Ohio Senate; he next served as President of the Columbus and Xenia Railroad, until 1859, when he was chosen by the Republican party Governor of the State. He was inaugurated January 9, 1860, and delivered his first message to the Fifty-fourth General Assembly, January 7, 1861. In April of the same year, at his suggestion, the Legislature of Ohio voted \$3,000,000 to "protect the State from invasion and insurrection," and conferred additional power on the Executive to raise troops, etc. In response to the President's call for 11,000 troops, Governor Dennison offered 30,000 men, and sent agents to Washington to urge their acceptance, and the adoption of a vigorous policy in conducting the war. He took possession of the telegraph lines and railroads in the name of the State, and exercised much authority not conferred by law. He seized money *in transitu* from Washington to the State Auditor, and turned it over to the Quartermaster-General of the State, to clothe and equip the soldiers. Governor Dennison was a delegate to the Republican National Convention in 1864, and was elected chairman of that body. A great admirer of Mr. Lincoln, and an ardent anti-slavery advocate, he was made Postmaster-General on the retirement of Montgomery Blair from the Cabinet, and he retained the post until President Johnson declared his "policy"; then he resigned at once, and retired into private life at Columbus. He was a candidate for Senator when General Garfield was chosen in 1880.

DINSMORE, SAMUEL P., born in Bristol, Me.; died in New York city, March 22, 1882. Mr. Dinsmore graduated at Bowdoin College in 1844. After that he studied law in Bangor, and was admitted to the bar in that city. Shortly afterward he became editor of the Bangor "Mercury," and while holding that position had considerable influence in local politics. He took an active part in the campaign for Fremont, a candidate for President. Early in life he was a contributor to current literature, as well as during the period of his editorial labors, having written for "The North American Review," "The Republican Court" of Washington, and other publications. He came to New York to practice law in 1857, then was appointed to a position in the War Department by President Lincoln; subsequently he held for a short time the post of financial editor of the "Evening Post." Mr. Dinsmore was a journalist over thirty-five years.

GARDINER, SAMUEL BUELL, died January 5, 1882, at East Hampton, Long Island, in the sixty-seventh year of his age. He was a great-grandson of the Rev. Samuel Buell, the first clergyman settled on Long Island, and was a lineal descendant of Lion Gardiner, the founder of the famous family, which, for two hundred

and forty-two years, have held rightful and undisputed possession of the first white-man's settlement formed within the present limits of the State of New York. Gardiner's Island is, probably, the oldest entailed estate in the country; it was purchased from the Indians by Lion Gardiner in 1639. It was then known as Manchonock Island, and the Indians willingly sold it for a few coats, hats, hatchets, and small trinkets. Gardiner changed its name to the Isle of Wight; but, in course of time, it came to be designated only by the owner's name. The island is situated about one hundred and twenty miles from New York and fourteen from New London; it lies in Gardiner's Bay, which sets in from the ocean at the extreme end of Long Island, with Orient Point on the north and Montauk land on the south. The surroundings are very beautiful. The island is nine miles long, a mile and a half wide, and contains thirty-three hundred acres, a goodly proportion of which is under cultivation. Immense quantities of grain, hay, live-stock, fruit, dairy-produce, timber, etc., are raised thereon yearly. The subject of this sketch succeeded his brother, John Griswold Gardiner, in the ownership of the island in 1861. He was a fine-looking, but quiet and unostentatious gentleman.

GILLETTE, Rev. Dr. A. D., born September 8, 1807; died August 24, 1882. After passing through a successful course of studies at Madison University and Union College, he was ordained a Baptist minister in 1831, and passed the greater part of his life in active service. In May, 1862, he was installed pastor over the Schenectady Baptist Church, where he remained for five years, was then called to Philadelphia, and afterward to New York, where he became pastor of the Broadway Baptist Church, a position which he held twelve years; then he went to Washington, D. C. In January, 1872, he was elected Corresponding Secretary of the American and Foreign Bible Society.

GEMMILL, WILLIAM D., died in San Francisco, 1882, aged forty years. Mr. Gemmill was the son of a Philadelphia dry-goods merchant. At his father's death he inherited an ample fortune, and, having a predilection for the stage, he abandoned his business in 1875, and, in conjunction with three other young gentlemen of means, he opened the Chestnut-Street Theatre, Philadelphia, with Byron's comedy, "Our Boys." After a short season, he inaugurated a series of Shakespearean revivals, in which money was spent with a lavish hand. The venture was not successful, and, for financial reasons, the management of the theatre was given up, and Mr. Gemmill went on the stage. He appeared in leading characters, and his impersonation of *Hamlet* was much praised. About two years ago he retired from the Chestnut-Street Theatre, and since then belonged to different stock companies, and appeared frequently in the West.

GODDARD, DELANO A., editor of the Bos-

ton "Daily Advertiser," died on January 4th of congestion of the lungs. Mr. Goddard was born in Worcester, Mass., August 27, 1831, and was a graduate of Yale College. After having spent some years upon the Worcester "Spy," he became, in 1869, associate editor of the "Daily Advertiser," and shortly afterward editor-in-chief. He was a member of the Massachusetts Historical Society, and was much interested in questions relating to the history and influence of his profession. Two years ago he read a paper before the New England Historico-Genealogical Society upon "Newspapers and Newspaper Writers of New England," which formed the basis of an article contributed to the second volume of the "Memorial History of Boston," entitled "The Press and Literature of the Provincial Period." An article on "The Pulpit, Press, and Literature of the Revolutionary Period," was also contributed by him to the third volume of the same work. Mr. Goddard represented his native place in the State Legislature in 1862, and also in 1868, but beyond these he held no public positions.

GUBERT, LOUISE, born in Philadelphia, Pa.; died in Baltimore, Md., 1882. Her paternal grandfather was a French officer, and served under the first Napoleon. Her father was born in Cuba, and married a sister of the late Milnor Roberts, a civil engineer of distinction. At the age of eighteen months, Louise developed the most wonderful musical talent, and, to the surprise of her family, sang with perfect correctness a little ballad that she had frequently heard others sing, called "By the Margin of Fair Zurich's Waters." As she grew older the wonderful gift attracted the attention of some of the most distinguished musicians of the time. At the age of fifteen she was selected by Mr. Cross, an experienced musician, to sing the "Inflammatus" from Rossini's "Stabat Mater," at a concert given by the Musical Fund Hall Society, in Philadelphia, in preference to a number of amateurs who were also to take part. Her voice was the most exquisite soprano, and the night of the concert she sang the celebrated selection with such power and sweetness, that Perelli, the eminent Italian vocalist, who was conducting the orchestra, was so much enraptured with the loveliness of her voice that he entreated her father to grant him the privilege of training it. The request was complied with, and the knowledge of music that she had already acquired under the instruction of Mr. Wolseiffer, a German professor of renown in her native city, enabled her very soon to become celebrated, and she was always the prominent voice in the numerous concerts and *soirées* got up for charitable purposes. She also sang in the choir of St. Augustine's church. While she was still pursuing her education, the Sisters of the Visitation from Georgetown, D. C., established a branch of their order in Philadelphia. Miss Gubert became one of their

pupils, and, under the pious teaching of the Daughters of St. Francis of Sales, she formed the determination of embracing a religious life. In the mean time she was constantly solicited to appear in public. Madame Laboide asked permission to take her to Paris and place her in charge of Meyerbeer, who, she said, would write operas for her voice. Madame Sontag, after hearing her sing, passed the highest encomiums upon her voice, and advised her to abandon the instruction of teachers, and follow the guidance of her own genius. After this a great difference was observed in her style; she turned her attention to the German school, and acquired great dramatic power and pathos. She possessed the rare quality of imparting her knowledge to others, which made her eminently successful as a teacher. A few years after her father's death she accompanied the Right Rev. Bishop Whelan to his episcopal city of Wheeling, Va., and in a short time she entered the Community of Visitation Nuns established there, where the spiritual name of Sister Mary Agnes was conferred upon her. Through her skill and energy their school acquired a reputation unsurpassed in the United States. Before the academy was removed to its present locality, at Mt. de Chantal, she was visited by all the distinguished musicians who passed through Wheeling. Adeline and Carlotta Patti, Carl Formes the great basso, Thalberg the pianist, and other celebrities, had the privilege of hearing her sing, in obedience to the commands of her superiors. Carl Formes was at once impressed with her rare dramatic power, and advised her to study the grand aria from "Oberon," "Ocean, thou mighty monster!" which afterward became one of her favorite and most celebrated pieces. Among her most prominent songs were "The Erl King," by Schubert, and the principal arias from "Der Freischütz." The last time that she sang in the convent was on the occasion of a first communion, when, without organ accompaniment, she rendered, with the pathetic feeling for which she was so noted, one of Father Faber's hymns.

HEALY, JOHN PLUMMER, born December 28, 1810, in Washington, Sullivan County, N. H.; died January 4, 1882, in Boston, Mass. His father, Joseph Healy, was a Representative from New Hampshire in Congress from 1825 to 1829, and a warm friend and admirer of Daniel Webster; these facts had an important bearing on the career of his son. The senior Healy was a man of noble character, although of limited means. He sent his son to Dartmouth College, through which he passed, as poor boys do, eking out his pecuniary resources by teaching. Mr. Healy was graduated from Dartmouth in 1835, from which he received the degree of LL. D. in 1871. He came at once to Boston, and entered the law-office of Daniel Webster. By his diligence, quick apprehension, and courteous conduct he won the warm friendship of Mr. Webster; and, when he had

completed his legal studies, became the famous statesman's law partner, a relation that he maintained until it was terminated by Mr. Webster's death. When Mr. Webster was Secretary of State, he offered Mr. Healy the chief-justiceship of California, which was declined. He was several times offered the chief-justiceship of the Supreme Court of Massachusetts, but always declined, being content with his position of a trusted legal adviser, and the Solicitor of the City of Boston, which office he assumed in 1856, and continued to hold until March 30, 1881. While he was a general practitioner of law, he was connected for several years with the Massachusetts Legislature. He entered the House in 1840, and was made Senator in 1854, serving his terms with ability. After he became City Solicitor, he devoted by far the greater part of his time to the duties of that office, which he discharged most efficiently.

HATZLER, ELISABETH, born at Landau, France, in 1790, died in Philadelphia, January 1, 1882. She was a veteran of the Franco-Russian War of 1812. At the age of twenty she married George Hatzler, a sergeant of cavalry in the French army. Very soon after their marriage her husband was ordered to join the memorable expedition against Russia, and Madame Hatzler determined to go with him. Her hair was cut short, a soldier's uniform took the place of the feminine attire, and thus disguised she rode at her husband's side during the whole campaign. She was present at all of the principal battles, and at the burning of Moscow. After the promotion of her husband to the rank of a staff-officer, she had many opportunities of seeing the great Emperor, and on several occasions conversed with him. An accident to her husband separated them from the main army at one time, and for nine weeks Madame Hatzler dragged him on a hand-sledge over the frozen ground. Through a guide's treachery they were taken prisoners by the Cossacks, and held for months. They were exchanged in time to rejoin the French army and undergo the sufferings and privations of the disastrous retreat which almost annihilated Napoleon's forces. Through all these vicissitudes the sex of the woman remained undiscovered. Mrs. Hatzler emigrated to this country in 1846, and lived for twelve years on Fort Delaware, while it was being built by Major Sanders. Up to the time of her death she retained the full use of all her faculties, and it is said that since leaving the battle-field in 1814 she never suffered any results of her long exposure. She spoke English, German, and French fluently, and had also skill in the Russian and Italian languages.

How, Mrs. MARY KIRKPATRICK, widow of Rev. Dr. S. B. How, died in New Brunswick, N. J., aged eighty-nine years. She was the eldest and last surviving child of Chief-Justice Kirkpatrick, of New Jersey, whose wife was Jane Bayard, a descendant of Madame Anne

Bayard, sister of Peter Stuyvesant. She, with her four children, accompanied the last of the Dutch Governors to New York in May, 1647. Mrs. How's grandfather was a Revolutionary patriot, and a personal friend of Washington, Franklin, Hamilton, Lafayette, and Kosciusko, of whom Bancroft says, "Colonel John Bayard was personally brave, pensive, earnest, and devout." Mrs. How's health had been gradually failing for a few months, but her mind remained clear and unclouded till within a week of her death. Early in March, in conversation with her nephew, General James Grant Wilson, she mentioned having been present with her grandfather at the funeral services held in honor of Washington at New Brunswick, in December, 1799, and of her having seen and spoken with Hamilton on her first visit to Mrs. Bayard, of New York, in 1803. She spent a portion of the winter of 1811-'12 in Washington, where she became intimate with President Madison and his family circle, meeting most of the prominent people of that period. On one of her last visits to New York she saw a lady after a separation of seventy years. They were girls together at a fashionable school, and parted to meet again as venerable women of more than fourscore. Mrs. How was a philanthropic Christian lady.

KELLOGG, ENSIGN H., died at Pittsfield, Mass., 1882, aged seventy years. He graduated at Amherst in 1836, and made the law his profession. He was prominent in local political affairs, and had been a member of the State House of Representatives, of which he was Speaker for two terms. He served also as Senator, and was the American representative on the late Fisheries Commission.

KIMBALL, EUGENE, born in Rochester, N. Y.; died in the same place, August 2, 1882, aged thirty-one years. He was formerly a famous base-ball player, and belonged to the Cleveland nine in 1871 and 1872, as center-field and short stop. For eighteen years past he had been a professional billiard-player, and won distinction at cushion-carroms, which was his best game. He has played in private all over the country, and was widely known and esteemed as an upright, honest man, with many amiable qualities. His first public appearance as a billiardist was in a tournament in Rochester; his last games were played in New York, in April and June, 1882. In the first-named month he played with Sexton, who gave him 150 points out of 500; he defeated Sexton by 99 points. In June he played a match with Daly on even terms, and was defeated. Slosson, the champion, who knew Kimball well, pronounced him a first-class player, of great promise, showing signs of rapid improvement.

LELAND, GEORGE S., born in Langrove, Vt., 1838; died in New York city, August 2, 1882. Mr. Leland received the regular Eastern common-school education, and at an early age became interested in the management of hotels. Before he was twenty-one he

came to New York, and opened the well-remembered Clinton Hotel, where the Nassau Bank and Kelly Building are now. In 1852 he went to the Metropolitan Hotel, and his talent and ability were soon noticed in the energetic management of that popular and profitable hotel. In 1861 he joined the army, and served in the war for the Union. He was well equipped mentally and physically for the exacting duties of the commissariat department, and sought usefulness there. His ability was soon recognized, and in a short time he was appointed chief commissary for the division, then quartered near Harper's Ferry. There he served faithfully and zealously. His business integrity was beyond question, and his usefulness conspicuous. He was personally known to President Lincoln, who sent him a major's commission and a complimentary letter. In 1864 his interest called him to New York, and he arranged to participate in the management of the Grand Union Hotel in Saratoga. Mr. George S. Leland and his brothers then had a chain of hotels extending from Saratoga to Albany, and from New York to San Francisco, where the great Palace Hotel was established. For a while Major Leland conducted the St. Charles Hotel, New York, and eleven years ago, with his brother Lewis, he opened the Sturtevant House in the same city.

LINCOLN, MARY TODD, born in Kentucky; died in Springfield, Ill., July 16, 1882. Her father, Robert S. Todd, was a prominent Kentucky politician. Mrs. Lincoln's marriage with Abraham Lincoln was very much opposed by her family. The parties each possessed strongly-marked peculiarities of disposition and temperament, and serious misgivings as to their happiness were entertained. Their married life was nevertheless marked by great affection and contentment. At the time of the marriage, Mr. Lincoln was thirty-two years of age, and "merely a prairie-lawyer," as he was fond of describing himself in after-years. He was naturally of a slow imagination, and needed encouragement in the political field. It is believed that to the energy and ambition of his wife he owed much of his advancement, while it is admitted that he could always rise to the crest of the circumstances with which even his high and critical position as Chief Magistrate of a nation at war was surrounded. There were those who unjustly looked with suspicion upon Mrs. Lincoln, at the time of her entry into the White House, because of the tendencies of her family and her native State, but her life as the wife of the President proved conclusively that she was loyal to him and to the country of which he was the chosen head. She was neither a woman of great refinement nor of a high degree of intellectuality, yet she possessed a strong faith in her husband as a man of great promise, and recognized in him qualities which were unseen and unsuspected by his fellow-men for years after her openly-expressed prophecies of his future. Mrs. Lincoln, like others

of a naturally singular character and eccentric habits, suffered much unmerited contumely both before and since her husband's death. That catastrophe without doubt unsettled her reason, for, with all her weaknesses, she was attached to Mr. Lincoln by an affection that was even greater than the ambition with which it went hand-in-hand to seek his advancement. For many years she suffered from a combination of real and imaginary ills, and that her bodily ailments were not all chimerical is proved by the closeness with which death followed the paralytic shock received a few days before. Those who for years have persisted in maligning Mrs. Lincoln should cast a glance at the sorrowful side of her life: her second son died in childhood; her third son, William, a boy of unusual precocity, died during her first year in the White House; Thomas Todd Lincoln, her fourth son, who was the life and plaything of the Executive mansion, died eight years ago, just as he was approaching man's estate, and after he had become the staff and solace of his stricken mother. Add to these afflictions the great one of having a loving and beloved husband killed by her side, during a short season of pleasure, after his re-entry upon a new and prosperous term of high office. Her death leaves but one representative of the family, which numbered five at the time of the entrance of its head upon the duties of the presidency—the eldest son, Robert Todd Lincoln, the present Secretary of War.

MAYNARD, HORACE, born at Westboro, Mass., August 13, 1814; died at Knoxville, Tenn., May 3, 1882. He received an academic education at Millbury, Mass., and entered Amherst College in 1834, and graduated from it in 1838. The following year he removed to Knoxville, and was appointed Principal of Hampden Sidney Academy. The next year he was elected instructor in East Tennessee College, which became a university in 1842, and served in that capacity for four years, when he was appointed Professor of Mathematics and Natural Philosophy. He remained in that chair but one year; at the end thereof he entered upon the study of law, and after one year's preparation was admitted to the bar. Mr. Maynard followed his profession until 1857, when he was elected to Congress as the candidate of the Whig party; two years after, he was re-elected, and again in 1861. He returned to Knoxville upon its occupation by General Burnside, in the fall of 1863. The war having ended, he was elected to Congress from Tennessee repeatedly, once from the State at large, and other times from the Knoxville district, until 1875. Mr. Maynard was United States Minister to Turkey, by appointment of President Hayes, for nearly four years, and Postmaster-General for a few months before General Garfield's inauguration. He was a man of distinguished abilities, was a forcible and clear speaker, and always entertaining. Having espoused with Andrew Johnson the principles of

the Republican party, he remained faithful to them. Just previous to his death he had attended the State Republican Convention at Nashville.

MCCLAY, WILLIAM B., died in New York city, in 1882, aged seventy years. He began his political career in 1840, and continued to be a public man up to 1861, when he retired to private life. He was elected to the Assembly in 1840, 1841, and 1842, and was a member of the Twenty-eighth, Twenty-ninth, Thirtieth, Thirty-fifth, and Thirty-sixth Congresses.

MCCANDLESS, WILSON, born in Pittsburgh, Pa., June 19, 1810; died in the same town, June 30, 1882. His parents, although Scotch-Irish, were born in the United States. Judge McCandless was a graduate of the Western University. He studied law with W. W. Fetterman, and was admitted to practice June 19, 1831. Being a close student, he soon made a reputation at the bar, and his powers of oratory won him a large connection. After a successful practice for more than twenty-five years, he was appointed by President Buchanan, on the 8th of February, 1859, United States District Judge for the Western District of Pennsylvania, embracing a large jurisdiction. Long before his judicial career commenced, Judge McCandless took an active part in politics; he was a Democrat of the most aggressive type, and most persistent in maintaining the principles he espoused. His manner was polite and agreeable, and, no matter how excited the discussion of political points might grow, he was able to command the respect and esteem of his most violent opponents. He was three times elector for President and Vice-President of the United States, in 1844, 1852, and 1856, and was twice president of the electoral college of the State. In 1848 he was chairman of the Pennsylvania delegation in the National Democratic Convention held in Baltimore. He was a member of the Masonic fraternity, and was Past-Master of Milner Lodge. On the occasion of the visit of John Quincy Adams to Pittsburgh, in 1833, he delivered the address of welcome; also, the oration on the death of General Jackson, in 1848.

MORRISON, JOHN IRWIN, died in Knightstown, Ind., July 17, 1882, aged seventy-seven years. He was a Pennsylvanian by birth, but was taken to Indiana when a child. His opportunities for an education were meager, but his indefatigable energy and perseverance enabled him to overcome all difficulties, and he finally "worked his way" through Miami University, O. He entered the teacher's profession, and soon became principal of what was for many years known as the "Washington County Seminary," at Salem, Ind. He made this one of the best-known schools in the State, and its patronage was not limited to Indiana. His force of character enabled him to impress himself upon his students in an extraordinary manner. Among his former students were many who have risen to eminence. He was

for three years Professor of Greek in the State University, and for many years one of its trustees. Mr. Morrison filled many offices of trust and honor. He was twice elected Treasurer of his own county, and was a member of each House of the State Legislature. In 1852 he was a member of the convention that framed the present Constitution of the State, and as a member of the Committee on Education aided in shaping Indiana's excellent school system. In 1864 President Lincoln appointed him Commissioner of Enrollment, and he was one of Governor Morton's trusted advisers in those perilous times. While holding this position he was elected Treasurer of the State. His public career was as honorable as his private life was stainless. He was a man of rare intellectual attainments and force of character.

NAIRNE, CHARLES MURRAY, born at Perth, Scotland, April 15, 1808; died at Warrenton, Va., May 29, 1882. He graduated M. A. at St. Andrews University, in 1830, and two years later at Edinburgh. For some time he was assistant to the celebrated Dr. Thomas Chalmers, at Glasgow, and in 1847 came to this country. For a short while he taught in the principal classical school in Poughkeepsie; leaving there, he came to New York, and established a private school, and in 1857 accepted the professorship of Philosophy and Belles-Lettres in Columbia College. He continued to hold his position until October, 1881, when, his health having become greatly impaired, he was relieved from duty. Professor Nairne was a finished writer and a very attractive speaker; occasionally he lectured upon the subjects he had made a life-study, and was regarded as one of the most accomplished scholars in those departments. He published a collection of "Lectures and Orations," as well as many pamphlets of lesser note. Professor Nairne was a man of great gentleness of character, and in his lecture-room was particularly kind and courteous in his manner toward the students.

PAINE, ROBERT, born in Person County, N. C., November, 1799; died in Aberdeen, Miss., October 20, 1882. When quite a boy his parents removed to Tennessee, where he received a good education. He joined the Methodist Conference of that State, and became a missionary preacher. In 1830 he was elected President of La Grange College, Alabama, the duties of which position he discharged with ability for sixteen years. He was made bishop in 1846, during a very important period of the Methodist Church, when the Northern and Southern portions disagreed, and separate organizations were formed. Bishop Paine presided over the first General Conference of the new body that was held in Petersburg, Va., in 1846. He was made chairman of a committee to draw up a declaration of the intentions of the delegates from Southern States, in seceding from the General Conference. The question of dividing the Church property came before

the Supreme Court of the United States, and during the time Bishop Paine worked zealously and ably for the good of the Church. Since the war the Church has wonderfully recovered from her misfortunes, owing in a great measure to his courage and untiring ability. He was also instrumental in establishing new missions in the Southern States, and even in Mexico and China. Bishop Paine was the author of a valuable work, which was published at the request of the General Conference, the "Life and Times of Bishop McKendree."

PEASE, ALFRED H., born in Cleveland, O.; died in St. Louis, Mo., July 13, 1882. His descent was direct on his mother's side from Colonel David Humphreys, an aide to General Washington in the Revolutionary War; afterward secretary to Benjamin Franklin, and Minister to Spain. At an early age Mr. Pease evinced a remarkable talent for music, but his parents, being averse to his becoming a professional musician, strove to counteract the tendency. At the age of sixteen he entered Kenyon College, at Gambier, Ohio, and at once displayed a wonderful taste for drawing and painting. In the prosecution of his studies he made the acquaintance of a young German, with whom he visited Germany under a plea of ill-health; there his love of music mastered him, and he studied under Theodor Kinlack, court pianist of Prussia, who taught him the different schools of piano-music. Richard Wuerst instructed him in composition, after the manner of Felix Mendelssohn. Wieprecht, the Prussian Director of Military Music, taught him the science of orchestral scoring, and his compositions were received with favor by the Berlin public. With the foundation of his future career thus laid, Mr. Pease returned to America with happy prophecy of a success which he rapidly achieved. He was not content, however, with the knowledge gained, and returned to Europe and studied for nearly three years under Von Bulow. As a composer, Mr. Pease stood at the head of the second rank, and his works are to be found in all the fields of composition, though his success was greatest in the orchestral and vocal. The list of his popular songs reaches nearly one hundred in number, and many of them have found favor with the most distinguished singers of the time—Miss Kellogg, Mmes. Nilsson, Albani, Parepa Rosa, Marie Roze, and others. As a composer he was original in melody and prolific in theme; he made many additions to church-music, but his most remarkable composition was a memorial hymn, dedicated to an only brother and sister, who lost their lives in the New Hamburg disaster, and whose terrible deaths seemed to cast a shadow upon him which, in a measure, accounted for the pursuit of the melancholy habit of drinking, which indirectly resulted in his own sad end. Mr. Pease was a resident of Buffalo, and went to St. Louis about the middle of May, 1882, from

Chicago, where he had given a series of highly successful concerts; he stopped in St. Louis with an acquaintance until June 5, 1882, when he suddenly and mysteriously disappeared, and offers of large rewards by his friends, and the employment of private detectives, availed nothing in the search for the unfortunate man. His last dissipation began several days before his disappearance. He was identified, after death, as one who had registered at an hotel under the name of John C. Doehn, and his body was not recognized until after it had been conveyed to the morgue.

PRUYN, ROBERT H., died at Albany, N. Y., 1882. Mr. Pruyn was Minister to Japan under President Lincoln; was a candidate for Governor in 1865; and was President of the National Commercial Bank of Albany, and of the Dudley Observatory, besides being trustee and director in several institutions.

PUTNAM, JOHN PHELPS, born March 21, 1817, in Hartford, Conn.; died January 4, 1882. Judge Putnam's father was also a native of Hartford, and in his day one of its most prominent citizens—a merchant, a director of several insurance and banking institutions, and an alderman and mayor of the city successively. His grandfather came to the United States from the north of England and settled in Hartford in 1789. From what is known of the genealogy of the family, it is supposed to have been connected in England with the family of John Putnam who came over in 1634, and who was one of the oldest settlers of Salem Village, now Danvers, and also the ancestor of General Israel Putnam, of Revolutionary fame. Judge Putnam was a graduate of Yale College in 1837. Immediately after, he entered the office of the late Hon. William W. Ellsworth. He received a two years' course of instruction in the Harvard Law School, where was also conferred on him the degree of LL.B. After that he entered the office of Sidney Bartlett, one of the oldest as well as one of the ablest members of the Suffolk Bar. Judge Putnam was admitted to the bar in 1840, when he immediately began an independent practice in Boston, and for many years prosecuted it with excellent success. In addition to the exacting duties of professional life from 1847 to 1858, he edited no less than fifteen volumes of the "Annual Digest" of the decisions of all the courts of the United States. Judge Putnam was for two years Judge of Probate of Suffolk County; prior to that, he held for a number of years the office of Commissioner of Insolvency for the same county. He was one of the original Judges of the Superior Court, appointed on its organization in 1859. He was passionately fond of music, was President of the Apollo Club, and long identified with musical undertakings. It was mainly through his exertions that the great organ of Music Hall was procured.

ROBBINS, CHANDLER, Rev. Dr., born February 14, 1810; died September 11, 1882. A native of Massachusetts and a graduate from

Harvard University in 1829, after passing through Cambridge Divinity School he was ordained pastor of the Second Unitarian Church in 1833, his predecessor being Ralph Waldo Emerson. He remained in charge there for forty-one years, and at the time of his resignation he was the oldest settled pastor in Boston. In 1855 Harvard University bestowed upon him the degree of D.D. Dr. Robbins was a frequent contributor to literary and religious periodicals; he was also the author of "A History of the Second Church" (1852), of "Memoirs of Maria E. Clapp" (1858), of "Memoirs of William Appleton" (1868). He was a member of the Massachusetts Historical Society, and editor of its "Proceedings."

ROBERTS, SOLOMON W., born in Philadelphia, Pa., August 3, 1811; died in Atlantic City, N. J., May 22, 1882. His ancestors were among the families of Welsh members of the Society of Friends who came over with William Penn. At the age of sixteen he went to Mauch Chunk as the assistant of his uncle Josiah White, the acting manager and superintendent of the Lehigh Coal and Navigation Company, and under his direction constructed the Summit-Hill Railroad, the first one completed in Pennsylvania. He remained with the Lehigh Company until 1829, when he entered the service of the State as one of the engineers of the canal to be constructed on the Conemaugh River. In 1831 he received the appointment of principal assistant engineer in the construction of the Alleghany Portage Railroad, and afterward held the position of resident engineer and superintendent of transportation. In 1836 he resigned in order to visit Europe in behalf of the Philadelphia and Reading Railroad. He remained abroad for two years, superintending the manufacture of rails for the Reading Company, in South Wales. While there he visited the works of George Crane, who had then just succeeded in his invention for smelting iron-ore in large quantities by the use of anthracite coal and the hot blast. Upon his return home, Mr. Roberts called the attention of the Franklin Institute to the new invention, and interested his uncle, Josiah White, to the extent of founding, with others of his associates, the Crane Iron-Works on the Lehigh, which were the successful beginning of Pennsylvania's immense iron-trade. From 1838 to 1841 he was the chief engineer of the Catawissa Railway. On its completion he accepted the place of president and acting superintendent of the Philadelphia, Germantown, and Norristown Railway. He was also President of the Schuylkill Navigation Company from 1843 to 1845, and devised the plan by which navigation on that river was made feasible for boats of large tonnage. When the Pennsylvania Railroad was chartered, in 1847, Mr. Roberts declined an official position, but was elected for the purpose of representing its interest to the membership of the Lower House of the Legislature, where his experience in

railroad matters enabled him to obtain important legislation on the subject, and also to secure the passage of an act incorporating a company to construct the "Ohio and Pennsylvania Railroad" from Pittsburg to the State line. He became chief-engineer of this road and its extension in 1848, and in April, 1853, saw it completed to Crestline—for which town, and for that of Alliance, he selected both site and name. He remained with the company until 1856 as general superintendent, when he resigned and moved to Philadelphia, from Pittsburg, to accept the post of chief-engineer and general superintendent of the North Pennsylvania Railroad, which then extended only to Gwynedd. In July of 1857 he had it completed to Bethlehem, and thereafter devoted himself to the care of its constantly increasing business, refusing at various times the proffered presidency of other railway schemes. In July, 1875, he was one of the board nominated by the Franklin Institute, at the request of Mayor Stokely, to consider "the entire subject of the present and future water-supply of Philadelphia."

RUDERSDORFF, EMMA MANSFIELD, born at Ivanowsky, in the Ukraine government in Russia, in 1822; died in Boston, Mass., 1882. Her father was a distinguished violinist. Madame Rudersdorff was a soprano singer of great success, making her first appearance professionally in Leipsic, in 1840, and subsequently filling engagements in opera in all the prominent cities of the Old World.

RYERSON, ADOLPHUS EGERTON, born at Charlottetown, in the present Province of Ontario, Canada, March 24, 1803; died at Toronto, Ont., 1882. Rev. Mr. Ryerson, D. D., LL. D., was the son of a loyalist of the American Revolution, who settled in New Brunswick, and afterward in Upper Canada. He received a good classical education, became a Wesleyan minister in 1825, and founded in 1829 the "Guardian" newspaper, the organ of the Canadian Wesleyans. He was a delegate to the British Wesleyan Conference in 1833 and 1886; was appointed in 1841 Principal of Victoria College, Coburg, Ont., and in 1844 Superintendent of Public Schools for Upper Canada. In that capacity he made an extensive tour of observation in the United States and Europe, and published an elaborate report on methods of education in 1847, with a plan for the reorganization of the Canadian schools, which he labored for many years to improve. Mr. Ryerson wrote largely on educational topics, and maintained warm controversies with the opponents of the system he advocated. He was author of a "History of Canada" and of a "History of the United Empire Loyalists."

SAWYER, GEORGE Y., died June 15, 1882, in Boston, Mass. He was a classmate in Bowdoin College of William Pitt Fessenden, of Maine; Henry W. Longfellow, Nathaniel Hawthorne, Franklin Pierce, and other distinguished gentlemen. In 1839-1841 he represented Nashua,

N. H., in the Legislature, and, in one of the exciting political campaigns of that decade, he was the Whig candidate for Congress, falling a few votes short of the election. He was Judge of the Court of Common Pleas from 1851 to 1854, and of the Supreme Judicial Court from 1855 to 1859. Judge Sawyer declined an offer by President Pierce of the governorship of one of the Territories, and devoted himself, to within a few years, to an extensive law practice, being, in 1865, one of the commissioners that revised and codified the statute laws of the State.

SCHEM, ALEXANDER JACOB, a German-American scholar, born in Wiedenbrück, Westphalia, March 16, 1826; died at West Hoboken, N. J., May 21, 1881. He studied theology and philology in the Universities of Bonn and Tübingen, and came to the United States in 1851. In 1854 he was appointed Professor of Ancient and Modern Languages in Dickinson College, Carlisle, Pa., but left this position in 1860 to devote himself entirely to literature. While in Carlisle, he edited, together with Rev. George R. Crooks, a Latin-English Dictionary (Philadelphia, 1857). In 1860 he went to New York, where he received an appointment on the staff of the "New York Tribune." He was particularly noted for his encyclopedic and statistical labors, which he began in 1859 as a regular contributor to the "American Cyclopædia," for which he furnished a large number of articles. He was also a regular contributor to the "Annual Cyclopædia" since the publication of the first volume in 1861, in the foreign and religious departments. He also wrote a large number of articles for McClintock and Strong's "Cyclopædia of Theological, Biblical, and Ecclesiastical Literature." He published the "American Ecclesiastical Year-Book (1860), and in 1868 and 1869 an "Ecclesiastical Almanac," besides contributing to numerous other almanacs and year-books. In 1869 he severed his connection with the "Tribune," and assumed the editorial charge of the "Deutsch Amerikanisches Conversations-Lexicon," which was completed in 1874. He also published several editions of "Schem's Statistics of the World," a comparative statistical table similar to Hübnér's Tables. In 1874 he was elected an assistant superintendent of public schools in New York city, which position he retained up to the time of his death. In this, as well as in his previous positions, he did much to promote among Americans a better understanding of German literature and science, and as assistant superintendent particularly, to promote the study of the German language in the public schools. Together with Henry Kiddle, he edited a "Cyclopædia of Education" (New York, 1877), which was followed by two annual supplements under the title of "Year-Book of Education" (New York, 1878 and 1879).

SMITH, IDA GREELEY, born in New York city, 1850; died at Chappaqua, N. Y., 1882.

Mrs. Smith was the eldest daughter of the late Horace Greeley. She was educated at the Academy of the Sacred Heart, at Manhattanville, and at the age of eighteen graduated with high honors. During the campaign of 1872 she presided over her father's establishment with superior grace and dignity, entertaining many of his most intimate friends. When Mr. Greeley's will was contested in December, 1872, his daughter attended each sitting of the court, exciting much admiration by her refined manner and modest bearing. In May, 1875, she was married to Colonel Nicholas Smith. It was to her that the late Cornelius J. Vanderbilt paid the \$50,000 borrowed of Mr. Greeley during the lifetime of Commodore Vanderbilt.

SPOTTS, JAMES H., born at Fort Johnson, N. C., March 11, 1822; died, 1882, at Stanley, Falkland Islands. Rear-Admiral Spotts entered the naval service August 3, 1837, was promoted from midshipman to passed-midshipman in 1843, lieutenant in 1851, commander in 1862, and captain in 1866. His total sea-service was more than twenty-two years, and until the breaking out of the war the greater part of it was spent in the South Pacific squadron. He commanded the steamer Powhatan in both engagements with Fort Fisher, November, 1864, and January, 1865; in the engagement with Fort Anderson; and engagements along the banks of the Cape Fear River in the following month; also, at the bombardment of the batteries above Dutch Gap, James River, in April of the same year. The late admiral's father was Major Spotts, the gallant officer who commanded the Fourth Artillery in the battle of New Orleans in the War of 1812.

WEBSTER, CAROLINE LE ROY, died in New York city, February 28, 1882, aged eighty-five years. Mrs. Webster's father, Jacob Le Roy, was a wealthy New-Yorker, well known in the city when its limits were less extended. She was in her youth a beautiful girl, intelligent and very attractive. In 1829 she was married to the distinguished Daniel Webster. Their nuptials were celebrated at a time of great excitement, and full of special interest to Mr. Webster. Mrs. Webster was then in the prime of life, well informed and acquainted with national affairs, and was the confidante, companion, and honored counsel of her husband's most guarded thoughts. In his Washington life, the wife of Daniel Webster participated to a marked degree, and, until the time of his death, she was the queen of society. Elegant in appearance, and blessed with a brilliant mind, Mrs. Webster numbered among her visitors all the contemporaneous statesmen and diplomats of her husband's time. Her receptions were the most elegantly appointed events of the national capital. Among the distinguished guests who were always welcomed at her residence were Clay, Calhoun, Bulwer, Lord Ashburton, and Benton. During her travels in Europe, a few years after her mar-

riage, she was received by nearly all the crowned heads, at one time being the specially invited guest of Queen Victoria. After the death of Daniel Webster, October 24, 1852, Mrs. Webster left Marshfield, Mass., where her husband breathed his last, and came to New York and resided. The loss of her husband was a severe blow to Mrs. Webster. She was a devoted wife, and had a deep appreciation of his superior intellectual qualifications. With the competence which she had in her own right, and the income from the annuity given her by the city of Boston, she was enabled to live in the modest and comfortable style that became the widow of an American statesman. She led a most secluded life, seldom appearing in public, but took great interest in everything pertaining to the memory of Mr. Webster. About twenty-five years before her death she was thrown from a carriage and received a serious injury, which at times seemed to obscure her memory of events, yet she would often relate lengthy incidents of her husband's life. Her last appearance in public was at the unveiling of the Webster statue in 1872, when she occupied a place of honor on the platform.

OBITUARIES, FOREIGN. AINSWORTH, WILLIAM HARRISON, English novelist, died in London, January 3d, at the age of seventy-seven. His first book, "Sir John Cheverton," written in his youth while engaged to a lawyer, received the praise of Walter Scott, which incited him to adopt the profession of literature. "Rookwood" (1834) and "Jack Sheppard" (1839) enjoyed unbounded popularity. The latter was illustrated by Cruikshank in his finest vein, and was dramatized in eight different versions. The deeds of famous law-breakers, which furnished the subject of these tales, did not afterward occupy Ainsworth's pen, because the robber school of romance, as it was called, was thought to have an immoral influence. Equally vivid pictures of old England, replete with antiquarian knowledge, were the later products of his industrious pen.

AUERBACH, BERTHOLD, German novelist, died at Cannes, February 8th. That genial and prolific author was born, February 28, 1812, at Nordstetten, in Wurtemberg, and studied theology, history, and philosophy, becoming involved in the Burschenschaft movement, which led to his incarceration in 1836. While in prison he wrote "The Jews and Recent Literature," and soon afterward a philosophical novel, "Spinoza" (1837). The finest products of Auerbach's genius were objective pictures of the peasant-life of his native Black Forest, full of humor and pathos, as found in the "Dorfgeschichten" and "Die Frau Professorin." His later works, "On the Heights" (1860), "Das Landhaus am Rhein," and "Waldfried" were again more speculative and philosophical. Auerbach was an intensely patriotic German, with a deep ethnic attachment to the Israelitish race from which he sprang; and the sudden wasting of his energy, in the

midst of a vigorous old age, came from brooding over the antipathy to the Jews developed in the Fatherland.

BLANC, CHARLES, French art critic, died January 17th. He was born at Castres in 1813. He learned engraving, but afterward devoted himself to art criticism. Except when drawn aside, through sympathy with his brother, Louis Blanc, into an attempt at political journalism, his life was given up to the critical contemplation of art. His "History of Painters" procured his appointment as Director of Fine Arts under the second republic. His "Grammar of the Arts of Design" is considered the foundation of the scientific method of art criticism, and his popular writings on architecture and domestic decoration are classics of art literature.

BURKE, THOMAS HENRY, Under-Secretary for Ireland, was assassinated with the Chief Secretary in Phoenix Park, Dublin, May 6th. He was the son of an Irish gentleman who resided at Bruges, and was educated in Belgium and Germany. Born May 25, 1829, he received an appointment in Dublin Castle at an early age, and passed his life in the service of the Irish Executive. He served as private secretary to three Chief Secretaries, and succeeded Sir Thomas Larcom as Under-Secretary in 1868. Although a Liberal, he was never displaced from office by the Conservatives. To the Irish Mr. Burke had early rendered himself obnoxious by his zeal in the Castle service. He was identified in the popular mind with many of the odious measures of the Government. He was haughty and reserved in demeanor, but among his own associates was a cheerful companion, and showed some very noble traits of character.

CAVENDISH, LORD FREDERICK CHARLES, Chief Secretary to the Lord-Lieutenant of Ireland, was murdered at Dublin, May 6th. He was the second son of the Duke of Devonshire, was born in 1836, was educated at Trinity College, Cambridge, and entered the public service as private secretary to Lord Granville, then Lord President of the Council, in 1859, retaining the post until 1864. In 1872 he served for a time as private secretary to Mr. Gladstone. He sat in Parliament as representative for the West Riding of Yorkshire from 1865 to the day of his death. In 1873 he became a Lord of the Treasury, and when Gladstone came into power again he was appointed Financial Secretary to the Treasury. When Forster resigned the Chief Secretaryship of Ireland on May 1, 1882, the office was given to Frederick Cavendish, after being first offered to Mr. Porter, Irish Solicitor-General. Two days after his appointment he was assassinated. He was industrious as a public officer, but seldom spoke in Parliament, except on education or some such subject in which he took a special interest. He showed considerable ability in the Treasury. His amiable disposition had made him many friends.

CISSEY, ERNEST LOUIS COURTOT DE, French

general and former Secretary of War, died at Paris June 18th. Born at Paris December 23, 1810, he was educated at the military school of St. Cyr, fought with distinction in Algeria, was made brigadier-general for gallantry at the battle of Inkerman, and commanded a division in the Franco-Prussian War. He was chosen Secretary of War by Thiers on June 5, 1871, and labored energetically in reorganizing the system of national defense. He gave up his portfolio on May 30th, after the fall of Thiers, but was recalled May 22, 1874, upon the fall of the De Broglie ministry, and was reappointed after the retirement of the ministers upon the adoption of the republican constitution of February 25, 1875. He retained his portfolio in the Dufaure Cabinet, but was replaced by General Berthault upon the accession of Jules Simon, December 13, 1876. In October, 1880, General De Cissey, who had been appointed a division commander, was cashiered in consequence of the discovery that a woman, with whom he was intimate, had obtained a knowledge of important secrets of the war office and communicated them to the German Government.

DECAISNE, JOSEPH, French botanist, died at Paris, February 8th. He was born at Brussels in 1807, and was brought to Paris with his widowed mother by his brother Henri, who had won fame as a painter. He went into the Museum of Natural History in 1824 as a simple gardener. After eight years of rude labor his aptitude and assiduity opened the way of promotion. He robbed himself almost entirely of sleep to acquire the botanical knowledge necessary in the positions he was called upon to fill. His reports on the new plants brought to the gardens gave him a place in the first rank of descriptive botanists. Original researches in vegetable anatomy and physiology extended his reputation. His studies on madder, the beet-root, *ramie*, the potato-rot, etc., were inspired by the desire of rendering useful services common among French scientists. Decaisne was appointed Professor of Culture to the Museum in 1851, and superintended the works until his death. Besides preparing the annual volumes on botany in the "Annals of the Natural Sciences," and voluminous publications on his investigations in horticulture and the botany of fruit-trees, he wrote, with the aid of Le Maout, the "Systematic Treatise on Botany," which is as well known in America as in France.

DRAKE, FRIEDRICH, German sculptor, died in Berlin, April 6th. He was born in Pymont in 1805, and commenced life as a mechanical engineer. An amateur carving, which fell into the hands of a dealer, was sold at a price which encouraged him to follow his artistic bent. He entered the studio of the famous Rauch, and was soon able to assist his master in all his works. His first work was a Madonna statue, which was followed by a dying warrior and a maid dressing vines. His statues of Goethe,

Schiller, Rauch, Schinkel, and the Humboldts, spread his fame. He executed a number of monumental works in Berlin and other cities, among them two statues of Friedrich Wilhelm IV; an equestrian statue of the present Emperor, in Cologne; the groups on the Castle Bridge, in Berlin; the gigantic Victoria, on the triumphal column, at Berlin; and many others, besides a long catalogue of minor pieces.

DUROT, AUGUST ALEXANDRE, one of the most distinguished officers of the French army, who was second to none in the energy and ability with which he resisted the German invasion of 1870-71, died at Versailles, August 16th. He commanded the First Corps, and, after the wounding of MacMahon, was provisionally in command of the entire army, until relieved by his senior, General Wimpffen. Escaping from the Germans after being taken prisoner at Sedan, he made resolute and ingenious attempts to break the lines of the army which invested Paris. In the sortie of the Second Army of Paris on the southeast of Champigny, and in the last "supreme effort," at Montretout-Buzenval, on the east, the success of Ducrot was not equal to his merit. It was not through lack of bravery or devotion that his oath to return either dead or victorious from Champigny was not fulfilled. General Ducrot was born February 27, 1817, at Nevers, passed through the academy at St. Cyr, and received a commission in 1840. In the course of eighteen years he mounted to the grade of brigadier-general. He fought with distinction in the war of 1859 on the plains of Lombardy. He served in Africa as general of division, and at the outbreak of the Prussian War was commandant in Strasburg. General Ducrot was falsely accused of breaking his parole and taking up arms after the capitulation of Sedan.

DUPRÉ, GIOVANNI, the chief of Italian sculptors, died at Florence, January 8th. He was born March 1, 1817. His father, a wood-carver, was the son of a family which came with fallen fortunes from Lorraine. Giovanni learned the same trade. He practiced modeling in the studio of a benevolent sculptor, and found patrons who enabled him to execute his first works. Dupré was a realist, but nobler in his conceptions than any other modern follower of this tendency in sculpture. Among the best of his numerous productions are a "Pietà" in Sienna, a "Statue of Giotto" in the Uffizi at Florence, the "Triumph of the Cross" in the Church of Santa Croce, etc.

GREY, Sir GEORGE, English statesman, died September 9th. His father, the first baronet, was the brother of Earl Grey, the Reform Minister. Sir George succeeded to the title in 1828. He was born at Gibraltar, May 11, 1799, took high honors at Oxford, and was called to the bar in 1826. He entered Parliament in 1832, and was made Under-Secretary for the Colonies in 1834, Judge-Advocate in 1839, and Chancellor of the Duchy of Lancaster in 1841. He advocated arbitrary measures in the Irish,

Canadian, and Jamaican difficulties, but advanced liberal views on certain Irish questions when in opposition. In the Cabinet of Lord John Russell he was Home Secretary, and introduced the harsh repressive measures adopted during the Chartist and Irish agitations of 1848. In the Palmerston Government he again received the position of Home Secretary, and in 1866 the *habeas corpus* act was again suspended in Ireland at his proposal. He held no office during Gladstone's first ministry, and after its defeat retired from public life.

KAUFMANN, CONSTANTINE, Russian general, died May 14th. He was born in 1818. He rose rapidly in the army, and attained distinction in the Crimean War. After the war he was commissioned to arrange a plan, conjointly with General Miliutin, for the reorganization of the Russian army. He occupied the post of Governor of Lithuania for ten years, and was then appointed Governor of Turkistan. In Asia he extended the dominion of Russia, annexing successively Bokhara and Khiva, then Khokand in 1875, and was preparing to establish quietly a Russian protectorate in Afghanistan, when the resistance of the English, who made war upon his ally, Shere Ali, and the change in the political situation, led the Russian Government to abandon their designs, and eventually recall the able and energetic general who had done so much to extend the power of the White Czar in Central Asia.

LANZA, Signor, Italian statesman, died at Rome, March 9th. He was born in Piedmont in 1819. In 1848 he was chosen President of the Sardinian Chamber. He had been Minister many times in Italy, usually presiding over the Finance Department, but sometimes over that of Public Instruction. In 1866 he resigned his portfolio, and was chosen President of the Chamber in 1867. In 1870 he undertook to form a ministry, and being unable, took office under Sella, as Minister of the Interior. He retired in 1873, but continued to sit in the Chamber.

LESLIE, THOMAS EDWARD CLIFFE, British political economist, died January 27th, aged fifty-five years. He was born in Ireland, the son of a clergyman of Scotch extraction, and was called to the English bar after studying at Trinity College, Dublin, and at Lincoln's-Inn, London; but, turning his attention to literature, he became a contributor to the quarterlies, and received the appointment of Professor of Jurisprudence and Political Economy in the Queen's College, Belfast, a position which he filled for twenty-five years. Cliffe Leslie was the pioneer in England of the historical or inductive method as applied to political economy. His criticisms call in question the universality and value of the current maxims of the theoretical economists. Among his chief works are "Land Systems and Industrial Economy of Ireland, England, and Continental Countries" (1870), and a volume of essays on "Political and Moral Philosophy" (1879).

He was preparing a systematic treatise on economics, but lost his notes in 1872, and was not able to complete the work before his death.

MANTEUFFEL, BARON OTTO THEODOR VON, Prussian statesman, died November 27th. He was born February 8, 1805. After studying at Halle, he entered the public service in 1827. He rose through various civil and diplomatic positions to be Minister of the Interior under Count Brandenburg, in 1848, and took a conspicuous part in the suppression of the revolution. During the reactionary period of the '50's Manteuffel was prominent in the councils of the state. As director of the foreign policy he humbled his country before Russia and Austria, but assumed a firmer tone in the peace negotiations at Paris in 1856. The reactionary policy was cut short, and Baron Manteuffel permanently excluded from public affairs, upon the assumption of the regency by the present Emperor, in 1858.

OSBORNE, BERNAL, English politician, died January 4th. Descended from a family of Hebrew merchants, his father was Ralph Bernal. The son took the name of Osborne upon his marriage with an Irish heiress of that name. He was Secretary to the Admiralty under the Administration of Lord Aberdeen and under Lord Palmerston, until he lost his seat as member for Middlesex. Bernal Osborne was the Liberal wit of the House of Commons, but sometimes directed his sarcasms against his own party.

PALMER, Professor, an English Oriental scholar, was killed by Arabs, together with two officers, while visiting the tribes of the desert near Suez in quest of military information. He was born at Cambridge in 1840. He commenced life as a clerk in London, but had already begun the study of Arabic. After several years he abandoned commerce and studied at Cambridge University. He received the professorship of Arabic. He made several adventurous journeys in the East. In the last ten years of his life he published dictionaries of Arabic and Persian, grammars of various languages, a translation of the New Testament into Persian and of the Koran into English, and many other works.

RAFF, JOACHIM, a prolific Swiss composer; died at Frankfurt, June 25th. Born at Lachen, in Switzerland, May 27, 1824, he commenced life as a school-teacher, but embraced the musical profession on the strength of the favorable comments elicited from famous musicians by his first compositions. Although an advocate of the new school of music, which he defended in an able pamphlet on "The Wagner Question," he cultivated various styles and classes of music, with an eye to immediate success and popularity. He was a successful songwriter, less successful in his three operas, but a masterly composer of instrumental music of a high order, his chief productions being the symphony "Im Walde" and his celebrated "Leonora" symphony.

ROSSETTI, DANTE GABRIEL, painter and poet; died April 9th, at the age of fifty-four. He was the son of a noted Italian poet, who came to England as a political refugee. He became one of the most conspicuous representatives of the pre-Raphaelite school in art. He was a supremely gifted colorist, and as a delineator of female beauty he realized a type which contrasted strikingly with the conventional Academic prettiness. As a poet he employed language and rhythm to convey artistic impressions, and was the most typical and masterly of the modern sensuous school of English poets. The so-called æsthetic movement received its impulse and direction principally from the genius of Dante Rossetti.

RUSSEL, SCOTT, English engineer; died June 8th, in the Isle of Wight, at the age of seventy-four. He was the son of a Scottish clergyman, and was destined for the Church, but was allowed to enter a workshop and follow his mechanical taste. He afterward studied in Edinburgh University, and when only twenty-four years old filled provisionally the chair of Natural Philosophy. He began at this time researches into the nature of waves, with a view to improve the models of vessels. He discovered the wave of translation and developed the wave-line system of naval architecture. He was placed at the head of the great ship-yards at Greenock to introduce this system of instruction. In his own works on the Thames he built other vessels on the new system, among them the Great Eastern, in which another improvement of his invention, the longitudinal double-skin principle, was applied. Scott Russel was one of the first advocates of iron-clad war-vessels, and designed some of the first ironclads built for the British Government. His last work in naval architecture was the steamer to transport railroad-trains across the Lake of Constance. He planned important works in civil engineering, among them the dome for the Vienna Exhibition of 1873, a new high-level bridge across the Thames at London, etc.

SCHWANN, THEODOR, German scientist; died at Liège, in January. He was born at Neuss, near Düsseldorf, December 7, 1810. He was assistant to Johannes Müller in the Anatomical Museum in Berlin from 1834 to 1839, then Professor of Anatomy at Louvain, and since 1848 at Liège. Schwann was the author of the cell-theory, which was announced in 1839, and marks an epoch in biological science.

THOMSON, SIR CHARLES WYVILLE, English scientist; died March 10th, at the age of fifty-one years. He was the son of a surgeon, and was educated at Edinburgh University. He filled professorships in the Universities of Aberdeen, Cork, and Belfast. In 1867-'69 he took part in dredging expeditions of the Porcupine and Lightning, in 1870 took the chair of Professor of Natural History at Edinburgh, and in 1872 took charge of the scientific department of the Challenger expedition. He finished the first volume of the report of the three years'

expedition in 1877, and published also a treatise on the "Depth of the Sea," besides numerous contributions to scientific journals.

**OBLIGATION OF CONTRACTS.** That clause of the Federal Constitution which prohibits the States from passing any law impairing the obligation of a contract was elaborately considered by the Supreme Court of the United States in two important cases, decided early in 1883. In each case State legislation, relating to State bonds, was under review. One suit was brought by a holder of Virginia bonds, and the other by creditors of Louisiana. In each case the decision was in favor of the State. The opinions of the Court are of exceptional interest and importance, as an exposition of the constitutional powers of the States in dealing with their creditors.

**THE VIRGINIA CASE.**—In 1871 the principal of the State debt of Virginia, with its overdue and unpaid interest, amounted to more than \$45,000,000. The principal of this indebtedness had been incurred by the construction of various public works prior to the civil war. It was claimed that one third of this burden was to be borne by West Virginia, and this liability was recognized by the latter State in its first Constitution, adopted in 1863; but nothing was done by its Legislature toward making any provision for the payment of the debt. In 1871 Virginia undertook to make a settlement with its creditors, and for that purpose passed "an act to provide for the funding and payment of the public debt." After reciting that two thirds of the debt was the just proportion of Virginia, the act provided that the owners of the bonds, stocks, or interest-certificates of the State, with some exceptions, might fund two thirds of the amount of the same, together with two thirds of the interest due, in six per cent coupon or registered bonds of the State, having thirty-four years to run, but redeemable at the pleasure of the State after ten years, the bonds payable to order or bearer, and the coupons to bearer, at the Treasury of the State. The statute then declared that "the coupons shall be payable semi-annually, and be receivable at and after maturity for all taxes, debts, dues, and demands due the State, which shall be so expressed on their face; and the bonds shall bear on their face a declaration to the effect that the redemption thereof is secured by a sinking fund provided for by the law under which they are issued." For the remaining third of the amount of the bonds thus funded, the act provided that certificates should be issued to the creditors, setting forth the amount, with the interest thereon; and that their payment should be provided for in accordance with such settlement as might subsequently be made between the two States, and that Virginia would hold the surrendered bonds, so far as they were not funded, in trust for the holder or his assignees.

A large number of creditors accepted these

terms, surrendered their old bonds, and took new ones, with interest coupons annexed, for two thirds of their amount, and certificates for the balance. The amount of bonds surrendered was about thirty million dollars, for which new bonds, amounting to twenty million dollars, were issued. When the act of 1871 was passed, and when the interchange of bonds was made in conformity with its provisions, the law of Virginia afforded the holders of the new bonds the remedy of a mandamus from the Supreme Court of Appeals, to compel collectors to accept the coupons in payment of taxes.

Such was the law governing the rights and the remedies of the holders of these bonds and coupons, when, on January 14, 1882, was passed "an act to prevent frauds upon the Commonwealth, and the holders of her securities, in the collection and disbursement of revenues." After reciting that forged and spurious bonds and coupons were in existence, the act provides that the officer to whom coupons, issued under the act of 1871, are tendered in payment of taxes, debts, or demands due the State, "shall receive the same, giving the party tendering a receipt, stating that he has received the same for the purpose of identification and verification." The second section provides that "he shall at the same time require such taxpayer to pay his taxes in coin, legal-tender notes, or national bank bills, and, upon payment, give him a receipt for the same. In case of refusal to pay, the taxes due shall be collected as all other delinquent taxes are collected." Section 3 is as follows:

He shall mark each paper as coupons so received, with the initials of the tax-payer from whom received, and the date of receipt, and shall deliver the same, securely sealed up, to the judge of the county court of the county or hustings court of the city in which such taxes, debts, or demands are payable. The tax-payer shall thereupon be at liberty to file his petition in said county court against the Commonwealth. A summons to answer which petition shall be served on the Commonwealth's attorney, who shall appear and defend the same. The petition shall allege that he has tendered certain coupons in payment of his taxes, debts, and demands, and pray that a jury be impaneled to try whether they are genuine, legal coupons, which are legally receivable for taxes, debts, and demands. Upon this petition an issue shall be made in behalf of the Commonwealth, which shall be tried by a jury, and either party shall have a right to exceptions on the trial, and of appeal to the Circuit Court and Court of Appeals. If it be finally decided in favor of the petitioner that the coupons tendered by him are genuine, legal coupons, which are legally receivable for taxes and so forth, then the judgment of the court shall be certified to the Treasurer, who, upon the receipt thereof, shall receive said coupons for taxes, and shall refund the money before then paid for his taxes by the tax-payer out of the first money in the Treasury, in preference to all other claims.

Section 4 provides that whenever any taxpayer shall apply to any court for a mandamus to compel a collector to receive the coupons for taxes, it shall be the duty of the collector to make return to the mandamus that he "is

ready to receive said coupons in payment of such taxes, debts, and demands, as soon as they have been legally ascertained to be genuine." The act then prescribes the legal procedure by which the issue of genuineness is to be joined and decided.

The question raised by this legislation was whether the act of January, 1882, was in violation of that clause of the Federal Constitution which declares that no State shall pass any "law impairing the obligation of contracts." It was raised by Andrew Antoni, who, in March, 1882, tendered to Samuel O. Greenhow, treasurer of the city of Richmond, a coupon of the issue of 1871 for \$3.00, in payment of taxes. The tender was refused, whereupon Antoni applied to the Supreme Court of Appeals for a mandamus to compel its acceptance. The Treasurer answered that under the law of January, 1882, he could not receive the coupon until its genuineness was established as prescribed by that law. To this return a demurrer was filed. The four judges of the Supreme Court of Appeals divided equally on the question of the constitutionality of the law of January, 1882. The mandamus was accordingly denied, and an appeal was taken to the United States Supreme Court. The opinion of that court, upholding the constitutionality of the act, was delivered by Chief-Justice Waite, in March, 1883. Elaborate dissenting opinions were rendered by Justices Field and Harlan. Justice Matthews concurred in the judgment of the majority, but dissented from the grounds on which it was based. The Chief-Justice pointed out that the Supreme Court of Appeals of Virginia had held in two or three cases that in issuing the bonds of 1871 the State had entered into a valid contract with all persons taking the coupons to receive them in payment of taxes and State dues. The same principle was affirmed by the United States Supreme Court in the case of *Hartman vs. Greenhow*, decided at the October term, 1880, and reported in 102 United States Reports. "Any act of the State," says Chief-Justice Waite, "which forbids the receipt of these coupons for taxes is a violation of the contract, and void as against coupon holders."

But the question here is, continues the opinion, whether the act of 1882 violates any implied obligation of the State in respect to the remedies that may be employed for the enforcement of its contract, if the collector refuses to take them. It can not be denied that, as a general rule, laws applicable to the case, which are in force at the time and place of making a contract, enter into and form part of the contract itself, and that this embraces alike those laws which affect its validity, construction, discharge, and enforcement. But it is equally well settled that changes in the forms of action and modes of proceeding do not amount to an impairment of the obligations of a contract, if an adequate and efficacious remedy is left. As the Supreme Court said in the case of *Von*

*Hoffman vs. Quincy* (4 Wallace's Reports, 553), "it is competent for the States to change the form of the remedy, or to modify it otherwise, as they may see fit, provided no substantial right secured by the contract is thereby impaired. No attempt has been made to fix definitely the line between alterations of the remedy, which are to be deemed legitimate, and those which, under the form of modifying the remedy, impair substantial rights. Every case must be determined upon its own circumstances. Whenever the result last mentioned is produced, the act is within the prohibition of the Constitution, and to that extent void." In all such cases the question becomes, therefore, one of reasonableness, and of that the Legislature is primarily the judge. The Court ought never to overrule the decision of the Legislature unless a palpable error has been committed. If a state of facts could exist that would justify the change in a remedy which has been made, the Court must presume it did exist, and that the law was passed on that account. The Court has nothing to do with the motives of the Legislature, if what they do is within the scope of their powers under the Constitution.

The right of the coupon-holder, continued the Court, is to have his coupon received for taxes when offered. The question here is not as to that right, but as to the remedy the holder has for its enforcement when denied. After comparing the old with the new remedy, the Chief-Justice said:

The following changes are thus made in the old remedy: 1. The taxes actually due must be paid in money before the court can proceed, after the collector has signified in the proper way his willingness to receive the coupons, if they are genuine and in law receivable; 2. The coupons must be filed in the Court of Appeals; and, 3. They must be sent to the local court to have the fact of their genuineness and receivability determined, subject to an appeal to the Circuit Court and the Supreme Court of Appeals. As the suit is for a mandamus, all the provisions of the general law regulating the practice not inconsistent with the new law remain, and, if the petitioner succeeds in getting his peremptory writ, he will recover his costs. No issues are required that it would not have been in the power of the collector to raise before the change was made, and there is no additional burden of proof imposed to meet the issues, so that the simple question is, whether the requirement of the advance of the taxes and the change of the place and manner of trial impair the obligation of the contract on the part of the State to furnish an adequate and efficacious remedy to compel a tax-collector to receive the coupons in payment of taxes, in case he will not do it without compulsion.

The Court then proceeded to show that the change of remedy was not such as, in its opinion, was sufficient to impair the obligation of the contract. "The primary obligation of the State," it said, "is for the payment of the coupons. All else is simply as a means to that end. It matters not whether the coupons have been refused for the taxes, if full payment of the amount they call for is actually made in money. A remedy, therefore, which is ample for the enforcement of the payment of the

money, is ample for all the purposes of the contract. That, we think, is given by the act of 1882 in both forms of proceeding."

The Court concluded as follows:

In conclusion, we repeat that the question presented by this record is not whether the tax-collector is bound in law to receive the coupon, notwithstanding the legislation which, on its face, prohibits him from doing so, nor whether, if he refuses to take the coupon and proceeds with the collection of the tax by force, he can be made personally responsible in damages for what he does, but whether the obligation of the contract has been impaired by the changes which have been made in the remedies for its enforcement in case he refuses to accept the coupon. We decide only the question which is actually before us. It is no doubt true that the commercial value of the bonds and coupons has been impaired by the hostile legislation of the State, but this impairment, in our opinion, comes not from the change of the remedies, but from the refusal to accept the coupons without suit. What we are called upon to consider in this case is not the refusal to take the coupons, but the remedy after refusal.

Inasmuch as we are satisfied that a remedy is given by the act of 1882, substantially equivalent to that in force when the coupons were issued, we have not deemed it necessary to consider what would be the effect of a statute taking away all remedies.

Justice Field began his dissenting opinion by saying that the legislation of Virginia of 1882, which was sustained by the Court, appeared to him to be "in flagrant violation of the contract with her creditors under the act of March 30, 1871, commonly known as the funding act; and that the doctrines advanced by the Court, though not so intended, do, in fact, license any disregard of her obligations which the ill-advised policy of her legislators may suggest."

The clause of the Constitution, he continued, which declares that no State shall pass any law impairing the obligation of contracts, prohibits legislation thus affecting contracts between the State and individuals equally as it does contracts between individuals. What, then, was the obligation of the contract entered into between Virginia and her creditors under the funding act of 1871, so far as the interest coupons are concerned? The contract is, that she will pay the amount of the coupon, and that it shall, at and after maturity, be receivable for taxes, dues, and demands of the State. And by its receivability is meant that it is to be taken by officers whom the State may authorize to receive money for its dues whenever tendered them. By the obligation of a contract is meant the means which the law affords for its execution, the means by which it could at the time it was made be enforced. Justice Field then said:

The receivability of the coupon, under the funding act of 1871, for taxes, dues, and demands, gave to it, as already said, its principal value. At that time there was provided in the system of procedure of the State a remedy for the specific execution of the contract, by which this receivability could be enforced. The legislation of January 14 and April 7, 1882, deprives the holder of the coupon of this remedy, and in lieu of it gives him the barren privilege, after paying the taxes, of suing in a local court to test before a jury the genuineness of the coupon and its legal receivability for them, and, in case he establishes these facts, of having

a judgment to that effect certified to the Treasurer of the Commonwealth, and the amount paid refunded out of money in the Treasury, if there be any. To recover this judgment, he must pay the costs of the proceeding, including the fees of witnesses and jurors, and of the clerk, sheriff, and other officers of the court. This is a most palpable and flagrant impairment of the obligation of the contract. No legislation more destructive of all value to the contract is conceivable, unless it should absolutely and in terms repudiate the coupon as a contract at all. It is practical repudiation.

In *Bronson vs. Kinzie* this court, speaking by Chief Justice Taney, said: "It is difficult, perhaps, to draw a line that would be applicable in all cases between legitimate alterations of the remedy and provisions which, in the form of remedy, impair the right. But it is manifest that the obligation of a contract, and the rights of a party under it, may, in effect, be destroyed by denying a remedy altogether, or may be seriously impaired by burdening the proceedings with new conditions and restrictions, so as to make the remedy hardly worth pursuing. And no one, we presume, would say that there is any substantial difference between a retrospective law, declaring a particular contract or class of contracts to be abrogated and void, and one which took away all remedy to enforce them, or encumbered it with conditions that rendered it useless or impracticable to pursue it." (1 How., 317.)

In *Planters' Bank vs. Sharp* this court said: "One of the tests that a contract has been impaired is, that its value has by legislation been diminished. It is not, by the Constitution, to be impaired at all. This is not a question of degree or manner or cause, but of encroaching in any respect on its obligation, dispensing with any part of its force." (6 How., 327.)

In *Murray vs. Charleston* the court cited with approval the language of a previous decision to the effect that a law which alters the terms of a contract by imposing new conditions, or dispensing with those expressed, impairs its obligation; and added, speaking by Mr. Justice Strong, who recently occupied a seat on this bench, that "it is one of the highest duties of this court to take care the prohibition [against the impairment of contracts] shall neither be evaded nor frittered away. Complete effect must be given to it in all its spirit." (96 U. S., 448.)

In *Edwards vs. Kearzey* this court said, speaking by Mr. Justice Swayne, so lately one of our number: "The remedy subsisting in a State when and where a contract is made and is to be performed is a part of its obligation, and any subsequent law of the State which so affects that remedy as substantially to impair and lessen the value of the contract is forbidden by the Constitution, and is therefore void." (96 U. S., 607.)

And only two terms ago, in the case of *Louisiana vs. New Orleans*, this court said, without a dissenting voice, that "the obligation of a contract, in the constitutional sense, is the means provided by law by which it can be enforced, by which the parties can be obliged to perform it. Whatever legislation lessens the efficacy of these means impairs the obligation. If it tend to postpone or retard the enforcement of the contract, the obligation of the latter is to that extent weakened." (102 U. S., 205.)

How can it be maintained, in the face of these decisions, that the legislation of January 14 and April 7, 1882, does not impair the obligation of the contract under the funding act? It annuls the present receivability of the coupon; it substitutes for the specific execution of the contract a protracted litigation, and, when the genuineness of the coupon and its legal receivability for taxes are judicially established, its payment is made dependent upon the existence of money in the Treasury of the State. If the language of the act, declaring that, when the genuineness of the coupon and its receivability for taxes are established, the taxes paid by its holder shall be refunded out of the first money in the Treasury in preference to other claims, be deemed a sufficient appropriation to au-

thorize the Treasurer to pay out the money, contrary to what has just been decided with respect to language much more expressive in the legislation of Louisiana, of what avail can it be to the owner of the coupon if the Treasurer refuse to refund the amount? There is no mode, according to the opinion of the majority, of coercing his action. No mandamus can issue, for that remedy and all compulsory process have been abolished.

Besides all this, as the coupons are mostly for small amounts, the costs of the suits to test their genuineness and receivability for taxes would be more than their value. Practically, the law destroys the coupons, and it was evidently intended to have that effect. . . .

That there is any adequate and efficacious remedy substituted for the one in existence when the funding act was adopted, can not, it seems to me, be seriously affirmed. The remedy originally existing was effective. No officer could refuse to receive the coupon without subjecting himself to personal liability. After a tender no valid sale could be made for the taxes. And the creditor could invoke the compulsory process of the courts to secure a specific performance. Now all is changed. A law which practically destroys the value of the coupon is sustained. The officer is not bound to receive it, in the sense that he can not be compelled to take it. He can enforce the payment of taxes in money; he can sell property, if necessary, to collect them; he can wholly ignore the coupon, unless the holder should foolishly consent to incur double the amount in costs to establish by a jury trial its genuineness and legal receivability for taxes.

Justice Field concluded his dissenting opinion in these words: "I find myself bewildered by the opinion of the majority of the court. I confess that I can not comprehend it, so foreign does it appear to be from what I have heretofore supposed to be established and settled law. And I fear that it will be appealed to as an excuse, if not justification, for legislation amounting practically to the repudiation of the obligations of States, and of their subordinate municipalities—their cities and counties. It will only be necessary to insert in their statutes a false recital of the existence of forged and spurious bonds and coupons, as a plausible pretext for such legislation, and their schemes of plunder will be accomplished. No greater calamity could, in my judgment, befall the country than the general adoption of the doctrine that it is not a constitutional impairment of the obligation of contracts to embarrass their enforcement with onerous and destructive conditions, and thus to evade the performance of them."

Justice Harlan said, in his dissenting opinion, that "if the act of January 14, 1882, be upheld in its application to bonds issued under the act of 1871, it is difficult to perceive that the constitutional inhibition upon laws impairing the obligation of contracts is of the slightest practical value for the preservation of the rights of those dealing with States. Indeed, the act of January 14, 1882, in its necessary operation, as directly and effectually impairs the commercial value of the bonds and coupons issued under the funding act as would a statute which repudiated the bonds outright, and forbade the receipt of their coupons, under any circumstances, for taxes, debts, or demands due Virginia."

After explaining that the judgment of the Court was based on the ground that the obligation of the contract was not impaired by the changes made by the act of January 14, 1882, in the remedies for its enforcement, Justice Harlan proceeded:

Here is the radical difference between the majority of my brethren and myself. To my mind—I say it with all respect for my associates who have reached a different conclusion—it is so entirely clear that the change in the remedies has impaired both the obligation and value of the contract, that I almost despair of making it clearer by argument or illustration.

Under the contract the tax-payer, it is conceded, is entitled to have his coupon received for his taxes when tendered; while under the statute of January 14, 1882, the collector is forbidden to so receive it; and the tax-payer, in order to protect his property against levy or distraint, and relieve it from the encumbrance created by the assessment of taxes, must pay his taxes in money, and then, if he wishes to get his money back, prove to the satisfaction of twelve jurymen the genuineness and legal receivability of his coupons.

Under the contract, and the laws in force when it was made, the tax-payer is entitled, in the first instance, to enforce the receipt of his coupons for taxes by mandamus, the sole remedy then given to effect that result; while under the subsequent legislation he is denied the right to a mandamus until he first pays his taxes in money, and then proves to the satisfaction of twelve jurymen that they are genuine coupons, and legally receivable for taxes.

Under the contract and the laws in force when it was made, the tax-collector was not bound to resist an application for mandamus, and it is not to be presumed that he would do so unless he doubted the genuineness of the coupons tendered in payment of taxes; if, however, he did so, he became liable to pay the costs incurred by the tax-payer, when the latter succeeded; while under the act of January 14, 1882, all discretion is taken from the collector, and he is *required, although he may know the coupons to be genuine and legally receivable for taxes, to decline receiving them for taxes until the tax-payer, having first paid his taxes in money, shall prove them, to the satisfaction of twelve jurymen, to be genuine.*

And the remedy thus given by the statutes, passed after the contract was made, for the enforcement of the tax-payer's admitted right to have his coupon received for taxes, *when offered*, is pronounced to be adequate and efficacious, and not an impairment of the substantial rights given by the contract. My brethren—distinctly admitting that the legislation of 1882 is in hostility to the State's creditors, and has impaired the commercial value both of the bonds and their coupons—in effect, hold that such legislation does not burden the proceedings for the enforcement of the contract with any new conditions or restrictions inconsistent with, or which impair, its obligations. I can not assent to such conclusion, believing, as I do, not only that it is in direct conflict with every adjudged case cited, either by the court or by my brother Field, but that the new remedy is adequate and efficacious, not for the preservation and enforcement, but the destruction of the contract. The holders of the bonds and coupons are placed by the legislation of 1882 in the position where it is useless and impracticable to pursue the remedies thereby given. To my mind this is so perfectly apparent that I should have deemed it impossible that any different view could be entertained.

Justice Harlan concluded his opinion as follows:

Finally came the enactments of 1882, which have so changed the remedies existing when bonds were issued under the act of 1871 that tax-payers, holding

coupons of such bonds, can not use them in payment of taxes without expending more money to enforce compliance with their contract than the coupons are worth.

I can not agree that the courts of the Union are powerless against State legislation, which is so manifestly designed to destroy contract rights protected by the Constitution of the United States.

Without stopping to speculate upon the disastrous consequences which would result both to the business interests and to the honor of the country if all the States should enact statutes similar to those passed by Virginia, I sum up what has been so imperfectly said by me: If, as is conceded, Antoni is entitled by the contract to have his coupon received in payment of taxes, *when offered* for that purpose, and if, as is also conceded in the opinion of the majority, he was entitled, by the laws in force when the contract was made, to the remedy of mandamus to compel the tax-collector to receive his coupons and discharge *pro tanto* his taxes, it is clear that the subsequent statute does impair the obligation of the contract, by imposing new and burdensome conditions, which not only prohibit the collector from receiving coupons in payment of taxes *when offered*, but require the tax-payer to pay his taxes *in money*, not to be returned to him unless, upon the occasion of *each* tender of coupons, he submits (without the possibility of recovering his costs of suit) to a jury trial, and proves to the satisfaction of twelve jurymen that the coupons tendered are genuine, and legally receivable for taxes.

A separate opinion was also written by Justice Matthews, who concurred in the judgment of the Court, but not in the grounds on which the Court rested its decision. He agreed that the State of Virginia, by the act of 1871, entered into a valid contract with the holders of its bonds to receive their coupons in payment of taxes; and that any subsequent statute which denies this right is a breach of its contract and a violation of the Constitution of the United States. But for a breach of its contract by a State, no remedy is provided by the Constitution of the United States against the State itself; and a suit to compel the officers of a State to do the acts which constitute a performance of its contract by the State, is a suit against the State itself. If the State furnishes a remedy by process against itself or its officers, that process may be pursued because it has consented to submit itself to that extent to the jurisdiction of the courts; but if it chooses to withdraw its consent by a repeal of all remedies, it is restored to the immunity from suit, which belongs to it as a political community, responsible in that particular to no superior.

Justices Bradley and Gray concurred in the judgment on both grounds: that stated in the opinion of the court delivered by the Chief-Justice, and that presented by Justice Matthews.

THE LOUISIANA CASE.—In 1874 the Legislature of Louisiana passed an act providing for an issue of bonds for the purpose of consolidating and reducing the floating and bonded debts of the State. The bonds were payable to bearer forty years from January 1, 1874, and bore interest at the rate of seven per cent per annum, payable semi-annually. The Governor, Lieutenant-Governor, Auditor, Treasurer, Secretary of State, Speaker of the House

of Representatives, and a person to be elected by these officers as a fiscal agent of the State, were created a Board of Liquidation, with power to issue the bonds and exchange them for all valid outstanding bonds and certain warrants on the Treasury, at the rate of sixty cents in the new bonds for one dollar of old bonds and warrants. The act then provided for an annual tax levy of five and one half mills for the purpose of paying the principal and interest on the bonds, and declared that "the revenue derived therefrom is hereby set apart and appropriated for that purpose and no other." It was made a felony, punishable by imprisonment for not more than ten nor less than two years, for the fiscal agent, or any officer of the State, or Board of Liquidation, to divert the fund from its legitimate channel. The act further declared that "the interest tax aforesaid shall be a continuing annual tax until the said consolidated bonds shall be paid or redeemed, principal and interest; and the said appropriation shall be a continuing annual appropriation during the same period, and this levy and appropriation shall authorize and make it the duty of the Auditor and Treasurer, and the said board, respectively, to collect said tax annually, and pay said interest, and redeem said bonds, until the same shall be fully discharged." By other sections it was provided that any judge, tax-collector, or any other officer of the State, obstructing the execution of the act, or failing to perform his official duty, should be guilty of a misdemeanor; that each provision of the act should be a contract between the State and every holder of the consolidated bonds; that the tax-collectors should not pay over any moneys collected by them to any other person than the State Treasurer; and that no court or any judge should have power to enjoin the payment of principal or interest of any of the bonds, or the collection of the special tax therefor. Immediately after the passage of the act the following amendment to the Constitution was adopted:

The issue of consolidated bonds authorized by the General Assembly of the State, at its regular session in the year 1874, is hereby declared to create a valid contract between the State and each and every holder of said bonds, which the State shall by no means and in no wise impair. The said bonds shall be a valid obligation of the State in favor of any holder thereof, and no court shall enjoin the payment of the principal or interest thereof, or the levy and collection of the tax therefor; to secure such levy, collection, and payment, the judicial power shall be exercised when necessary. The tax required for the payment of the principal and interest of said bonds shall be assessed and collected each and every year until the bonds shall be paid, principal and interest, and the proceeds shall be paid by the Treasurer of State to the holders of said bonds, as the principal and interest of the same shall fall due, and no further legislation or appropriation shall be requisite for the said assessment and collection and for such payment from the Treasury.

Under this authority consolidated bonds to the amount of about twelve million dollars were issued.

In 1879 a new Constitution was adopted.

It took effect January 1, 1880. A part of this, called the "debt ordinance," reduced the interest on the consolidated bonds to two per cent per annum for five years, to three per cent for fifteen years afterward, and to four per cent thereafter, with a proviso that the holders of the bonds might exchange them for new bonds for seventy-five per cent on the dollar drawing four per cent interest. The Constitution further declared that the coupons of the consolidated bonds should be remitted, and that "any interest taxes collected to meet said coupons are hereby transferred to defray the expenses of the State government."

In January, 1880, after the above constitutional provisions went into operation, two suits to test their validity were brought by John Elliott, Nicholas Gwynn and Henry S. Walker, holders of bonds. One was brought in the United States Circuit Court to enjoin the several officers of the State composing the Board of Liquidation from recognizing the "debt ordinance" of the new Constitution, and from disregarding the provisions of the funding act and the Constitution of 1874. In the other suit, which was begun in the State Court and removed to the Federal Court, a mandamus was asked to compel these officers to apply the funds on hand to the payment of interest on the consolidated bonds, and also to proceed to collect the tax levied in accordance with the provisions of the act and the Constitution of 1874.

The question raised by these suits, and brought before the United States Supreme Court, was whether the "debt ordinance" provisions of the Constitution of 1879 impaired, in violation of the Federal Constitution, the obligation of the contract entered into between the State and its creditors by the act of 1874 and the Constitution of that year. The Supreme Court said that the language of the act and the Constitution of 1874 "shows unmistakably a design to make these promises and these pledges so far contracts, that their obligations would be protected by the Constitution of the United States against impairment;" and added that it is equally manifest that the object of the State in adopting the "debt ordinance" in 1879 was to stop the further levy of the promised tax, and to prevent the disbursing officers from using the revenue from previous levies to pay the interest falling due in January, 1880, as well as the principal and interest maturing thereafter." The Court admitted that the State had violated its contract, but held that there was no means of compelling it or its officers to carry out the contract. It was clear that the State itself could not be sued by these bondholders without its own consent, and this had never been given. "Neither was there when the bonds were issued," said Chief-Justice Waite, "nor is there now, any statute or judicial decision giving the bondholders a remedy, in the State courts or elsewhere, either by mandamus or injunction, against the State in its political

capacity, to compel it to do what it has agreed should be done, but what it refuses to do." The persons sued are the executive officers of the State, and they are proceeded against in their official capacity. The suits are to enjoin them from doing what the Constitution of 1879 requires them to do, and to compel them to do what that Constitution prohibits them from doing.

The question then is whether, notwithstanding the Constitution of 1879 on its face takes away the power of the executive officers of the State to comply with the provisions of the act of 1874, the contract can be enforced by coercing the agents and instrumentalities of the State, whose authority has been withdrawn in violation of the contract, without having the State itself in its political capacity a party to the proceedings. The relief asked will require the officers against whom the process goes to act contrary to the positive orders of the supreme political power of the State, whose creatures they are, and to which they are ultimately responsible in law for what they do. They must use the money in the Treasury and under their official control in one way, when the supreme power has directed them to use it in another, and they must raise more money by taxation when the same power has declared it shall not be done. The parties prosecuting the suits do not, in direct terms, ask for the payment only of the bonds and coupons which they hold. All that is asked will enure as much to the benefit of the other holders of similar obligations as to the particular parties to these suits. So that the remedy sought implies power in the judiciary to compel the State to abide by and perform its contracts for the payment of money, not by rendering and enforcing a judgment in the ordinary form of judicial procedure, but by assuming the control of the administration of the fiscal affairs of the State to the extent that may be necessary to accomplish the end in view.

It was argued that the money in the Treasury collected from the tax levied for 1879 constituted a trust fund of which the individual defendants were *ex-officio* trustees, and that they might be enjoined as such trustees from diverting it from the purposes to which it was pledged under the contract. On this point Chief-Justice Waite said:

The individual defendants are the several officers of the State, who, under the law, compose the Board of Liquidation. That board is in no sense a custodian of this fund. Its duty was to negotiate the exchange of the new bonds for the old on the terms proposed. It had nothing to do with levying the tax, collecting the money, or paying it out further than by purchasing the bonds with any surplus there might be from time to time in the Treasury over what was required to meet the interest. The provision in the law that it shall be the duty of the Auditor, Treasurer, and the board, respectively, to collect the tax, pay the interest, and redeem the bonds, evidently means no more than that the Auditor and Treasurer shall perform their respective duties under the general laws in the assessment and collection of the tax, and shall pay in the

usual manner the interest and principal of the bonds as they respectively fall due, and that the board shall purchase and retire the bonds whenever there is a surplus that, under the law, is to be used for that purpose.

The Treasurer of State is the keeper of the Treasury, and in that way is the keeper of the money collected from this tax, just as he is the keeper of other public moneys. The taxes were collected by the tax-collectors and paid over to the State Treasurer, that is to say, into the State Treasury, just as other taxes were when collected. The Treasurer is no more a trustee of these moneys than he is of all other public moneys. He holds them, but only as the agent of the State. If there is any trust, the State is the trustee, and unless the State can be sued the trustee cannot be enjoined. The officers owe duty to the State alone, and have no contract relations with the bondholders. They can only act as the State directs them to act, and hold as the State allows them to hold. It was never agreed that their relations with the bondholders should be any other than as officers of the State, or that they should have any control over this fund except to keep it like other funds in the Treasury and pay it out according to law. They can be moved through the State, but not the State through them.

The Court concluded its opinion as follows:

Little need be said with special reference to the suit for mandamus. In this no trust is involved, but the simple question presented is, whether a single bondholder, or a committee of bondholders, can, by the judicial writ of mandamus, compel the executive officers of the State to perform generally their several duties under the law. The relators do not occupy the position of creditors of the State demanding payment from an executive officer charged with the ministerial duty of taking the money from the public Treasury and handing it over to them, and, on his refusal, seeking to compel him to perform that specific duty. What they ask is that the Auditor of State, the Treasurer of State, and the Board of Liquidation may be required to enforce the act of 1874, and "carry out, perform, and discharge each and every one of the ministerial acts, things, and duties respectively required of them, . . . according to the full and true intent and purport of that act." Certainly no suit begun in the Circuit Court for such relief would be entertained, for that court can ordinarily grant a writ of mandamus only in aid of some existing jurisdiction. (*Bath County vs. Ames*, 13 Wallace, 247; *Davenport vs. Dodge County*, 105 U. S. Reports, 242.) Our attention has been called to no case in the State courts of Louisiana in which such general relief has been afforded, and the jurisdiction of the Circuit Court was, therefore, in no way enlarged through the operation of the removal acts, even if this is a case which was properly removed—a question we do not deem it necessary now to decide. The remedy sought, in order to be complete, would require the court to assume all the executive authority of the State, so far as it related to the enforcement of this law, and to supervise the conduct of all persons charged with any official duty in respect to the levy, collection, and disbursement of the tax in question until the bonds, principal and interest, were paid in full, and that, too, in a proceeding to which the State, as a State, was not and could not be made a party. It needs no argument to show that the political power can not be thus ousted of its jurisdiction and the judiciary set in its place. When a State submits itself, without reservation, to the jurisdiction of a court in a particular case, that jurisdiction may be used to give full effect to what the State has, by its act of submission, allowed to be done; and if the law permits coercion of the public officers, to enforce any judgment that may be rendered, then such coercion may be employed for that purpose. But this is very far from authorizing the courts, when a State can not be sued, to set up their jurisdiction over the officers in charge of the public moneys, so as to control them as against the political power in their

administration of the finances of the State. In our opinion, to grant the relief asked for in either of these cases would be to exercise such a power.

Elaborate dissenting opinions were written by Justices Field and Harlan. The former admitted that the common law rule, that the sovereign can not be sued in his own courts without his consent, applies in this country to the State, under which designation are included the people within its territorial limits, in whom resides whatever sovereignty the State possesses. "But they act and speak in this country, at least in times of peace, only through the Constitution and laws. For their will we must look to these manifestations of it. If in that way they consent to suits, either directly against themselves by name or against any of their authorized agents, there can be no reasons of policy or of law against issuing process in proper cases to bring them or their agents before the court. And if in that way, that is, by their Constitution or laws, they direct their officers to do or omit certain things, in the doing or omission of which individuals are interested, and they provide appropriate remedies to compel or enjoin the performance of those things, there can be no reason why such remedies should not be resorted to when private rights are involved." After reviewing the legislative and constitutional enactments of 1874, and the "debt ordinance" part of the Constitution of 1879, Justice Field remarked: "Of course the new Constitution in these provisions is a repudiation of the engagements of the act of 1874 and of the constitutional amendment of that year, and a direct violation of the inhibition of the Federal Constitution against the impairment of the obligation of contracts." He then said:

Is this inhibition against the repudiation by the State of her engagements of any efficacy? The majority of the court answer, "No." I answer, adhering to the doctrines taught by a long line of illustrious judges preceding me, "Yes, it is"; and, though now denied, I feel confident that at no distant day its power will be reasserted and maintained. In that faith I dissent from the judgment of my associates, and I shall continue to do so on all proper cases, until the prohibition inserted in the Constitution as a barrier against the agrarian and despoiling spirit which both precedes and follows a breach of public faith is re-established in its original vigor.

The question whether the court will restrain the diversion of the funds in the hands of the Treasurer, a member of the Board of Liquidation, is to be considered precisely as though the new Constitution had never been adopted. The inhibition of the Federal Constitution is upon the State, and not merely upon her Legislature. All the authority which her people can confer, whether by constitutional enactment or legislative provision, is subject to the inhibition. Her people are at all times under the Constitution of the United States, subject to its restrictions as they are entitled to its privileges. They can not lawfully insert in any constitution or organic law provisions contravening that instrument. . . .

If the new Constitution had never been adopted, there could be no question as to the power of the State courts to require that the moneys collected be applied to the payment of the interest. It would not only have been the duty of the Board of Liquidation

to thus apply them, but it would have been a felony to refuse to do so. Now, whatever enactment, constitutional or legislative, impairs the obligation of the contract with the bondholders, that is, abrogates or lessens the means of its enforcement, is void. Therefore, the new Constitution, as to that contract, is to be treated as though it never existed. . . .

No reason in law, therefore, any more than in morals, can be given why the mandates of the act of 1874 and the constitutional amendment of that year should not be carried out. There is nothing in the fact that the defendants are officers of the State. The books are full of cases where executive and administrative officers of a State have been required by the judiciary to do certain acts, or been enjoined from doing them. And it has not been deemed an answer to the proceeding that the State was interested in the controversy.

There could be no doubt, Justice Field added, that, but for the "debt ordinance" in the Constitution of 1879, a mandamus or other compulsory process could have been issued by the courts of Louisiana, under the code of procedure of that State, to compel officers of the State and of the Board of Liquidation to execute the provisions of the act of 1874, and of the constitutional amendment of that year. But, independently of the code, the constitutional amendment of 1874 expressly gave the courts of the State jurisdiction to issue such compulsory process by the clause which declares that, to secure the levy, collection, and payment stipulated, "the judicial power shall be exercised when necessary," and that means, said Justice Field, "such power as properly belongs to judicial tribunals to enforce the performance by public officers of duties imposed upon them by law." In the opinion of Justice Field, this means of enforcing the contract which was given by the State when the contract was made could not afterward be taken away by the State, as it was by the Constitution of 1879, without impairing the obligation of the contract in violation of the Federal Constitution.

OHIO. The State officers for the year were as follow: Governor, Charles Foster, of Seneca County; Lieutenant-Governor, R. G. Richards, of Jefferson County; Attorney-General, G. K. Nash, of Franklin County; Treasurer, Joseph Turney, of Cuyahoga County.

FINANCES.—On the 15th day of November, 1881, the public funded debt of the State was \$5,201,665. During the year there was paid the loan payable July 1, 1882, bearing 4 per cent interest, \$300,000. On the 15th day of November, 1882, the public funded debt of the State was \$4,901,665. This sum consists of the following loans:

Loan payable after December 31, 1886, bearing 6 per cent interest.....	\$2,400,000 00
Loan payable July 1, 1883, bearing 4 per cent interest.....	325,000 00
Loan payable July 1, 1884, bearing 4 per cent interest.....	350,000 00
Loan payable July 1, 1885, bearing 4 per cent interest.....	350,000 00
Loan payable July 1, 1886, bearing 4 per cent interest.....	375,000 00
Loan payable July 1, 1887, bearing 4 per cent interest.....	500,000 00

Brought forward.....	\$4,900,000 00
Loan payable July 1, 1888, bearing 4 per cent interest.....	600,000 00
Canal loan, not bearing interest.....	1,665 00
Total funded debt.....	\$4,901,665 00

The local debts at the same time were as follow:

Debts of counties.....	\$2,660,297 64
Debts of cities, first and second class.....	88,849,598 43
Debts of incorporated villages.....	1,311,380 83
Debts of townships.....	605,715 24
Debts of separate (special) school districts.....	1,389,414 88
Total local debts.....	\$45,766,351 22

Net increase in above local debts from last year, \$1,652,250.47. This increase is as follows:

Increase in counties.....	\$437,618 86
Increase in cities.....	940,244 63
Increase in villages.....	265,512 87
Increase in townships.....	148,307 64
Total.....	\$1,781,678 50
Deduct decrease in school districts.....	129,428 03
Leaving net increase as above.....	\$1,652,250 47

The balances in the Treasury to the credit of the several funds at the close of the fiscal year 1881 were as follow:

General revenue fund.....	\$254,518 83
Sinking fund.....	208,265 69
State common-school fund.....	85,642 19
Total.....	\$501,421 11

The receipts into the Treasury during the year from all sources amounted to.....

Total receipts, including balances.....	\$6,270,396 22
Disbursements for same period.....	5,620,219 29

Leaving cash balance in the Treasury, November 15, 1882.....

Leaving cash balance in the Treasury, November 15, 1882.....	\$640,176 93
--	--------------

The above balance is to the credit of the following funds, to wit:

General revenue fund.....	\$418,856 29
Sinking fund.....	208,892 70
State common-school fund.....	17,927 94
Total.....	\$640,176 93

TAXATION.—The value of all the taxable real estate and personal property in Ohio, according to the consolidated tax duplicate for 1882, is as follows:

Real estate in cities, towns, and villages.....	\$413,999,976 00
Real estate not in towns, cities, and villages.....	702,681,679 00
Chattel property.....	518,229,079 00
Total taxable values for 1882.....	\$1,634,910,734 00

Net increase in the valuation, as compared with 1881.....

Net increase in the valuation, as compared with 1881.....	\$47,703,185 00
---	-----------------

The taxes for the fiscal year 1883, levied upon the foregoing basis of \$1,634,910,734, are as follow:

General revenue fund ( $1\frac{1}{2}$ of a mill).....	\$2,285,587 47
Sinking fund ( $\frac{1}{2}$ mill).....	816,299 70
Common-school fund (1 mill).....	1,633,911 00

Total for State purposes ( $2\frac{1}{2}$ mills).....	\$4,735,748 17
County expenses.....	\$2,584,913 74
The poor.....	762,189 87
Bridges.....	1,570,440 26
Buildings.....	737,489 94
Roads.....	1,036,388 68
Payment of debts.....	693,409 35
Total for county purposes.....	\$7,884,776 84

Local taxation as follows:

Township expenses.....	\$1,006,093 87
School and school-houses.....	6,843,699 68
City, town, and village taxes.....	7,125,177 57
Other special purposes.....	1,582,489 25

Total township, city, school,  
and special taxes.....\$16,507,459 87

Total county and local taxes levied in 1882.....\$28,892,286 71

Total levies made in 1882 for all purposes.....\$28,627,984 85  
Per capita tax on dogs—sheep fund.....281,688 00

Total levies made in 1882 (including per  
capita dog-tax) for all purposes.....\$28,859,617 85  
Add delinquencies and forfeitures of previous  
years.....1,990,801 08

Total taxes for 1882, including delinquen-  
cies, etc.....\$30,850,418 91

**BANK-STOCKS.**—There is quite a noticeable increase in the amount of capital invested in the stock of national banks over what was reported last year. This increase is confined almost entirely to the large cities of the State.

The valuation and taxation of the property of such banks for this year are as follow :

The total valuation of national banks, as equalized by the several county and city Boards of Equalization for the year 1881, was.....	\$21,778,313 20
The valuation of this class of property, as equalized by the several county and city Boards of Equalization for the year 1882, is.....	25,855,688 41
An increase over the valuation of 1881 of.....	3,577,370 21
Total valuation of State banks for taxation, as fixed by the several county and city Boards of Equalization for 1881, was.....	1,186,238 09
The valuation of this class of property, as fixed by the several county and city boards for 1882, is.....	1,406,390 00
An increase over the valuation of 1881 of.....	220,156 91

**CANAL REVENUES.**—The report of the Board of Public Works shows revenues from the canals as follow :

Miami and Erie Canal.....	\$98,764 67
Ohio Canal.....	57,708 27
Muskingum Improvement.....	17,659 56
Hocking Canal.....	5,614 43
Walwhonding Canal.....	1,573 89
Total.....	\$181,316 12

The total receipts of the year, including appropriations by the Legislature, were \$226,748.97; total disbursements, \$222,059.94. This, added to \$4,000 fraudulently drawn out by the defaulting clerk of the board, makes a total of expenditures \$226,059.99, and leaves a balance of \$688.98 in the State Treasury to the credit of the canal fund. The number of boats on the different canals is given as follows:

Hocking, 241 private boats, 11 State boats, and 3 dredges; Miami and Erie, 97 private boats, 8 State boats, and 2 dredges; Muskingum River, 9 steamers, 43 flat barges, and 10 United States boats.

**RAILROAD STATISTICS.**—The statistics of the Railroad Commissioner of the State are made up each year to June 30th. The report for the year ending June 30, 1882, shows the average number of miles of railroad operated during the year to have been 6,040, an increase over the previous year of 3·504 per cent.

The total stock and debt on June 30, 1882, was \$483,963,079.83; the average amount of stock and debt of the roads operated during

the year was \$439,252,387.64, being an increase of 14·92 per cent; the net earnings have been equal to 3·115 per cent of the above amount of stock and debt, or to \$14,694,210.92.

The gross earnings amounted to \$46,737,163.80, or 1·9095 per cent increase. Of this amount \$12,335,239.73 were received from passenger-traffic, an increase of 19·52 per cent; \$32,312,140.94 were from freight, a decrease of 3·302 per cent; \$1,143,532.43 were from mail, an increase of 20 per cent, and \$1,146,385·55 were from "other sources," an increase of 32·88 per cent.

The operating expenses amounted to \$32,042,952.88, an increase of 9·35 per cent. The maintenance of way and structures made up \$7,149,722.84 of this amount, being an increase of 5·94 per cent; the cost of conducting transportation was \$12,485,529.06, an increase of 9·90 per cent.

The operating expenses were 68·55 per cent of gross earnings, as against 64·14 per cent for the previous year.

The number of passengers carried during the year has increased 27·95 per cent, and have been equal in amount to each inhabitant of the State being a passenger about four times. The passenger mileage has increased 19·417 per cent, while the rate per mile received from each has decreased from 2·336 to 2·310, or 1·114 per cent.

The total tonnage carried during the year has increased 10·76 per cent, and has been equal to about nine tons moving for each inhabitant of the State. The total ton-mileage has increased 8·37 per cent, and the rate per ton per mile has decreased from ·015 cents to ·807 cents, or 11·863 per cent.

In comparing the year 1882 with the year 1872, it is found that the mileage has increased 59·51 per cent; the gross earnings, 36·43 per cent; the operating expenses, 35·34 per cent; the passengers carried, 142·04 per cent; the passenger mileage, 99·95 per cent; the freight tonnage, 191·93 per cent; and the ton-mileage, 181·98 per cent, while the rate paid per passenger has decreased from 2·935 cents to 2·310 cents, or 21·295 per cent; and the rate per ton per mile has decreased from 1·569 cents to ·807 cents, or 49·2 per cent.

**MILITIA, ETC.**—By the report of the Adjutant-General it is shown that the present force of the Ohio National Guard consists of 79 companies of infantry, one troop of cavalry, and six batteries of light artillery, and a total number of 5,875 men, including officers, being a reduction of 1,469 during the year.

No call has been made by the civil authorities for the militia to aid them in the preservation of peace and order.

The allowance obtained by the agent of the State, of \$67,674 in settlement of suspended war claims against the General Government, has been collected, and paid into the Treasury. A further allowance of \$70,043.96 has been secured, and reported by the Secretary of the

Treasury to Congress, for appropriation for its payment.

The report of the Inspector of Mines shows a marked reduction in the number of accidents in mines, the continued application of a more improved system of working and ventilation, and a growing feeling of harmony between the employers and employes in this industry, which has for so long a time been marked by bitter and prolonged contests, often resulting in lawlessness.

**EDUCATION.**—The State School Commissioner furnishes the following educational statistics of the State: Number of youth of school age in the State in September, 1882, 1,081,321; number of youth of school age in the State in September, 1881, 1,063,337; number of school-houses in township districts, 10,968; number of school-houses erected within the year, 528; cost of school-houses within the year, \$1,123,688; estimated value of school-houses, including grounds, \$23,610,858; number of teachers necessary to supply schools, 17,117; number of different teachers actually employed, 24,135; average number of weeks the schools were in session, 81; number of pupils enrolled in the schools, 751,101; average number of pupils in daily attendance, 483,232; number of school-officers, 52,151; total receipts, including balance on hand September 1, 1881, \$12,236,357.63; total expenditures, \$8,335,475.48.

**AGRICULTURE.**—The report of the State Board of Agriculture, made up to December 1st, places the acreage of wheat sown at 2,741,560, and the yield at 38,506,370 bushels. The yield of corn is placed at 87,386,260 bushels; oats, 16,732,154 bushels; potatoes, 6,131,725 bushels.

**LIVE-STOCK.**—According to the returns made to the Auditor of State, the number and value of the live-stock were as follow: Horses, 714,585, valued at \$42,207,878; cattle, 1,518,755, value \$26,941,612; mules, 22,891, value \$1,563,452; sheep, 4,594,607, value \$13,383,249; hogs, 1,624,077, value \$6,587,148.

**SOCIAL STATISTICS.**—The social statistics of the State, as reported to the Secretary of State, show that during the year there were 30,528 marriages; 69,914 births; 34,173 deaths; 1,228 persons sent to insane asylums; 18,266 paupers supported in and out of the county infirmaries, at a cost of \$828,146.87; number of persons in the benevolent institutions November 15, 1882, 178 blind, 431 deaf and dumb, 499 idiotic and imbecile, 677 in soldiers' and sailors' orphans' home; number in penitentiary during the year, 1,767; in work-houses, 4,674; boys and girls in reform and industrial schools, 1,426.

**THE LIQUOR QUESTION.**—The most exciting political question of the year was that of legislation affecting the traffic in intoxicating liquors. The Legislature organized January 2d, with 22 Republicans and 11 Democrats in the Senate, and 70 Republicans and 35 Democrats in the House—an exact two-thirds Republican vote in

each branch. In his message Governor Foster brought the temperance question before the Legislature by this statement of the situation:

All good citizens deplore the evils growing out of the intemperate use of intoxicating liquors. Our jails, penitentiary, work-houses, reform schools, infirmaries, insane asylums, and other institutions of like character, are largely made necessary because of this evil. The framers of the Constitution recognized this fact, and empowered the General Assembly "to provide against the evils resulting from the sale of intoxicating liquors."

The subject has been discussed year after year, in and out of the General Assembly, and laws have been enacted which, if enforced, would largely mitigate the evils; but, for the want of a public sentiment sufficiently strong to secure their enforcement, they are practically inoperative. Public opinion to-day is divided mainly into two classes as to the character of further legislation upon the subject. One class insists upon the prohibition of the manufacture and sale of intoxicating and malt liquors, while the other proposes a tax upon the traffic, coupled with restrictions upon its sale, with severe penalties imposed for violations of the law.

The Cleveland Convention, recognizing the fact that both of the foregoing propositions are of doubtful constitutionality, adopted the following as the views of the convention and of the party it represented, for the purpose of relieving the subject of this doubt, viz.:

"Resolved, That the public interests require that the General Assembly should submit to a vote of the people such amendments to the Constitution of the State, relative to the manufacture, sale, and use of intoxicating liquors, as shall leave the whole matter to legislation."

This resolution was made the subject of earnest discussion prior to the last election, and extraordinary efforts were made to defeat the party that adopted it. After the fullest discussion, the people sustained the party by an unprecedented majority, and thus approve the action of the convention.

The duty of the General Assembly is thus marked out by the people, viz., the submission of constitutional amendments to the people essentially embodying the substance of the resolution.

The propriety of submitting three amendments, one favoring local option, another the prohibition of the manufacture and sale, and a third the taxation of the traffic with well-guarded restrictions, is earnestly recommended. This course will give the people, the source of all power, an opportunity to express themselves, and thus give the great value of popular approval to the successful proposition.

The recommendation of the Governor was not taken up in earnest until March 8th, when, after a hot debate, the House passed a joint resolution providing that a proposition to amend the Constitution of the State of Ohio be submitted to the electors of the State on the second Tuesday of October, A. D. 1883, as follows:

SECTION 1. A license to traffic in spirituous, vinous, and malt liquors may be granted under such regulations and limitations as shall be provided by law. At the said election the electors desiring to vote in favor of the adoption of said amendment shall have placed upon their ballots "License to Traffic in Intoxicating Liquors, Yes," and those desiring to vote against the adoption of said amendment shall have placed upon their ballots "License to Traffic in Intoxicating Liquors, No"; and if a majority of all the ballots cast at said election shall contain the words "License to Traffic in Intoxicating Liquors, Yes," the said amendment shall be adopted, and shall constitute the separate section to Article XV of the Constitution described in section 18 of the schedule thereto, and the

said original separate section of said Article XV shall be repealed.

SEC. 2. That at said election on said second Tuesday in October, A. D. 1883, a proposition to amend the Constitution by an additional separate section to said Article XV shall also be submitted in the words and figures following, to wit: The General Assembly may by law restrict and prohibit the traffic in spirituous, vinous, and malt liquors, or may impose a special tax on persons engaged therein, or may by law provide for submitting to the electors of State, counties, townships, cities, and incorporated villages at special elections, the option of prohibiting the traffic in spirituous, vinous, and malt liquors therein, to be determined by a majority of all the electors voting at such an election, and shall provide for the enforcement of such option by appropriate legislation.

While the House was passing this proposition, the Senate adopted another in the following form:

That the additional section to Article XVI of the Constitution, as described in section 18 of the schedule thereto, be so amended as to read as follows: And said additional section to Article XVI of the Constitution as described in section 18 of the schedule thereto be repealed.

SECTION 18. The General Assembly of the State of Ohio shall have absolute power to legislate concerning the manufacture and sale of spirituous, vinous, and malt liquors in the State of Ohio. It may provide against the evils resulting therefrom, and regulate, restrain, tax, license, or prohibit by law the manufacture or sale thereof.

The House resolution came up in the Senate several weeks later, was amended to conform to the proposition originally passed by the Senate, and in this form was passed. The House disagreed to the amendment and the measure went to a committee of conference, where it remained at the adjournment of the Legislature.

At the beginning of the session a bill was introduced in the Senate by Mr. Pond, providing for the taxation of the traffic in intoxicating liquors. The leading features of the bill were taxation and the filing of a bond, but there were a number of other regulations tending to restrict and embarrass the traffic. The annual tax on each dealer, in cities of the first class, was placed at \$300; in cities of the second class, having a population of 10,000 or more, \$250; in villages or cities, with a population between 2,000 and 10,000, the tax was put at \$200; in villages having less than 2,000 population, \$150; and in all parts of the State outside a village or city and its surrounding belt, as designated in the law, the dealer was required to pay \$100—the tax to be paid into the County Treasury, upon the certificate of the County Auditor.

Every person engaged in the traffic was required to file with the Probate Court his penal bond in the sum of \$1,000, with two freeholders as sureties, the fee to the Probate Judge being \$2.

To engage or continue in the traffic without filing the required bond, or after the bond has been declared forfeited, subjected the offender to a fine of \$500 to \$1,000, or imprisonment in the county jail from thirty days to a year, or both fine and imprisonment.

The bill was reported by the Committee on the Judiciary early in March, amended so as to declare that the tax was not a license, and then passed by a bare constitutional vote of 17 to 15. It lay in the House nearly a month, and was then passed by a vote of 56 to 40.

Almost immediately after the bill became a law, the municipal elections came on. The Germans were indignant at the passage of the bill, and at the progress made with the Smith Sunday bill, which also became a law within a few days. The liquor-dealers in the large cities organized for the election, and the result was an overwhelming defeat of the Republicans in the larger cities of the State. That only served to consolidate the anti-liquor element in the Legislature. The Smith Sunday bill was passed, and an attempt to modify the more stringent features of the Pond bill was defeated.

CONSTITUTIONALITY OF THE ACT.—During the discussion in the Legislature over the Pond bill, the question of its constitutionality was frequently raised. After its passage there was a general desire that this question should be disposed of at the earliest possible moment. A case was made in Crawford County and sent at once to the Supreme Court, which immediately took it under advisement. The decision of the court was given May 30th, by Chief-Justice Okey, declaring the Pond law unconstitutional. The Court held—

1. The constitutionality of a statute depends upon its operation and effect, and not upon the form it may be made to assume.

2. A license is permission granted by some competent authority to do an act which, without such permission, would be illegal.

3. The act of April 6, 1882, entitled "An act more effectually to provide against the evils resulting from the traffic in intoxicating liquors" (79 Ohio Laws, 66), which requires every person engaged or engaging in such traffic to pay a specified sum of money annually, and execute a bond as therein required, and also provides that "every person who shall engage or continue in such traffic without having executed the bond, or after his bond shall have been adjudged forfeited, shall be deemed guilty of a misdemeanor," is in operation and effect a license within the inhibition of the section of the Constitution which provides that "no license to traffic in intoxicating liquors shall hereafter be granted in this State."

During the session of the Legislature some excitement was caused by the charge that parties in the interest of a Cincinnati railway company had attempted to bribe legislators. An investigating committee reported that two of the members of the House had been guilty of misconduct and should be censured, and that two persons not members had violated the laws in attempting to bribe members. The grand jury of Franklin County found indictments against the two members and one of the alleged lobbyists. Neither of the cases came up for trial during the year, but at the first term of the court in 1883 the cases against the members failed, there being no evidence offered in support of the charges.

The Legislature adjourned, April 17th, until

the first Tuesday in January, 1883, one of its last acts being the passage of a bill to redistrict the State for congressional purposes.

**POLITICAL CONVENTIONS.**—The Republican State Convention was held in Columbus, June 7th. The following ticket was placed in nomination: For Secretary of State, Charles Townsend, of Athens County; for Supreme Judge, John H. Doyle, of Lucas County; for member of Board of Public Works, C. A. Flickinger, of Defiance County.

The following were among the resolutions:

We tender to President Chester A. Arthur our assurance of confidence in his administration, and our approval of the moderate and patriotic course pursued by him amid the embarrassing circumstances unavoidably attending such a national crisis.

*Resolved*, That we fully indorse the administration of Governor Charles Foster, and the State administration of the Republican party during the last two years, under which the expenditures of the State were reduced over one half a million dollars below the expenditures of the Democratic administration of the two preceding years, and the public debt of the State reduced nearly a million and a quarter of dollars, and the remainder of the debt redeemable the 30th of June, 1881, refunded at a rate of interest below 3½ per cent per annum.

*Resolved*, That we condemn the terrible outrages and persecutions inflicted upon the Jews of Russia and other sections of Europe; and while we heartily approve the action of the Government in its efforts to ameliorate the condition of these unfortunate people, we earnestly solicit a continuance of its most energetic efforts to that end.

*Resolved*, That we indorse and affirm the principle of protection to American industry as adopted at the last National Republican Convention.

*Resolved*, That the tax-paying people of the State demand that by specific taxation the traffic in intoxicating liquors shall be made to bear its share of the public burdens, and that the Constitution, in so far as it may be an obstacle in the way of the exercise by the people, through their representatives, of practical control over the liquor-traffic, to the end that the evils resulting therefrom may be effectually provided against, should be amended at the earliest date allowed by law.

The Democratic State Convention met at Columbus, July 20th, and placed in nomination the following ticket: For Secretary of State, James W. Newman, of Scioto County; for Supreme Judge, John W. Okey, of Franklin County; for member of Board of Public Works, Henry Weeble, of Van Wert County.

The following were among the resolutions adopted:

The Democratic party, in convention assembled, reaffirm the great principles which are the foundation of free government, among which are equal rights to all, special privileges to none, protection of the weak against the encroachments of the strong, equal taxation, free speech, free press, free schools, and first of all a free and incorruptible ballot.

*Resolved*, That we favor a tariff levied to meet the actual needs, and so adjusted in its details with a view to equality in the public burdens as to encourage productive industries, and afford labor a just compensation without creating monopolies.

*Resolved*, That stability in the value of money is a primary requisite to industrial commercial prosperity. This can only be secured by maintaining both gold and silver as money, as provided by the Constitution, and subjecting the issue and regulation of paper

money to established principles, which will prevent fluctuations in the value of the currency.

*Resolved*, That the growth of monopolies is such as to seriously threaten the rights of individuals and the public welfare, and ought to be provided against by proper legislation.

*Resolved*, That the Democratic party has ever maintained, and still steadfastly adheres to, the doctrine of the largest liberty consistent with the public welfare, and is opposed to legislation merely sumptuary.

**ELECTION RETURNS.**—Prohibition and Greenback tickets were also put in nomination. The election was held October 10th, and resulted in an overwhelming Democratic success. The full official vote was as follows:

#### SECRETARY OF STATE.

James W. Newman, Democrat.....	816,874
Charles Townsend, Republican.....	297,759
Ferdinand Schumacher, Prohibition.....	12,202
George L. Hafer, Greenback.....	5,845

#### JUDGE OF SUPREME COURT.

John W. Okey, Democrat.....	815,758
John H. Doyle, Republican.....	299,889
John W. Roseborough, Prohibition.....	12,290
Lloyd G. Tuttle, Greenback.....	5,882

#### MEMBER OF BOARD OF PUBLIC WORKS.

Henry Weeble, Democrat.....	815,858
Charles A. Flickinger, Republican.....	299,688
Carmi Alderman, Prohibition.....	12,240
Lambert B. Stevens, Greenback.....	5,892

The congressional contest resulted in the election of thirteen Democrats and eight Republicans, with notice of contest in the Eighteenth District. The official figures are as follows:

#### FIRST DISTRICT.

Benjamin Butterworth, Republican.....	18,721
John F. Follett, Democrat.....	14,540
Charles C. Benton.....	22

#### SECOND DISTRICT.

Amor Smith, Republican.....	14,166
Isaac M. Jordan, Democrat.....	15,983

#### THIRD DISTRICT.

Emanuel Shultz, Republican.....	15,882
R. M. Murray, Democrat.....	16,106
William McKee, Prohibition.....	446
William H. Miller.....	77

#### FOURTH DISTRICT.

Jacob S. Conklin, Republican.....	9,688
Benjamin LeFever, Democrat.....	16,596
Zeno C. Payne.....	7
William Dillon.....	184

#### FIFTH DISTRICT.

Lovell B. Harris, Republican.....	11,006
George E. Seney, Democrat.....	16,619
Martin Deal, Prohibition.....	287
John Seitz, Greenback.....	235

#### SIXTH DISTRICT.

Joseph H. Brigham, Republican.....	15,480
William D. Hill, Democrat.....	16,201
E. T. Hayes, Prohibition.....	426
George Loutzenheiser, Greenback.....	510

#### SEVENTH DISTRICT.

Henry L. Morey, Republican.....	14,451
James E. Campbell, Democrat.....	14,410
Samuel K. Mitchell, Prohibition.....	156
C. C. Parker.....	49

#### EIGHTH DISTRICT.

J. Warren Kofer, Republican.....	14,897
J. H. Young, Democrat.....	13,171
Joseph R. Smith, Prohibition.....	1,000
A. S. Platt, Greenback.....	122

NINTH DISTRICT.	
James S. Robinson, Republican.....	15,864
Thomas E. Powell, Democrat.....	15,458
William Bonar, Prohibition.....	1,217

TENTH DISTRICT.	
Charles A. King, Republican.....	18,490
Frank H. Hurd, Democrat.....	14,534
J. H. Rhoads.....	237
N. E. Prentiss.....	22
J. W. Luce.....	178

ELEVENTH DISTRICT.	
J. W. McCormack, Republican.....	15,288
John P. Leedom, Democrat.....	13,037
Alva Crabtree.....	183
David Bennett.....	111

TWELFTH DISTRICT.	
Alphonso Hart, Republican.....	16,898
Lawrence T. Neal, Democrat.....	16,888
Daniel Hill, Prohibition.....	748
C. C. Parker.....	26

THIRTEENTH DISTRICT.	
H. C. Drinkle, Republican.....	14,092
George L. Converse, Democrat.....	17,766
Zeno C. Payne, Prohibition.....	823
Thomas P. James, Greenback.....	606

FOURTEENTH DISTRICT.	
Rollin A. Horr, Republican.....	12,604
George W. Geddes, Democrat.....	14,277
John W. Bell, Prohibition.....	991

FIFTEENTH DISTRICT.	
Rufus R. Dawes, Republican.....	18,048
A. J. Warner, Democrat.....	13,739
William Reese.....	841
Smith Branson.....	112

SIXTEENTH DISTRICT.	
A. B. Clark, Republican.....	14,422
Beriah Wilkins, Democrat.....	19,748
Jay Odell.....	6
Joseph Judkins.....	268

SEVENTEENTH DISTRICT.	
Jonathan T. Updegraff, Republican.....	14,165
Foss J. Alexander, Democrat.....	18,265
Thomas S. Luccock, Prohibition.....	361
N. C. Horton, Greenback.....	322

EIGHTEENTH DISTRICT.	
William McKinley, Jr., Republican.....	16,906
Jonathan H. Wallace, Democrat.....	16,898
Lemuel T. Foster, Prohibition.....	976
James A. Brush, Greenback.....	261
J. K. Buskirk.....	1
John H. Wallace.....	4
Major Wallace.....	1
Wallace.....	5
W. H. Wallace.....	2
W. W. Wallace.....	1
Jonathan Wallace.....	5
Major Wallace.....	3
Jonathan H. Wallace.....	1

NINETEENTH DISTRICT.	
Ezra B. Taylor, Republican.....	15,789
David L. Rockwell, Democrat.....	7,708
George E. Smith, Prohibition.....	1,090
Reuben T. Harmon, Greenback.....	553

TWENTIETH DISTRICT.	
Addison S. McClure, Republican.....	13,980
David R. Paige, Democrat.....	14,090
Jay Odell, Prohibition.....	1,189
Harlow P. Smith, Greenback.....	131

TWENTY-FIRST DISTRICT.	
Sylvester T. Everett, Republican.....	11,408
Martin A. Foran, Democrat.....	15,946
William H. Doan, Prohibition.....	1,999

**OIL, CALMING WAVES WITH.** The calming effect of a film of oil spread over the surface of agitated water has been often observed, although many have supposed the ancient saying referring to it to be based upon

a superstition. Many instances have been recorded of vessels and cargoes being saved in an overwhelming sea by pouring oil overboard. James Shields, a Scotch engineer, observed that some oil accidentally spilled in a pond stirred by the wind, spread over the neighboring surface and stilled the waves almost instantaneously. He tried the experiment of pouring about a quart of oil into a rubber pipe two or three yards long in another pond. It rose in bubbles, and with wonderful rapidity covered the pond and reduced the billows. Living on a coast where severe storms render the entrance to the ports extremely dangerous to the numerous small craft fishing and coasting in the neighboring seas, he utilized this property of fatty liquids to prevent the frequent disasters of the regions of the British coast deprived of harbors of refuge. He tried the effect of a few bottles of oil at Peterhead Harbor on a stormy day. The result was encouraging, and convinced him that moderate quantities of oil discharged at the right spot, and at the right moment, would enable vessels to make the port in dangerous times. He determined to give the principle a practical test. From the rocky coast he laid an iron pipe, two hundred yards long, with a gutta-percha hose attached to the end running two hundred yards farther. A storm occurring, he was gratified to see a schooner, lying to outside unable to enter, towed in half an hour after oil was pumped through the pipes. The rubber tube became separated and was replaced by a lead pipe, which was also destroyed by the rolling fragments of rock. He afterward fitted up an apparatus at the mouth of Aberdeen Harbor, in which the lead pipe was protected by bags of cement. At Peterhead the oil was discharged through three conical valves twenty-five yards apart. In the Aberdeen experiment, pipes of three fourths of an inch aperture, instead of inch-pipe as before, were employed, and two valves were deemed sufficient. Mr. Shields defrayed the expenses of all the experiments described, out of his own purse. He succeeded in drawing the attention of the Government and of all engineers to the matter, and then left it in the hands of the Board of Trade, which carefully watched the results of the trials at Aberdeen.

The effect of oil in calming waves has been known from the times of antiquity. Pliny speaks of divers spitting oil in the water to quiet the surface, so that the light will penetrate. The divers of the Mediterranean follow the practice to the present day. Hunters of the otter know the spot where they are devouring their oily prey, from the calmness of the water. The track of a wounded whale or porpoise is, in like manner, indicated by the streak of still water. It has often been remarked that a dead whale always floats in calm water, however agitated the sea may be round about. The spears of the salmon in the Scottish Highlands often pour oil on the

water to enable them to see into the depth of the pools. The fishermen of the Bermudas and the oyster-fishers of Gibraltar employ the same device. The herring-fishers of England detect schools of oil-bearing fish by the stillness of the surface. The same phenomenon enables the Cornish fishermen to find the sardine. The inhabitants of the Isle of St. Kilda attach cakes of the grease of sea-fowl to the sterns of their boats to prevent the waves from breaking and driving them against the rocks. The Shetland-Islanders understand the efficacy of oil in stilling the violence of the sea, for as they return in their frail craft from the fisheries when the weather is tempestuous, they cut out the livers of the cod which they have caught, as a last resort, and express the oil to save themselves from being swamped.

Dr. Franklin was the public writer who recognized the value of oil in preventing marine disasters. His attention was attracted to the subject by a letter recounting how a Dutch master saved his vessel from being overwhelmed in a tempest by pouring overboard a small quantity of olive-oil. Franklin was reminded of the fact that the water was always still when there were whalers in Newport Harbor. He experimented in a pond upon a windy day, and found that only a spoonful of oil poured on the water from the windward side spread over a wide space, and produced an instantaneous calm. He repeated the experiment upon a stormy day in the sea off Portsmouth, New Hampshire. While the sea was covered with whitecaps round about, no waves broke in the wake of his boat. He noticed also that a bark was drawn into this smooth track as by a whirlpool. The Scotch publishers, Chambers, endeavored to impress upon the public the utility of this means of rescue, by publishing accounts of ship-captains on the subject. Individual captains have employed oil to break the force of heavy seas, and made a practice of taking it with them for the purpose; but the generality of mariners treated these well-attested instances with apathy and doubt. A New York captain in a report published in 1867, in the "Shipping List," attributed the salvation of his vessel on two occasions to pouring out a few gallons of oil. Captain Betts, of the King Cenric, bound from Liverpool to Bombay, weathered a hurricane only by suspending canvas sacks of oil from the ship's side, with small punctures to allow the oil to trickle out. Captain Richardson, of Bristol, overtaken by a storm near the Bermudas, escaped by the same means. The captain of the Diamond, of Dundee, shipwrecked off Anholt Island, having heard of the escape of a storm-stressed whaler in the South Seas through the accidental breakage of some barrels of oil, furnished each boat with a few quarts of oil to pour over the stern, by which means the waves were kept from washing over them, and the crew reached land in safety. The diminutive sail-boat in which two Italian

captains acquired notoriety, in 1881, by crossing the Atlantic from Buenos Ayres, would, on several occasions have been lost if they had not used liberally their cargo of oil to assuage the seas. Since the revival of the subject through the efforts of Shields, sea-captains have been more impressed with the value of this simple safeguard. A captain recently arriving in New York attributed his escape from a storm in the North Atlantic to the oil-bags with which he had provided himself. Another captain withstood a terrific squall in the Bay of Biscay by the same means. A third, Captain Floreman, of the Dundee Clipper Line, passing through a four days' gale on his return from Calcutta, suspended bags of oil from the vessel. Waves of the largest size rolled to within twice the length of the ship, but the area protected by the slowly escaping oil was a dead level.

The cost, bulk, and weight of a provision of oil carried on board for safety, are offset by the saving of trouble and labor in a tempest, aside from the prime object of security of lives, ships, and cargoes. Many a life could be saved by attaching a small oil-bag to the life-buoys thrown to persons lost overboard, which can be pierced with a knife at the instant it is thrown out, and by the calming effect of the oil will reveal from afar the position of the swimmer. Vessels of oil provided with stopcocks on life-boats, and projectiles which would burst on striking the water and spread oil over the surface, have likewise been proposed for the life-saving service.

**OLEOMARGARINE.** Properly speaking, this name is applied to the butter-fat obtained by the process of M. Niége. Oleomargarine butter, or butterine (as it is called by some), is the product obtained by churning oleomargarine with milk, which, being colored and salted, has the look and taste of butter. About a dozen years ago, M. Hippolyte Niége, a French chemist and philosopher, undertook various experiments, by direction of Government, to see if it were possible to find, for the use of the navy and poorer classes, a product suited to take the place of ordinary butter, and which could be kept without becoming rancid. By experimenting largely upon milk, he discovered that milk always contained butter-fat, even when cows had been partially or wholly deprived of food. M. Niége next tried to produce this butter-fat from the fat of the cow, by artificial processes; and he finally succeeded in getting a pure and sweet fat, free from foreign odor, which, by churning with milk, was converted into what was considered excellent butter.

The process by which this is accomplished may be described more in detail, as follows: The fat of the cow (or beef fat) is thrown piece by piece into large tanks containing tepid water, where it remains for an hour or two, when the water is drawn off and fresh water brought into the tank. Each piece is then

separately inspected and thrown into another tank containing pure water, where it remains about the same time as at first. Pieces rich in oil are the only ones thrown into this tank; all the others are cut off and put into tierces, to be rendered into tallow. The fat in the second tank is again inspected and passed into a third, after which third washing it is a perfectly pure white fat. The next step is to elevate this fat, in cars holding about 600 pounds each, to the top of the building or third floor, alongside the disintegrating machines. These are like the regular meat-hasher. This machine consists of a series of sharp blades set on an axis like the thread of a screw. A closely-fitting chamber or cylinder placed horizontally contains these blades. The cylinder is divided into two portions, hinged together on one side,

ing-point by the introduction of live steam, which in turn heats the caldron containing the fat, causing it to melt at a temperature of from  $114^{\circ}$  to  $122^{\circ}$  F. Much care is taken to prevent getting above  $122^{\circ}$ , since the lower the temperature is kept the better is the product obtained. During this rendering process about 5 per cent of ordinary salt is added, which helps the membrane to settle. Each caldron or kettle holds about 2,300 pounds of fat, which is the usual product of an hour's work of the hashing machine. As soon as the fat falls into the kettle, the steam is turned on to heat the water in the jacket, after which the heat thus accumulated is found sufficient to finish the process. When the fat is completely rendered, cold water is poured into the jacket. Something over two hours is occupied from the

the hasher begins before the fat is allowed to rest. Revolving agitators keep the mass in constant motion during the rendering process, thus equalizing the temperature and facilitating the rendering. When the fat finally comes to a rest, a membrane (or "scrap") settles to the bottom of the kettle, and the pure fat is left on the top. Usually the separation is complete and satisfactory; but in case the fat has become water-soaked in the washing process, it is necessary to agitate the whole mass rapidly several times, after which the membrane will sink to the bottom. The rendered fat is left at rest about half an hour, when the pure fat is ready to be drawn off and strained into the "settling-kettles."

The water in the jacket is heated to the boil-

oil in the condition of froth floats on the surface of the rendered fat, which is ladled off. The rendered fat remains in the settling-kettles from one to three hours, and is kept at a temperature of  $118^{\circ}$  to  $122^{\circ}$  F., the water in the jacket being kept at about  $135^{\circ}$ . When the settling is complete, and the refined fat is at the proper temperature, it is drawn off through a fine sieve into tanks or cars, which are immediately removed to the "seeding-room," which is kept at a temperature of  $85^{\circ}$ . In this room the fat begins to solidify very slowly, the more solid constituents crystallizing out at first, the whole mass at last assuming a kind of mushy consistency. The "seeding" or crystallizing process requires from thirty-six to forty-eight hours, and must not be hurried. When the rendered fat is in the proper condition, it is pressed so as to separate the butter-oil from the stearine.

To accomplish this, the fat is packed in cloths set in moulds, to form packages  $13 \times 5\frac{1}{2} \times 2$  inches. These packages are placed on plates of galvanized iron in the press, one above the other. Each plate holds twelve bags, and from thirty-six to forty plates are used in each hydraulic press. The packages contain from two to three pounds of fat, so that each press, when filled, holds about 1,200 pounds. About an hour is required to fill a press. Before it is completely filled, the butter-oil flows from each package, from the weight of the plates above; and when the press is entirely full, a gradually increasing pressure is applied, amounting at last to about 3,000 pounds to the square inch. This pressure is kept up until the butter-oil ceases to flow from the bags or packages, leaving a cake of stearine perfectly dry, hard, and white. The press is then unpacked, and the cakes of stearine, taken from the bags, are in a condition to be packed for shipment. The butter-oil is received into a large reservoir, and if it is to be shipped it flows into perfectly clean tierces, where, after solidifying, it is sealed up. In this state the butter-oil will keep for an almost indefinite period. A large quantity is exported to Europe, to be churned with milk into butter. The name "oleomargarine" was given to this butter-oil because it was thought to be composed principally of oleine and margarine; but Heintz and Gössman have shown that margarine is not a simple fat, but a compound consisting of palmitine and stearine. Hence the term is really a misnomer.

The oleomargarine of commerce is largely used as a cheap cooking butter. It is a light-yellow substance, melts in the mouth like butter, and has a rather agreeable taste. When butter-oil is not to be used for shipment or consumption in its present state, it is pumped while warm from the reservoir, over to the dairy-room, where it is received in large cylindrical kettles, which keep it at the proper temperature for use in the next operation. It is now to be churned with milk, and thus converted into "butterine," or "oleomargarine butter." The accompanying illustration represents that section of the dairy-room known as the churning department. The churns in this room hold about 600 pounds of material, viz., 442 pounds of butter-oil, 120 pounds of milk, 87½ pounds of cream-made butter, and

1½ ounces of bicarbonate of soda. This mixture is churned for some five to ten minutes, when some coloring matter is added, and the churning continued for thirty to forty minutes longer. The first agitation forms a perfect emulsion, and the continued motion supplies to it a homogeneous color.

At the time oleomargarine butter was first made in the United States, by Paraf, the contents of the churn, after the operation, were allowed to flow out into tubs, and, on being solidified, were worked on tables with salt, then packed, and offered in market. The butter thus made was crystallized, which gave it a gritty taste, and prevented its being sold. As

no one experimented in the direction given by Niége, the sale was very limited for a year or so. Dr. Henry A. Mott, of New York, began a series of experiments to prevent crystallization, with excellent results, which have generally been adopted by manufacturers. The process, as simplified and perfected by Dr. Mott, is as follows: The churned mixture, a creamy-looking emulsion, is allowed to flow from the churns directly on pounded ice, which is kept in rapid motion until the whole mass becomes solid. By this process crystallization of the butter is wholly prevented. The ice absorbs the sensible (and in part the latent) heat of the emulsion, not giving it time to crystallize. This congealed emulsion is left in contact with the ice for two or three hours, when the mass is dumped out on inclined tables. The larger pieces of ice are picked out, and the smaller ones melt out through the heat of the room, which is kept from 85° to 90°. The butter is then left to soften for six or eight hours. When

the mass has become soft and all the ice and ice-water been removed, the product is chopped up with wooden ladles, and then put into a small apparatus, which has for its bottom a coarse wire sieve, through which the product is pressed, so that it comes out in shreds of various length, and about an eighth of an inch in diameter. It is then placed on tables, and worked and salted by a revolving butter-worker turned by hand. The butter is now ready to be packed in tubs. In case prints or rolls are to be made, it stands for several hours until it gets harder. Dr. Mott suggested a further churning for a few minutes with milk, to increase the butter odor and flavor; but it was found after a time to be more expensive than beneficial, and so was abandoned.

M. Niéges's process for preventing crystallization gives a butter far superior to that now produced. This fact was made known in 1880 by Mr. George Harding. Experiments conducted, under his direction, by Professors Chandler and Williams and Dr. H. A. Mott, resulted in the production of a butter superior in flavor, odor, and texture to any previously made. The process is as follows: The emulsion from the churn is to be put into a tin vessel, which can be closed, having an agitator within which receives its motion from outside. This vessel is placed in water with pieces of ice, at a temperature of about 36°. The agitator is kept in motion as long as it can be turned, when the solidified whipped product is ready to be removed. A large ice-cream freezer of the capacity of forty quarts gives good results. As, by this process, the emulsion in solidifying does not come in contact with the ice or ice-water, the congealed mass retains its flavor and odor unimpaired. The butter thus obtained is considered very suitable for winter use, as it is much softer than that made by throwing the emulsion on ice.

There are several large factories in the United States engaged in this industry. At the works of the Commercial Manufacturing Company, New York, 50,000 pounds of butter are made daily, and finds a ready sale at fifteen to twenty-two cents per pound, according to the season and the form in which it is put up. By law, every tub or package of butter sold must be branded "oleomargarine butter," so that there may be no mistake, and no selling this for butter obtained by churning the milk of the cow. In order to make 50,000 pounds of butter, 122,000 pounds of fat are required. This amount of fat yields nearly 42,000 pounds of butter-oil or oleomargarine, which, adding 20 per cent for milk and salt taken up, yield fully 50,000 pounds of butter. The returns, then, are: 50,000 pounds of butter, at 15 cents = \$7,500; stearine, tallow, scrap = \$3,300; total, \$10,800. Expenses of working, wages, material, etc., show that the cost of making butter in this way is about 14½ cents per pound. There are other factories in Philadelphia, Baltimore, Pittsburg, Louisville, Chicago, St. Louis, Cin-

cinnati, New Haven, Providence, and Boston. During July and August butter is not made, but the butter-oil is made and stored for use in the colder months. Dr. Mott has made a careful analysis of oleomargarine butter, from which it appears that its constituents are: Water, 11.203; butter solids, 88.797 = 100. The constituents of cream butter are: Water, 11.968; butter solids, 88.032 = 100. Thus it seems plain that every element which enters into the composition of the best dairy butter is to be found in oleomargarine butter, and no element is present in the latter which is not present in the former. Oleomargarine butter which has, under the microscope, identically the same appearance as butter made from cream, but has less of the volatile fats in it, keeps sweet and pure for a much longer period than dairy butter—an advantage of no little consequence for various purposes.

In addition to the above, it seems desirable to give the laws passed by the Legislature of New York on this subject, and also the patents under which imitation butter and cheese are made:

CHAPTER 215. An Act to regulate the manufacture and sale of oleomargarine, or any form of imitation butter and lard, or any form of imitation cheese, for the prevention of fraud and the better protection of the public health. Passed May 24, 1882.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. No person, persons, firm, or corporation manufacturing with intent to sell any article or substance in semblance of natural butter or natural cheese not the legitimate product of the dairy, and not made exclusively from milk or cream, or both, with salt or rennet, or both, and with or without coloring matter or sage, but into which any animal, intestinal, or offal fats, or any oils or fats of any kind whatsoever not produced from milk or cream, or into which melted butter, lard, or tallow shall be introduced, shall add thereto or combine therewith any annatto or compounds of the same, or any other substance or substances whatsoever, for the purpose or with the effect of imparting thereto a color resembling that of yellow (or any shade of the same) butter or cheese; nor shall they introduce said coloring matter into any of the articles of which the same is composed.

SEC. 2. No person, persons, firm, or corporation shall deal in, sell, expose for sale, or give away any article or substance in semblance of natural butter or natural cheese, described in the first section of this act and known as oleomargarine, or imitation butter and lard, or imitation cheese; and no keeper of any hotel, restaurant, boarding-house, or other place of public entertainment shall keep, use, or serve either as food for their guests or for cooking purposes any such imitation butter or cheese which shall contain any of the coloring matter therein prohibited, or be colored contrary to the provisions of this act.

SEC. 3. No person, persons, firm, or corporation shall manufacture, with intent to sell, deal in, sell or expose for sale any article or substance in semblance of natural cheese not the legitimate product of the dairy, and not made exclusively of milk or cream, or both, but into which any animal, intestinal, or offal fats or oils of any kind whatsoever, not produced from milk or cream, shall be introduced, unless the words "imitation cheese" shall be plainly stenciled, in plain Roman letters at least one half inch in length, with durable paint, upon the sides of each and every cheese, and also upon the outside of top and opposite sides of each and every box containing the same, in letters and with paint as before mentioned and described.

SEC. 4. For the purposes of this act the terms "natural butter" and "natural cheese" shall be understood to mean the products usually known by these names, and which are manufactured exclusively from milk or cream, or both, with salt and rennet, and with or without coloring matter or sage.

SEC. 5. Every person, firm, or corporation violating the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than \$50 nor more than \$200, or by imprisonment in the county jail for not less than ten nor more than thirty days, or by both such fine and imprisonment for each and every offence, in the discretion of the Court, one half of such fine to be paid to the complainant, the other half to be paid to the officer or officers having charge of the poor fund of the town where such prosecution occurs, for the support of the poor; or, if the poor of such town are supported by the county, then such moneys shall be paid to the officer or officers having charge of the poor fund of the county in which said town is located, to be used for the support of the poor of such county. But nothing in this act shall be so construed as to interfere with or abridge any right obtained, secured, or guaranteed by any law of Congress, or by any patent duly granted by the United States Government.

SEC. 6. This act shall take effect sixty days after it becomes a law.

CHAPTER 214. An Act to prohibit the coloring of oleomargarine, butterine, and adulterated cheese. Passed May 24, 1882, three fifths being present.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Every person who shall use, or permit any person in his employment to use, anatto or any other substance for the purpose of coloring the article in semblance of butter known as oleomargarine, or butterine, or any cheese which has been adulterated by the use of lard or any other greasy substance, with an intent to sell the same for food, or who shall sell or expose for sale any oleomargarine, butterine, or adulterated cheese which has been colored contrary to the provisions of this act, shall be guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than \$50 nor more than \$200, or by imprisonment in the county jail for not less than thirty nor more than ninety days, or by both such fine and imprisonment, for each and every offence. But nothing in this act shall be so construed as to interfere with or abridge any right obtained, secured, or guaranteed by a law of Congress, or by any patent duly granted by the United States Government.

SEC. 2. This act shall take effect on the 1st day of September, 1882.

#### THE MÉGE PATENT.

United States Patent Office.—Commercial Manufacturing Company (Consolidated) of New York, N. Y., assignee, by Mesne assignments, of Hippolyte Mége, deceased. Treating animal fats. (Specification forming part of reissued letters patent No. 10,137, dated June 13, 1882. Original No. 146,012, dated December 30, 1873; reissue No. 5,868, dated May 12, 1874; reissue No. 8,424, dated September 24, 1878. Application for reissue filed May 20, 1882.)

The processes set forth in the specification attached are those which have been fully described in the preceding pages of this article.

What is claimed is: 1. The improved material herein described, produced by treating animal fats so as to remove the tissues and other portions named, with or without the addition of substances to change the flavor, consistency, or color, as set forth. 2. The process herein described of treating animal fat in the production of oleomargarine.

The Commercial Manufacturing Company Consolidated.  
CHARLES M. FIELD, President.  
Witnesses: GEORGE H. SONNEBORN, WILLIAM H. SONNEBORN.

#### THE COSINE PATENT.

United States Patent Office.—Garret Cosine, of New York, N. Y., "Improvement in Processes for making Artificial Butter." (Specification forming part of Letters Patent No. 173,591, dated February 15, 1876; application filed December 21, 1875.)

TO ALL WHOM IT MAY CONCERN:

Be it known that I, Garret Cosine, of the city, county, and State of New York, have invented an improved process of making artificial butter, of which the following is a specification:

My invention relates to the manufacture of butter for table use from oleine and margarine, as obtained from animal fats, fruits, and vegetable nuts, with lactic acid and loppered cream or milk.

To obtain the oleine and margarine from animal fats, I take any given quantity of animal fat and cause the same to be cut or minced by any suitable machine for the purpose, after which I place the fat in a vessel and subject it to a heat that will cause the whole mass to become fused; I then place the liquid fat in other vessels, and allow it to remain and cool until the degree of Fahrenheit is from eighty to ninety degrees, and when in this state I place a portion in bags of cloth. These bags are then placed in a press and subjected to a high pressure, which causes the oleine and margarine to free itself from the stearine and fibrous tissue.

The above shall be known and designated as oleine and margarine No. 1.

The process above described will give the same results as described by Chevreul in "Brande's Work of Chemistry," page 482, and published in the year 1829.

To obtain the vegetable oleine and margarine, I use any one of the following articles of commerce, viz.: oil peanut, oil sweet almonds, and oil olives.

To produce the lactic acid, I take fourteen parts cane sugar, sixty parts water, four parts caseine, and five parts chalk. This mixture is kept at a temperature of 80° to 95° Fahr. for eight or ten days, or until it becomes a crystalline paste of lactate lime. This is pressed in a cloth, dissolved in hot water, and filtered. This solution is then concentrated by evaporation. The acid is obtained from this lactate by treating it with the equivalent quantity of sulphuric acid and filtering from the insoluble gypsum. The solution of lactic acid I make as follows: One drachm of lactic acid and sixteen ounces of water. The solution of lactic acid assists digestion; it prevents the product from becoming deteriorated before use, and it assists also in giving the product a butyaceous consistency. By the use of lactic acid all putrefactive and catalytic action is arrested, which action would take place if such acid were not added, and by this means there is prepared an article which is fit for use at any time, and which will preserve its original state and flavor.

To obtain the loppered cream or milk, I take the cream as obtained from the surface of milk, or milk as obtained from the cow, and place it in open vessels, and allow it to remain until the putrefactive and catalytic action has taken place. When in this state it will be ready for use.

To obtain the margarine from the oleine and margarine No. 1, I take a given quantity of oleine and margarine designated as No. 1, and place it in a water bath and subject it to heat until the same assumes a semi-liquid state; then I place it in bags of cloth. These bags are then placed in a press and subjected to a high pressure, when the oleine will free itself from the margarine.

The above shall be known and designated as oleine No. 2.

I find that the composition of butter made from cows' milk, according to Robin, Verdel, and described by Dalton in his work of "Human Physiology," page 320, and published in the year 1867, is as follows: "In one hundred parts—margarine, sixty-eight parts; oleine, thirty parts; butyrine, two parts. And it being a fact that butter made from cows' milk does not con-

tain the same proportion of oleine and margarine in summer as in winter, it having a larger proportion of oleine in the winter, and having described the several articles that I use, and to enable others skilled in the art to make and use my discovery or invention, I will now give my improved process for making butter for winter and summer use.

To manufacture butter for table use in the winter by my improved process, I take and place in a suitable vessel nine parts of oleine No. 2, one part of fruit or nut oil, one part of solution lactic acid, one part of loppered cream or milk, as hereinbefore described. I then cause the same to be rapidly agitated with a revolving skeleton beater, until the whole assumes the consistence of butter made of cream taken from cows' milk, after which I add coloring matter, and then remove the mass upon a table or other suitable receptacle, and then work it until all the fluid portions are expressed. I then add salt to suit the taste, when it will be ready for use.

To manufacture the above for summer use, I take and place in a suitable vessel nine parts of oleine and margarine No. 1, one part of margarine as obtained from No. 1, one part of solution lactic acid, one part of loppered cream or milk, as hereinbefore described, and proceed as I do in making the same for winter use.

What I claim as my invention, and desire to secure by letters patent, is:

1. The process of making artificial butter by mixing together oleine and margarine from animal fats, and from fruit and vegetable nuts, and lactic acid, and loppered cream or milk, substantially as described.

2. The process of making artificial butter by mixing together oleine and margarine from animal fats, and lactic acid, and loppered cream or milk, substantially as described.

3. The process of preventing artificial butter from becoming deteriorated before use, and giving it a butyraceous consistence, by mixing with it lactic acid, substantially as described.

GARRET COSINE.

Witnesses: JOHN R. LEFFERTS, E. W. COSINE.

By a comparison in detail of what is set forth in the Cosine specification with the processes described in previous pages as forming the Mége patent, the reader can judge of the merits of the course pursued by each, and the results thus far attained. Whether oleomargarine butter is to be a permanent industry, may perhaps be open to doubt; but it has capital and enterprise enough embarked in it to give it a fair and thorough trial.

**OPIUM QUESTION IN CHINA AND INDIA.** The Chinese Government have lately appealed to Great Britain for release from the tyrannous conditions exacted as the result of the two opium wars by which they are restrained from prohibiting the import of, or placing deterrent duties upon, Indian opium. The Chefoo convention, which the British Government has refused to ratify, and the treaties with the United States and with Russia, in which stipulations against the importation of the drug were inserted, indicate a determination to grapple with the Chinese national vice with more energy than they have yet shown; though the anti-opium clauses in the two treaties were placed there merely for effect, and the task is almost hopeless until the British and Indian Governments grant them the release for which they pray. Outside of official circles there is a growing sentiment in favor of allowing the Chinese to attempt the suppression of the vice

and removing the immoral treaty obligations which tie their hands; but the \$40,000,000 of Indian opium revenue is an argument which weighs with the British public almost as strongly as with the responsible statesmen, as its loss would probably have to be made good out of the pocket of the British tax-payer. The Society for the Suppression of the Opium Trade, in recommending that the culture, which is carried on in Bengal under Government supervision, should be confined to supplying the demand for medicinal purposes, boldly propose to have the derangement which would follow in Indian finances averted by raising the revenue in Great Britain—the only rational solution of the problem. The people of England naturally listen favorably to every objection, reasonable or specious, to a step which involves the payment of taxes for the benefit of their fellow-subjects in India—a reversal of conditions to which, perhaps, no considerations of morality or national honor can force them.

The sincerity of the Chinese Government in their efforts to exterminate the opium-traffic are at once called in question. If they are in earnest, why do they not suppress the cultivation of the poppy in China? The only object of the Chinese is declared to be the transfer of the opium revenue from the Indian Exchequer to their own, or the protection of the native opium. Such motives, which would be sufficient for any government not wearing the yoke of conquest, are considered iniquitous on the part of the Chinese. But when an honest purpose to destroy the evil which is sapping the vigor and morality of the Chinese people is made apparent, Sir George Birdwood and other veterans of the Indian civil service bring scientific arguments to prove that the debasing narcotic is really a blessing to the Chinese. The Rajpoots and Sikhs of India are instanced as vigorous races who are addicted to the excessive use of opium; but its baleful effects are officially recognized in India in the laws prohibiting its sale; and when its destructive influence became recently apparent in British Burmah, energetic measures were taken by the Indian Government to uproot the evil. It is only in China that the British apologists, with no foreign scientists and no Chinese authority of any kind to support them, contend that the opium-habit is beneficial. It supplanted spirituous liquors in China. The Indian opium is much weaker in the narcotic alkaloids than the Turkish drug. Chinese opium is more harmless still. The Chinese do not eat opium nor drink laudanum or morphia, but smoke "chando," an extract obtained by long boiling the preparation sold in the bazaars, which is already greatly weakened in narcotic power by various admixtures. The narcotic principles can not be inhaled in the single puff of smoke that comes from the pipe which burns with a flash in the opium-pipe, because the alkaloids are not volatilizable. The resinous properties seem

to be all that passes into the lungs of the smoker. They are probably the cause of the efficacy of the smokable extract as a prophylactic against pulmonary and bronchial diseases. The Chinese missionaries who forbid opium-smoking, as well as juvenile marriages, to their converts, commit a double mistake, and rear an enfeebled class, who are decimated by consumption. Another inestimable property of opium is its value as a febrifuge. The Hindoos who eat the crude opium find it a perfect safeguard against malarial epidemics. Sir George Birdwood considers opium beneficial to the nutrition of vegetarians, as it prolongs the process of digestion. The Hindoos who do not take opium suffer from indigestion from the time they are weaned till the end of their lives. The reason is, that the human intestines are not as long proportionately as those of the graminivorous animals, and do not allow the complete digestion and assimilation of vegetable food. Smoking opium, as is the custom in China and the Indian Archipelago, he holds entirely harmless and indifferent, milder than tobacco, and the least alloyed of the pleasures of the senses, one which "seems to possess the true magic which spiritualizes sense." The residuum of the "chandoo" smoked by the rich is worked over with Indian hemp, tobacco, and nux vomica, and smoked again by the poorer classes. It is this "tye-chandoo," with its deleterious admixtures, which has given opium-smoking a bad name, although the mere vapor from even those substances can not be very harmful.

The Chinese themselves contribute no testimony to the English defenders of the opium-vice. To them it is neither a "dietetic corroborant" nor a prophylactic against consumption or malaria, but a national curse. Even the victims of opium pronounce it an enslaving vice. It brings all other vices in its train. The dissolute, the idle, and the vicious are all opium-smokers. The indulgence is so expensive that it ruins both rich and poor in fortune, as well as character and health. The debilitated, cachectic, soddan-witted wrecks of men, sunk in every vice, which are met with in appalling numbers in the cities of China, are believed by the Chinese to be the victims of opium. They trace poverty and immorality to this costly and demoralizing luxury with much greater unanimity than the people of America ascribe similar lapses of character and usefulness to alcohol. In Assam the cultivation of the poppy was promptly suppressed, and the consumption restricted by the Indian Government, because the vice became so general that it threatened to depopulate the province. The same firm course is being now taken in Burmah. The report of the commissioner in Burmah presents a very different estimate of the effects of opium-smoking from those of the defenders of the Tientsin treaty, who represent it as no more harmful than smoking willow-bark.

The papers now submitted for consideration present a painful picture of the demoralization, misery, and ruin produced among the Burmese by opium-smoking. These show that, among the Burmans, the habitual use of the drug saps the physical and mental energies, destroys the nerves, emaciates the body, predisposes to disease, induces indolent and filthy habits of life, destroys self-respect, is one of the most fertile sources of misery, destitution, and crime, fills the jails with men predisposed to dysentery and cholera, prevents the due extension of cultivation and the development of the land revenue, checks the natural growth of the population, and enfeebles the constitution of succeeding generations.

The Chinese Government have always been sincere and consistent in their efforts to suppress the opium-vice, but with intermittent energy, and through the agency of officials who are for the most part lax and shamefully corrupt. Opium was imported from India as a medicine a couple of centuries ago, but was first brought in considerable quantities and consumed as a luxury in the last quarter of the last century. The importers were the first British merchants who settled in China, agents of the East India Company at Canton, with whom a guild of native traders called the Hong merchants were permitted to hold dealings. As soon as the demoralizing effects of the drug were noticed, the authorities forbade its use, and in the year 1800 an imperial edict was issued entirely forbidding the import. The opium-trade grew in spite of the prohibition, and became established on a regular though still illicit footing. Bribes were taken from Dent, Jardine, and the other smugglers, and the opium was passed by the customs officials so systematically that the trade acquired a regular character. In 1820, when it had increased to 6,500 chests, the opium-ships removed their anchorage to Lintin, farther out of sight of the authorities. The evil was as yet insignificant, and confined to the wealthy and official classes; but in the next twenty years it acquired serious dimensions. For years the Government tried to enforce the law, but the opium importers armed their ships and landed their cargoes in defiance of the authorities. At length Lin Tsch-seu was sent to Canton in 1839 to put down the traffic. He besieged the factories at Lintin, seized the 20,000 chests of opium, valued at six million dollars, and threw it into the sea. Smuggling was resumed from Hong-Kong, and, when he beleaguered that place, war was declared. With all the humiliating terms and the heavy indemnities exacted from the Emperor in the treaty of 1842, he could not be induced to legalize the opium-traffic. Hong-Kong became British territory, and smuggling was carried on in Chinese vessels flying the British flag. An arrest of pirates on such a vessel was the ground of the second opium war, by which the treaty of Tientsin, legalizing the trade, was extorted in 1858. In 1869 negotiations were commenced for a revision, releasing China from the obligation to permit the traffic. A convention, authorizing a slight increase in the import duty, was signed

by Sir Rutherford Alcock in 1871, but was rejected in London. The Chefoo convention, concluded between Sir Thomas Wade and Li-Hung-Chang in 1876, promised, in return for the opening of the four new treaty ports, that opium imports should remain in bond until all dues were paid. As this would have permitted China to restrict the traffic by increasing the local dues, the agreement was not ratified by the British Government.

The efforts of the Chinese authorities to suppress the native cultivation of the poppy have been as fitful and ineffectual as those directed against the smugglers. The task is much more formidable than it would be to check the imports if their hands were freed; but considerable progress has been made of late years. Up to 1848 the cultivation was restrained with tolerable success. Subsequently, and particularly after the Tientsin treaty, the laws fell into desuetude. The policy was actually contemplated of encouraging the native cultivation until the Indian drug was driven from the market, and then crushing out the home production. The cultivation was probably extending in Western China and Manchuria, but of late years honest and energetic administrators like Tso, Shen, Pao-Chin, Tseng, and Yien have cleared large districts of the plant. Tsu Tsung-tang has reported that the poppy has been banished from the northwest. In like manner more frequent attempts have been made to enforce the laws against consumption, and thousands of shops have been closed within two or three years. But if a habit so prevalent, and an interest on which so many depend for livelihood, could be suddenly suppressed in any country, it would be most difficult in that immense, loosely-jointed empire, where central government is only a fiction, where the provincial governors and chief officials of the empire follow independent policies in the present interregnum, where they are glad if they can gather the taxes without driving the people to revolt, and where the administrative machinery is very imperfect and the officers ill-paid and scandalously venal.

The abolition of the Chinese opium-trade would entail serious difficulties in the government of India. There remains too little now of the enormous revenue drained from the indigent population of India by barbarous taxes discarded in all free countries, after the rapacious hierarchy of officials and the great garrison of soldiers by which British rule is maintained have been provided for, to return any satisfactory equivalent in public improvements of which the need is crying, and the schemes already matured, even with the opium revenue, which amounts to 17 or 18 per cent of the total. This forced contribution from China has increased from \$10,000,000 in 1848-'44 to \$42,000,000 in 1880-'81. It has supplied \$672,000,000 of net revenue in the last twenty years. The extension of opium-culture in China has not caused the importations to decline; the

aggregate net revenue of the decade 1871-'81 has exceeded that of the preceding decade by about \$60,000,000. The Chinese Government also raises a revenue from the import duty, which is fixed by the treaty legalizing the trade, and from internal transit dues, which some estimate at \$7,500,000 a year.

OREGON. The State officers chosen at the election on the first Monday in June, and inaugurated on September 13th, were Z. F. Moody, Governor; R. P. Earhart, Secretary of State; Edward Hirsch, Treasurer; E. B. McElroy, Superintendent of Public Instruction; State Printer, W. H. Byars; Supreme Court Judge, W. P. Lord. The other Judges of the Supreme Court are Edward B. Watson and John B. Waldo; State Librarian, S. H. Condon.

FINANCES.—The receipts of the State Treasury were as follows:

From the four-mill tax, 1881.....	\$198,982 61
From the four-mill tax, 1882.....	287,030 91
From the earnings of the Penitentiary.....	11,054 25
From delinquent taxes.....	1,683 79
From private insane.....	2,716 07
From sale of stamps.....	4,651 19
From sale of books.....	846 15
Miscellaneous sources.....	803 50
This, with balance on hand September 1, 1880....	57,794 26

Amounts to a total of..... \$510,018 18

The current expenses during the fiscal years 1881 and 1882 amount to about \$400,000, thus leaving a balance of \$110,000 in the Treasury.

The general bonded indebtedness of the State includes the soldiers' bounty bonds, the soldiers' relief bonds, the bonded debt arising out of the Indian difficulties of 1878, known as the Umatilla Indian war, and the bonded debt created by the act approved October 25, 1880, to complete the payment of the Modoc war bonds.

The soldiers' bounty bonds and soldiers' relief bonds are in the same condition they were at the close of the fiscal year 1880, except that the time when the State will be entitled to redeem them, in accordance with the terms upon which they were issued, is so much nearer at hand, though it continues two years yet. The requisite funds have for a long time been in the Treasury, with which to pay them off, but the holders could not be compelled to receive payment, and, as it appears, preferred to retain them as an investment.

The bonded debt arising out of the Umatilla Indian war is yet outstanding, except so far as it has been affected under the provisions of said act approved October 25, 1880, entitled "An act to refund the war debt and maintain the public credit, and appropriate money and levy a tax therefor."

At the last-mentioned date there was outstanding a bonded indebtedness known as "the Modoc war bonds," which amounted to \$132,858.72, with certain accrued interest thereon. By the provisions of said last-mentioned act the State Treasurer was authorized to sell the bonds of the State of Oregon to such an amount as, with the surplus moneys not otherwise appropriated, which had or might accrue from the

three-mill tax levied pursuant to an act to provide for a tax to defray the current expenses of the State, and to pay the indebtedness thereof, approved October 20, 1876, would realize enough money to pay in full the said Modoc war bonds, with the accrued interest. And for the purpose of paying the principal and interest on said Umatilla Indian war bonds, and the principal and interest upon the bonds of the State of Oregon so to be sold, a one-half mill tax upon the dollar was thereby levied.

In pursuance of said act of October 25, 1880, said Treasurer did sell one hundred and twenty bonds of the State of Oregon, each being for the sum of \$500, from the proceeds of which, with the surplus moneys accrued from said three-mill tax, he has redeemed the said Modoc war bonds.

There have been realized the proceeds of one levy of the half-mill tax, which amounted to \$29,628; and which has been applied upon the principal and interest of the said indebtedness, as in and by said act provided. The portions thereof unliquidated are respectively the sums following: Upon the Umatilla Indian war bonds, \$28,171; upon the bonds issued under the act of October 25, 1880, \$60,000. A continuation of this tax four years longer will more than pay off the entire amount. This indebtedness arose out of claims assumed by the State.

This is all of the general bonded indebtedness of the State, and if the Umatilla war claims and other claims referred to are allowed at any reasonable amount against the United States, they, together with the Modoc war claims already allowed, will not only pay off all the indebtedness arising out of those claims, but will bring into the State Treasury a surplus of several thousand dollars.

There is a bonded debt payable to the Willamette Falls Canal and Locks Company, or its assigns, out of the fund arising from the 5 per cent of the net proceeds of the sales of the public lands in the State, and the fund arising out of the sale of the 500,000 acres of land donated to the State for the purposes of internal improvements.

The original amount of these bonds was \$200,000. They bore interest at the rate of 7 per cent per annum. The 500,000 acre grant has all been sold, excepting 40,520 acres, and all of the amount sold has been deeded away, excepting 37,617.21 acres, two thirds of the purchase price of which has not been paid.

The cash sums arising upon the sale of said lands, except the portion thereof consumed in expenses attending the management of the grant, have been applied in payment of said lock bonds, which has reduced the same to the sum of \$68,000, and the Treasurer has sufficient money on hand to pay off about \$30,000 more of them.

There will probably be left of the proceeds of the said grant, after the lock bonds are redeemed \$56,000, besides the 40,520 acres of

land. Whatever is left of this grant belongs, it is presumed, to the common-school fund.

There is another special indebtedness known as the road warrants. They were made payable generally out of the swamp-land fund. They amounted, two years ago, to \$133,604. During the last two years a portion of them, amounting to about \$14,000 of principal and about \$5,500 in interest, has been taken up in payment of the 20 per cent payable on the purchase of swamp-lands, under the former act providing for the selection and sale of the swamp and overflowed lands belonging to the State of Oregon.

The balance due upon these warrants is but a small sum compared with the amount and value of the swamp and overflowed lands the State is entitled to under the act of Congress of March 12, 1860; yet it will be likely to drag along until more of them, claimed by the State as swamp and overflowed lands, are certified to be such by the department at Washington having the matter in charge.

**PUBLIC INSTITUTIONS.**—An act of 1880 provided for the construction of an Insane Asylum building. This structure, when completed and furnished, will have cost, it is estimated, not less than \$175,000. It was ready for inmates at the close of the year.

The last Legislative Assembly organized the School for Deaf Mutes by providing for a board of directors to have the charge and management thereof. The plan has operated well, and relieved the Board of Education of a great annoyance.

The insane and idiotic, since the death of Dr. J. C. Hawthorne, which occurred about February, 1881, have been kept, under the contract made between him and the State, by Mrs. Rachel Hawthorne, widow of the deceased, and Dr. S. E. Josephi, administratrix and administrator of his estate. The whole number in charge of said representatives is 315, of whom 221 are males and 94 females.

The number of convicts in the State Penitentiary on August 31st was 178.

The attendance during the year 1880-'81 in the collegiate department of the State University, according to the report of the president, was as follows: Highest number, 112; 48 women and 64 men. Lowest number, 55; 31 women and 24 men. Average for the year, women, 39½; men, 49; total average, 88½.

Highest number of free students, 60; 19 women and 41 men. Lowest number of free students, 40; 17 women and 23 men. Average for the year, women, 18; men, 32; total average, 50.

Highest number of pay students, 52; 28 women and 24 men. Lowest number of pay students, 25; 14 women and 11 men. Average for the year, women, 21; men, 18; total average, 39.

In the preparatory department the attendance was as follows: Highest number during the year, 64; 34 girls and 30 boys. Lowest

number, 31; 17 girls and 14 boys. Average for the year, girls, 25½; boys, 22; total average, 47½.

At commencement a class of seven persons was graduated, one woman and six men, four of them in the classical course and three in the scientific one.

**LANDS GRANTED TO THE STATE.**—Reference has already been made to the 500,000 acres donated for internal improvements.

The grant of ten sections of land, for the completion of public buildings, has been fully realized.

The grant of the salt-springs lapsed long ago, and no benefit will probably ever be realized therefrom.

The seventy-two sections set apart and reserved for a State University have been selected, and about 29,000 acres thereof sold, leaving about 17,000 acres unsold.

The 90,000 acres of land granted under the act of July 2, 1882, for an Agricultural College, have been selected, and about 26,000 acres thereof sold. The price at which they are required to be sold by the terms of the grant, \$2.50 an acre, renders their sale slow.

The sixteenth and thirty-sixth sections in each township, granted to the State for the use of schools, have been and are being sold from time to time, as the public surveys are extended. The full benefits of this grant will not be realized until all the public lands in the State are surveyed.

The several funds arising from the sales of the lands included in the said grants amount to the following sums respectively:

The University fund, principal.....	\$62,000
The Agricultural College fund, principal.....	65,000
The common-school fund, principal.....	655,000

The investment of these funds, under the present rate of interest, has become very difficult.

"I think it absolutely necessary," says Governor Thayer, "to lower the rate specified in the present law from 10 per cent to 9 per cent or lower. I doubt whether half of the amount on hand will be called for during the next year unless that is done."

Referring to the swamp-land grant, the Governor, in his message to the Legislature, says:

At the commencement of my term of office there had only been approved, by the Surveyor-General, 43,653.94 acres. During the time of its continuance he has approved 443,789.36 acres, nearly all of which have been selected, and the proof required by the mode aforesaid furnished. Besides other selections have been and are being made, which, when completed, will make the area of acres at least a half a million, from which the State should realize nearly that number of dollars.

There should be remaining in that fund, after the road warrants are paid off, fully \$300,000.

This fund, like the 500,000 acre grant, has been unkindly dealt with. It has been rudely invaded, and a great portion of its substance purloined. Some portion of it may have been applied to useful purposes, but it would be very small when compared with the benefits that should be received by the State. The

appropriations from it for the building of certain roads was somewhat after the manner of the disposal of the various grants by the United States to the State, for the building of roads from and to certain points. Generally they went to enrich private parties.

But the remnant may still be preserved and rendered highly useful. Ten per cent of the swamp-land fund is pledged by the laws of the State to the use of the common schools. Another portion should be applied to the benefit of the State University, which will enable an institution that should be the pride of Oregon to gain a firm financial footing. Had such a policy been pursued a few years ago we should not have witnessed the humiliating spectacle of the prevention of a forced sale of its building only through the kindly intervention of a non-resident of the State. An institution that sheds its light and luster far and wide becoming a mendicant for foreign aid is not a pleasing subject of contemplation.

**SALMON.**—On the regulation of the salmon-fishery, the Governor says:

Nature has bountifully supplied the Columbia River with salmon, a very excellent quality of fish, which, if preserved, will afford to the people of the State and adjoining Territories a delicate and substantial article of food for all future time. The State has full control over the subject within its limits. That authority has never been delegated. It has complete power to regulate its fisheries.

By proper legislation on the part of the State, and of Washington Territory, the salmon of the Columbia River could be preserved and rendered a lasting benefit to the people of both sections of the country. This can be done by limiting the catch during the spawning-season. It may require the arbitrary exercise of authority, for no other kind will check the greed and rapacity of a portion of mankind—the class that will prosecute any business as long as it can be rendered profitable, regardless of the importance of the consequences that are certain to follow.

One of two modes should be adopted. Either shorten the period in which salmon are allowed to be taken during the season, and regulate the kind and character of the appliances to be employed in taking them, so as to catch only the larger-sized fish; or limit the catch of a season to a specified number. Either mode may require the appointment of an officer invested with authority to enforce the provisions of the regulation, but the exigency of the case will justify it. Some rigorous measure must be adopted to prevent the extirpation of those valuable fish from the waters of the Columbia River.

**STATISTICS.**—The following statistics are for the year 1881-'82: Acres of land assessed, 5,201,654; value, \$28,280,847; value of town-lots, \$9,727,988; value of improvements, \$9,993,906; merchandise and implements, \$11,114,159; moneys, notes, and accounts, \$15,432,444; household furniture, carriages, etc., \$2,824,277; horses and mules, 114,024; value, \$4,831,352; cattle, 269,412; value, \$2,771,040; sheep, 854,750; value, \$1,401,837; swine, 85,218; value, \$193,816; gross value of all property, \$86,531,716; indebtedness, \$22,300,912; exemptions, \$4,973,058; total taxable property, \$59,257,746; State tax, \$325,917.38; school-children, 61,641.

**LEGISLATURE.**—The Legislature met on the 11th of September, and adjourned on the 21st of October. The following are among the acts passed:

An act to establish a paid fire department for the city of Portland.

An act to create the county of Crook, and

to fix the salaries of the county judge and treasurer thereof.

An act making provisions for the incorporation of cemetery associations.

An act for the protection of fish and game.

An act to create the county of Klamath, and fix the salaries of county judge and treasurer.

An act to incorporate the city of Philomath.

An act to change the time of meeting of the Legislature of the State of Oregon.

An act to authorize the Governor of the State to contract for keeping the insane and idiotic.

An act to define the boundaries of Coos and Douglas Counties.

An act to provide for the erection of a fish-way or ladder at the falls of the Willamette River, and to appropriate money therefor.

An act redistricting the State into judicial districts, and to provide for time and place of holding the Supreme, Circuit, and County Courts, etc.

An act to protect the ring-neck Mongolian pheasant in the State of Oregon.

An act to protect laborers in timber and logging camps.

An act providing for the establishing of State Normal Schools.

The most important provision of the law regulating the salmon-fishery in the Columbia River is one prohibiting fishing on the bar or in its immediate vicinity. The bill provides that it shall be unlawful to fish with gill-nets, of any description whatsoever, on or in the vicinity of the Columbia River bar. Hereafter it will be unlawful to take salmon in the Columbia River or its tributaries during March, August, and September, and during the "close times" in April, May, June, and July—such close times to be between six o'clock in the afternoon on Saturday and six o'clock on Sunday. The size of mesh for gill-nets is four and one eighth inches square. It is also made unlawful to put sawdust and mill-refuse into the Columbia River or its tributaries. Severe penalties are prescribed for violation of these various provisions.

Both branches of the Legislature ratified the proposed woman's suffrage amendment to the Constitution. The vote in its favor was unexpectedly large, it being 21 yeas to 7 nays in the Senate, and 47 yeas to 9 nays in the House of Representatives. The resolution had previously passed the Legislature of 1880. It now goes to the people.

Hereafter the Legislature will meet, and the terms of office of the State officers will end, on the 1st of January. Governor Moody and his colleagues will hold office until January 1, 1887. A heated contest over the United States senatorship continued through the entire session. The Republicans were divided, a majority of them supporting obstinately ex-Senator Mitchell. On the seventy-fifth ballot, on the last day of the session, just before adjournment, Joseph N. Dolph, of Portland, Republican, was

chosen, receiving 51 votes, against 36 for all others.

**PARTY CONVENTIONS.**—The Democratic State Convention met in Portland on the 5th of April, and nominated the following ticket: Congressman, William D. Fenton, of Yamhill; Governor, Joseph S. Smith, of Portland; Secretary of State, J. K. Weatherford, of Linn; Treasurer, Hyman Abraham, of Douglas; Superintendent of Instruction, W. L. Worthington, of Wasco; State Printer, Wilbur Cornell, of Marion; Supreme Judge, E. D. Shattuck, of Portland.

The platform adopted contained the following among other resolutions:

The Democratic party of the State of Oregon, in convention assembled, cognizant of the important consequences depending upon its deliberations, and affirming the principles of popular liberty and rights laid down by the founders of this Government, do declare as follows:

1. That we favor honesty, efficiency, and economy in every department of the Government, both State and Federal.

2. That we favor the equal protection of the rights of labor and capital under just laws.

3. That while we recognize and respect the legal rights of railroad enterprises, we demand that our Legislatures, State and Federal, enact such laws regulating the same, as may be necessary to prevent unjust discrimination and oppression of the people.

4. That we denounce the present tariff system as class legislation favorable to the few and oppressive to the many; and therefore demand an immediate revision thereof, a reduction of all import duties to a strict revenue standard; and that the free list be so enlarged as to include all articles of mechanical, agricultural, and domestic use among the people, as far as the needed revenues of the Government will permit.

5. That the President's veto of the Chinese Immigration Bill is a public misfortune. It sets the degrading mark of competition with coolies of China upon the labor of the working-men of America, and it treats with contemptuous disregard the unanimous protests and appeals of the entire Pacific coast. In behalf of the people of Oregon we disapprove and condemn it, and declare it to be the duty of every citizen, regardless of party, to express his disapproval with his vote as well as with his voice. . . .

8. That we are in favor of a repeal of the navigation laws, and the removal of the duties on all materials that enter into the construction of vessels, so that American produce can be carried in American bottoms, and the American people be able to enter into competition for the carrying-trade of the world.

The Republican State Convention met in Portland on the 20th of April, and nominated the following ticket: Congressman, M. C. George; Governor, Z. F. Moody; Secretary of State, R. P. Earhart; Treasurer, Edward Hirsch; Superintendent of Public Instruction, E. B. McElroy; State Printer, W. H. Byars; Judge of Supreme Court, W. P. Lord. The platform adopted contained the following, among other resolutions:

The Republican party of Oregon, in convention assembled, do make and affirm the following declaration of our political principles:

- Resolved*, 1. That we favor honest, efficient, and economic administration of every department of the Government.

2. That we favor the equal protection of the rights of labor and capital.

3. We are in favor of regulating the salaries of

county officers, so that they shall receive such compensations as are commensurate with their services.

4. That we regard the free-school system of our State as the special care and pride of the Republican party.

5. That it is the policy of the Republican party to foster and encourage the development of our State by the construction of railways which will place us in direct communication with our sister States.

6. That we hold all corporations to be strictly responsible to their liabilities under the law, and recognize the right of the Legislature to enact all reasonable limitations on corporate powers.

8. That we favor the enactment of a law by Congress, restoring to settlers the right to homestead and pre-empt in all cases where, by abandonment of entries and filing, they have hitherto not had the full benefit of these acts.

9. That the rapidly increasing manufacturing and wool-raising interests of the State demand the continued fostering care of the General Government.

10. That the reciprocity treaty with the Sandwich Islands is an imposition upon the Government and the people, and should be speedily abrogated.

We here earnestly declare it to be our belief that Chinese immigration to the United States should be restricted, and we demand that our representatives in Congress shall persist in advocating the enactment of a law that will effectively accomplish this result.

**ELECTION RETURNS.**—The election in June resulted in the choice of the Republican ticket. The following is the vote :

OFFICERS.	Republicans.	Democrats.	Majority.
Congressman.....	22,517	19,152	3,365
Governor.....	21,481	20,069	1,412
Secretary of State...	22,052	19,536	2,516
Treasurer.....	21,290	18,891	2,399
Sup't Public Instr'n.	22,163	19,120	3,043
State Printer.....	21,999	19,561	2,436
Judge.....	21,484	20,033	1,451

The Legislature chosen at this election consists of 16 Republicans and 14 Democrats in the Senate, and 37 Republicans, 21 Democrats, and two Independents in the House.

**OSTRICH-FARMING IN THE UNITED STATES.** This is a new branch of industry proposed for introduction, with promises of rich returns. In May, 1881, it appears that twenty-two South-African ostriches were shipped to this country, by way of Buenos Ayres, South America. The birds survived the long sea-voyage, and were placed in the Central Park inclosure, New York. As ostrich-farming has been a very profitable industry in South Africa since 1867, more than \$6,500,000 worth of feathers being exported annually, it is urged that American farmers should turn their attention to this new and alluring venture. The business is successful in Buenos Ayres, where the birds flourish and produce a superior quality of feathers. It is claimed that the United States, particularly the Southern, Southwestern, and Pacific States, are admirably adapted to the raising of these birds, who need only an inclosed paddock, or grass-field, with sufficient pasturage to sustain them. They thrive, it is said, on clover, grass, weeds, grain of any kind, acorns, potatoes, beets, turnips, onions, car-

rots, salt, small pebbles, and chopped bones. From what appear to be reliable statements, it is asserted that the product of feathers from one bird annually is worth \$60, wholesale, in London. Where the pasturage is very good, the yield of one plucking has reached \$150, which, however, is much in excess of what is ordinarily to be expected. There being two pluckings a year, it is deemed reasonable to expect at least \$120 worth of feathers from each bird annually in the United States.

An ostrich of two years old costs about \$375; deducting from the yield a percentage for expenses and risks of mortality, the profit is still as much as 15 to 20 per cent on the investment. Any farmer of stock can place (say) fifty birds on his land; and as the trouble of caring for them is not great, it is claimed as certain that the returns will be large. The cost of four-year-old birds is estimated at \$1,200 per pair, and for breeders \$1,750 per pair. By the process of incubation it is expected that sixty chicks will be annually reared from a pair of breeders. The first plucking of feathers, at the end of nine months, is worth \$5 or \$6 per bird, and every six months thereafter, the yield is from \$28 to \$120 per plucking, according to the age of the bird. Naturally, the birds are timid, but they are readily domesticated, and become on the farm as tame as chickens, ducks, or geese. In the management of them, it is best that they be collected and counted about once a week. Every month they should be brought into a small inclosure, when each bird should be examined, and the ripe feathers plucked. The process of displucking them is quite simple. They are put in a *corral*, or small pen, so confined that they can not exercise their propensity for kicking, and while two men hold the bird, a third proceeds to pluck the feathers. A still safer and more satisfactory way is to put the bird in a box or stall made for the purpose. When the birds are breeding, each pair should have a small inclosure to themselves, say seventy yards square, and a little grain daily.

As a rule, each wing of an ostrich produces twenty-four to twenty-six long feathers. In the male bird they are all pure white, except two, which are black and white, and usually termed "natural fancy feathers." In the female the long wing-feathers are perfectly white and gray. In addition, the male bird produces at each plucking three ounces of smaller black feathers; the small feathers of the female are gray and drab in color. From the tail are plucked forty ounces of feathers, those from the male being white, and those from the female white, and white and gray.

If the judgment of those best acquainted with the subject be sound and correct, ostrich-farming promises to become an active and profitable pursuit. Further experiment will test the question fully.

## P

**PARAGUAY** (REPÚBLICA DEL PARAGUAY). Provisional President, General B. Caballero; Secretary of the Interior, Colonel Duarte; Secretary of Foreign Affairs, J. S. Decoud; Secretary of the Treasury, J. A. Jara; Secretary of Justice and Public Worship, J. A. Bazarás; Secretary of War, Colonel Duarte.

The republic covers an area of 238,290 kilometres square, or 91,650 square miles.

**POPULATION.**—The last census, that of 1876, fixes the population at 293,844 persons. Since the war of 1865-70, the number of females greatly predominates. The number of foreigners is named at about 7,000; of these more than one third are Italians. Next to them, the most numerous are Brazilians, Argentines, Spaniards, and Portuguese. Since 1881 the number of Germans has rapidly increased, there being about 350 in the country. The capital, Asuncion, contains 19,463 inhabitants.

**FINANCES.**—The chief source of revenue is derived from the duties on imports, which in 1881 furnished an income of \$412,740, silver. The export duty was abolished in 1877, but, since then, that on hides and Paraguay tea (*yerba maté*) has been re-established. The budget estimate for 1882 fixed the public expenditure at \$313,429, of which the Department of the Interior was expected to absorb \$134,583; Foreign Affairs, \$10,440; Treasury Department, \$42,948; Justice and Public Worship, \$60,564; and War and Navy, \$64,894.

**PUBLIC DEBT.**—Under the provisions of the treaty of peace with the nationalities that composed the triple alliance, Paraguay assumed to pay the expense of the war, as well as an indemnity for the destruction wrought by the invading hosts of Lopez on the borders of Brazil and the Argentine Republic. The amount of the indemnity of the war has never been stipulated, but the inhabitants that had been sufferers in consequence of the invasion have drawn up their account establishing a joint claim of several million dollars. This bill Paraguay has formally acknowledged. The internal debt has been reduced by the sale of national property and of the railroad, and further through the working of a sinking fund created by 15 per cent extra duties levied, so that it now amounts to a mere trifle. On the other hand, the foreign indebtedness increases steadily, through accumulation of unpaid coupons.

**ARMY.**—Every able-bodied citizen is held to serve his country; yet, for economy's sake, the number of soldiers actually enrolled and doing service does not exceed 500 men, 350 of whom are infantry and 150 cavalry. Part of this little force is garrisoned at Asuncion, the remainder being scattered along the frontier. In time of war the National Guard is called under

arms. The entire country is subdivided into 70 departments, each of them under a chief of police.

**COMMERCE.**—The imports amounted in 1880 to \$1,030,000, the exports to \$1,163,000, the duties collected thereon amounting to \$320,000, while in 1881 the imports reached \$1,278,000, and the exports \$1,812,000, \$430,000 being the customs revenue derived therefrom.

The chief articles of import in 1881 were the following: Cotton goods, \$263,000; wines, \$112,500; flour, \$40,800; rice, 25,100; malt-liquors, \$24,400; bagging, \$18,800; exports in the same year: Paraguay tea, 5,000 tons; tobacco, 3,600 tons; cigars, 2,000,000; oranges, 24,000,000, the balance being made up from hides, tanning-bark, starch, essence of orange-flowers (2,500 kilogrammes), woods, brandy, Indian corn, and leather.

There is no railroad in operation except the Asuncion and Paraguay line, of 45 miles in length.

The postal service only forwarded 67,335 letters in 1880, of which 20,796 were inland; and in 1881 the amount had nearly doubled, 130,113 being forwarded, of which 34,117 were inland. The receipts were \$1,872 in 1880, and \$2,227 in 1881.

The only line of telegraph is the one running parallel with the railroad.

**PARSONS, THEOPHILUS**, died January 26th, at his home in Cambridge, Mass. He was descended from a long line of men eminent in Massachusetts since its colonization, and was the son of Chief-Justice Theophilus Parsons, of that State. He was born at Newburyport, in 1797, when that town was a flourishing commercial port. After graduating at Harvard in 1816, he spent a year in Europe, and then entered upon the study of the law in Boston, in the office of Judge William Prescott, father of the eminent historian. He first practiced his profession in Taunton, and afterward in Boston. At this time he became a frequent contributor to "The North American Review" and lesser periodicals, among which were the "Club Room," edited by William H. Prescott; Walsh's "American Review," published in Philadelphia; Merrick's "Free Press," and the "New England Galaxy," of which he was for some time associate editor. He also founded and edited the "United States Literary Gazette," which had but a brief existence. Among Professor Parsons's earlier literary productions, were a volume of "Sunday Lessons," setting forth the Swedenborgian doctrines, and one of essays treating of such subjects as "Providence," "Life," and "Religion." It is, however, as a writer upon legal subjects that Professor Parsons is best known. He was appointed to the Dane Professorship of Law at Harvard

in 1848, which position he held at the time of his death. Five years after his appointment he published his first important work, his well-known and authoritative "Treatise on the Law of Contracts." This was followed by "The Elements of Mercantile Law" a year afterward, and by "The Laws of Business for Business Men" in 1857. In 1859 he published his "Treatise on Maritime Law," and in 1863 his "Treatise on the Law of Promissory Notes and Bills of Exchange." The "Treatise on the Law of Partnership" was published in 1867, and that on "Marine Insurance and General Average" in 1868, and "The Political, Personal, and Property Rights of a Citizen of the United States" in 1875. Besides these, his chief works, Professor Parsons wrote on a variety of topics. One of his most interesting works is the biography of his father, Chief-Justice Parsons.

**PENNSYLVANIA. STATE GOVERNMENT.**—The State officers during the year were the following: Governor, Henry M. Hoyt, Republican; Lieutenant-Governor, Charles W. Stone; Secretary of State, Matthew S. Quay; Treasurer, S. M. Baily; Auditor-General, John A. Lemon; Secretary of Internal Affairs, Aaron K. Dunkel; Attorney-General, Henry W. Palmer; Adjutant-General, James W. Latta; Superintendent of Public Instruction, E. E. Higbee; Insurance Commissioner, J. M. Foster; Judiciary, Supreme Court, Chief-Justice George Sharswood; Justices, Ulysses Mercur, Isaac G. Gordon, Edward M. Paxson, Henry Green, John Trunkay, and James P. Sterrett.

#### FINANCES.

At the close of 1878 the State debt was ..... \$21,575,620 86  
At the close of 1882 the State debt was ..... 20,225,088 28

Reduction of debt in four years ..... \$1,650,537 58  
From this total of State debt is to be deducted  
assets in sinking fund amounting to ..... 7,982,988 82

The net State indebtedness December 1,  
1882, is ..... \$12,282,099 46

In 1879 there was refunded an outstanding debt of \$2,000,000, bearing 6 per cent interest, by a loan of a like amount, bearing 4 per cent interest, the premiums on which were \$80,002.83.

In 1882 State loans of over \$10,000,000, bearing in the main 6 per cent interest, were refunded by loans of \$9,450,000, bearing interest at 3, 3½, and 4 per cent per annum. The premium on these loans amounted to \$449,562.

The result of these operations has been to reduce the annual interest which the State pays upon its interest-bearing debt from \$1,233,623.72 in 1878, to \$874,460 in 1882, an annual saving of \$359,163.72 on this account.

There is at present in the sinking fund \$2,077,073.90 cash. As none of the State loans are at present reimbursable, the Treasurer has no lawful authority to apply this fund to the reduction of the debt, except by going into the market and buying the bonds of the State at a premium. These bonds, at market rates, now bear premiums about as follow :

The 3½ per cents are selling at ..... \$106  
The 4 per cents are selling at ..... 117  
The 5 per cents are selling at ..... 119

Before assuming such responsibility, the Treasurer is justified in awaiting a legislative command.

The sources of revenue to the State for the year were as follow :

Lands .....	\$5,605 47
Tax on corporation stock and limited partnerships.....	1,675,888 80
Tax on gross receipts.....	658,670 91
Tax on coal companies.....	90,708 86
Tax on bank-stock.....	850,171 59
Tax on net earnings or income.....	74,265 15
Tax on gross premiums.....	62,057 86
Tax on loans.....	636,790 88
Tax on personal property.....	487,778 61
Tax on writs, wills, deeds, etc.....	109,104 23
Tax on collateral inheritances.....	476,552 02
Tax on sale of fertilizers.....	8,780 00
Foreign insurance companies.....	224,989 10
Tavern licenses.....	498,862 82
Retailers' licenses.....	805,984 92
Eating-house licenses.....	79,682 26
Brewers' licenses.....	9,188 42
Billiard licenses.....	16,584 60
Brokers' licenses.....	9,886 84
Auctioneers' licenses.....	6,538 04
Liquor licenses.....	86,076 50
Peddlers' licenses.....	1,766 10
Patent-medicine licenses.....	4,508 20
Theatre, circus, etc., licenses.....	6,040 30
Bonus on charters.....	150,991 91
Office license-fees.....	10,480 99
Accrued interest.....	50,336 39
Penalties.....	578 17
Pamphlet laws.....	275 41
Notaries public commissions.....	10,275 00
Alleghany Valley Railroad Company.....	499,069 41
United States Government.....	94,561 15
Commutation of tonnage tax.....	460,000 00
Annuity for right of way.....	10,000 00
Escheats.....	8,078 87
Fees of public officers.....	50,472 99
Refunded cash.....	697 57
Dividends on stock owned by the Commonwealth.....	80 00
Conscience-money.....	16 00
Miscellaneous.....	1,551 27
<b>Total.....</b>	<b>\$7,068,529 66</b>

The total expenditures for the same time were \$5,024,766.41.

Of this aggregate, more than \$4,000,000 were derived from taxes on corporations. The only item which, in any true sense, is a direct tax on the people, is that of \$437,776.64, "tax on personal property." This tax is derived from money at interest, watches, and carriages. If it is desirable to retain the taxes on the national banks, which yield the State nearly \$350,000 annually, this "tax on personal property" can not be abolished, as the acts of Congress creating the national banks forbid their being subject to any greater tax than is imposed upon "other moneyed capital" in the State. There is no tax for State purposes on real estate. Except certain corporate bonds and stocks, and the road-beds and shops and mechanical devices of railroads, all *property* in the State is liable to local taxes, for city, county, school, poor, and road purposes. The laws for their levy and collection are substantially uniform, and sufficiently understood by the people.

For educational, penal, and charitable purposes, there were appropriated by the Legis-

lature in 1881, for annual expenditure, sums as follow :

Educational.....	\$1,463,764 15
Penal.....	367,198 75
Charitable.....	681,664 85
Total.....	\$2,512,617 25

EDUCATION.—The annual expenditures of all kinds for public schools were \$8,263,244.54. The value of school-property is \$28,346,560.

Appropriation by the State to the common schools.....	\$1,000,000 00
Normal schools.....	82,000 00
Soldiers' Orphan Schools.....	381,764 15
Total.....	\$1,463,764 15

The number of school-directors is 15,000; there are nearly 22,000 teachers, and the number of pupils enrolled is 950,000. To these extensive agencies may be added the numerous academies, colleges, and universities which are supported by voluntary contributions and private patronage. "I concur," says the Governor, "in the recommendation of the superintendent, that the minimum time during which the public schools should be open each year should be enlarged to six months; as also that the appropriation made by the State to each district should be distributed on the basis of the average number of children in attendance, rather than on the basis of taxables in the respective districts, as is now the law. The State Normal Schools will doubtless be constrained to present their condition and their claims to the Legislature. Some of them are badly involved in debt, and others, which have contracted no serious indebtedness, are without adequate equipment."

The Soldiers' Orphans' Schools are now, by law, under the superintendency of the Department of Public Instruction. The reports show them in a healthy condition, physically, intellectually, and morally. There are now 2,963 children in these schools. By existing law it is provided that they shall be finally closed on June 1, 1885. It is estimated that at that date there will be on their rolls 1,770 children.

The number of school districts in the State is 2,215; number of schools, 19,183; graded schools, 7,812; school directors, 15,625; superintendents, 102; male teachers, 9,051; female teachers, 12,778; average salaries of male teachers per month, \$35.12; female teachers, \$28.89; average length of school terms in months, 6.99; number of pupils, 945,345; average number of pupils, 611,317; cost of tuition, \$4,863,717.91; cost of building, purchasing, and renting, \$1,329,232.03; cost of fuel, contingencies, and interest paid, \$2,058,294.64; State appropriation, \$1,000,000; estimated value of school-property, \$28,341,560. As compared with the preceding year, the increase in the number of districts is 7; schools, 348; grade schools, 555; decrease in number of male teachers, 308; increase in number of female teachers, 785; increase of salary of male teachers per month, \$1.46; decrease of salary of female teachers, 14 cents; increase of length

of school term in months, .11; increase in number of pupils, 13,596; increase in average number of pupils, 13,596; increase in cost of tuition, \$146,701.41; increase in cost of building, purchasing, and renting, \$22,220.90; increase in cost of fuel contingencies, debt and interest paid, \$59,617.26; increase in value of school-property, \$1,736,239. In Philadelphia there were 2,113 schools, 81 male teachers, and 2,032 female teachers. The average salary of male teachers was \$120.53 per month, and of female teachers \$39.90. The number of pupils at the close of the year was 102,185, and the average attendance 91,894.

PUBLIC INSTITUTIONS.—There are two penitentiaries in the State—one in Allegheny and one in Philadelphia. The Western Penitentiary has been in process of rebuilding for several years, at a cost of several hundred thousand dollars. The course of treatment pursued there is that known as the congregate system.

The Eastern Penitentiary has reached about its limit of cell capacity. It is conducted on the separate confinement or individual treatment system. It has not met with the uniform approval of those who claim to be specialists in this branch of political economy, and social science congresses occasionally assume to condemn its mode of dealing with its inmates. It has, for more than fifty years, held consistently to the statute creating it. "Much as the system has been controverted, I deem it just," says the Governor, "as one who has given some attention to this subject, to say that for convicts who have deliberately joined the criminal class—for those whose age or repeated conviction render them amenable to punitive rather than reformatory methods—and for those against whose violent passions or confirmed habits society can find no protection but in incarceration, the separate system affords the most complete opportunities of treatment, and yields the best attainable results."

There are two institutions in the State for the reform of juvenile offenders—the State Reform School at Morganza, Washington County, and the House of Refuge at Philadelphia. The latter is a private corporation, to which the State gives financial aid and official inspection, but in which it has no administrative control. It is fulfilling the purpose of its erection with substantial success.

The Reform School at Morganza was originally a local institution, but its property and its control are now in the hands of the State. The property consists of a valuable farm of several hundred acres, in a high state of cultivation, well-constructed brick buildings, containing family rooms, dormitories, and workshops, capable of accommodating about five hundred boys and girls.

The State has in operation five hospitals for the care of the insane—at Norristown, Harrisburg, Danville, Warren, and Dixmont. The latter is not strictly a State institution, but receives liberal aid from the State. In them

are accommodations for nearly four thousand patients. The buildings have cost several million dollars, and are constructed in view of the largest experience. In all of them, certain sums are required of the State for annual maintenance.

In 1879 the Legislature directed the erection of a State hospital for injured persons of the anthracite-coal region, for the counties of Schuylkill, Carbon, Northumberland, Columbia, and Dauphin. This institution is now completed. The buildings are well arranged, the site is an eligible one, and the purposes of the act seem likely to be successfully reached.

Beside these State Institutions, very liberal appropriations have been made in the interests of the defective classes in institutions not under State control. These institutions are the "Pennsylvania Working Home for Blind Men," the "Pennsylvania Institution for Instruction of Blind," both in Philadelphia; "Training-School for Feeble-Minded Children," at Media; "Pennsylvania Institution for Instruction of Deaf and Dumb," at Philadelphia; "Western Pennsylvania Institute for Instruction of Deaf and Dumb," at Pittsburgh. Some thousands of dollars were also appropriated to purely private hospitals, in which were no State patients, in the different cities of the State—Pittsburg, Williamsport, Wilkesbarre, Scranton, York, and Harrisburg.

**LIFE INSURANCE.**—The magnitude of this interest may be estimated by the fact that in the years 1880 and 1881 the regular life companies of the State and other States authorized to do business in Pennsylvania received premiums from their business in the State amounting to \$10,483,836. Of this sum, \$3,025,109 was received by companies of the State, and \$7,358,696 by companies of other States, upon which last-named sum a tax amounting to \$221,768.88 was paid into the State Treasury for the privilege of doing business in the Commonwealth.

During the same years companies organized under the laws of the State to insure lives upon the assessment plan, received, in the premiums and assessments, the sum of \$5,500,989, upon which no tax was paid to the State; and paid for death-claims the sum of \$2,959,302. The balance of \$2,541,687 was appropriated by these companies to agents, officers, and expenses. Most of these companies engaged, without warrant of law, in business of a purely speculative character, and entire communities were demoralized by their nefarious operations. The evil attained such magnitude that it was found necessary to institute legal proceedings for their suppression, which has been happily accomplished through the instrumentality of the proper authorities.

**GEOLOGICAL SURVEY.**—The Board of Commissioners of the Second Geological Survey make report of their work and their estimates for the future. The unfinished survey is mainly confined to the anthracite-coal region. Reasons

are assigned for the delay and increased cost of this portion of the work, and the letterpress and maps illustrating it. They say: "But such work can not be done within the time nor for the money named in our former estimate. It will require at least three more years and \$50,000. Whether the Legislature will be willing to expend that amount for the benefit of an interest the most important in the State—in fact, the most important of the kind in the known world, and which has contributed to the State Treasury, directly and indirectly, millions of dollars in taxation—is not for this board to say. If not, the work will be wound up as well as possible, leaving about two thirds of the anthracite region unsurveyed."

**NATIONAL GUARD.**—As now constituted, the National Guard is composed of a single division, three brigades, fifteen regiments, three companies of cavalry, three batteries of artillery, the battalion of State Fencibles, and two independent companies, aggregating 8,220 officers and enlisted men. They are distributed throughout the State in such numbers and in such localities as seemed likely best to subserve any duty to which they might be assigned. The Guard is well equipped, and armed in an approved manner. The mobility and efficiency of the whole command have been well attested, both in camp and in route, on more than one occasion. The quartermaster and commissary departments have been fully proved in their capacity to furnish prompt and economical supplies.

**POLITICAL.**—The campaign of the year was notable. Dissatisfaction with the party organization and management had for some time been growing among Republicans, and led in 1881 to the independent candidacy of Charles S. Wolfe for Treasurer, and to the formation of an organization opposed to the existing control of the party. These warnings were not heeded, but early in the year it became evident that the party managers, under the lead of Senator Cameron, had selected their ticket and arranged their programme in advance of the convention, which would meet only to register their will. There was no objection, on personal grounds, to the nominee selected for Governor. The objection of the Independents was against the system. The chief points of their creed were: the overthrow of "bossism," reform in the choice of delegates to State Conventions, civil-service reform, and the overthrow of the "spoils system." The action of the regular Republican Convention on these points, though advanced, was not satisfactory to them. After the two conventions had been held, efforts were made to secure union, but they proved unsuccessful. To the split in the Republican party was added the wise action of the Democratic Convention, whose nominee for Governor was taken as a fit representative of the reform sentiment of the time.

The Republican State Convention met in Harrisburg on the 10th of May, and nominated

the following ticket: For Governor, General James A. Beaver, of Centre County; Justice of the Supreme Court, William Henry Rawle, of Philadelphia; Secretary of Internal Affairs, John M. Greer, of Butler County; Lieutenant-Governor, William T. Davies, of Bradford County; Congressman-at-large, Thomas M. Marshall, of Alleghany County. The following, among other resolutions, were adopted:

*Resolved*, That as the sense of the great body of the Republican party of the State of Pennsylvania we declare:

1. That we unequivocally condemn the use of patronage to promote personal political ends, and require that all offices bestowed within the party shall be upon the sole basis of fitness.

2. That competent and faithful officers should not be removed except for cause.

3. That the non-elective minor offices should be filled in accordance with rules established by law.

4. That the ascertained popular will shall be faithfully carried out in State and National Conventions, and by those holding office by the favor of the party.

5. That we condemn compulsory assessments for political purposes and proscription for failure to respond either to such assessments or to requests for voluntary contributions, and that any policy of political proscription is unjust and calculated to disturb party harmony.

6. That public office constitutes a high trust to be administered solely for the people, whose interests must be paramount to those of persons and parties, and that it should be invariably conducted with the same efficiency, economy, and integrity as are expected in the execution of private trusts.

7. That the State ticket should be such as by the impartiality of its constitution and the high character and acknowledged fitness of its nominees will justly commend itself to the support of the united Republican party.

*Resolved*, That it is the duty of the Federal Government to adopt a policy which will result in observing good faith toward aborigines by keeping intruders out of the Indian Territory, by enacting laws protecting life and property on reservations, by prohibiting tribe removals, by educating all Indian children in manual-labor schools, and by giving lands in severalty, and eventually citizenship, to all self-supporting Indians who desire the same.

*Resolved*, That the administration of President Chester A. Arthur, commenced under such sad and trying circumstances, has proved to be wise, conciliatory, and efficient, and is entitled to the cordial support of every Republican.

*Resolved*, That under the administration of our worthy and able Governor, Henry M. Hoyt, the affairs of our State have been wisely, honestly, and economically administered, the interests of the taxpayers of the State been carefully guarded, and the administration is worthy of the confidence of every citizen.

*Resolved*, That the ticket nominated this day combines purity of personal character with eminent ability, is worthy of the hearty and undivided support of every true Republican, and for its election we hereby pledge our earnest efforts.

General James A. Beaver, of Centre County, the nominee for Governor, was born in Millers-town, Perry County, Pa., October 21, 1837. His father died when he was three years of age, and he was brought up by his grandfather, who lived in Mifflin County. He was graduated at Jefferson College when nineteen years of age, with honor, and then settled at Bellefonte, Centre County, and entered the legal profes-

sion. Upon the breaking out of the civil war, Beaver entered the service as captain of Company H, Second Pennsylvania Infantry, and served as such during the three months' campaign. He entered the three years' service as lieutenant-colonel of the Forty-fifth Pennsylvania Infantry. He resigned his command on September 4, 1862, to take command of the One Hundred and Forty-eighth Regiment recruited in Centre County. He was shot through the body at Chancellorsville, and his wound was supposed to be fatal, but he was sent to Harrisburg and recovered. Before rejoining his regiment he organized and sent to the field the emergency men from Camp Curtin who participated in the battle of Gettysburg. He distinguished himself at Auburn Hill and Bristow Station. At Cold Harbor he was wounded in the hip, and promoted to the command of his brigade. At Petersburg, while rallying his forces, he was struck in the side by a piece of shell and thus received a severe wound. He came North and remained until the battle of Ream's Station, on the Wilmington and Weldon Railroad, August 24, 1864, in which he lost a leg. The loss of his limb obliged him to retire from the service, and he returned to Bellefonte, and resumed the practice of law. In 1865 he married the daughter of his law preceptor and partner. He is the President of the Board of Trustees of the Agricultural College of Bellefonte, was a delegate to the Chicago Convention, and, after Oliver's defeat for United States Senator in 1881, was brought forward as a compromise candidate, but was not accepted by the Independents.

Mr. Marshall subsequently declined, and Marriot Brosius was substituted in his place.

The Greenback State Convention met in Harrisburg on the 18th of May, and made the following nominations: For Governor, Thomas A. Armstrong, of Pittsburg; Lieutenant-Governor, Mayor Powderly, of Scranton; Supreme Court Judge, J. Adam Eake, of Northumberland County; Secretary of Internal Affairs, J. Lowry Dewoody, of Venango County; Congressman-at-large, Robert K. Tomlinson, of Bucks County. The platform adopted contained the following resolutions:

*Resolved*, That we are against the monopoly of money by the national banking system, and are in favor of the Government issuing all currency and making it full legal tender.

2. We are against the monopoly of transportation and telegraphy, and declare that corporations, the creation of the State, be governed by the State in the interest of the people.

3. We are against the monopoly of the land, and demand the reservation of all public land, including the vast amount now forfeited by the great corporations, for actual settlers.

4. We are opposed to all monopolies, and are in favor of equal rights, equal burdens, equal benefits, and special privileges to none.

And whereas the right of labor to organize for discussion and enforcement of its rights in this State has been assailed by combined monopolies; therefore—

*Resolved*, 7. That this legal and constitutional right

shall be maintained, and that associated labor shall have all the rights and privileges permitted to associated capital.

An additional resolution was adopted declaring that all pay shall be upon a basis of eight hours constituting a day's labor.

The Independent Republicans assembled in State Convention in Philadelphia, on the 24th of May, and put forth a ticket consisting of the following names: For Governor, Senator John Stewart; Lieutenant-Governor, Levi Bird Duff, of Alleghany County; Secretary of Internal Affairs, Major G. W. Merriek, of Tioga; for Congressman-at-large, Colonel William McMichael; for Judge of Supreme Court, George Junkin.

The following is the platform adopted by the convention:

The Republicans of Pennsylvania who will not surrender their political rights, and who maintain the exercise of their own conscience and judgment concerning public affairs, having assembled in State convention, make the following declaration of principles and purposes:

1. We declare our attachment to the principles of the Republican party—freedom, wisdom, nationality, equal rights before the law, maintenance of the public faith, protection to home industry—and we demand the record which has been so nobly made shall be wisely and fearlessly perpetuated.

2. We declare the nomination and election of James A. Garfield to the presidency signified to us the triumph of true reform in the civil service, and enlarged liberty of action for the masses of the Republican party in the nomination of candidates and the conduct of their party affairs, and we deplore the overwhelming evidence presented to us in Pennsylvania that the calamity of his assassination has been followed by the overthrow of these reforms in the hands of his successor.

3. We denounce the system which makes "patronage" and "spoils" out of public offices; we denounce the practice giving them to political managers for use in advancing personal and political ends; we denounce the removal of faithful and competent officers in the absence of public reason; we denounce the practice of levying assessments and demanding contributions for party use from public officials; we denounce severally and collectively the evils and corruptions which accompany the conduct of the Government as the "spoils" system, and which are inseparable from such method of administration; and we denounce the system of "boss rule" and "machine" control, which, when tamely endured, makes leaders autocrats, and reduces the mass of citizenship into political bondage.

4. We declare our purpose to take up the work which fell when Garfield fell. We demand, in place of the "spoils system," the reformation of the civil service by law, so that appointive places therein may be freely open to all fit and industrious citizens, and removals therefrom shall be only for good and sufficient public cause. We demand instead of the prostitution of the public service to private uses, its recognition as a high and honorable trust to be administered for the people's benefit, with efficiency, economy, and integrity. We demand, instead of the insolence, the proscription, and tyranny of "bossism" and "machine" rule, the free and conscientious exercise of private judgment in political affairs, and faithful discharge, by those who assume representative trusts, of the expressed will of the people.

5. We declare in favor of the following party reforms: First, that delegates to State Conventions be chosen by the people in the manner in which the candidates for General Assembly are chosen; second, that representation in State Conventions be by counties,

and apportioned according to their Republican vote; third, that State Conventions shall not be held without at least sixty days' notice, nor earlier than the second Wednesday of July, except in presidential years; fourth, that Republicans who voted for the Republican candidate for President at the presidential election next preceding shall be entitled to join in the choice of delegates to the State and National Conventions.

The Democratic State Convention met in Harrisburg, on the 28th and 29th of June, and nominated the following ticket: For Governor, Robert E. Pattison; Lieutenant-Governor, Chauncey F. Black; Supreme Judge, Silas M. Clark; Secretary of Internal Affairs, J. Simpson Africa; Congressman-at-large, Mortimer F. Elliott.

The following platform was adopted:

The Democratic party of Pennsylvania, holding fast to the faith that all power not delegated by the Constitution is reserved to the States and the people:

Upholding the sanctity of personal liberty, the security of personal property, and the rights of local self-government; demanding honesty and economy in the administration of government and the enforcement of all the provisions of the Constitution by the Legislature and the courts of this Commonwealth; declaring against monopolies and in sympathy with labor seeking its protection, and in favor of the protection of the industrial interests of Pennsylvania, at this time do solemnly protest against evils which the policy and practices of the Republican party, and the insolence of its long possession of office, have thus brought upon the country; therefore—

1. We do protest against what is called the boss system and the plundering of office-holders by assessments of money for political purposes; public offices are the property of no party, but are open to every citizen, honest, capable, and faithful to the Constitution, qualifications which Jefferson declared were the requisites for office.

2. We protest against the spoils system; it is a prostitution of the offices of the people, so that they become the mere perquisites of the politician.

3. We denounce all repudiation, State and Federal, because it is dishonest and destructive of that public morality upon which are founded the existence and perpetuity of our free institutions; it should be made odious, and the political party that aids it with alliance and abets it with office deserves public condemnation.

4. We denounce spoliation of the State Treasury, and immunity by pardon of those convicted of crimes whose acts are flagrant subversions of official trusts and wrongs done the people.

5. We believe the Republican party, as now organized and controlled, is based on fraud, force, and corruption, and there can be no hope for true reform except by the ballot-box excluding it from place and power.

6. The Democratic party demands of the Legislature an honest, just, and true apportionment.

7. Upon these declarations we invite the co-operation of all honest citizens who, with us, desire the re-establishment of honest government.

ROBERT EMORY PATTISON was born December 8, 1850, at Quantico, Somerset County, Maryland. His father, the Rev. R. H. Pattison, was ordered to Philadelphia by the Methodist Episcopal Conference when the son had reached his sixth year. There the latter passed through the successive grades of the common schools, and the Penn Grammar and Central High School. He became a law-student in 1869, and in 1872 commenced the practice of law, and was married. In 1877 he was elected

Comptroller for the city of Philadelphia, and in 1880 re-elected by a large majority.

Almost from his first induction into the office of Comptroller, Mr. Pattison invested it with a degree of importance which the law had given it, but which none of his predecessors had done. He adopted and maintained a wide view of the obligations of the office, and declined to hide behind technicalities that brought disgrace upon his predecessor. He refused to consider the office merely clerical, but investigated claims, and enraged

ROBERT EMORY PATTISON.

partisans by refusing to be a mere machine to deplete the city Treasury. In this inflexible purpose he recognized no claimant as Democrat or Republican. How the whole atmosphere of that office changed under his vigorous, vigilant, and healthy administration, and what complimentary enmity he won from many whose schemes have been rendered hopeless by his relentless scrutiny and determination, is a matter of public notoriety.

In view of all this, and of the fact that during his term complete administrative reform had been inaugurated in the second city of the

Union and the first in Pennsylvania, it was not strange that the Democratic State Convention found in him its nominee for Governor. Year by year the political issue of administrative reform had become the supreme concern of intelligent men. Recognizing his special fitness to embody this issue, the convention gravitated toward him on the sixth ballot, and without any adjournment after it began to ballot. His nomination was the well-considered action of an unusually earnest and intelligent body, and that no mistake was made is assured by the universal approbation with which it was received, not only by the party press of the State, but by all the independent journals of any standing, while it challenged the opposition.

At the election in November, 1882, Mr. Pattison was the successful candidate. The vote was as follows: Robert E. Pattison, Democrat, 355,791; James A. Beaver, Republican, 315,589; John Stewart, Independent Republican, 43,743; Thomas A. Armstrong, Labor, 23,484; Alfred C. Pettit, Temperance, 5,196.

Governor Pattison was inaugurated January 16, 1883, in the presence of the largest gathering that, in all probability, ever witnessed a Governor of Pennsylvania inducted into office. His inaugural address was in entire harmony with the pledges he made during the campaign on the side of reform and retrenchment; and shortly after he sent a message to the Legislature, in which he recommended his policy in very vigorous terms, citing wherein true reform could be secured, and urging in that connection the modification or repeal of certain laws, under which needless offices were created, and a waste of public funds was allowed. An acrimonious controversy followed, which resulted in the complete success of Governor Pattison's policy as it related to commissions and special legislation. A better feeling finally prevailed on all sides, save where personal ambition had been baffled by the young Governor appointing a Cabinet of his own choice; and, at date, every recommendation made to the Legislature has either been carried out, or bills introduced with that end in view.

Nominations were also made by the Temperance party.

ELECTION RETURNS.—The election in November resulted in the choice of the Democratic ticket. The vote was as follows:

	Democrat.	Republican.	Independent.	Greenback.	Temperance.
Governor.....	355,791	315,589	43,743	23,484	5,196
Lieutenant-Governor.....	353,642	317,614	43,577	19,475	4,662
Secretary of Internal Affairs.....	353,752	317,408	43,096	19,941	5,497
Congressman.....	351,043	323,255	40,995	20,400	4,642
Judge.....	355,935	315,163	41,990	19,285	4,459

For district Congressmen, fifteen Republicans, ten Democrats, one Greenback-Republican, and one Greenback-Democrat were elected. The Legislature of 1883 will be constituted as follows:

	Republican.	Democrat.
Senate.....	80	20
House of Representatives.....	88	113
Total members.....	118	133

PERSIA, an empire in Central Asia. The Shah is absolute ruler, with the power of disposing of the lives and property of his subjects. The present Shah is Nassr-ed-Din, born September 4, 1829. He succeeded his father, Shah Mohammed, September 10, 1848, and is the fourth of the Kajar dynasty, which gained the throne after the civil wars of 1779-1794. The Shah has two sons, Muzafer-ed-Din, the heir-apparent, born in 1850, and Djilal-el-Dauleh, born in 1853. The constitution of the empire is found in the laws of the Koran, and implicit obedience is paid to the Shah as vicegerent of the Prophet, governing according to the sacred precepts. The Shah formerly had only two ministers, the Grand Vizier and the Treasurer; but now the government is carried on in seven departments on the model of European cabinets, the other ministers being, however, subordinate in authority. The Vizier directs the foreign policy and commands the military forces. The empire is divided into twenty provinces, each governed by a beglerbeg, or civil and military governor, who is often a member of the royal family. The towns and villages elect the magistrates who dispense justice.

**AREA AND POPULATION.**—The area is about 634,000 square miles, a great portion of which is desert. The population is approximately 7,653,600, of whom 1,963,800 constitute the city, 3,780,000 the rural, and 1,909,800 the nomad population. The latter number comprises 260,100 Arabs, 720,000 Turkomans, 675,000 Kurds and Leks, 20,700 Beloochees and Gypsies, and 234,000 Bahtiares and Lures. In respect to religion, the population is divided into 6,860,600 Shiites, 760,000 Sunnites and other Mohammedan sects, 8,000 Guebres or Parsees, 19,000 Israelites, 43,000 Armenians, and 23,000 Nestorians and Chaldeans. The Imans Djuma and the Sheik-ul-Islam are official Moslem dignitaries, who receive emoluments from the Government; but the Mushtaheds, who hold no official position, are the real chiefs of the clergy. There are only five members of this priestly order. The Mushtahed who resides at Kerbela, near Bagdad, is recognized as the head of all. In choosing their associates, the Mushtaheds always select the candidate acclaimed by the people, who are the actual appointing power. The Armenians have two bishops, one a Roman Catholic, and both residing in Ispahan. The Christian sects are treated with perfect tolerance, but the Jews and the Guebres are harshly used.

Among the Mussulman population there are in every 1,000 inhabitants 495 males and 505 females; among the Armenians there are 528 males and 472 females.

A considerable proportion of the people of Persia receive a literary education and a larger portion possess the rudiments of education than in any country in Asia except China. There are many colleges supported by the Government, where, besides religion, Persian and

Arabian literature, and such science as is current in the East, are taught. Every family that is able employs tutors to instruct its sons.

The population of Teheran, the capital, is about 200,000; that of Tabreez or Tauris, the chief commercial emporium, 165,000; that of Ispahan and Meshed, about 60,000 each; of Kerman, 42,000; of Reshd, Kasbin, and Yezd, about 40,000 each; of Hamadan, Shiras, Kermansha, Dizfoul, and Kachan, about 20,000 each.

There were only 42 post-offices in 1879; the total number of letters forwarded was 419,630. The principal cities are most of them connected by telegraph lines. There were, in 1879, 3,650 miles of lines and 5,950 miles of wires. The number of dispatches sent in 1878 was about 500,000.

**COMMERCE.**—The external commerce of Persia is of small volume, the total exports amounting to about 1,250,000 toman or \$2,812,500, the imports to twice as much, or about \$5,625,000. (The toman is a gold piece worth \$2.25; the silver unit is the keran, of one tenth the value of the toman). The main part of the commerce of Persia centers in Tabreez, which is the market for the productions of Northern India, Samarcand, Bokhara, Cabool, and Beloochistan, and the emporium for the European trade, which is carried on by caravans with Constantinople by way of Trebizond. The principal article of import is cotton fabrics from England; the chief article of export is silk, which goes to France and England. Woolens, glass, paper, iron, copper, sugar, and tea are also imported. Among the other exports are tobacco, skins, carpets, opium, gums, wool, dates, cereals, and rice.

**ARMY.**—Military service was formerly for life, but by the law of 1875 the time was fixed at twelve years. The system of drawing by lot, the conscripted being permitted to provide substitutes, was ordained; but it has not been put in practice. The nizams, or regular infantry, muster 77 battalions of from 600 to 800 men each. About 1,500 men, recently organized by Austrian officers, are armed with Werndl rifles. The chassepot had previously been partially introduced. The armories contain about 9,000 Werndls, a few thousands of chassepots, and 50,000 old breech-loading muskets. The cavalry consists of the excellently mounted irregular troops which the tribes are required to furnish in time of war, and two regiments organized by Russian officers in the manner of Cossacks; the effective force is about 80,000. The artillery numbers 5,000 men, with 200 antiquated pieces, excepting 30 Uchatius guns given to five batteries instructed by Austrians. There is a militia, called the Tofangtchi, consisting of 24 companies of from 100 to 500 men each, which is employed only as a rural police.

**FINANCES.**—The receipts in 1876 amounted to about \$8,200,000, of which some \$7,000,000

were collected in money and the rest in kind, counting a bushel of grain worth a little over 25 cents. The expenses were about \$8,000,000. They comprised about \$3,400,000 for the army, \$1,500,000 for the court, \$1,150,000 for the clergy, \$350,000 for presents to great families, the Afghans, etc., \$1,300,000 for foreign affairs, \$250,000 for the other ministries, and \$50,000 for colleges. About \$600,000 came from direct taxes and \$1,000,000 from customs. The direct taxes are levied upon the villages, towns, and districts, which are assessed for a fixed annual sum, the quota being adjusted from time to time by royal assessors. There is no public debt. The surplus revenue of each year is turned into the Shah's treasury. The present Shah is believed to have amassed a fortune of over \$20,000,000, one half of which is represented by diamonds. The incidence of the taxes falls directly upon the laboring population. The Christians, Jews, and Parsees escape paying their proportionate share. The payments in kind are mostly used in the maintenance of the army.

**FOREIGN RELATIONS.**—The Shah has placed himself virtually under the protection of Russia. By the treaty, concluded on March 10th, adjusting the boundary between Persia and the Russian possessions east of the Caspian, the Shah ceded to Russia the northeastern rim of the Iranian plateau. The Persian ruler, by this act, places his realm entirely in the power of the Russians, admitting them within the impregnable mountain bulwarks at the edge of the plateau. If the Russians have the acquisition of Afghanistan in view, or if they entertained designs upon British India, the conceded territory gives them the command of a shorter and easier route to Herat than around the skirt of the plateau by way of Merv. Astrabad, 320 miles southeast of Krasnovodsky and 40 miles from the Persian port of Chikislar, has become the military and commercial center of Russia in the Transcaspian region. A railroad has been built from the port of Krasnovodsky to this post, placing it in steam communication with the Russian railroad system. The head of navigation on the Tejend, 350 miles above Herat, is only 60 miles distant from Astrabad. Herat is also approachable from Meshed by way of Keltechinan Pass, the distance being 220 miles, and between Meshed and Astrabad 50 miles. The economical value of the acquired territory surpasses its strategical importance. It embraces the foot-hills of the chains of Kubbet Dagh, Allah Akbar, and Muzderan, extending from Kizil-Arvat to Sarakhs. This district was the garden of ancient Khorassan, and is still as fertile, well-watered, and salubrious, as ever. The raids of the steppe Turkomans have caused the rich valleys to be deserted within the last two centuries. According to the Russian maps of sixty years ago, Sarakhs did not form a part of the Persian Empire. The Persians had a fort formerly on the right bank of the Redsh,

which they destroyed. They then established the present town of Sarakhs on the other side of the river, and the fortress, which has been manned with Persian soldiers for a quarter of a century.

This corner of Iran is better adapted for Russian colonization than any territory acquired by the Czar in the khanates. Persia, in subjecting herself to political dependence on Russia, places her hopes of commercial progress in the Russians. The Russians are exerting themselves to extend their traffic on the Caspian, and the caravan-trade with the regions beyond. A railroad is spoken of, to be built within three years by the Persian Government, from Teheran to the Caspian port of Reshd, and one to be built by Russia from Tiflis, through Erivan and Natchitchewan, to Julfa, and to be extended thence, by the aid of Russian capital, to Tabreez and Teheran. The dominance of Russian influence in Teheran dates from the fall of the chief minister, Mirza Hussein Khan, who was deprived of his post on account of pecculation. He returned to Meshed and commenced to fortify it, refusing to obey the orders summoning him to Teheran, until he suddenly died, it was said, of poison. His successor, Mirza Seid Khan, is said to stand in Russian pay.

**INTERNAL DISTURBANCES.**—The chief of the Bahtiaries, in the neighborhood of Ispahan, was murdered while on a visit to the governor, Djilal-es-Soltanes, the son of the Shah. The prince was suspected of the crime, actuated by the growing influence and power of the chief. The son of the latter died in like sudden and mysterious manner a few days later. These events roused the Bahtiaries to rebellion. The first force of 4,000 to 5,000 troops which was sent against them in August was defeated.

While the Bahtiaries raised the flag of rebellion in the south, the Turkomans continued to be the scourge of the north of Persia. Since the Russians received the submission of the Akhal Turkomans, and commenced paying court to the tribes of Merv, they appear to have been less eager to suppress marauding. The execution of a Turkoman chief, who was sentenced by the Russian governor of Astrabad, aroused the vengeance of the widow of the chief, who rendered the whole district unsafe.

**PERU (REPÚBLICA DEL PERÚ) AND BOLIVIA.** For details concerning territorial division, area, population, etc., reference may be made to the "Annual Cyclopædia" for 1873 and 1878, to the article "BOLIVIA" in the volume for 1879, and to the article "PERU" in that for 1881. Since the year 1882 has passed by without an end to the strife between Chili and portions of the Peruvian population headed by partisan chieftains, and since no practical basis has yet been arrived at for the conclusion of a formal armistice as a forerunner to peace, we shall mainly confine ourselves to making some extracts from the book of Mr. Clements

R. Markham, "The War between Peru and Chili, 1879-'82" (New York: R. Worthington, publisher).

In the preface we find the ensuing passage: "The authentic materials for a narrative of the war are now sufficiently extensive, although they are almost exclusively supplied from the Chilean side. The ground has been carefully described in a series of publications issued by the Chilean Hydrographic Department, entitled '*Noticias sobre las provincias litorales.*' The official dispatches, diplomatic notes, and reports of correspondents are contained in the '*Boletín de la guerra del Pacífico,*' published at Santiago periodically from April, 1879, to March, 1881. The history of the three campaigns has been written in copious detail by one of the most distinguished literary men in Chili, Don Benjamin Vicuña Mackenna. The author's powers of description, of delineating character, and of critical analysis are of a very high order. His industry in collecting materials is extraordinary, and it is equaled by his ability in arranging them. Vicuña Mackenna is, above all things, an historical biographer. He could not, if he would, omit a trait or an incident, however much its mention might tell against the view he advocates. His love of historical truth amounts to a passion. From no writer since the days of Ercilla are we more certain to get the good equally with the bad points of an enemy. His work is, therefore, invaluable.

"Don Diego Barros Arana, in his '*Historia de la guerra del Pacífico,*' gives us the history of the three campaigns, as well as of the naval warfare. His narrative is less interesting and not nearly in such full detail as that of Vicuña Mackenna. We also have the memoir of the Chilean Minister of War for 1881, which gave rise to an acrimonious paper war between the minister and the general commanding the army, and thus many things were made public. The general replied in a volume containing all the official dispatches. There are also a few monographs of special actions, such as '*El Combate Homérico*' and '*Estudios sobre la vida del Capitán Arturo Prat,*' which are useful. Chili, assuredly, has been fully heard, but Peru and Bolivia, apart from official reports, are silent so far as we are aware. If books have been published, they have not become accessible here. The whole story, with the exception of private letters regarding the proceedings or the fate of individuals, and mere official utterances, is told by Chileans. Impartiality and common fairness, therefore, demand the utmost care in judging of the acts and motives of their opponents. If an unbiased stranger does not adopt the Chilean view with regard to the causes of the war, the justice of its continuance, and the character of some of the events, he at least argues from the same premises. The facts have been supplied almost exclusively by one side; and, if the historian feels obliged to condemn the proceedings of Chilean statesmen and sol-

diers, he must, at the same time, commend the fairness of Chilean writers."

From the book of Mr. Markham we borrow the passage on "Peruvian railroads and finance": "On August 2, 1868, Colonel Balta was elected President of Peru. Led on by speculators and contractors, he was unfortunately induced to enter upon a career of extravagant expenditure with the help of foreign loans. He pushed forward the construction of railroads and other public works with feverish haste. In 1870 he raised a loan of £11,920,000 at 6 per cent, and in 1872 another of £36,800,000 to increase the old debt, and for the construction of public works. Colonel Balta also guaranteed a loan of £290,000 for a railroad; so that the whole liabilities of his government became £49,010,000, besides an internal debt of £4,000,000. It seems almost incredible that these loans could have been raised, when the revenue of Peru was notoriously small and precarious. The speculators who undertook to advance such sums, only a portion of which ever reached Peru, must have known perfectly well that the continuous payment of the interest on them was simply impossible. These matters are not intelligible to an outsider; but the historian will consider the unhappy people of Peru, not the exceedingly clever financiers who arranged the loans, and were well able to take care of themselves, as the victims. The railroads are largely in the hands of English capitalists. From Payta, the most northern port of Peru, there is a railroad, sixty-three miles long, to the city of Piura, facilitating the shipment of cotton-crops. Farther south a line, forty-five miles long, connects the port of Pimentel with Chiclayo and Lambayeque. The rice-crops of the Terretepe Valley are brought to the port of Eten by a line fifty miles in length, which is said to be entirely the property of an English house. The railroad from Magdalena to the port of Pacasmayo, ninety-three miles long, taps the fertile valley of Jequetepeque, and is a state enterprise. The sugar and rice estates of Chicania reach the coast by a line of twenty-five miles from Ascope to Malabrigo. The city of Truxillo is connected with its port of Salaverry by a line of eighty-five miles. The city of Huaraz, between two ranges of the Andes, is to have a railroad to the coast at Chimbote, one hundred and seventy-two miles long, but only fifty-two are as yet finished. The capital was connected with its port of Callao by a railroad, in 1851, and with the fashionable watering-place of Chorrillos in 1858. Another line, forty-five miles long, goes from Lima to Chancay. South of Lima the vineyards and cotton estates of Ica are joined to the port of Pisco by a line of forty-eight miles. The railroad from Mollendo to Arequipa was completed in 1870, and runs over one hundred and seventy miles of desert. In order to supply Mollendo with water, a pipe was laid alongside the line for eighty-five miles, starting near Arequipa, 8,000 feet above the

sea, and discharging 433,000 gallons in twenty-four hours. This is the largest iron aqueduct in the world. The line from the port of Ylo to Moquegua is sixty-three, and, from Arica to Tacna, thirty-nine miles long. There is also a system of railroads in Tarapacá, from the nitrate-of-soda works to the ports, comprising when finished one hundred and eighty miles. All these lines were planned to meet existing needs, and they tap rich and valuable districts, but the great lines across the Andes were undertaken prematurely. One passes from Callao and Lima, across the western and central Cordilleras to Oroya in the lofty valley of Jauja, and is to be one hundred and thirty-six miles long. It was commenced in 1870, and rises 5,000 feet in the first forty-six miles. It then threads intricate gorges of the Andes, along the ledges of precipices, and over bridges that seem suspended in the air. It tunnels the Andes at an altitude of 15,645 feet, the most elevated spot in the world where a piston-rod is moved by steam, and will terminate at Oroya, 12,178 feet above the sea. There are sixty-three tunnels. The bridge of Verrugas, spanning a chasm five hundred and eighty feet wide, rests on three piers, the center one of hollow wrought-iron, being two hundred and fifty-two feet high. Of this Oroya Railroad eighty-seven miles were completed when the war broke out, and it had cost £4,625,887. Another line crosses the Andes from Arequipa to Puno, on the shore of Lake Titicaca, which was opened in 1872, and is two hundred and thirty-two miles long. Steamers have been launched on the lake. The whole scheme of Peruvian railroads, if ever completed, would have a length of 1,281 miles, private lines 496 miles, and two projects partly private, altogether 2,030 miles, and cost £37,500,000. In 1867 a telegraph company laid down a number of lines. The rule of Colonel Balta, though ruinous to Peru from a financial point of view, was throughout a period of peace and internal prosperity, ending in the opening of an International Exhibition at Lima. His successor, Don Manuel Pardo, inaugurated August 2, 1872, was the first civilian who had been elected. He found his country loaded with a debt of £60,000,000, and that a sum of £4,000,000 was needed to pay the annual interest. A contract had been made with Messrs. Dryfus, of Paris, in 1869, in order to pay off another debt of £4,000,000 by the sale of 2,000,000 tons of guano, the delivery of which was to commence in 1872. But the whole of the proceeds of the guano was more than absorbed in meeting the liabilities created by the foreign loans. Both demands could not possibly be met, and the payments of the interest on the loans ceased in 1876. They had been regularly met since 1849, and the failure was a great national misfortune. All that the new President could do was to curtail the expenditure in every branch, and he hoped to bring it down to £3,000,000. The customs receipts only amounted to £1,500,-

000 in 1875, and there were no direct taxes. He reduced the army, regulated Chinese immigration, promoted the exploration of navigable streams leading to the Amazon, organized an efficient volume for the collection of statistics and for a census, and supported the interests of literature. He was the best President that Peru has ever known."

About the trade of his countrymen with Peru Mr. Markham observes: "As a customer of Great Britain, the Peruvian Republic held an important position. In 1878 Peru received woolen and cotton goods and other manufactures from us to the value of £1,369,836. In return, her exports to Great Britain in the same year were worth £5,232,305. The number of British vessels that entered Callao in 1877 was 720, of which 198 (tonnage, 194,973) were sailing vessels and 522 steamers. Englishmen, therefore, have material as well as moral reasons for regretting the ruinous disasters of so good a customer."

With reference to the natural resources of Peru, Mr. Markham remarks: "Peru found a strange source of wealth, which was as fatal to her as the great influx of gold and silver was to the mother-country. The trade-winds are loaded with moisture from the Atlantic, which produces the rich vegetation of the Amazon Valley; but when they reach the snowy ridges of the Andes the last drop of this moisture is wrung from them, and they come down to the Pacific coast without a particle. Guano can only accumulate, as a valuable manure, where there is no rain. The great deposits of nitrate of soda have also been formed in deserts where there is no rain. The exhausted lands of the Old World needed these manures, the farmers were willing to pay high prices for them, and there were vast deposits on the islands and headlands and in the deserts of Peru. A wise government would have treated this source of revenue as temporary and extraordinary. The Peruvians looked upon it as though it were permanent, abolishing other taxes, and recklessly increasing the expenditure. The guano demoralized public men, and is the chief cause of the country's ruin. The exportation of guano commenced in 1846, and from 1851 to 1860 the amount of shipping that loaded at the Chincha Islands represented 2,860,000 tons. Between 1853 and 1872 there were 8,000,000 tons shipped; and in the latter year the Chincha Island deposits were practically exhausted. But other deposits were discovered. From 1869 to 1871 over 800,000 tons were shipped from the Guafape Islands; and since 1874 large deposits have been discovered on headlands of the coast of Tarapacá. In 1875 the guano exports amounted to 378,683 tons, valued at £4,000,000. The deposits of nitrate of soda have been worked since 1830 in the province of Tarapacá, the chief ports of export being Iquique and Pisagua. From 1820 to 1850 the export amounted to 239,860 tons. It reached its maximum in 1875, when 326,869 tons left the

country in one year. In 1877 the number of ships that cleared from the port of Iquique was 253. In 1878 the number of tons of nitrate exported from the ports of Tarapacá was 269,327. Other industries rapidly rose in importance. The sugar estates on the coast were worked by negro-slave labor until the emancipation of 1855. Chinese laborers then began to arrive, and over 58,000 landed between 1860 and 1872. In 1859 the sugar exported from Peru was valued at £90,000; in 1876 it had increased to 71,700 tons, valued at £1,219,000, of which quantity 63,370 tons went to Great Britain. A very excellent kind of cotton is grown in the coast valleys, the value of the crops in 1877 being estimated at £160,000; and there are extensive vineyards. Rice is also cultivated in the north, besides olives, mulberries, and cochineal. From the Andes the staple exports are silver and wool."

Respecting political events in 1882 Mr. Markham furnishes the ensuing general sketch: "The Provisional President, Piérola, resigned office in November, 1881, and, proceeding to Lima as a private citizen, he has since left the country. Generals Buendia and Silva retired into private life at the same time. Admiral Montero, in the forced absence of Dr. García Calderón, then became the head of the Peruvian Government as Vice-President in charge. He remained for some time at Huaraz, in the north of Peru; but in August, 1882, he went to Arequipa, where he was enthusiastically received. He proceeded to form a government. Captain Camilo Carrillo became Minister of the Interior; Dr. M. del Valle, of Foreign Affairs; Dr. Epifanio Serpe, of Justice; Dr. F.F. Oviedo, of Finance; and Colonel Manuel Velarde, of War. Colonel Iglesias, the hero of the Morro Solar, holds the military command in the north, with his headquarters in the Department of Caxamarca. He has summoned a representative assembly of the northern departments to express their views regarding the terms of peace. The indefatigable Cáceres, now promoted to the rank of general, is in command in the central departments, actively engaged in organizing an efficient force. At Arequipa the accomplished Captain Camilo Carrillo assembled a force of five thousand men, with several guns, and received arms and ammunition by way of Bolivia. Since the arrival of Vice-President Montero at Arequipa, and the assumption of ministerial office by Captain Carrillo, the command of the troops in the south has been given to Colonel Belisario Suarez. Colonel Canevaro, who had recovered from the severe wound he received at the battle of Miraflores, has taken the command of the National Guard. The Government of Peru has thus been reorganized, after the interval of unavoidable confusion caused by the loss of the capital, and the paralyzing calamity of January, 1881. Bolivia has remained loyally true to her ally, and has also been occupied in the reorganization of her army. In September, 1882,

Montero proceeded to La Paz to have an interview with General Campero, and the resolution of the allies seems to be to hold out until less hard and more just and reasonable terms of peace can be obtained from Chili. As for the Chilean occupation, enormous sums of money have been extorted at Lima from private persons, and a great number of leading citizens have been seized and imprisoned or transported to captivity in remote parts of Chili. The educational establishments, including the Colleges of San Carlos and San Fernando, the School of Arts, and the National Library, have been converted into barracks, their treasures robbed or destroyed. The Peruvian students now have neither books, instruments, nor instruction. Meanwhile predatory raids have been made by the Chileans into the interior from several points on the coast. Soon after the occupation of Lima, Colonel Aristides Martínez, with an adequate force, was landed at Chimbote, and occupied the city of Truxillo. Another smaller force took possession of Pacasmayo. A third party made a dash at the silver-mines of the Cerro Pasco, and penetrated as far as Huancayo, where a revolting slaughter of half-armed Indians was committed. In January, 1882, a force of five thousand men occupied the valleys of Tarma and Jaña, under Colonel del Canto, who placed garrisons in those towns, as well as at the Oroya bridge, in Concepción, and in Huancayo. Other parties were sent to Cañete, Chinca, Pisco, and Ica, apparently with the sole object of plunder and useless bloodshed. In the Andean valley of the Jaña the descendants of the Huanca Indians made a brave resistance to the predatory incursions of the Chilean garrisons, armed only with spears and slings, and were mercilessly slaughtered, as their ancestors had been by Pizarro. But help was at hand. General Cáceres was actively engaged at Ayacucho during the first months of the year 1882 in organizing a force for the defense of the interior of Peru. In July he was able to take the field. Colonel del Canto, with the bulk of the Chilean force, was at Huancayo, and there was a garrison of seventy-seven men of the Chacabuco regiment in the town of Concepción. The first encounter was at Marcabaya, a small village, two leagues from Huancayo. The Peruvians then advanced to Concepción, and, after a long defense of the barracks, the Chilean garrison was cut to pieces on July 9, 1882. Del Canto then assembled the other garrisons from Tarma, Jaña, and Huancayo, and retreated by way of Oroya to the terminus of the railroad at Chila. He burned the town of Concepción to ashes, in revenge for the Chilean reverse.

"Meanwhile a small Peruvian force, under Colonel Tafur, had crossed the Oroya and encamped on the heights of Chacapalca. He was surprised by two hundred Chilean carbineers under Lieutenant Stüven and forced to retreat with a loss of forty-eight prisoners. The Pe-

ruvians still remained in threatening force in the neighborhood, and Stuten, embarrassed by his prisoners, proceeded to commit a cruel act, which shows how utterly demoralized the Chilians had become. He ordered the Peruvian prisoners to be formed in a line and shot them down to a man. The wounded were dispatched by the Chilians with their long knives. The retreat was then continued, and the invaders, covered with disgrace by this act of infamy, evacuated the valley of Jauja. General Caceres then sent some troops, by a flanking march, to a point down the line of railway, to intercept the retreat of Canto. On the 22d of July the Chilian garrison, numbering one hundred men, at San Bartolomé, a place on the railway about fifty miles from Lima, was resolutely attacked. But re-enforcements arrived from Lima, under General Gana, and the Peruvians retired over the mountains in good order. The Chilians destroyed several villages along the line, and finally retreated to Chorica, twenty-four miles from Lima. General Caceres cleared this part of Peru of the invaders. He established his headquarters at Tarma, in August, 1882, and continued his labor of arming and organizing his forces. Huancas, Tquichanos, Pocras, and Morochucos flocked in thousands to his standard, all eager to defend their beloved villages from invasion. But the task of arming and drilling them must needs be slow and difficult. Their leader, however, is one who is not easily turned away from his purpose. Ayacucho is the home of Andres Caceres. He is surrounded by his own people. They know him as the man who has fought for his country in almost every action since the invaders landed at Pisagua. A similar need-

less extension of the horrors of war was planned by the Chilians in Northern Peru, where Colonel Iglesias conducted the defense. A force of three hundred men, landed at the port of Pacasmayo, advanced up the Jequetepeque Valley, with the intention of ravaging the Department of Caxamarca. Met by Iglesias at San Pablo, twelve miles from Caxamarca, they were defeated, and fled back to Pacasmayo, leaving their field hospital in the hands of the Peruvians. But they received re-enforcements, and eventually, like Pizarro before them, entered Caxamarca as conquering invaders. After converting two of the ancient churches into ruins, and burning several villages, they evacuated the historical city so famous for similar crimes committed there three hundred and fifty years ago. They then entirely destroyed the town of Chota, and finally retreated to the coast in September, 1882.

"Peru waits in broken-hearted suspense, but with undaunted front, for reasonable terms of peace. The province of Tarapacá to Camarones must be ceded. The nitrate and guano must go with it, and also the claims on the revenue derived from nitrate and guano. These false riches have never been other than a curse to their possessors."

As some peace settlement is likely soon to be brought about between Peru and Chili, it will not be amiss to study the commercial statistics having reference to the trade of the former with the three leading trading nations, the United States, England, and France, up to and subsequent to the outbreak of hostilities, in view of the revival in this Peruvian trade which may gradually be brought about after the re-establishment of peace:

IMPORT OF PERUVIAN PRODUCTS INTO THE UNITED STATES, AND EXPORT OF AMERICAN DOMESTIC GOODS TO PERU.

The preceding tabular statement shows that prior to the war, in spite of the gradual exhaustion of the guano deposits in Peru, the export figures from that country were steadily on the increase in its dealings with the three nations named, the large nitrate of soda production more than compensating for any falling off in guano. Importation, on the other hand, though also about doubling from the United States and England during the second decade we have given, had become stationary from France. During the twenty-two years specified, England did with Peru about twice the amount of business which was transacted between France and Peru, and more than nine times as much as the United States did with that country. This fully demonstrates the correctness of Mr. Markham's remarks about the importance of Peru as a customer of England. Ruined and crippled as Peru is at present, it will, however, take a great many years ere that country will become again what it has been in this respect, if ever it does.

BOLIVIA (REPÚBLICA DE BOLIVIA).—For particulars concerning area, territorial division, and population, reference may be made to the "Annual Cyclopædia" for 1877. The formation of a new department, with Tupiza for its capital, is said to be contemplated.

The President of the Republic is General Campero (since June 1, 1880), the First Vice-President is Dr. Aniceto Arce, and the Second Vice-President, Dr. B. Salinas. The Cabinet was composed of the following ministers: Interior and Foreign Affairs, Dr. P. J. Silveti; Finance, Dr. A. Quijarro; Public Worship, etc., Dr. P. H. Vargas; War, General J. M. Rendon.

The Bolivian Envoy Extraordinary and Minister Plenipotentiary to the United States is

Dr. L. Cabrera, and the Bolivian Consul-General at New York is Señor Obarrio.

The United States Minister Resident and Consul-General in Bolivia is Mr. G. Manney.

The Metropolitan Archbishop is Dr. Puch y Solona (elevated in 1861), and there are the following bishops: La Paz, Dr. Juan de Dios Bosque (1874); Cochabamba, F. M. del Granado (1872); and Santa Cruz de la Sierra, J. J. Valdivia (1879).

It is impossible to state the exact condition or number of the Bolivian forces during the past year, but it is to be presumed that the troops which spent most of the year at Oruro, under the command of the General-President, represent but a small proportion of the twenty thousand "fighting men" who were called to arms immediately after the commencement of the war with Chili. Previous to that time the regulation strength of the standing army was about three thousand, comprising eight generals, three hundred and fifty-nine superior, and six hundred and fifty-four subaltern officers. This force, according to official reports, cost the republic \$2,000,000 annually.

In the budget for 1880-'81, the first return of the sort published by the Finance Department since 1873, the estimated revenue and expenditure were set down at \$3,465,790 and \$4,799,225 respectively, showing a deficit of \$1,333,435. Among the items of expenditure may be mentioned that for the War Department, \$2,871,959. No mention is made of there being any provision made for covering the deficit just alluded to.

The tide of Bolivia's foreign commerce was effectually checked for a time by the war, and, when the reaction at length set in, the direction of the current was for the most part completely reversed. Although Bolivia had two ports exclusively her own, Cobija and Mejillone, it was found much more convenient to carry on trade through the Peruvian port of Arica, for which facility Bolivia paid a tax of five per cent to Peru. Soon after the beginning of the war, however, the Bolivian seaports proper and Arica were successively occupied by the Chilians, and held in a state of blockade for a year. The first two have remained permanently closed to Bolivian traffic, and the demand by the Chilians of fifty instead of five per cent on goods passing through Arica *in transitu* for Bolivia must, if persisted in, eventually determine the withdrawal of Bolivian trade from that port. In the face of these adverse circumstances Bolivia sought and has found a comparatively ready channel to the Atlantic seaboard through the Argentine Republic. The route—being by mule, *via* Salta or Jujuy to Tucuman, thence by rail to Rosario, and lastly down the river Parana to Buenos Ayres—already offers many advantages, such as transportation at half the rates charged for merchandise intended for consumption on Argentine territory, absolute freedom from duties, and the enjoyment, besides, of the privi-

\* One quintal = one hundred pounds Spanish.

lege of free storage in the Argentine custom-houses. These liberal concessions show how fully the Buenos Ayres Government comprehends the future importance of the Bolivian commerce. In the last-named city, and in Rosario, agencies have been established; a large number of mules have been placed on the route, thus still further reducing freights; lodging-houses and hotels have been opened where such conveniences were unknown; new industries have been established; and frequent traffic has led to such improvement in the condition of the roads that it is said to be now possible "to ride in a carriage from Buenos Ayres to Potosi." Transportation companies run wagons over the route, carrying goods into the interior of Bolivia, and taking back minerals; and when the railway from Tucuman to Jujuy is completed, and it becomes possible to travel direct from the Argentine capital to that city, freights will reach the lowest level of cheapness, and it is presumed that both North and South Bolivia will finally transfer their business from Valparaiso to Buenos Ayres.

The Bolivian trade with the Argentine Republic, for the year 1880 was of the total value of \$2,013,642, against \$683,045 for 1879, as follows:

Exports to the Argentine Republic.....	\$32,007
Imports from the Argentine Republic.....	\$60,113
<i>In transitu</i> from Bolivia.....	1,570,308
<i>In transitu</i> to Bolivia.....	51,214
Total in 1880.....	\$2,013,642
Total in 1879.....	683,045
Increase.....	\$1,330,597

The transit trade from Bolivia through the Argentine Republic, in 1880, was as exhibited in the following table:

ARTICLES.	Value.
Bismuth.....	\$31,815
Quinine.....	54,566
Hides.....	15,406
Tin.....	21,061
Silver.....	1,416,953
Total.....	\$1,570,308

The commodities comprising the transit trade through the Argentine Republic to Bolivia in the same year were as follow:

ARTICLES.	Value.
Quicksilver.....	\$6,230
Sugar, refined.....	2,099
Drugs.....	5,219
Iron-work.....	11,276
Agricultural implements.....	117
Machinery.....	15,645
Cotton goods.....	6,451
Woods.....	995
Canned preserves.....	1,735
Sundries.....	1,427
Total.....	\$51,214

In 1882 the Congress was petitioned for a concession for the construction of a railway from La Paz, with various branches, and the main line of which should effect a junction with the Central Argentine Railway, the extension of which last to Jujuy has been already referred to.

PETROLEUM, STATISTICS OF, during the year ending May 31, 1880:

I. Number of firms and corporations reported.....	86
II. Amount of capital invested.....	\$27,395,746
III. Hands employed: men, 9,493; women, 25; children, 346.....	9,569
IV. Wages, total amount paid for.....	\$4,381,372
V. Materials:	

1. Oil:	
Number of gallons crude oil used.....	731,533,127
Value.....	\$16,340,581

2. Fuel:	
Anthracite coal, tons.....	179,997
Value.....	\$446,922
Bituminous coal, tons.....	504,667
Value.....	\$580,983
Wood, cords.....	1,471
Value.....	\$6,355
Coke, bushels.....	303,596
Value.....	\$13,513
Naphtha, gallons.....	2,392,164
Value.....	\$42,315
Residuum, gallons.....	11,765,705
Value.....	\$229,215

3. Chemicals:	
Sulphur, tons.....	3
Value.....	\$180
Sulphuric acid, tons.....	45,313
Value.....	\$1,206,052
Hydrochloric acid, pounds.....	3,424
Value.....	\$63
Soda-ash, tons.....	411
Value.....	\$10,427
Caustic soda, tons.....	772
Value.....	\$85,064
Salt-soda, pounds.....	96,643
Value.....	\$1,423
Aqua-ammonia, pounds.....	160,160
Value.....	\$8,697
Lime, bushels.....	797
Value.....	\$159
Bone-black, tons.....	1,990
Value.....	\$62,315

4. Packages:	
Barrels.....	9,717,306
Value.....	\$11,618,307
Tin cans.....	23,541,089
Value.....	\$2,793,997
Cases.....	6,452,501
Value.....	\$906,911
Bungs, paint, etc., value.....	645,412

Total value of raw materials..... \$34,999,101

VI. Products:	
1. Rhigoline, barrels.....	5,363
Value.....	\$29,117
2. Gasoline, barrels.....	289,555
Value.....	\$1,123,166
3. Naphtha, barrels.....	1,212,626
Value.....	\$1,833,395
4. Illuminating oil, barrels.....	11,092,249
Value.....	\$36,839,613
5. Mineral sperm, barrels.....	16,514
Value.....	\$202,725
6. Reduced petroleum for cylinders, barrels.....	26,018
Value.....	\$971,020
7. Reduced petroleum for journals, barrels.....	204,841
Value.....	\$1,024,017
8. Decolorized lubricating oils, barrels.....	70,415
Value.....	\$611,572
9. Paraffine oil, barrels.....	79,465
Value.....	\$403,023
10. Residuum, barrels.....	293,133
Value.....	\$297,529
11. Paraffine-wax, pounds.....	7,889,626
Value.....	\$681,944
12. Petroleum-ointment, harness-oil, etc., value.....	\$323,097

Total value of manufactured products..... \$43,705,213

Boilers in use.....	374
Horse-power of same.....	12,744
Engines in use.....	885
Pumps in use.....	200
Buildings, number.....	866
“ value.....	\$1,899,288
Machinery, value.....	3,737,395
Loss during the year from fire and other accidents.....	104,631

# PHYSIOLOGY. CEREBRAL LOCALIZATION.

—Dr. Sigmund Exner has proposed a new system of cerebral localization, in which, instead of depending on experiments upon animals and the application of the results to the human brain, he fixes the seats of the several functions of the brain by deduction from the results of autopsies, and the light they throw on the relations of disease and the brain. The localizations as determined in his system agree generally as to their main features with those fixed by Dr. Ferrier from his experiments upon animals, but with some differences in detail. Dr. Exner distinguishes between absolute areas or centers of action, lesion of which always causes the same symptom, and relative areas or centers, lesion of which does not always, but only frequently, cause affection of the function with which they are supposed to be in relation; and he admits that the centers or areas of different organs, instead of being sharply defined and separated, run into each other, and are even partly inclosed one within another. In regard to the last point, he has remarked, in defending his opinions against criticisms by Professor Ferrier, that "there is no fact that would support the opinion that the part designated in the cortex as centrum has no other function than the one which caused it to be called 'centrum'; neither is there any fact which would support the idea that these centers are sharply circumscribed, that the organ of the leg extends, as on a map, as far as a designated limit, on which another organ begins. Anatomy and histology of the cortex, which teach that from every part of it fibres in immense quantities break through into the neighboring areas, are decidedly against such a view; and it is the result of preconceived opinion when every case is considered obscure and rejected in which, in spite of the lesion being very small, there were motor disturbances in both extremities. I consider a view based on such principles, according to which a 'centrum,' recognized as 'motor centrum,' can only have connection with the muscle group belonging to it, and with nothing else, as an hypothesis which prevents an impartial research. . . . I have proved . . . that from the greater part of the cerebral cortex (visible from above) of the rabbit we can call forth movement in both fore paws by electric irritation, and that these movements are transmitted by fibres which penetrate from the cortex into the white substance of the hemispheres."

**PHYSIOLOGY OF EXERCISE.**—Professor Du Bois-Reymond has shown, in an address on the "Physiology of Exercise," before the Institute for Military Surgeons, at Berlin, how the functions of exercise are much more extensive than has been popularly supposed, and how that exercise may stand in intimate connection with natural selection as a factor in the improvement of the higher animals and races. Having described the generally known effects of exercise in facilitating certain movements, harden-

ing the tissues and developing glands, and in making the system more secure against certain kinds of injury, he gives, as the broader definition of the term exercise, the frequent repetition of a more or less complicated action of the body with the co-operation of the mind, or of an action of the mind alone, for the purpose of being able to perform it better. Exercise has generally been spoken of in connection with the body only, or with the muscular system; but "it is easy to show the error of this view, and to demonstrate that such bodily exercises as gymnastics, fencing, swimming, riding, dancing, and skating are much more exercises of the central nervous system, of the brain and spinal marrow." Every action of our body as a motive apparatus depends more upon the co-operation of the muscles than upon the force of their contractions. In order to execute a composite motion, the muscles must begin to work in the proper order, and the energy of each of them must increase, halt, and diminish according to a certain law, so as to produce the proper combination of positions and velocities. On this point Johann Müller has a pertinent remark, that improvement in exercises of the body often consists nearly as much in the suppression of unnecessary by-motions as in acquiring dexterity in essential motions. Still other faculties come into action in executing these composite motions. The sight, the sense of pressure, the muscular sense, and the mind must be prepared to take in the position of the body at each instant, so that the muscles may be in a proper state of adjustment. Thus, not only the motor, but the sensory nervous system also, and the mental functions, are capable of being exercised, and need it; and in all skilled work, while muscular strength and facility are absolutely necessary, the supreme essential is the control by the central nervous system and the mind. In all these processes, the more any composite movement is practiced, the more unconscious is the act of the nervous system directing it, until at last the latter can not be distinguished from spontaneous nervous mechanisms like the involuntary reflex and by-movements. Practice further exhibits its influence on the purely sensory side of the nervous system, training the musical ear, improving the local sense and the color sense of the eye, and teaching such wonderful arts as quick reading and the instantaneous taking in of fleeting phenomena. As it induces the discontinuance of unused muscles, it also teaches us to neglect unused images; and, as exercise refines the senses, neglect stupefies them.

Man is thus adapted to self-improvement by means of exercise. "It makes his muscles stronger and more enduring; his skin becomes fortified against all injury; through exercise his limbs become more flexible, his glands more productive. It fits his central nerve-system for the most complicated functions; it sharpens his senses, and by it his mind, react-
